SEALS, MESOPOTAMIAN. Seals take two forms in Mesopotamia: stamp and cylinder. The earliest seals are small geometric pieces of stone, bone, or fired clay, one surface engraved with a design and a back by which it can be handled (Buchanan 1984). Cylinder seals are short tubes (avg. 20 mm) of stone drilled through the center and engraved around their circumference. Both stamps and cylinders are engraved in intaglio to produce a positive impression when rolled or stamped on a receptive surface. Seals may bear either design or inscription or both. Designs include scenes of everyday life, warfare, sport, gods, legends, myth, and ritual activities. Such scenes provide information on activities poorly recorded in texts or archaeological deposits as well as evidence of a monumental art no longer extant (Amiet 1973). Seal inscriptions most commonly refer to the owner's name, but also may include his patronymic, office or profession, political allegiance, and/or religious affiliation (Gelb 1977). Thus seal inscriptions are excellent sources of information on onomastics, administrative hierarchies, political history, and religious preferences. Seal impressions on clay documents or their envelopes both protected the integrity of the contents and served to identify the sealer as author, witness, agent, buyer, or seller, depending on the contents and purpose of the text (Leemans 1982).

A. Materials and Manufacture

Different materials for seals were used during the successive periods in Mesopotamian history, depending on accessibility and technical ability to work them. In the earliest period bone, shell, soft stone (serpentine and limestone), and fired clay are used to make stamp and cylinder seals. Harder stones are introduced in the late 3d and 2d millennium when quartz, hematite, carnelian, and lapis lazuli become popular.

Valued as amulets and ornaments as well as administrative devices, seals often are set in gold, silver, or bronze for rings or pendants, or attached by string to toggle pins. Occasionally a seal inscription will indicate that it was given as a votive gift to a god. The "seal cutter," Sum BURGUL or Akk *purkullu*, both cut and set seals. While most of our information comes from official archives and refers to seal cutters employed in large institutions, the number and variability of seals extant indicate that access to seals usually is not restricted to any particular class or institution in Mesopotamian society (Porada 1977).

B. History and Use

The earliest evidence for the use of engraved devices as seals dates from the 4th millennium B.C. During this period stamps are used to impress the wet clay applied to secure the closures of various types of containers. Sealing served both to protect the contents and identify the responsible individual or institution. Increasing social and political complexity during the late 4th millennium resulted in the need for more precise methods of accounting and accountability.

Initially hollow clay balls containing tokens representing various commodities were sealed to maintain the integrity of their contents, just as seal impressions on containers secured the commodities themselves (Le Brun and Vallat 1978). Over time cuneiform writing on clay tablets developed as a more efficient means of recording and conveying information, and these were also sealed. Cylinder seals appear at the same time, perhaps because rolling the seal over wet clay tablets or jar closings was a more efficient means of sealing a large surface than stamping it (Frankfort 1939:1–4). Designs on 4th millennium B.C. cylinder seals include scenes of hunting, herding, battle, storage of grain, and ritual activities. Recent research suggests that these motifs refer to the activities of various departments in early administrative centers (Brandes 1979). Other contemporary designs show mythical beasts and geometric patterns. Jemdet Nasr style seals are contemporary with those of the late Uruk period but smaller in size and made of harder stones. Many of the designs show women at work spinning, weaving, and making pottery or participating in ritual activities (Asher-Greve 1985).

Cuneiform inscriptions appear on seals at the beginning of the Early Dynastic period (2900–2300 B.C.). Seal size and design becomes more standardized, and seal impressions can be found on a few tablets as well as jar, box, bag, and door sealings. Two scenes that recur throughout the Bronze Age are formalized during the ED period: the contest between lion and bull or bull-man, and the banquet (Selz 1983). Banquet scenes show female and male figures eating or drinking, sometimes in the company of musicians, and it has been suggested that this represents the sacred marriage ceremony or the Near Year Festival known from later texts (Collon 1987:27).

Around 2300 B.C. Sargon of Akkad created the first Mesopotamian empire, and a number of innovations in art and administration are credited to this period of unification and expansion. Often created for the court and of very high artistic quality, Akkadian seals demonstrate a new, more naturalistic style and greater use of hard semiprecious stones. One of the most important innovations of the Akkadian period is the portrayal of deities with attributes that permit their identification with gods known from texts (Amiet 1980). From this period on seal design is one of the primary sources of information on the Mesopotamian pantheon and activities associated with its gods (Frankfort 1939). As in the earlier periods, seals continue to be used to secure closures and to impress administrative and legal tablets.

Much of the Akkadian iconography persists after the fall of Akkad and throughout the Ur III period (2250–2000 B.C.), although the quality of the engraving declines (Porada 1980:10). The presentation scene, however, remains an important source of information on political ideology and administration in this period (Winter 1986). In this design a human figure accompanied by a god or goddess approaches a deity seated on a throne. The seated figure in the Ur III presentation scene may be either deity or king, the distinction apparent in the form of the headdress. When the king appears in such a scene the inscription often refers to its ownership by a royal official, usually at a very high level. Used primarily within administrative contexts, official seals are commonly found on orders, letters and receipts, and the series of seals and impressions remains one of the few instances where iconography, inscription, and function are clearly related. During the Ur III period, seals are used predominantly in administrative contexts on both objects and texts.

Old Babylonian (OB) period (2000–1500 B.C.) seals retain much of the Akkadian and Ur III iconography, albeit in a more simplified and occasionally schematic form, particularly at the end of the period (Collon 1986). Around 1700 B.C. new techniques for drilling and cutting designs were introduced and resulted in a “drilled style” of seals (Buchanan 1970). These techniques probably aided the mass production of seals evident in the identical scenes found on a great number of them. Throughout the OB period private seals are widely owned and used to impress the various legal documents that required

witnesses or personal acknowledgment. "Burgul" seals, simple clay cylinders inscribed with the owner's name, are produced for single transactions for individuals who did not regularly require a seal.

In the last half of the 2d millennium B.C., in the kingdom of Mitanni in N Mesopotamia, sintered quartz ("faience," composition, or frit) made its appearance as a material for cylinder seals (Porada 1947). Easily made out of locally available materials, frit seals were produced in quantity for internal use and for export. Rarely inscribed, "common-style" frit seals were probably meant to be jewelry or amulets, although occasionally they were used as seals. "Elaborate style" seals were more carefully produced, and are often found impressed on legal and government documents. While Assyria was under the political domination of Mitanni, Assyrian seals were produced in the Mitannian style. As Assyria grew more powerful at the beginning of the 1st millennium B.C., they developed their own style reflecting Assyrian interests and ideology. However, the use of seals on documents and containers followed OB tradition (Porada 1979).

The rise of the Neo-Assyrian empire in the 9th and 8th centuries B.C. was accompanied by the reappearance of stamp seals which quickly replaced cylinders as the preferred method of sealing. Long the most widespread form of seal in the rest of the ANE, its reintroduction and popularity in Iron Age Mesopotamia has been tied to expansion of the Assyrian Empire and forced resettlement of large numbers of people from W Asia and W Iran (Parker 1962:27). As papyrus became a common vehicle for written documents during the 1st millennium B.C., a small sealed lump of clay (bulla) served to fix the string binding the rolled document, and replaced the impression of stamp or cylinder on a clay tablet as means of authorizing, witnessing, or securing the text. Stamp seals continued to be used throughout the Persian period. The Persepolis Fortification tablets indicate that impressions still served to acknowledge receipt and disbursement of goods in complex administrative systems (Hallock 1977).

C. Bibliographic Sources

A good introduction to cylinder seals as well as a full bibliography of published collections and current scholarship can be found in Collon 1987, while Frankfort 1939 remains a basic, though dated, resource. A good introduction to stamp seals and review of the current literature on the subject can be found in Buchanan 1984, and Buchanan and Moorey 1988. The art of Mesopotamian seals is a vast subject most recently reviewed by Porada in her introduction to *Ancient Art in Seals* (1980). Brief articles on seal use in various periods can be found in the symposium volume edited by Gibson and Biggs 1977.

SEBA (PERSON) [Heb *sĕbā‹* (סְבָא)]. SABEANS. The firstborn son of Cush (Gen 10:7; 1 Chr 1:9) and hence the name of a people or region located either in Ethiopia or in South Arabia. According to Ps 72:10 the kings of Sheba in Arabia (*Arabōn*) and of Seba came with presents, which is an indication of wealthy kingdoms. In Isa 43:3 God is ready to give the rich countries of Egypt, Cush, and Seba as ransom for Israel; the listing of Seba after Egypt and Cush points to NE Africa, which is confirmed by the LXX, which reads here *Soēnē* (for Syene) instead of Saba. A further passage in Deutero-Isaiah gives the same sequence: "The Egyptians with their produce, the Cushites with their profit, and the tall Sebaites (MT *sĕbā›īm,* LXX *Sebōin,* Vg *Sabaim*) shall come to you" (Isa 45:14); in the light of the comparison with the Cushites noted for their stature (Isa 18:2), this likewise points to an African people.

Already Dillmann (1892:180–81) proposed locating biblical Seba at the coast of Erythraea and consequently seeing in Sheba and Seba the two present countries Yemen and Abyssinia on the E and W shores of the S part of the Red Sea. This would be a reference to the colonization of the Ethiopian littoral by Sabaean settlers from S Arabia which started toward the end of the first half of the 1st millennium B.C. Beginning with the end of the 6th century B.C., however, Abyssinia existed no longer as a Sabaean colony, but came under the control of native sovereigns; Sabaean epigraphic texts with dialectal peculiarities have been discovered on Ethiopian soil bearing witness to this fact. In the inscription JE 4 from Maqalle king Rabāḥ designates himself as "*mukarrib* of Da‹māt and Saba›," which probably means ruler of the highland and of the coastal plain, and his son Lammān similarly designates himself in the inscriptions JE 1384+1370 from Melazo and Abuna Garimā 2 from Adde Kaweh in Tigre.

Furthermore, a few topographical names with Sabaean foundations testify to the immigration from S Arabia to Africa and also to the relations between ancient Yemen and Abyssinia; these include the harbor Saba (Strabo, *Geog.* 16,4.8) on the Ethiopian coast of the Red Sea to the N of Adulis; Sabat (Ptolemaios, *Geog.* 4,7.8), most probably to be identified with the harbor Saba; *Sabai* (Strabo, *Geog.* 16,4.10) NW of the straits of Bāb al-Mandab; and the *Sabaïtikon stoma* (Strabo, *Geog.* 16,4.8 on the authority of Artemidor), a place at the mouth of a river on the coast of the Trogodytice in the region of present-day Suakin. Possibly Soba on the river Atbara can also be connected with Seba, especially since the Ethiopic translation of the Bible offers in Gen 10:7 *Sobā* for *Seba.* Less trustworthy, on the other hand, is the remark given by Josephus (*Ant* 2.10.2) that Saba is said to be the ancient name of the kingdom of Meroë, to which this name was supposedly given only by Cambyses; therefore the connection of Meroë with biblical Seba is surely wrong. Consequently, the Heb name *sĕbā›* is finally identical with the name *šĕbā›;* while, however, the latter is the correct phonetic rendering of South Arabic *sb›,* the form *sĕbā›* might reflect the Ethiopic variant of the pronunciation of that name.

Caussin de Perceval (1847:42–46) held the view that the people of Cushite Seba are to be identified with the prehistoric ‹Ādites of the Arabian Peninsula, who later on were expelled from there by the immigrating Joktanide Sabaeans, emigrated to Abyssinia, and possibly became the founders of the Axumite kingdom. Glaser (1890:387–91) looked for Seba at the Djabal Shammar in N Central Arabia, and likewise Hommel (1926:577) believed that Seba is to be counted among the Arabian Cushites and is the name of a people in Central Arabia. Occasionally it has been suggested that while *šebā›* designates Sheba in SW Arabia, *sebā›,* which is mentioned besides *šebā›* in Gen 10:7 and Ps 72:10, refers to a Sabaean colony on the incense road in the NW part of the Arabian Peninsula. This view, however, is also hardly acceptable.

SEBAM (PLACE) [Heb *śĕbām* (שְׂבָם)]. Variant spelling of SIBMAH.

SEBAOTH. See NAMES OF GOD IN THE OT.

SECACAH (PLACE) [Heb *sĕkākâ* (סְכָכָה)]. A town situated in the wilderness of Judah (Josh 15:61), within the same district as En-gedi. This settlement, whose name perhaps means "protection" or "cover," is listed among the towns within the tribal allotment of Judah (Josh 15:21–62). The theory that this list is derived from an administrative roster compiled under the Judean Monarchy (Alt 1925) has been widely accepted, although controversy continues over the precise makeup of the districts, the proper context of the town lists of Benjamin and Dan, and the period of the monarchy to which the original roster belongs (Boling and Wright *Joshua* AB, 64–72). Recent archaeological work in the Buqeiah valley has uncovered three Iron Age fortress-farms which may be associated with the towns of this district (Stager 1976). If the list in Josh 15:61–62 runs N to S, then ancient Secacah is probably to be identified with the largest of these three fortresses, Khirbet es-Samrah, located approximately 7 km SW of Khirbet Qumran (Boling and Wright *Joshua* AB, 392; M.R. 187125).

SECOND COMING. See PAROUSIA.

SECOND DEATH. See DEATH, SECOND.

SECOND QUARTER (PLACE) [Heb *mišneh* (מִשְׁנֶה)]. A district within the city of Jerusalem in which Huldah the prophetess resided toward the end of the 7th century B.C. (2 Kgs 22:14 = 2 Chr 34:22). The Heb *mišneh,* in the usual ordinal sense, indeed means "second," but it can also have the nuance of "expansion/increase as a result of doubling"; thus one could translate *mišneh* as "annex" (cf. Zeph 1:10; perhaps also *ha‹îr mišneh* in Neh 11:9). The texts attesting to the "Second Quarter" are all late, and it has long been suspected that this new addition to Jerusalem was constructed opposite the Tyropoeon Valley on the hill W of the old city of David and SW of the Temple Mount sometime during the reign of Hezekiah (late 8th–early 7th centuries B.C.). This expansion would have been designed to handle the increasing number of Israelite and Judean refugees fleeing the devastations of the Assyrian army.

Archaeological confirmation of this "Second Quarter" emerged during Avigad's excavations (beginning in 1969) in the center of the Jewish Quarter in the Old City of Jerusalem. Beneath Byzantine, Herodian, and Hasmonean levels, evidence of Israelite occupation in the 8th–7th centuries was found, including a portion of an Israelite defensive wall (Avigad 1983; *EAEHL* 2:597). Although the complete line of this fortification is unknown, the addition of this new quarter seems to have approximately quadrupled the area of Jerusalem's residential neighborhoods, accommodating a swollen population of perhaps 25,000 (compared to an estimated population of ca. 7,000 in Solomonic Jerusalem). See also DAVID, CITY OF; JERUSALEM.

SECU (PLACE) [Heb *śekû* (שְׂכוּ)]. A site on the route between Gibeah and Ramah which Saul visited while pursuing David (1 Sam 19:22). Secu, commonly thought to be a village, is otherwise unknown. It is questionable whether Secu is a place name at all; some LXX and Latin mss read "on the bare hill." The well at the site mentioned in the passage was apparently a common meeting place.

TOM WAYNE WILLETT

SECUNDUS (PERSON) [Gk *Sekoundos* (Σεκουνδος)]. A gentile Christian from Thessalonica mentioned in Acts 20:4. He accompanied Paul from Macedonia to Jerusalem during his 3d missionary journey. He and the others in Paul's party were probably the delegates delivering the special collection to the church at Jerusalem (cf. Acts 24:17; 2 Cor 8:23). Secundus and his fellow Thessalonian traveler Aristarchus were probably representing the church at Thessalonica in the presentation of their portion of the contribution to the collection. Ambiguities in the text of Acts 20:5–6 create two possibilities. Either Secundus and the others crossed the Aegean Sea to wait for Paul at Troas, or they celebrated the Festival of Unleavened Bread at Philippi with Paul and then sailed with him to meet Trophimus and Tychicus, who alone had gone on ahead to Troas, possibly to procure a ship.

JOANN FORD WATSON

SEDHEQ (DEITY) [Heb *ṣedeq* (צֶדֶק)]. The god Sedheq appears in West Semitic proper names from the 2d and 1st millennia B.C.E. The deity appears on a god list from Ugarit (*KTU* 1.123.14) where it is half of the dual divinity form *ṣdq mšr.* The other source of information about this god comes from a pair of classical writers. The major information derives from the *Phoenician History* of Philo of Byblos (fragments of which are preserved in Eus. *Praep. Evang.* 1.10.13, 14, 25, 38), while a note appears on Sedheq's sons in Damascius, *Vita Isidori,* 302 (Attridge and Oden 1981:92 n. 140; Baumgarten 1981:228).

The fact that both the Ugaritic text and the Philo of Byblos references pair Sedheq with the god *mšr/misōr* (*Praep. Evang.* 1.10.13) has led to the reasonable conclusion that these two divinities may have been the West Semitic variants of the Babylonian pair of gods Kittu and Mešaru. The Mesopotamian pair are sons of the god Šamaš and represent two aspects of the sun god's role as the deity of justice (Rosenberg 1965:161; Astour 1966:282; Liverani 1971:58). This association would imply that the god Sedheq was seen as an attendant deity to some other, more powerful divinity; it would not necessitate that the god was associated with a solar deity cult (Rosenberg 1965:164–65; Baumgarten 1981:231). The root *ṣdq* supports the connotation of the divine sphere of the deity as having been justice; this understanding is recorded by Philo of Byblos, who explained the name as *dikaion.* Both in Mesopotamia and Syria-Palestine the gods may reflect deified characteristics of divine qualities (Troiani 1974:135).

What mythological information exists about Sedheq comes from classical sources. In these works it is posited that Sedheq and his brother Misor discovered how to use salt; this has been related to the legal aspect of the gods (Baumgarten 1981:176), but Philo of Byblos has treated these divinities as humans, and it is unlikely that a clear rendition of myth has been retained in the narrative, though it is possible that salt played a part in some myth told about these gods. What the classical writers were more interested in when dealing with Sedheq was his offspring. Sedheq not only was credited with fathering the Dioskouri and Kabeiri, but his eighth son was the renowned Asclepius, born to the god by one of the Titanids. The descendants of Sedheq are credited with inventing the boat, devising medicines, and beginning the noble art of historiography.

Names containing a Sedheq element have been acknowledged for a long time as divine references (Wood 1916:271–72). Among the Phoenicians Sedheq appears commonly among the royal names (Masson and Sznycer 1972:98–99). In biblical texts three names often are cited for bearing the divine

name Sedheq: Melchizedek (Gen 14:18; Ps 110:4), Adonizedek (Josh 10:1), and Zadok (2 Sam 15:24, etc.). Since all of these men are related in the narratives to the city of Jerusalem, two as kings and one as priest, it has been suggested that Sedheq was a major deity in the Jerusalem cult. This would explain the consistent use of Sedheq and variants in biblical names and names found in Hebrew inscriptions, though Tigay (1986:79) doubts such names refer to the deity. Sedheq does appear as a constant characteristic of Yahweh and may even be taken as an attendant minor deity to the Israelite/Judean deity (Rosenberg 1965:170–75); which might raise a mythological background to the constant pairing of the priests Zadok and Abiathar as with *ṣdq* and *mšr* (Cody 1969:89). At least such a pairing has been suggested for the use of the words *ṣdq* and *yšr* as used in the Bible (Liverani 1971:67).

The god appears in Syria-Palestine, perhaps in Judah, and among the Phoenician colonies. Sedheq would appear to have been a minor god, one who was seen to stand in attendance on the major deity of a given pantheon. "Justice" and "Rectitude" seem to have been a pair of gods recognized as members of the divine hierarchy in Mesopotamia and the West Semitic pantheons.

LOWELL K. HANDY

SEDRACH, APOCALYPSE OF. Extant in only one 15th-century Gk manuscript (Bodleian Library, Cod. Misc. Gr. 56, fols. 92–100), this pseudepigraphical work attributed to Sedrach has not been adequately researched. James (1893:127–37), Shutt (1984), and Diez Macho (1984) rightly contend that "Sedrach" does not refer to one of Daniel's companions, according to the Greek spelling; it is a corruption of "Esdras." The document certainly belongs with the apocryphal works attributed to Ezra.

The work begins with a sermon on love by Sedrach, who is subsequently taken up as far as the third heaven by an angel, the hypostatic Voice. Sedrach stands before the Lord and questions him.

P. Volz (1934) and C. C. Torrey (*JEnc* 1:674) thought that the pseudepigraphon was a Jewish work. P. Riessler claimed it was a Christian redaction of a Jewish document (1928:1274). The apocalypse may be a compilation of many documents (Denis 1970), many of them Jewish, but it is Christian in its present form.

James (1893) incorrectly divided the work into two separate and unrelated documents: the sermon and the apocalypse. The connection between these two—specifically that God's actions are motivated by love—suggests that the sermon is a Christian preface to a much older work, the apocalypse. This portion may be a Christian reworking of much older Jewish traditions (and perhaps even a Jewish work). The author (or compiler) was influenced especially by Job, Paul, the gospel of John, the *Testament of Abraham, 2 Baruch,* and especially the *Greek Apocalypse of Ezra* and *4 Ezra.* Agourides (*OTP* 1:606) contends that the apocalypse was composed by a Jew between 150 and 500 C.E., and that the sermon was added by a Christian shortly after 1000 C.E. Diez Macho (1984) suggests that the Jewish document, if one can be isolated, dates from the 2d century C.E., and that the Christian additions date from the 5th century. Sparks (in Shutt 1984:953) attributes the sermon on love to Ephraem Syrus. The Greek is close in some passages to modern Greek, suggesting that the present form of the work is late; but the original language is probably an earlier form of Greek (Agourides). There are sections with Byzantine and even patristic syntax and words.

As in *4 Ezra* the theme of the *Apocalypse of Sedrach* is God's compassion for the sinner. Here are some significant excerpts: "And Sedrach said, 'What (is it), my Lord?' And the Voice said to him, 'I was sent to

you that I may carry you up into heaven … the angel, having stretched out his wings, took him and went up into the heavens, and took him as far as the third heaven, and the flame of the divinity stood there" (2:2–5). Sedrach urges the Lord to make it impossible for Adam to sin, and to "hold onto his foot" so that he will not stray. Then, "God said to him, 'If I hold his foot, he says, "You have given me no grace in the world," and so I left him to his own desires because I loved him' …" (8:1).

JAMES H. CHARLESWORTH

SEFUNIM CAVES (M.R. 238148). A set of three prehistoric sites in the Carmel range just S of Haifa. Nahal Sefunim is one of the rivers draining Mt. Carmel westward toward the Mediterranean, about 5 km S of Haifa. Three prehistoric sites are known along this river, all located on its S bank. Whereas most of the prehistoric sites of the Carmel range are located on the mountain edge overlooking the plain, the Sefunim sites are unique with their hidden, inland position. They are, from E to W, the "Brecchia Cave," the "Sefunim Cave," and the "Sefunim Shelter."

A. The Brecchia Cave

This is a large mass of brecciated sediment about 1 m thick which covers the floor of a small cavity and the slope outside it. It apparently constitutes the rear part of a collapsed cave. The stone-hard sediment contains abundant animal bones and a few flint artifacts. The site has never been studied nor dated, but the breccia indicates the Middle Paleolithic (90,000–40,000 years ago) as the latest possible age.

B. Sefunim Cave

This cave (formerly "Iraq el-Barud") is located about 1 km from the coastal plain. Stekelis briefly tested the cave in 1941, and A. Ronen excavated it between 1965 and 1970. It is a vast cave, 50 m x 24 m, with two chambers. Cultural remains were found only in the front chamber and on the terrace, yielding a sequence (from bottom to top) of Middle Paleolithic, Upper Paleolithic, Neolithic/Chalcolithic, and modern remains.

1. The Middle Paleolithic. A small area near the present cave entrance (layers 13 and 12) and on the terrace (layers VII–VI) yielded Middle Paleolithic remains. These were embedded in a light brown silty clay, with abundant calcareous concretions on the terrace. The lithic industry, mostly of Levallois technique, is governed by points and scrapers. Tool making took place on the terrace, where almost all the cores were found. Faunal remains include forest dwellers such as wild boar and deer, and open-country species such as hippopotamus, gazelle, and cattle.

2. The Upper Paleolithic. This period consists of several occupations of Levantine Aurignacian (layers 10–8 in the cave), including one floor made of chalk (layer 10). The cave area occupied by the Upper Paleolithic is slightly larger than that of the Middle Paleolithic; the terrace had no remains of the Upper Paleolithic. The lithic industry includes the typical steep and end-scrapers, burins, various blades, and two bone points. The remains of boar, deer, gazelle, cattle, and antelope were found.

A small Kebaran occupation existed after the Aurignacian, and was almost completely removed by Stekelis' excavations.

3. The Neolithic/Chalcolithic. The Neolithic and Chalcolithic remains (cave layer 7; terrace, V–III) are found in a thick (0.2–2 m) stone layer. The entire front chamber and terrace were occupied. The lithic industry includes mainly cores, indicating that the site served primarily as a workshop, which produced celts of various types, scrapers, burins, retouched blades, and knives. A few arrowheads and a dagger

were found on the terrace. A hearth 1 m x 1.3 m and 0.2 m deep was dug on the terrace, which was filled with ashes and burnt stones. A stone anvil was carefully placed on the edge of the hearth. This structure may have been used to heat-treat stone artifacts. The charcoal was C^{14} dated to the end of the 8th millennium B.C.E., which begins the Neolithic/Chalcolithic occupation. Its estimated end was in the 5th millennium.

The faunal remains contain wild species—gazelle and deer—with domestic goat and donkey. Cattle and boar are present, but it is unclear whether they were wild or domesticated. Marine mollusks are relatively abundant here compared with older layers.

4. The Modern Period. The site was used to corral flocks and to exploit saltpeter for gunpowder manufacture during the last few centuries. Several plaster-and-ash floors were built in the cave during this period.

C. The Shelter

Located midway between Sefunim Cave and the coastal plain, Sefunim Shelter was discovered by A. Ronen and excavated by Lamdan in 1975 and 1976. The site is at the foot of a high vertical cliff where the river terrace is the widest (ca. 10 m) along its entire course. Two periods are represented: Middle Paleolithic and Neolithic.

1. The Middle Paleolithic. This phase is embedded in the top part of a red *terra rose,* 0.5–1.0 m thick, which lies on bedrock. The remains were concentrated in a 6 m × 5 m area, and included a pavement 2.5 m × 3.5 m made of thin stone slabs—the only architectural feature known in the Middle Paleolithic of the Levant.

The lithic industry is represented by a small assemblage, indicating a limited occupation both in time and in number of occupants. This fact apparently contrasts with the significance of the slab floor. Possibly each occupation cleaned the remains of the former, so that the remains of the latest use of the Mousterian site are what were preserved. This involved local manufacture of stone tools, inferred from the relatively numerous cores. Levallois products, points, and scrapers form the bulk of the small assemblage, a composition similar to that found in Sefunim cave. The fauna includes deer, boar, and few gazelle. A few mollusks were also found, both marine and sweetwater, but these could have come from the overlying Neolithic occupation. No sediments were found between the Mousterian and Neolithic layers.

2. The Neolithic. The Neolithic layer is gray and humic, clearly distinguishable from the underlying red clay. The Neolithic inhabitants built a 13 m long, slightly curved wall parallel to and near the cliff; it was constructed of large boulders. At the W end of the wall a structure made of smaller stones was added which extended the wall another 5 m. It might originally have been a circular structure, but the N part has completely eroded. The Neolithic remains were scattered mainly in the W part of the structure and in the narrow space between the wall and the cliff. Only sparse finds were in the central and E parts of the structure, where had been the Mousterian site.

The lithic assemblage includes very few cores, so that tool manufacture clearly took place outside the area of excavation, perhaps at another site. There are celts, sickles, and arrowheads, along with scrapers, burins, borers, and various retouched items. Faunal remains include primarily cattle (which was absent in the underlying Mousterian), boar, deer, and a horse. Abundant sweetwater and marine mollusks were brought to the site, both for consumption and ornament.

The Sefunim shelter can only be understood as coexisting and cooperating with the cave inhabitants. From the shelter, both the cave and a narrow portion of the coastal plain are visible. Signals could have been transmitted between the sites, and communal hunting could have taken place in the Sefunim valley during the Middle Paleolithic. The shelter's function in the Neolithic, with its long and massive wall, remains unclear. Possibly the tools were brought to the shelter from the workshop in the cave, but this is yet to be demonstrated.

AVRAHAM RONEN

SEGUB (PERSON) [Heb *śĕgûb* (שְׂגוּב)]. **1.** The younger son of Hiel who was responsible for the refortification of Jericho during the days of Ahab (1 Kgs 16:34). Scholars debate what is implied by the

note that Hiel rebuilt Jericho "at the expense of" (Heb *bĕ*) his two sons, Abiram and Segub. It is obviously intended by DH to be the working out of Joshua's curse pronounced against Jericho in Josh 6:26, thereby bringing the entire reign of Ahab under the judgment of the divine curse.

Several possibilities exist, however, for understanding the nature of the curse. Some see in this text the fated working out of a curse, whereby Segub and Abiram died of natural causes. Blake (1967:86–97), for example, argued that the entire family (inclusive use of "elder" and "younger") was wiped out due to radiation contamination of the spring. Others argue that the two sons may indeed have been buried in the foundations or gates, but only because they died in childbirth or of other natural causes.

Commentators more commonly assume that the note may be referring to the practice known elsewhere in the ANE and in Israel itself as the offering of a "foundation sacrifice." The association of Abiram with the rebuilding of the foundations and of Segub with the setting of the gates certainly suggests that one son's death marked the beginning of the project and the other son's the conclusion. The question hinges on whether the sons died of natural causes and were therefore buried in the foundation and at the gate, or whether they were offered as a sacrifice in order to ensure the future of the fortifications. If the latter was the case, did Hiel himself take the curse so seriously that he offered his own sons as a sacrifice, or was he compelled to give his sons over to be killed out of popular superstition? Already the Targum understands the text to mean that Hiel "killed" his two sons.

Most probably, the motif of the "fated curse" is due to the literary interest of DH. An early legendary tradition concerning the offering of a foundation sacrifice by Hiel was taken up by DH and reworked for polemical interests. By composing the tradition of Joshua's curse, the note in 1 Kgs 16:34 was thereby made to serve as prophetic fulfillment of a curse, with the literary effect of bringing the reign of Ahab under this divine curse.

2. Listed in 1 Chr 2:21–22 in the genealogy of Hezron. The genealogical information given is as follows: Judah > Perez > Hezron > Segub > Jair. The displacement of Hezron's genealogy in vv 21–23 to a position following that of his sons Ram and Caleb, together with the fact that the names presented in these verses represent geographical territories (Jair, Gilead, Aram), suggest that this material is a fragment cemented into the larger genealogy of Judah for certain interests. In this genealogy Judah is linked through Hezron to the family of Machir, whose daughter (Gilead's sister) becomes Hezron's wife. The families of Judah and Machir are nowhere else related, and in Num 32:39–41 both Machir and Jair are considered sons of Manasseh.

The editor of Chronicles has evidently used old genealogical information in order to further Judean claims of prominence. In spite of the territory of Gilead clearly being linked to the eponymous figure of Gilead, a later Judean claim to Gileadite sites (the 23 cities in Gilead) was effected by grafting Hezron into the genealogy by extending it back one generation to Machir and by coupling Hezron with Gilead's sister (to whom some give the name Abijah). Such Judean claims on Gileadite territory may go back to the era of David, who was allied through marriage to the territory of Geshur (2 Sam 3:3).

Braun (*1 Chronicles* WBC, 40) suggests that the name Segub is a corrupted form of the name Argob, since elsewhere Argob is connected with Jair.

ROD R. HUTTON

SEILUN, KHIRBET (M.R. 177162). Khirbet Seilun, in the heart of the territory of Ephraim a short distance E of the main road leading from Jerusalem to Shechem, is identified with the biblical town of Shiloh. Throughout the ages its location was not forgotten. In the Middle Ages, Eshtori ha-Parhi described its ruins, and the American explorer, E. Robinson, reidentified the site with Shiloh in 1838, according to the detailed biblical description of its location (Judg 21:19), "north of Bethel, on the east of the highway that goes up from Bethel to Shechem and south of Lebonah" (the Arab village Lubban-Sharqiya), and on the basis of the Onomasticon of Eusebius, which states that Shiloh is 12 miles from Neapolis in the district of Acrabattene. He also relied on the fact that the name is preserved by the ruins and nearby spring (see Fig. SEI.01).

A. Biblical Shiloh

Shiloh, where the Ark of the Covenant was kept in the first half of the 11th century B.C.E., was the sacred center of the Israelite hill country tribes. See SHILOH. According to the Bible, it was in Shiloh that the land was apportioned among the tribes (Josh 18:10) and the Levitical cities were allocated (Josh 21:2). The population assembled there both in times of distress (Josh 22:12) and times of celebration (Judg 21:19–21). The importance of Shiloh as a religious center and the seat of leadership of the Israelite tribes reached its zenith in the days of Eli the priest, when it became a focus of pilgrimage (1 Sam 1:3, 24). The town figured prominently in the battle of Ebenezer (1 Samuel 4); after defeating the Israelites, the Philistines apparently took advantage of their victory to press up into the hills and to put Shiloh to the torch. The Bible does not explicitly report the destruction of the site at the hands of the Philistines, but its fiery demise is alluded to in a number of passages (Jer 7:12, 14; 26:6, 9; Ps 78:60). Shiloh remained deserted for some time thereafter, but by the reign of Jeroboam I, settlement had been renewed (1 Kgs 14:2, 4), and the town still existed when Jerusalem was destroyed (Jer 41:5). The site is also mentioned in rabbinical sources and by Byzantine pilgrims.

C. Excavations

The mound of Seilun is located at the northern end of a fertile valley surrounded by hills. At a distance of 900 m to its NE there is a copious spring, providing water to supplement the runoff water that was collected in cisterns on the mound. The tell, which rises 714 m above sea level, covers an area of about 30 dunams (7.5 acres). Since its E, W, and N slopes are very steep, its most convenient approach is from the S. Three considerations thus determined the location of the settlement: proximity to the fertile valley, availability of a permanent water source, and an easily defensible topographical location.

The first archaeological soundings at Seilun were made by A. Schmidt in 1922. Between 1926 and 1932 a Danish expedition headed by H. Kjaer undertook three seasons of excavations, and an additional probe was made by S. Holm-Nielsen in 1963. The 1981–1984 expedition of the Department of the Land of Israel Studies, Bar Ilan University, headed by I. Finkelstein, conducted four seasons of excavations at the site. Eight strata were exposed by this expedition.

Period	*Stratum*	*Description of remains*
MB II	VIII	Pottery in the glacis and earthen fills of Stratum VII.
MB III	VII	Elaborate defense system consisting of a solid city wall and glacis, adjoined by a row of rooms; earth and stone fills.
LB	VI	Deposits of pottery of a cultic nature, ash and bones.
Iron I	V	Pillared buildings; numerous silos.
Iron II	IV	Scanty architectural remains.
Hellenistic	III	Scanty architectural remains.
Roman and Byzantine	II–I	Remains of village on upper part and S slope of the mound.
Middle Ages	Surface	Ruins of medieval village.

The first settlement at Seilun (Stratum VIII), apparently a small unwalled village, was established in the MB II. The evidence for this occupation consists solely of pottery found in the glacis and earthen fills of the following stratum; the builders of Stratum VII evidently used the debris from the previous settlement as fills in their earthworks.

During the MB III (Stratum VII) the site, probably about four acres in size, was surrounded by massive fortifications consisting of a solid city wall reinforced by an earthen glacis, whose remains were discovered in five places on the perimeter of the tell. The city wall, founded on bedrock and constructed of large fieldstones, was 3.0–5.5 m wide. In several of its segments its state of preservation is very impressive; in the sectional trench cut near its outer face in the NE sector (Area D), it was found standing to a height of almost 8 m. Following its destruction, it became a quarry for building material, and its stones were robbed throughout the ages. Since the wall was designed to conform to the contours of the

mound, its standard of construction was not uniform. The glacis was also constructed of segments of differing size, density and structural components. In the large section cut into the steep NE slope it was found to be 25 m long and to be composed of five different elements. Against the fortification wall it is 6.3 m thick. A wall 3.2 m high is incorporated into it, and two masses of large rough boulders were laid at the base in order to stabilize the earthworks and to prevent them from sliding down the slope. The glacis was especially strong wherever the slope is the steepest, while on the more moderate slopes it was less thick and of lesser complexity. Hence it is obvious that the principal motivation for laying the glacis was as a reinforcement rather than an attempt to hinder an enemy's approach to the fortification wall.

In the N sector of the site (Areas F–H) a row of rooms 115 m long was built against the inner face of the city wall. Their walls are preserved to a height of 2.5 m. Behind these rooms, in the direction of the center of the tell, and on a higher level, are stone and earth fills, giving the rooms the character of basements; judging by the large quantities of storage vessels found in them, they probably served as storerooms. In addition to these vessels, a unique hoard of silver and bronze objects was discovered, including a shafthole ax and a large silver pendant displaying a hammered "Cappadocian" symbol. Cultic vessels, such as stands, small votive bowls, and a bovine zoomorphic vessel, also came from these rooms, indicating that the rooms may have been connected to a nearby sanctuary. This high place may have stood on the top of the tell, supported by the stone and earthen fills uncovered above the above-mentioned rooms. Stratum VII was destroyed at the end of the MB III (16th century B.C.E.).

It was not long, however, before activity was renewed on the site. The LB level (Stratum VI) was exposed only in one part of the mound—Area D. No architectural remains came to light, but there was a thick accumulation of earth, ashes, and stones extending over an area of about 200 square meters inside and on top of the MB fortifications. A large quantity of broken pottery (mainly bowls and chalices) and animal bones was retrieved from this deposit. Several vessels containing ashes and bones were found intact, or nearly so. There were no other signs of activity in LB Seilun. The site may have consisted solely of an isolated cultic place on the summit of the tell, to which offerings were brought by pilgrims or people of the vicinity. After use, the vessels were broken deliberately and, together with the bones of the sacrifices, were buried in this spot. It is possible that these offerings were brought to the sacred location of the former (MB III) sanctuary. Most of the pottery is of the LB I horizon; from the ceramic evidence, it appears that the activity slowly decreased and finally ceased completely long before the end of the LB Age.

After a period of abandonment, the site was resettled in the 12–11th centuries (Stratum V). Iron I remains were found almost everywhere on the mound: more than 20 silos were unearthed in the N and NE sectors, and a group of pillared buildings was exposed on the W slope (Area C). These are the most important building remains of Iron I Seilun/Shiloh, indicating developed construction techniques and architectural concepts already at this early stage of "Israelite" settlement. The buildings adjoined the outer side of the former MB city wall, which was well preserved here and served as their rear wall. See Fig. SEI.02. A segment of the MB glacis was removed, and the Iron I structures were actually "sunk" into the glacis. The steep slope necessitated two building levels which were divided by a terrace wall. Two pillar buildings, separated by a corridor, stood on the upper level and a large hall on the lower level. The S building on the upper level had four parallel aisles separated from each other by three rows of pillars, while the N upper building consisted of a courtyard set off by pillars from each of its three side units, which were neatly paved with stone slabs. The hall of the lower level probably served as the basement of the upper S building.

The ceramic assemblage from this complex, the richest ever discovered at any early Israelite site, consists mainly of storage vessels, including more than 20 collared-rim jars (seven of which were found by the Danish expedition in 1929). Among its other functions, the building apparently served as a public storehouse. The buildings of the western slope were destroyed by a fierce conflagration. As suggested by Albright and Kjaer, this was probably the work of the Philistines in the aftermath of the battle of Ebenezer in the mid-11th century B.C.E.

The excavation results shed light on several aspects concerning the role of Shiloh in the Israelite Settlement process. First, it is now clear that in the beginning of the Iron Age Seilun/Shiloh was the outstanding candidate to become the sacred center of the hill-country population, since it was an ancient cult site that now stood deserted in an area with only a sparse Canaanite population and a high concentration of "Israelite" sites. See EPHRAIM (PERSON). The exact date Shiloh was first settled by the Israelites is not yet clear; however, it seems that major construction did not begin before the middle of the 12th century B.C.E. The important role played by Shiloh is reflected in the density of the Iron I sites around it, which is two and even three times greater than that of the other regions in the land of Ephraim. The size of the settlement was about 2.5–3 acres. Since a considerable part of it was probably occupied by the shrine complex and other public buildings, the possibility that Shiloh was primarily a sacred *temenos* rather than an ordinary village should not be ruled out. According to the data from the excavations, the shrine was probably at the summit of the tell. Unfortunately, this area was badly eroded and destroyed by later occupation.

After the destruction of Shiloh in the mid-11th century B.C.E., the site lay in ruins for some time. The resumption of settlement in Iron II is represented by scanty village-typed remains found in various places on the mound (Stratum IV). Shiloh of the Roman and Byzantine periods was a large village (Strata II–I). The two Byzantine churches with ornamental mosaic floors uncovered by the Danish expedition S of the mound show that Shiloh still retained its religious association.

ISRAEL FINKELSTEIN

SEIR (PERSON) [Heb *śēʿîr* (שֵׂעִיר)]. Ancestor of people living in Edom (Gen 36:20–21; 1 Chr 1:38).

Seir belonged to the ethnic group of the Horites who lived in the hill country of Seir (Gen 14:6). See SEIR (PLACE). According to Deut 2:12, 22 the Horites were defeated and displaced by the Edomites.

The personal name Seir is always found in the expression *bĕnê śēʿîr,* "descendants of Seir." Seir is also used as a geographical name and for the people living in this region (Ezek 25:8; Num 24:18). It is sometimes unclear whether the people identified as *bĕnê śēʿîr* should be understood as descendants of Seir or inhabitants of Seir (2 Chr 25:11, 14).

Seir, Edom, and Esau are closely connected in biblical texts, and are sometimes seemingly used as synonyms. For a thorough discussion of their relationships, see Bartlett 1969:1–20.

Bartlett, J. L. 1969. The Land of Seir and the Brotherhood of Edom. *JTS* n.s. 20:1–20.

STEPHEN A. REED

SEIR (PLACE) [Heb *śēʿîr* (שֵׂעִיר)]. 1. The biblical name for part of the country of Edom (Gen 14:6; 36:20–21, 30; Deut 1:2, 44; 2:1; 33:2; Josh 11:17; 12:7; Judg 5:4; Isa 21:11; 1 Chr 1:38; 4:42) and, secondarily, a synonym for Edom, both in the geographical and the political sense (Gen 32:4; 33:14, 16; 36:8–9; Num 24:18; Deut 2:4–5, 8, 12, 22, 29; Josh 24:4; Ezek 25:8; 35:2–3, 7, 15; 2 Chr 20:10, 22–23; 25:11, 14).

According to Gen 36:30, "the country of Seir" was inhabited by the HORITES, whereas "the sons of Esau" were living in Edom. In Gen 36:20, Seir is personified as a Horite whose descendants live in Edom. In the archaic text of Judg 5:4, "Seir" and "the field of Edom" parallel each other. Seir is frequently referred to as "the mountain," or "mountains of Seir" (Gen 14:6; 36:8–9; Deut 2:1, etc.). Combined, these

references suggest that Seir was a mountainous region which became part of the Edomite state. Etymologically, Seir means "hairy," whereas Edom signifies "red." There are three possibilities to circumscribe the pertinence of the toponym "Seir" more closely:

(a) "Edom" was originally connected with the Transjordanian plateau between Wādī al-Ḥasâ and Râs en-Naqb (because of its reddish soil; cf. the "field of Edom" in Judg 5:4). "Seir," accordingly, was originally connected with the wooded precipice leading from the plateau down to the Wādī al-ʿArabah (Weippert 1971; Knauf 1988b). This is the most likely interpretation.

(b) "Edom" meant the region between Wādī al-Ḥasâ and Wādī al-Ġhuwayr (which is called in Arabic *el-Jibâl*), and "Seir" referred to the S part of the Edomite state, the area between Wādī al-Ġhuwayr and Râs en-Naqb (in Arabic, *eš-Šarâh*). One argument in favor of this distinction is the fact that the formation of the Edomite state started in the north, in el-Jibâl. In addition, eš-Šarâh, "the mountain range," may have replaced eš-Šarâ, "the wooded rocky mountain with springs," since the region was probably known in Nabatean times when the Nabatean god Dhû Sharâ had his central sanctuary in its center, at Petra. Arabic *šarâ* refers to the same geographic features, rocks and trees, as does Seir, although there is no etymological connection between the two similar sounding words. The slight change from eš-Šarâ to eš-Šarâh may be due to post-Nabatean deforestation, or Islamic shunning of the memory of an "idol."

(c) "Edom" signified the area of eš-Šarâh because of the Nubian sandstone which is dominant along the precipice, especially in the Petra area, and "Seir" referred to el-Jibâl, "the mountains" (hence, the frequent mentioning of "mountains of Seir" in the OT). A ruin in the vicinity of et-Tafîlah may have preserved the ancient regional name: *Khirbet Umm Šaʿîr.*

Hypothesis (c) is irreconcilable with the epigraphic and archaeological evidence concerning the evolution of the Edomite state; hypothesis (b) is based on more assumptions than are needed for hypothesis (a). Furthermore, both Khirbet Umm Šaʿîr ("Seir" in hypothesis c) and Petra ("Seir" in hypothesis b) are situated on the upper terraces of the precipice, well below the plateau, i.e., both places are comprised in "Seir" (hypothesis a).

After Seir had become part of Edom (Gen 36:21), "Edom" and "Seir" became synonyms. Thus, Deut 2:12, 22 concluded from the "Horites in Seir, the inhabitants of the country" (Gen 36:20, 30) on the one hand and the "sons of Esau, this is Edom" (Gen 36:19) on the other that the Edomites conquered Seir and annihilated its previous inhabitants. Deut 1:44; 2:1 seems to presuppose Seir on both the W and the E side of Wādī al-ʿArabah (cf. Deut 2:3), a geographical extension due to Edom's penetration of the Negeb, and the subsequent establishment of Idumaea S of Judah from the late 7th century B.C. onward.

If "Edom" and "Seir" were originally distinct geographic units, the undoubtedly ancient text of Judg 5:4, which has Yahweh come from Edom and Seir to do battle for his people, already betrays a rather vague knowledge of the precise location of the "mountain of god" (Ahlström 1986:58–59; *HAIJ,* 111–12). Deut 33:2 ("Yahweh … dawned upon us from Seir") seems to be an evocation of various places connected with Yahweh's seat in different traditions which, in a geographic context, do not lead to a coherent itinerary. Egyptian topographical lists from the 14th and 13th centuries B.C. do, however, list a "country of *Yhw*-nomads" under the heading "country of Seir-nomads" (another possible translation would be "country of nomads: *Yhw*," "country of nomads: Seir"). The most ancient references, both biblical and extra-biblical, connect Yahweh and Seir, i.e., the region SE of Canaan (Knauf 1988a: 50–51; Görg 1989 *pace* Astour 1979, who tried to locate the nomads of *Yhw* and Seir in S Syria).

2. The name of a mountain in Judah (Josh 15:10). Because the geographical features (land formation, vegetation) which determine the majority of Semitic place-name formation are nearly ubiquitous in the Near East, place names also reoccur frequently. Because the mountain mentioned in Josh 15:10 is situated on the W slopes of the Judean range, it must have been heavily wooded in antiquity. This or a third Seir is mentioned in the Amarna letters (No. 288, line 26; Knauf 1988b: 64; cf., however, Görg 1989, who argues for the identity of the Amarna Seir with the Edomite Seir). Similarly, a Seirah was located in either Benjamin or Ephraim (Judg 3:26). See also SEIRAH.

SEIRAH (PLACE) [Heb *śĕʿîrâ* (שְׂעִירָה)]. The name of either a city or a topographical feature to which the Benjaminite judge Ehud fled after he assassinated Eglon, the Moabite king and oppressor of Israel, in the vicinity of Gilgal (Judg 3:26). So far Seirah has not been located, and the name does not appear to be mentioned apart from this reference.

Simons believes that by analogy with *happĕsîlîm* ("the quarries" or "the idols" in Judg 3:19, 26) *haśśĕʿîrātâ* is best understood as a topographical feature with the meaning "the woody hills" (*GTTOT*, 288).

On the understanding that Seirah designates a specific place name, it has been variously located E of the river Jordan, in the Jordan Valley, at Mount Seir, or in the hill country of Ephraim. A location E of the Jordan seems questionable, as it is less likely that Ehud would have found his countrymen in the Transjordan region than in the hills of Ephraim. The identification of Seirah with Mount Seir on the boundary of Judah (Josh 15:10) is unlikely, as it would have been too distant for Ehud to rally the Israelites and return in time to thwart the retreat of the Moabite soldiers across the river Jordan (Judg 3:28–29). A location in the Jordan Valley would account for the rapid deployment of Israelite forces to the fords of the Jordan River, but the identification of Seirah with some place in the hill country of Ephraim is best supported by the context and especially v 27.
ARTHUR J. FERCH

SELA (PLACE) [Heb *selaʿ* (סֶלַע)]. The word occurs about 65 times in the MT, though not usually as a proper name. In six passages it does appear as a place name—2 Kgs 14:7; 2 Chr 25:12; Isa 16:1; 42:11; Jer 49:16; Obad 3; and Judg 1:36. The name means "rock."

1. An Edomite fortress city conquered by Amaziah King of Judah and renamed Joktheel (2 Kgs 14:7). Usually this city has been identified with the Nabatean rock-city of Petra (M.R. 192971) halfway between the Dead Sea and the Gulf of Aqaba. Umm el-Bayyârah is the rocky peak that dominates the Wadī Mūsā on which Petra was built and towers 300 m above the level of Petra and 1,130 m above sea level. This may have led to the description of the Edomites as living "in the clefts of the rock" (Jer 49:16; Obad 3). However, another site has been proposed for Sela (see *IDBSup*, 800):the modern Selaʿ (M.R. 205020), which is 4 km NW of Buseira (biblical Bozrah). Excavations show that this site was a fortified city from the 9th to the 7th centuries B.C., whereas at Umm el-Bayyârah there are no remains earlier than the 7th century. It could be that both sites served as capitals of Edom at different times but with the same name. Isa 42:11 may refer to the same city.

2. An unidentified place on the Amorite border during the time of the judges (Judg 1:36). Apparently it was situated within Judah. This site is mentioned alongside the ascent of Akrabim (lit. "scorpions"), which lies to the SW end of the Dead Sea.

3. A place in Moab cited in Isaiah's prophecy against that nation (Isa 16:1). The site has not been identified. Some have proposed that this Sela is the same as that of Sela in Edom (#1 above) and that the Moabite fugitives fled there for refuge. However, the oracle is concerned only with Moab (Isa 15:1) and the fugitives fled S only as far as Zoar (15:5), S of the Dead Sea. Furthermore, references are made to Moab's borders, the "Brook of Willows" (15:7), which is identified with Wadī el-Ḥesā, and the "waters of Dibon" (15:9), which probably refers to the Arnon river. Petra lies yet 80 km farther S of Wadī el-Ḥesā and even farther from Dibon.

SELBIT (M.R. 148141). See SHAALBIM.

SELED (PERSON) [Heb *seled* (סֶלֶד)]. A leader in the tribe of Judah, the firstborn son of Nadab without male issue (mentioned twice in 1 Chr 2:30), and a descendant of Jerahmeel through his wife Atarah. Seled is the brother of Appaim through whose line the Jerahmeelites are traced another 16 generations to Elishama (the apparent interest of the genealogy). Variant spellings of Seled are found in the LXX (B *alsalad* and *salad*), although many scholars consider those genealogies corrupt (especially codex Vaticanus). However, the genealogies of Jerahmeel in the MT are viewed by most contemporary commentators as being in good order. For further discussion of the provenance and authenticity of the genealogies in 1 Chronicles 2, see MAAZ.

Many commentators note the sense of loss apparent in the OT for the lack of male issue and conclude that aspects of immortality were perpetuated through one's descendants. The meaning of this name is very uncertain, although it appears to come from the root *sld,* possibly meaning "to spring" or "to beat the ground in running"; some suggest the meaning for Seled is "exultation."
W. P. STEEGER

SELEMIA (PERSON) [Lat *Selemia*]. One of the five scribes whom Ezra was instructed to take with him in restoring the Scriptures (2 Esdr 14:24). See DABRIA for further discussion.
JIN HEE HAN

SELEUCIA (PLACE) [Gk *Seleukia* (Σελευκια)*; Seleukeia* (Σελευκεια)]. A name given to several cities established during the Hellenistic period. These cities are named after Seleucus I Nicator, one of the Diadochi who gained control of a large portion of Alexander the Great's empire and founded what is known as the Seleucid empire. As many as ten such cities have been identified within his domain. This article will discuss four of these which are of particular interest in biblical studies, including the Seleucia in Syria which is mentioned in 1 Macc 11:8 and Acts 13:4.

Other cities named Seleucia include those in the Anatolian districts of Pisidia, Pamphylia, Caria, and Phrygia. There were also other cities by this name, including one in the Orontes Valley and two others in Mesopotamia in addition to the more significant one on the Tigris. In Coele-Syria, the Decapolis cities of Abila and Gadara, although first mentioned in 217 B.C., have Seleucia added as a prefix in some inscriptions. The port city of Gaza also was given the dynastic name for a brief time while it was under Seleucid control.

The Seleucid state spanned an arc from the Persian Gulf across the Plain of Babylon to the Valley of Aleppo to the Mediterranean coast and up that coast to the Plain of Cilicia. The regions of Mesopotamia, Cilicia, and Syria formed the economic, strategic, and political nucleus of the empire. Seleucus I built important cities named after himself in each of these regions. The first of these to be established was in Mesopotamia.

1. Seleucia in Mesopotamia was founded by Seleucus Nicator in 312 B.C. as his E capital, replacing Babylon as the political and cultural center of Mesopotamia. It is variously known as Seleucia-on-the-Tigris, *Seleucia Babylonia, Seleucia Assyriae,* and *Seleucia Parthorum.* It was located on the W bank of the Tigris, at the Babylonian town of Opis, just N of the Royal Canal which provided access between the Tigris and Euphrates river systems (ca. 20 miles SE of modern Baghdad). Its strategic location on navigable waterways (Strabo 16.739) and on caravan routes to E Asia promoted trade and population growth. As the hub of the new Hellenistic culture in the region, its population was principally Greek and Syrian. Seleucus also built extensively in N Syria, but this did not mean the end of Seleucia-on-the-Tigris as a political and cultural center. It is true that N Syria became the unique center of Seleucid power in the second half of the 2d century B.C., but is a mistake to believe that the Seleucid empire had a single "capital" before that time. The empire had several capitals to house the royal administration, the army,

and the court. The central authority in the Seleucid empire was peripatetic, although the Seleucids recognized Babylonia as the heart of their empire.

Archaeological evidence indicates that Seleucid occupation of the site ended ca. 143 B.C. Even after the fall of the Seleucid empire the city continued to flourish. The new autonomous city was made up of a mixture of peoples including large Jewish and Greek populations. Pliny the Elder reports that in the 1st century A.D. there were 600,000 inhabitants (*HN* 6.122). The large numbers of Diaspora Jews in eastern cities like Seleucia in time became a concern for the Romans who desired to maintain control in the Levant.

Successive Parthian campaigns by Trajan, Avidius Cassius, and Septimius Severus during the 2d century A.D. devastated the city. Excavations from 1927–32 at Tell Umar, the site of Seleucia-on-the-Tigris, produced less spectacular results than might have been expected (see reports by Waterman 1931; 1933). Many of the architectural fragments appear to have been reused at the Parthian capital of Ctesiphon on the opposite bank of the Tigris.

2. Seleucia in Cilicia was founded by Seleucus I in 300 B.C. on the W bank of the Calycadmus River, 6 km from the Mediterranean coast. This city, also known as *Seleucia Tracheotis,* lay along a coastal highway as well as a route that penetrated deep into Anatolia. Its location suggests that the purpose of the city was to protect the region against attacks from the sea. It served in this capacity very well. It did not capitulate even though the rest of E Cilicia fell to Ptolemy III Euergetes in 245 B.C. during the Third Syrian War. This city was of regional cultural significance because it was the location of an oracle of Apollo, and annual athletic competitions. Architectural remains at the site include ruins of temples, porticoes, aqueducts, and a fortification on a nearby height. The site is located near modern Silifke.

3. Seleucia in Palestine was a Hellenistic city in Gaulanitis, what is known today as the Golan. The city eventually came into Jewish control under the leadership of Alexander Janneus (103–76 B.C.), who seized it from the Syrians (Josephus *Ant* 13.15.4). Under Roman control, Seleucia never regained her former importance. Josephus later fortified the site against the Romans during the First Jewish Revolt (*War* 2.20.6). Agrippa II, however, persuaded the city to come to terms with the Romans (*Life* 187, 358). Modern Seluqiyeh (M.R. 222267), 16 km NW of the Sea of Galilee, is believed to retain the ancient name of this Seleucia.

LESLIE J. HOPPE

4. Seleucia in Syria was the most important city founded by Seleucus I; it was also known as *Seleucia Pieria.* The name Seleucia honors Seleucus I as the founder of the city, while the name Pieria derives from Mt. Pierius, on whose S slope the city was built. Seleucia was one of four cities that Seleucus I built in N Syria. Apparently he considered it the most important of the four, since he named this one after himself. The three other cities were Antioch-on-the-Orontes (named for Seleucus' father), Laodicea-on-the-Sea (named for his mother), and Apamea (named after his wife). These four cities, known as the "Syrian Tetrapolis," became centers for propagating Hellenistic cultural ideals throughout the region. Coins minted in these cities called them "brother townships."

Although Seleucus I defeated Antigonus and so acquired hegemony over Syria for himself, he did not convert the latter's capital to his own use but built a new city, Seleucia Pieri, 4 miles N of the mouth of the river Orontes, in the N coastal region of Syria, at its frontier with Cilicia. It was 16 miles W of Antioch-on-the-Orontes and served as the seaport of that city. The southern slope of Mount Pierius, which rises 4,000 feet above the Mediterranean, was an ideal location for a fortified city. The city included three areas. The lower part of the city was the port and commercial center. Above the lower city to the NE were terraced cliffs that supported the residential area. At the summit of Mt. Pierius was the acropolis, where

the city's monumental public buildings were located. Surrounding the city on three sides were the cliffs of Mt. Pierius, which made Seleucia nearly invulnerable from land-based attacks. By 220 B.C. the population was 6,000 adult male citizens (Polybius *Histories* 5.61.1). This means that about a century after its founding the total population of the city—including women, children, and slaves—was approximately 30,000.

Seleucus' building program in Syria was evidence of his intention to orient his empire to the W and to press his claims on Palestine, which Ptolemy I Soter controlled. Although Antioch-on-the-Orontes eventually became the capital of the Seleucid empire, it is likely that Seleucus himself considered Seleucia more important. It was the first city he built following his victory over Antigonus at the battle of Ipsus in 301 B.C. He established a mint there and chose it as his burial place.

Seleucia's importance was not simply a matter of imperial vanity. Its location on the sea made it a communications and commercial center. Its acropolis was almost impregnable. The city's most serious disadvantage was that it was too far from the intersection of the major land routes that connected the Euphrates, Asia Minor, and central and S Syria. The need to control these land routes led to the emergence of Antioch-on-the-Orontes as the capital of the Seleucid empire after the death of Seleucus I.

Seleucia Pieria was the site of the tomb of Seleucus I. Antiochus I, his son and successor, deified his father by identifying him with Zeus. Antiochus built a temple in his father's honor called the Nicatorium. The city became the center of the private cult that honored Seleucus I.

Under Antiochus I Seleucia became a flourishing commercial center and formidable fortress protecting Antioch-on-the-Orontes. The commercial importance of the region encircled by the Syrian Tetrapolis goes back to the 3d millennium B.C., as attested by the discoveries at Ebla (Tell Mardikh). This region served to connect the Tigris with the Mediterranean and was at the axis of intersecting trade routes.

Seleucia also had strategic military importance. Seleucia and Ephesus were the two principal naval bases of the Seleucid empire. During the Third Syrian War, Seleucia Pieria fell to Ptolemy III. The Egyptians controlled the city from 245 to 219 B.C. Mastery of Seleucia Pieria was central to any military strategy that aimed to control the Seleucid empire. Dan 11:7–9 does not refer by name to the battle for Seleucia or the principals involved, but the text clearly refers to the events of Seleucia's capitulation to the Egyptian forces. The fortress of the "king of the north" that Dan 11:7 mentions is probably Seleucia.

Seleucia remained under Egyptian control until the reign of Antiochus III ("the Great"). He retook the city at the beginning of his war with Ptolemy IV Philopater. Antiochus III thus eliminated Ptolemaic presence in Seleucia just a few miles from his capital at Antioch. The Ptolemies made no serious effort to retake Seleucia since the city was too far from Egypt for them to exercise meaningful control over it. Also it made diplomatic sense for the Egyptians to end their provocative presence near the heart of the Seleucid domains.

This did not mean that the desire of the Ptolemies to control Syria-Palestine ended with their departure from Seleucia. This city was the key to political, military, and economic domination of the region. In the middle of the 2d century B.C. when the Egyptians wanted to retake Syria-Palestine from the Seleucids, they had to move against Seleucia. According to 1 Macc 11:8, Ptolemy VI Philometor succeeded in taking Seleucia and several other cities along the Mediterranean coast in 146 B.C. (1 Maccabees refers to the city as "Seleucia by the sea.") Later Ptolemy VI entered the Seleucid capital at Antioch and had himself proclaimed king of the Seleucid empire. Ptolemaic control continued until 138 B.C., when Antiochus VII Sidetes landed in force at Seleucia and there had himself proclaimed king.

Seleucia remained under Syrian control until the Roman period. Pompey granted Seleucia the status of a free city because it resisted the kings of Armenia and Pontus who challenged Roman hegemony in the ANE by invading Syria-Palestine. The anti-Roman coalition got as far as Jerusalem before Pompey defeated them and brought everything W of the Euphrates under the jurisdiction of Rome.

The role of Seleucia Pieria as a port is apparent from several references in the NT. In A.D. 49, Paul, Barnabas, and Mark sailed from Seleucia on the first Christian missionary journey (Acts 13:4). When the missionaries returned, Acts 14:26 says that they "sailed back to Antioch." Though the latter text does not mention Seleucia, it is probable that the three landed at the port from which they began their journey. It is

less likely that they continued sailing up the Orontes to Antioch. It is likewise probable that it was at the port of Seleucia that Paul and Silas parted company with Mark and Barnabas at the beginning of the second missionary journey (Acts 15:39–41).

Seleucia continued to have strategic importance throughout the Roman period. It was the home base of an imperial fleet in the 1st century A.D. so the Roman emperors maintained the port at Seleucia. This was a costly project since the area was not a natural harbor. Contemporaneous with the First Jewish Revolt against Rome in Palestine (A.D. 66–70), the Romans under Vespasian and Titus built a canal in solid rock to divert the waters from a mountain stream that caused regular flooding in the harbor area. At the beginning of the 4th century A.D., Roman soldiers who worked on deepening the harbor mutinied. Although the civilian population of Seleucia and Antioch helped put down the mutiny, the Roman authorities blamed the Christians for inciting the rebellion (Libanus *Antiochikos,* 158–62; Eusebius *Hist. Eccl.* 8.6.8). This became an excuse for a persecution of the city's Christian community. In A.D. 346 Constantius completed a new harbor to improve the movement of military supplies. This brought the city new economic prosperity. The port at Seleucia required regular maintenance. When the eclipse of its harbor took place in the Byzantine period, maintenance ceased, the harbor silted up, and it became a swamp, as it remains today.

The site of ancient Seleucia Pieria was excavated along with Antioch-on-the-Orontes between 1937 and 1939. The most impressive structure found on the acropolis was a large (36 by 19 m) Doric temple. Excavation of the upper city revealed Roman-period villas that were decorated with polychrome mosaic floors. Surrounding the lower city were ramparts made of polygonal Hellenistic ashlars. At the entrance of the lower tower there is a Hellenistic period monumental gate to the market area that was reused in the Roman period as a fortress. Little remains of the theater built in the Roman period. The most significant remains in the lower city is a Byzantine period cross-shaped martyrion with an adjoining choir and baptistery. Just N of the site 1,300 m of Vespasian's canal is visible. Also outside the lower city were several cemeteries with sarcophagi from the Roman period. The more modest tombs of Roman sailors occupy the area between the canal and the port.

SELEUCIDS. See SELEUCUS; PALESTINE, ADMINISTRATION OF (SELEUCID). See also ANTIOCHUS.

SELEUCUS (PERSON). Name of the founder of the line of Greek-speaking kings of Syria and adjacent areas after the death of Alexander the Great. Hence the line, which lasted more or less continuously from ca. 321 B.C. to 64 B.C., is known as the Seleucid dynasty, the rulers as the Seleucidae. It is of biblical interest because the kings' policies of Hellenization, while bringing them into conflict with the Jews (particularly during the reign of Antiochus Epiphanes, 175–164 B.C.), nevertheless prepared the ground in which Christianity was eventually to flourish, the city of Antioch among others being a Seleucid foundation. The Seleucid era, beginning 1 October 312 B.C. in Syria and on New Year's Day, 1 Nisan (=3 April) 311 B.C., in Babylonia, is also important for chronological purposes.

1. *Seleucus I Nicator* ("victor") (312/311–281 B.C.). Born ca. 358 B.C., son of the Macedonian Antiochus, a general of Philip. After distinguished service as one of the generals of Alexander the Great, he was made chiliarch (commander of 1000 men) under Perdiccas, protector of the kingdom, on the first division of Alexander's empire (323 B.C.). In the second division made after Perdiccas' murder (321 B.C.)

he became satrap of Babylon, but subsequent struggles among the Diadochi (successors to Alexander) saw him forced by Antigonus to flee to Egypt (316 B.C.). With Ptolemy's help (Dan 11:5 refers to Seleucus as "one of his princes"), he regained Babylon in 312 B.C. after Ptolemy's victory over Antigonus' forces at Gaza. He soon added Media and Susiana to his domains and between 311 and 306 B.C. continued to expand to the E, eventually reaching as far as NW India (his territories there were ceded to Chandragupta, ca. 304 B.C., in exchange for 500 elephants).

After the assassination of Alexander's sons (310–309 B.C.), the Diadochi declared themselves kings and Seleucus followed suit in 305 B.C. In 301 B.C., in alliance with Lysimachus, he defeated Antigonus at Ipsus and so gained control of Syria, much of Asia Minor and, more important, access to the Mediterranean. His policy now became oriented more to the west, with the establishment of Antioch (300 B.C.) as a new W capital (although Seleuceia, the E capital, was to remain important) and the foundation in Asia Minor of several other great cities designed to foster the spread of Hellenism. The Jews whom he settled in them were also granted citizen rights (Appian, *Syr.* 57; *Ant* 12.3.1 §119).

In 281 B.C. Seleucus consolidated his hold on Asia Minor by the defeat of Lysimachus at Corupedium. He was now poised to take over the Macedonian throne and thus reunify most of Alexander's empire, but en route to Europe he was murdered at Lysimacheia in Thrace by Ptolemy's exiled elder son, Ptolemy Ceraunus.

2. *Seleucus II Callinicus* ("glorious in victory") (246–225 B.C.). Born ca. 265 B.C., the oldest son of Antiochus II and Laodice. His reign saw a disintegration of the Seleucid empire that, despite his efforts, was reversed only under his son Antiochus the Great. Bactria and Parthia became independent, while in the W, Asia Minor was temporarily lost as a result of an invasion by Ptolemy III of Egypt in reprisal for Laodice's murder of his sister Berenice (Third Syrian [or Laodicean] War, 246–241 B.C.; Dan 11:7–9 alludes to this). Seleucus soon regained control of Antioch, but his attempts to recapture all the territory seized by Ptolemy in the E were further hampered by a rebellion in Asia Minor by his younger brother Antiochus Hierax, supported by Laodice. He died in 225 B.C. of a fall from his horse.

3. *Seleucus III Soter* ("savior") (225–223 B.C.). Elder son of Seleucus II, he attempted to recover Asia Minor but was murdered by conspirators while on campaign against Attalus I of Pergamum. He was succeeded by his brother Antiochus the Great; Dan 11:10 alludes to them ("his sons").

4. *Seleucus IV Philopator* ("father loving") (187–175 B.C.). Son of Antiochus the Great and co-ruler with him after the Romans defeated Antiochus at Magnesia in 190 B.C. The terms of the treaty of Apamea (188 B.C.) imposed by the Romans had not only prevented him from pursuing any Seleucid claims to Asia Minor W of the Taurus but had also imposed a huge indemnity. Seleucus had plans to pay this by confiscating the funds in the treasury of the High Temple, but his minister Heliodorus is said to have been prevented from entering the sanctuary by the monstrous apparition of a mounted rider (2 Macc 3:7–39; 5:18; there is also an allusion in Dan 11:20). After a comparatively peaceful reign Seleucus was murdered by Heliodorus in an unsuccessful coup d'état. He was succeeded by his younger brother Antiochus IV Epiphanes.

SEMACHIAH (PERSON) [Heb *sĕmakyāhû* (סְמַכְיָהוּ)]. This name, which means "Yahweh has supported," occurs once in the OT. It also appears in a shortened form, *smky,* in the Elephantine correspondence (*CAP,* 49.1). (Compare also AHISAMACH.) Named as the sixth and last son of Shemaiah, firstborn of Obed-edom, Semachiah is listed among the gatekeepers at the temple in Jerusalem in 1 Chr 26:7. The list in which his name occurs (1 Chr 26:4–8) appears to be the contribution of a reviser

of the Chronicler's organization of the gatekeepers (Williamson *Chronicles* NCBC, 169–70; Rudolph *Chronikbücher* HAT, 173).

SEMANTICS. The scientific study of the meaning of linguistic signs.

———

A. Lexical Meaning of Words
B. Contextual Meaning of Words
C. Phrases and Sentences
D. Grammatical Categories
E. Ethnological and Sociological Categories

———

A. Lexical Meaning of Words

Although linguistic signs apply to all levels of language from morphemes and words to paragraphs and total discourses, it has long been assumed that semantics is primarily the study of the meaning of words. Earlier writings on semantics were even more restricted; they were concerned mainly with the historical development of words and their meanings. Within such a framework it was believed that *words* were the basic semantic elements, each having an inherent original meaning underlying all later developments. Words were thus said to have a "basic" or "real" meaning to be recognized for the proper understanding of an utterance. This approach to meaning, called etymology, was for many centuries the core of semantics. During the 20th century, however, etymology became restricted to the mere history of words and their change of meanings, while semantics emerged as the study of the relationship between meaning (defined as the content of what people intend to communicate) and the linguistic signs used to express such meanings.

This new perspective is based on the insight that "the meaning of a word" is not a statement about something a word "has" as a "possession," but merely that meaning is conveyed by *using* words as conventional linguistic signs to convey certain features of meaning. It further involves the implication that meaning is primary, words secondary. This shift in orientation from "word" ∍ "meaning" to "meaning" ∍ "word" had a significant implication for semantics in suggesting that the meaning of a word cannot be properly expressed merely by substituting another word. Therefore, *paradidōmi* in Greek does not "mean" *betray* in English, but is a Greek term denoting a meaning for which the English term *betray* can be used in certain contexts.

The relevant meaning for which *paradidōmi* is used in Greek comprises a set of semantic features, namely, (1) an interpersonal activity, (2) involving the handing over of someone (either of the in-group or the out-group) to an authority, (3) to deal with such a person according to will or jurisdiction, and (4) usually implying punishment. In English this same set of semantic features can be largely expressed by terms such as *betray, hand over, turn over to,* etc. The term *betray* will not signify an out-group person, while *hand over* or *turn over to* usually do not pertain to an in-group person though it could be used of such a person in certain contexts. *Betray* is semantically more marked than *hand over* or *turn over to. Betray* also involves a component of lack of loyalty which is not signified by *paradidōmi.* The meaning denoted by *paradidōmi* is closer in semantic space to that of *hand over* than to that of *betray.* Nevertheless, the English terms are close enough to be used to translate *paradidōmi* in particular contexts. They are not "meanings" of *paradidōmi;* they are "translational equivalents."

The semantics of words is based upon the fact that the position of a word in an utterance is restricted by its lexical environment. The meaning of *bank* in "go to the bank and cash this check" is different from *bank* in "bank more earth along the fence" or "you can bank on him to do the job" or "she banked the plane to avoid the tower." The same word may be used to signify quite different meanings.

On the contrary, one may use different words to communicate the same meaning. For "bank more earth" one may say "pile (up) more earth" or "heap (up) more earth." Though there may be some subtle difference in meaning between *pile, heap* and *bank,* it is a remarkable characteristic of language that

semantically there is much more in common between different words used to convey essentially the same meaning than between the so-called different meanings of a single word. This fact implies that words function within semantic "fields" or "domains."

In the domain of interpersonal activities involving helping and taking care of, the meaning "to assist someone in supplying what may be needed" (often rendered in English by "help") is conveyed in the Greek NT by *paristamai* (Rom 6:2), *antilambanomai* (Acts 20:35), *epilambanomai* (Heb 2:16), *antechomai* (1 Thess 5:14), *eparkeo* (1 Tim 5:10), *boētheo* (Mark 9:22) and *boētheia* (Heb 4:16), *sumballomai* (Acts 18:27) and *hupolambano* (3 John 8). Though many native speakers undoubtedly would have sensed some subtle contrastive features of meaning, even if these were only of a connotative type or pertained to different levels of formality (since absolute synonyms are not a regular feature of language), the use of *paristamai* in Rom 6:2 is so close in semantic space to the use of the other terms occurring for this same meaning that one can hardly, on the basis of our limited contexts and distance in historical and cultural space, determine any significant contrastive semantic features.

On the other hand, *paristamai* in Rom 6:2 differs considerably in semantic space from *paristamai* in John 19:26, "to stand near or alongside of someone" or in Acts 27:23, "to come to be present at a particular place." The etymological approach to semantics would have tried to find some underlying core connection between these meanings. Such a connection, however, is generally quite artificial and misleading in that it tends to emphasize issues that are very remote and even petty. In semantics it is not so much a matter of comparing the same words, but rather the same meanings. Exegetically this implies that the same word in different passages is no true guide for equating the contents of the passages. Rather, the same meaning expressed, even by different words, should be pursued, and those passages will have a shared semantic feature.

Though in some instances it seems difficult to define the difference in meaning between terms belonging to the same semantic domain, it is important to be alert to possible differences, since in many other instances a semantic domain will highlight the significant contrastive features. For example, in the domain of forgiveness, Greek can use *aphiēmi* for the meaning "to remove guilt resulting from wrongdoing," while *charizomai* denotes "to remove guilt resulting from wrongdoing," but on the basis of one's gracious attitude toward the guilty individual. In both instances one may translate by using English words such as *pardon, forgive, overlook, condone,* etc. Yet the Greek terms differ, not with respect to the difference in meaning of the English translational terms, but in at least one crucial component, namely, that *aphiēmi* is a generic term, while *charizomai* focuses on the attitude of the person doing the forgiving.

The type of semantic relationship exhibited by the foregoing examples may be called contiguous. They are similar in meaning, though they differ mainly in one crucial semantic feature. Other semantic domains may have a hierarchical relationship as in animal-mammal-canine-dog-poodle. Terms such as alienate/reconcile, lend/borrow, hot/cold, and old/young constitute complementary sets in which the semantic components are very similar though reverse in sequence or orientation. A fourth type of relationship involves overlapping in that the terms are maximally similar in meaning and can be used almost interchangeably, as in the set involving *paristamai* above. These differ only in subtle issues of usage or association.

B. Contextual Meaning of Words

What has been discussed above may be called the lexical meanings of words, that is, what a particular word in and of itself contributes to the understanding of an utterance. This type of meaning should be distinguished from a further level of meaning, namely, contextual meaning involving the reference, usage, and inference of lexical meanings in a context. The Hebrew term *bĕʿēr* means lexically a deep hole in the ground, such as a well or pit, but in Ps 69:16 it occurs in a figurative context, "let not the pit close its mouth over me," in which the reference is probably to the underworld. In Greek *skeuos* is a highly generic term for any kind of container, but in the context of Luke 8:16 the reference seems to be to a bowl or bucket, while in Acts 10:11 it is a sheet used as a container. Closely related is the difference between meaning and usage. The Hebrew *tôʿēbâ* means "something that is highly offensive, to the extent of being abominable." It may be used of various activities such as Egyptians eating with Hebrews (Gen 43:32),

homosexual relations (Lev 18:22), unclean animals (Deut 14:3), foreign gods (Deut 32:16), unaccepted customs (1 Kgs 14:24), etc. Yet, it still means "something abominable," the usages are merely examples of abominable entities or activities and are not part of either the lexical or the contextual meaning of the term. Usage is thus much more generic than reference. Yet another distinction should be made, namely, the difference between meaning and inference. In Jer 31:39, "the measuring line shall extend straight forward over the hill," the Heb word *neged* can be translated by "straight forward" or "straight ahead," though its lexical meaning is merely "a position in front of something." In Jer 31:39 the inference of a surveyor's line extending before a person is that it runs straight ahead. One should carefully avoid reading into a word's lexical meaning features derived from other items in a context. Contextual meaning, whether reference, usage, or inference, can be expressed in translating a passage, but not in defining the meaning of a word as such.

C. Phrases and Sentences

Semantics extends beyond the lexical and contextual meanings of words. Phrases and sentences also have multiple meanings and as such they comprise all the distinctions made with regard to the meaning of words. Paragraphs and even total discourses can exhibit similar distinctions. Phrases such as "the book of Moses" may be understood as "the book belonging to Moses" or "the book Moses wrote" or even "the book about Moses." The same phrase may thus have different meanings, and each meaning can be semantically expressed by other phrases or sentences, e.g., "Moses owns a book" or "the book which is in the possession of Moses" or "the book Moses has," etc. Phrases, sentences, paragraphs, etc., can also have reference, usage, and inference. Their meanings can also be defined componentially, but though a larger stretch of language is constituted by the combined data of its members, the meaning is not the sum total of the units. A sentence such as "it is going to rain" can, on the basis of its word level, be understood as meaning that water will fall from clouds onto the ground. Yet a person may pronounce such a sentence to communicate various other meanings in addition to what the word level signifies, e.g., "there will be no tennis today" or "the crops might be saved" or "shelter should be sought." These are inferential meanings of the above sentence, and they function as speech-acts to prompt behavior. The same applies to the meanings of paragraphs and larger discourses. Each level of linguistic structure adds its features to eventually communicate a specific notion.

What makes semantics so extremely complex is that each structure may allow multiple combinations. A sentence such as "I saw his children in Boston" may be interpreted as "I was in Boston and saw his children there" (linking "in Boston" more closely with "I saw") or "I was in Boston and saw his children who live there" (linking "in Boston" more closely with "his children"). Meaning, therefore, is also expressed by the structural arrangement of an utterance.

The syntax of a sentence may allow for different linkages. Some may be as overt as in the above sentence. Others may have a semantic structure that seems somewhat obscure. In Ps 48:2, "the mountain of his holiness," the term "holiness" is syntactically linked to "his," though semantically it pertains to "mountain," meaning "his holy mountain." In Acts 9:36 it is said of Tabitha that she was "full of good works." The term "full" is syntactically linked to "she," yet semantically it designates the quantity of her deeds—"she did many good works." Syntax and semantics are not necessarily related in a direct one-to-one correspondence.

As with words, sentences may not only have more than one meaning, but practically the same meaning may also be conveyed by a number of different sentences. Because sentences are more complex than words, the different sentence structures a speaker may use to communicate almost the same idea can be rather numerous. To reprimand a person, several stylistic choices may be employed, depending on the foci and the harshness of the reprimand. One might say "do not ever be late again," or "I see you tried to be on time," or "I am glad you could make it." The responses elicited by these utterances may be quite varied, depending on the context in which they are used. Yet from the practical context the receptor will know that primarily a reprimand is communicated. The multiple choices are essentially a matter of style.

The semantics of style is extremely varied and complex since it also relates to the communication functions of language, often termed expressive, informative, emotive, imperative, phatic, etc. A phatic

statement such as "how do you do" has meaning in the sense of communicating goodwill and acceptance to a certain extent, though its word-level meaning may be zero. One may say "do this" as a direct command, but the imperative function may also be expressed by "may I ask you to do this for me?"—a question used not to elicit information, but to give a command. Though the function may be the same, the meaning of the command can have quite different inferential semantic components, such as authoritarian versus cordial, or advice versus pleading. Informative speech may often use present tenses of the verb to foreground statements while narrative tenses are used to supply background information. These semantic features are quite subtle and depend largely on the wider discourse structure. Nevertheless, they have important semantic content.

Discourses are semantically arranged by the clustering of units into structural patterns. The theme may occur at the beginning and be explained by enlarging on the same topic. Or one may develop various aspects of a theme and then present the theme as a summary statement. It is also possible to combine these by having the theme in the center of a paragraph. What is important is not so much the types of structural patterns of a discourse, but the extent of its semantic unity in contrast with preceding and following thematic units. The relationships between the constituent units have considerable semantic implications for a receptor's understanding of a passage.

D. Grammatical Categories

Semantics also involves grammatical meaning, such as word order conventions which in some languages may mark the subject of a sentence, conventions of concord marking the immediate constituents in a sentence, or the use of coordination and subordination marking the relationship between nuclear structures. In a sentence such as "she did not respond; she remained silent" the two synonymous expressions are coordinated into one utterance for the sake of emphasis. Coordinate grammatical constructions may also involve different expressions to highlight the range of a discourse setting, to contrast, or to compare. Subordinate grammatical constructions are even more complex and, therefore, semantically more varied in their effect. In "there were many reports of how he has bribed the officials," the subordinate construction involves the content of the report. Likewise, one may have clauses of manner, setting, cause, reason, result, condition, or concession expressed by different subordinate constructions. All these relations are utilized by receptors to analyze and interpret an utterance, and to sense any important semantic implications.

Grammatical categories also involve a number of communication strategies, such as speech perspectives and registers (or levels) of language. One may view a past event from the perspective of its *occurrence* at a particular point in time, as in "Christ died for us," or from the perspective of what happened as a *state of affairs*, e.g., "Christ has died for us." Semantically such a state highlights the present reality of an event. The meaning of tense forms is often a matter of speech perspectives, but nominalization as a stylistic alternative may also focus on a state; for example, "his reputation is impeccable," nominalizes "what people have reported about him." Speech registers are likewise important strategies. Formal speech differs in many ways from casual speech. Frozen language, as in some legal documents or in religious ritual, may have little denotative content, but they contribute significantly to the solemnity of the occasion and as such can influence the understanding of the receptor by means of impact and appeal.

E. Ethnological and Sociological Categories

Semantics also involves ethnological and sociological concerns. People often tend to think of words or sentences wholly in terms of psychological entities, especially the relationship between the referent and the concept. An expression taken at face value may be interpreted quite differently within a particular ethnological and sociological framework. In Acts 14:8–18, where Paul and Barnabas were mistaken for gods, they "tore their clothes." The significance of this action was once misinterpreted by people from a particular culture as indicating that Paul and Barnabas were happy because they were regarded as gods; but in the cultural context of the text of Acts, Paul and Barnabas were expressing their utter indignation with the total misunderstanding of the people they were trying to preach to.

The ethnological and sociological framework within which language is used has a considerable impact on the semantic interpretation of an utterance in a given situation. Linguistic semantics cannot be studied

apart from the semiotics of cultures and customs. Therefore, though semantics is primarily concerned with linguistic signs, the interpretation of linguistic utterances cannot be disassociated from ethnological and sociological concerns. The same applies to psychological attitudes peculiar to particular individuals or cultures. Likewise, logical considerations play an important part in semantics insofar as they focus on the validity of propositions. An expression such as "this man is a woman" may be interpreted logically as a contradiction, while in a particular sociological context it may be understood as meaning "the person you are referring to as a man is in fact a woman," or in another context, "this man is very effeminate."

These issues are very important for the response of receptors to linguistic discourses. People generally understand utterances in terms of their personal presuppositions. A person's ideological beliefs, especially political or religious convictions, have a direct bearing on how language is interpreted. In fact, the mere words and sentences often contribute much less to people's final reaction to a stretch of language than do their presuppositions.

Semantics is essentially an interpretative procedure. Though one may say that semantics primarily has to do with the meaning of linguistic items, the interpretive acts performed by receptors assign meaning to an utterance in terms of an extremely complex network of interrelated features. Every use of language by someone has to do with meaning and understanding, and as such, semantics is perhaps the most crucial component of language.

SEMEIA SOURCE. See SIGNS/SEMEIA SOURCE.

SEMEIN (PERSON) [Gk *Semein* (Σεμειν)]. The father of Mattathias and son of Josech, according to Luke's genealogy tying Joseph, the "supposed father" of Jesus, to descent from Adam and God (Luke 3:26). Codex D omits Semein, substituting a genealogy adapted from Matt 1:6–15 for Luke 3:23–31. Although there are names similar in form in the Hebrew Bible and the LXX (e.g., Exod 6:17: Heb *šmʿy,* Gk *semei;* 1 Chr 5:4: Heb *šmʿyh* and *šmʿy,* Gk *semei*), the only use of significance is in 1 Chr 3:19, where a Heb *šmʿy* and Gk *semei* is said to be the son of Pedaiah and brother of Zerubbabel. Kuhn (1923:212), however, claims that a number of the names in the list in 1 Chr 3:19ff. were transposed in transmission. Kuhn's proposal has not gained adherents, not least because it is questionable on other grounds how closely Luke follows 1 Chronicles (Jeremias 1969:295–96). Most scholars believe that reference to Semein as an ancestor of Jesus occurs nowhere else in biblical documents, including Matthew's

genealogy, and that he falls within a list of seventeen otherwise unknown descendants of David's son Nathan (Fitzmyer *Luke 1–9* AB, 500).

SEMITICISMS IN THE NT. A "semiticism" (or "semitism") in the NT is an aberration of language or style which suggests influence, direct or indirect, of Aramaic or Hebrew upon the Greek. The category includes elements of diction which (1) deviate from known Greek usage so as to conform with natural Aramaic or Hebrew idiom or style, or (2) though attested in Greek are relatively more frequent in the NT, possibly because they happen to coincide with normal Aramaic or Hebrew use.

———

A. Introduction

The detection of semiticisms in the Greek (or Latin) texts of certain noncanonical works (e.g., *1 Enoch*) led scholars to posit Aramaic or Hebrew originals for them, and in a number of cases Semitic originals were subsequently discovered. The better a Greek translation of a Semitic original, the harder it will be to detect as such: only stray traces of the Semitic prehistory may remain. Translation need not be the only explanation of semiticisms: bilingualism would give many similar effects. Both possibilities must therefore be kept in view.

It has also been fashionable to look for another cause of NT semiticisms: imitation (conscious or unconscious) of the Greek style of the LXX. While this may have been a factor, it is of little explanatory help except where the semiticisms in question (1) reflect biblical Hebrew idioms, (2) occur with fair frequency in the LXX as we have it, and (3) are not allusions to some specific OT passage. (Septuagintisms in the gospel of Luke are discussed by Fitzmyer *Luke I–IX* AB, 114–18.) A subtler variant of this explanation is that the NT author involved may have sought to impart realism to his work by making his characters speak the kind of Greek which his prospective readers might recognize as "Jewish." But that still means that the semiticisms need to be noticed as such. Such theories really relate to the manner of composition of a writer and tend to presuppose what they seek to prove. Interpretation of semiticisms should follow, not precede, their identification.

The essential problems of the semiticisms of the NT are thus how to isolate and identify them, and how to interpret them.

B. Identification of Semiticisms

1. Linguistic Criteria. The Hebrew and Aramaic texts from Qumran, Masada, Murabba‘at, and Naḥal Ḥever, along with coins and inscriptions, reveal that in the first two centuries C.E. (and probably earlier also) Aramaic, Greek, and two types of Hebrew (akin to classical and Mishnaic Hebrew respectively) were in use in Palestine. The vital role of Aramaic in the language and life of Jesus and his early followers appears from the various transliterated Aramaic words and sentences attributed to him or to the early

church in the NT, usually followed by a Greek translation or explanation. Examples include *Talitha koum (i)* (Mark 5:41), *ephphatha* (Mark 7:34), *abba* (Mark 14:36 = Rom 8:15, Gal 4:6), and *eloī eloī* (or: *ēli ēli* Matt) *lama sabachthan (e)i* (Mark 15:34, Matt 27:46 = *Tg. Ps* 22:1a). It is natural that Jesus should have uttered his cry of distress on the cross in his native language, and that he should have addressed the comatose daughter of Jairus in hers (Wilcox 1982:470, 476). Hebrew words also occur. Among these is *hosanna* (Mark 11:9, 10; Matt 21:9; John 12:13; *Did.* 10:6; cf. Ps 118:25), while *korban* (Mark 7:11) may be either. These tiny scraps of evidence give valuable clues to the type of Aramaic (and/or Hebrew) spoken by Jesus and his circle, but they do not mean that he or they spoke only Aramaic or only Hebrew.

The linguistic data thus favor the presumption that the influence of Aramaic (and/or Hebrew) upon Greek is reflected in at least some parts of the NT. This presumption will be all the stronger where the material or traditions in question appear to have emerged from circles in which Aramaic or Hebrew was the native language.

However, a particularly intractable problem is that of knowing just what was not grammatical in Greek. Many expressions once thought due to Aramaic or Hebrew influence have been traced in the nonliterary Greek papyri and other sources more or less contemporary with the NT. However, even if an apparent semiticism in the NT does happen to coincide with an expression attested in such Greek material, that does not mean that *in its NT context* the linguistic element involved is not a semiticism. In some cases the Greek of the papyri may have been affected by another local language, such as Aramaic or Coptic (Lefort 1928:152–60; *DBSup* 3:1353). But then some of the NT material or its basic tradition did in fact emerge from Aramaic- or Hebrew-speaking circles. However, where an apparent semiticism does turn up in the Greek papyri, it is probably wise to allow it no more than a supporting role in the argument, and then only where Semitic influence in the NT context is indicated on other grounds.

Next, the fact that Biblical Hebrew was in use in the NT period means that apparent "septuagintisms" must be examined carefully, for they may indeed be genuine cases of Hebrew influence after all. The use of the term "Heaven" in Luke 15:18, 21 as a substitute for the Divine Name can hardly be a septuagintism, while the language of Luke 1–2 has striking links with that of 4Q246 and related texts (Fitzmyer 1979:93). Expressions like *kai egeneto* (= Hebrew *wyhy*) and *en tō* with the infinitive are very frequent in the LXX; although basically Hebraisms, they may, in the NT, be septuagintisms. Whether, say, in Luke or Acts, they are due to the author's choice or were taken over ready made from earlier material is an open question. These doubts mean that such expressions should not be used as evidence of direct Semitic influence.

A serious problem is what in fact constitutes a septuagintism. Thus, appeal is sometimes made here to expressions of a Semitic type which appear only a few times in the LXX. Such cases may indeed be allusions to the OT, but if not, their very rarity makes it highly questionable whether they could have been used by an author to give a work a "biblical" atmosphere. If they are not due to reflection of underlying Semitic tradition or material, they may possibly have crept into the author's style or text from liturgical or other ecclesiastical sources (Wilcox 1965:65–86).

A suspected semiticism must of course be shown to be grammatical in Aramaic or Hebrew. But criteria must be established to determine (1) what kind of Aramaic or Hebrew is the source of the semiticism, and (b) how these languages can be distinguished from one another beneath the present Greek mask.

2. Dialect Models for Aramaic and Hebrew. Texts from which comparative data should be drawn ought ideally to meet certain conditions, namely:

1. They should be as close as possible to the NT in date and place (Fitzmyer and Harrington 1978:420)
2. They should be extensive enough to give statistically reassuring samples of the language
3. They should embody literary forms akin to those in the NT
4. They should be free compositions, not translations
5. They should reflect spoken forms of the language.

The material from Qumran, Masada, Murabba◦at, Naḥal Ḥever, and the contemporary epigraphic data may meet conditions (1), (2), and (4), and the apocalyptic texts may also help with cases like Mark 13 and Revelation. The Palestinian Targums, and parts of Talmud Yerushalmi and the Midrashic literature,

satisfy (2), (3), (4), and (5), but not (1). An examination of the linguistic affinities of the transliterated Aramaic words in the NT shows coherence with the 1st and 2d century C.E. Aramaic texts, and also a suprisingly high correlation with the language of the Palestinian Targums. Indeed, a check of the Aramaisms claimed by Matthew Black (1967) for the Gospels and Acts showed that in the majority of cases where the early texts could be used, their evidence supported the arguments he had built on Targumic Aramaic (Wilcox 1985:101; *ANRW* 2/25/2:988–1007).

3. Aramaic or Hebrew? Two main problems arise here. First, where Mishnaic Hebrew differs from biblical Hebrew, it is often very close to Aramaic, especially in syntax but also in vocabulary. Examples of this include: (1) absence of the "consecutive" verbal construction; (2) use of the participle to express the present (far commoner in Aramaic and Mishnaic Hebrew than in biblical Hebrew); (3) the periphrastic tenses, use of the verb "to be" with a participle to form frequentative and iterative meanings; (4) use of 3d person plural of a finite verb or plural of a participle to indicate an indefinite subject (that is, "they" do *x* = "one" does *x*); (5) the relative particle *š-* or Aramaic *d-*, *dy,* to introduce circumstantial, causal, and (with prepositions) temporal clauses; (6) the ethic dative with *l-;* (7) the "proleptic pronoun":use of a personal pronoun either in the nominative or, with a preposition, in the oblique cases to anticipate a following noun (*ANRW* 2/25/2:993). Second, there is now known to be a real possibility that biblical-type Hebrew may be involved. How are the two types of Hebrew to be distinguished? Aramaic can at times be distinguished from Hebrew (of either sort) through the presence of cognates in vocabulary: e.g., *ʿbd* in Hebrew is "to serve," in Aramaic "to do, make." But this raises the problem of supposed "mistranslations" as signs of semiticism. Of course, such "mistranslations" may in fact be due to bilingualism rather than to actual translation.

C. Types of NT Semiticisms

Apart from transliterated Aramaic and Hebrew, the following is a list of the more convincing examples of semiticisms in the NT.

1. Lexical. *alla = ei mē* or *ean mē,* "except." This use of *alla* has been traced in the Greek papyri (MM, 22), but in Mark 4:22, a saying of Jesus, may it not reflect an underlying *ʾlʾ* (Wellhausen 1911:16–17)? Now *ʾlʾ* "except" does not seem to be attested in early Palestinian sources, but it is common in Targumic Aramaic, Samaritan Aramaic, Christian Palestinian Aramaic and in Mishnaic Hebrew. Semitic influence seems probable, but whether Hebrew or Aramaic is an open question.

anastēthi epi tous podas sou, "stand up upon your feet" (Acts 14:10). 4 Kgdms 13:21 is the only case of this in the LXX and Acts 14:10 does not seem to allude to that passage. The Aramaic idiom occurs in a number of mss of the Palestinian Targums to Gen 38:26 (or 38:25, *Tg. Neof.*), as A. J. Wensinck saw (unpublished note). The Hebrew form (with *ʿmd*, not *qwm*) is found in 1QS 6:13 = "to stand up," as also in *Sipra* (Emor, 14:3).

ginōskein eis, "to be aware of." Luke 19:44 (D it^{d}) has the strange form *ouk egnōs eis kairon episkopēs sou*, "you did not know (of) the time of your visitation," where the usual text reads *ton*, not *eis.* Black (1967:115–16) looked to Aramaism; but the idiom he examined *(ydʿ b-)* occurs not only in 1QH frag. 1:3, 3:4, and 10:3 (?), but also in Mishnaic Hebrew with the meaning "to realize, know of, be aware of" (*m. B.Qam.* 10:8 "if its owners knew neither of its theft *[bgnybtw]* nor of its return *[bḥzyrtw]*"). It may thus be a Hebraism. The passage is in material peculiar to Luke.

eklegesthai en, "to choose from among." This construction in Acts 15:7 may reflect Aramaic *bḥr b-* (Torrey 1916:7, 22). The Greek construction does occur in the LXX some 11 times, but the idiomatic translation (without *en*) predominates by far. The Hebrew idiom occurs at Qumran (1QS 4:22, 10:12, etc.) and in Mishnaic Hebrew. The Greek may be explained as either an Aramaism or a Hebraism.

einai/prostithenai epi to auto. The Qumran texts provide several examples of the Hebrew expressions *lhywt lyḥd* "to be in the fellowship" (1QS 5:2, 6:23, 8:12), and *lhwsyp lyḥd* "to join the fellowship" (1QS 5:7, 8:19, CD 13:11, 16:14). This may well explain the difficult words of Acts 2:47, giving the meaning "the Lord was daily bringing into membership of the fellowship" (Wilcox 1965:93–100).

heuresthēnai eis, "to be found at." Wensinck saw this expression in Acts 8:40 as an Aramaism; cf. *y. Ma‹as. Š.* 5:2, Pal. Tg. Gen 28:1 (MS Paris BN hebr. 110):*w›skḥ bḥrn* (unpublished note; see Wilcox 1965:100). Both passages (interestingly) narrate a miraculous event.

heuriskein, "to be able." The use of Aramaic *›skḥ,* "to find" in the sense "to be able," was noted by Wensinck (see Black 1967:134) as a possible Semitic idiom behind the alternate replacement of the Greek verbs *dynasthai* and *ischyein/katischyein* with *heuriskein* in Codex Bezae (cf. Wellhausen 1911:17). Wensinck cited the Targumic Tosefta to Gen 4:7. Aram *›skḥ* also occurs in the meaning "to be able" in 1QapGen 21:13 (the ordinary meaning "to find" being attested in 1QapGen 21:19; Fitzmyer and Harrington 1978:423). Wellhausen and Wensinck are supported by Qumran Aramaic, and the Targumic data shown to be of greater value than sometimes held.

idou before expressions of time and number. The Greek evidence for this construction is somewhat late (papyri of the 4th–5th century C.E.), and there does not seem to be any Aramaic support for it. Connolly thought its use in Luke 13:16 due to Syriac influence (1936:378–81). The Mishnaic Hebrew use of *hry* "lo" before totals of numbers and times (especially, months, years, etc.) may be relevant: see *m. B. Bat.* 3:1, *m. Sanh.* 1:6.

polis, "province." Torrey's solution of the problem of Luke 1:39, where *eis polin Iouda,* "to the city of Judah," would make better sense as "to the province of Judah," hinged upon the double meaning possible for Hebrew *mdynh* (or Aramaic *mdyn›*) (1912:290–91). The Aramaic case is now supported by documentary material from the NT period, for example, 1QapGen 20:28, 22:4, 5, where the word means "province," and *Meg.* Ta‹an. 12, where it probably means "city" (*ANRW* 2/25/2:1014). Interpretation of the passage as a semiticism is opposed by Fitzmyer (*Luke I–IX* AB, 363).

2. Syntactic. a. Verbal. (1) Participle as Simple Indicative. In Aramaic and later Hebrew (especially Mishnaic) the participle frequently acts as a finite verb, especially in the present tense. 4QAmram^{b} frag. 1:10 reads: "Lo, two were (lit: are) passing judgment (Aram *d›nyn*) on me and saying (Aram *›mryn*)." NT examples include Acts 10:19, *idou andres (duo) zētountes se* "lo, (two) men are looking for you," 14:3 (D), Rev 1:16; 6:5 (Wilcox 1965:122–23; *ANRW* 2/25/2:1016). The idiom does occur in the papyri occasionally, but in the NT it may be a semiticism; whether it calques Aramaic or Hebrew is not clear.

(2) Periphrastic Tenses. The use of the participle with the verb "to be" to represent a continuous aspect (especially the imperfect) is known in Greek, though the construction is not a major feature of Hellenistic Greek. It is found in Hebrew, but is quite usual in Aramaic, Syriac, and Mishnaic Hebrew, and is common in the texts from the NT period from the land of Israel. NT examples include Rev 1:18 "and lo! I am alive *(zōn eimi)* for evermore" (Beyer 1961:199).

(3) Impersonal 3d Person Plural. The 3d person plural active of a finite verb may be used in Hebrew and Aramaic to represent an indefinite subject or the passive voice. Wellhausen noted the impersonal plural as a NT semiticism (1911:18). Examples include: Mark 15:27: "and with him they crucify two robbers"; Acts 3:2: *hon etithoun* "whom they used to put" = "who used to be put"; Acts 19:19; and Rev 16:15: "lest he go naked and they see his shame" (i.e., "lest … his shame be seen").

(4) Redundant Auxiliaries. Aramaic and Syriac at times use certain verbs, for example, *qwm* ("to stand"), *nsb* ("to take"), *‹ny* ("to answer") and *sr›* ("to begin"), as auxiliaries. These verbs introduce the action of the main verb, or, in the case of *qwm,* add an existential predicate. The great difficulty in identifying this construction in the NT is determining whether any given instance is truly pleonastic (Black 1967:125–26).

b. Substantival. (1) Pronouns. (a) The Resumptive Pronoun. The use of a resumptive pronoun after a relative particle is very common in Aramaic and Hebrew (on the phenomenon in biblical Hebrew, Gross 1987; as a syntactic feature of Semitic languages, Khan 1984, 1988). Similar use of pronouns in the Greek of the NT may indicate the influence of Aramaic or Hebrew. The following may be cited as examples: Rev 3:8, "an opened door, which no-one can close *it* (Gk *autēn*)"; 7:22, "to the four angels, to whom it was given *to them* (Gk *autois*)."

(b) The Ethic Dative. In Aramaic and Syriac (but also in Hebrew) the preposition *l-* ("to, for") with pronominal suffixes is often used with the verb superfluously as an "ethic dative." The use may be

documented from 1QapGen 21:19 (*wtbt wʾtyt ly lbyty bšlm,* "and then I returned and came [for myself] to my house in peace"); it also occurs in the Palestinian Targums. Arnold Meyer (1896:124) and Black (1967:104) detected it in John 20:10, where *apēlthon … pros autous hoi mathētai* might represent an Aramaic *ʾzlw lhwn tlmydyy,* "the disciples went (them) away." See also Acts 14:2(D) (Wilcox 1965:132), Luke 10:11 (Joüon 1928:353).

(2) Adjectives. Aramaic and Hebrew typically use the positive (plus the preposition *min*) for the comparative and the superlative. In the NT, compare Matt 22:36, "Which is the *great* (i.e., the greatest) commandment …?"; John 1:15 (cf. 1:10), "He who comes after me is ranked ahead of me, because he was *prior* (lit. "first") to me."

Another variant of the matter may be the expression of the superlative by the positive followed by *en* (= Aramaic or Hebrew *b-*):Luke 1:42, "Blessed art thou among women *(en gynaixin)*" = "Most blessed are thou of women" (cf. Cant 6:1, *hyph bnšym* "most beautiful of [lit.: among] women").

(3) Numerals. In Mur 19 recto 1:10, the Aramaic idiom *lrbʿyn* "fourfold" occurs. There may be an interesting resemblance here with Mark 4:8, *en hekaton,* "one hundredfold," if the Aramaic preposition *l-* can be translated by Greek *en*. The form *eis hekaton,* found for example in Codex Sinaiticus and some other mss at this point, corresponds even better. However, if the Greek text of Mark be read with *hen,* "one," we must allow with Metzger that another Aramaic idiom for "x-fold" employing the noun *ḥd,* "one" (e.g., *ḥd šbʿa,* "sevenfold" [cf. Dan 3:20]), may underlie the Greek of Mark 4:8 (Metzger 1975:83).

(4) Indefinite Article. Use of Greek *heis, mia, hen,* "one," to represent an indefinite article in certain NT passages may reflect the corresponding Aramaic idiom attested, for example, in 4QTLevi ar[a] 2:18, *wmlʾk ḥd,* "and an angel"; Lam R. 1:51, *ʿbr ʿlwy ḥd ʿrby,* "an Arab passed by him." NT cases may be found in Rev 8:13, "and I heard an eagle (Gk *henos aetou*) flying in mid-heaven," and 19:17, "and I saw an angel *(hena aggelon)*." Moulton and Milligan (MM, 187) argue that such a use is found in the papyri, but it seems more likely here in the NT to be due to semiticism.

c. Sentential. (1) Subordination. Subordinate clauses introduced by the Aramaic particle *d-, dy,* or the Hebrew particle *š-* may be ambiguous sometimes, due to the range of meanings which these particles possess, which include:

(a) relative particle = "who" "which"
(b) conjunction introducing a statement of fact = "that" = Gk *hoti*
(c) conjunction = "in order that" = Gk *hina*
(d) marker introducing direct speech = Gk *hoti*
(e) "for" "because"
(f) possibly also "so that" = Greek *hōste* (Black 1967:70)

In addition, the Aramaic particle is used to express possession indirectly in a form which partly replaces the construct state.

Black noted an interesting example of possible confusion of meanings for *d-, dy,* in Mark 8:24, "I see the people, *hoti hōs dendra peripatountas:* because I see them as trees walking." Codex Bezae and some other mss omit *hoti* and *horō* ("I see," second use), reading simply "like trees, walking." W. C. Allen (*Mark* ICC, 330) saw an original Aramaic *d-* here, read as *hoti* ("that") instead of *hous* ("whom"):"whom I see like trees walking" (Black 1967:53–54).

(2) Conditional Clauses. Beyer (1961:271–78) documents complex Aramaic sentences in which the logical relationship "if … then" is expressed by simple coordination of two clauses with the conjunction *w,* "and." NT examples include Matt 11:17, "We piped for you *and* you did not dance, we wailed for you *and* you did not lament"; the implicit logical structure might be paraphrased, "If we pipe for you, you do not dance, if we wail for you, you do not lament" (Beyer 1961:280; see also John 7:4, 21; 9:30). The fact that Matt 11:17 is a saying of Jesus and in synonymous parallelism heightens the chance of its having been influenced by Aramaic (or Hebrew).

(3) Indefiniteness. Aramaic and Hebrew use *k (w)l* to express indefinite countable quantities ("all") or nonspecific selection from definite sets ("any"). The construction occurs especially in generalizing statements. Thus an Aramaic writ of divorce dated to 111 C.E. (Mur 19 ar recto 1:5–7) reads: "you are

authorized on your part to go and become a wife of *any/whatever (kwl)* Jewish man that you wish." Matt 19:3 [RSV] has: "Is it lawful to divorce one's wife for *any* cause?" The Greek *kata pasan aitian* means literally "for *every* cause," suggesting a semiticism.

(4) Negation. The negation of statements involving indefiniteness is sometimes accomplished in NT Greek by use of the negative particles *ou* or *mē* with the pronoun *pas* in the order *ou/mē ... pas* or *pas ... ou/mē.* Turner (1963:196–97) notes that extrabiblical examples of this construction are rare. It occurs in both Aramaic and Hebrew, thus: 1QapGen 11:17, "you may not eat blood at all" *(kwl dm lʾ tʾklwn);* 20:6, etc. See Matt 24:22; Mark 13:30; Luke 1:37; Acts 10:14; Rev 9:4; 18:22; 21:27; 22:3 (LXX Zech 14:11).

(5) Focus. A constituent noun phrase or clause may be moved so that it precedes the verb, and its expected position in the sentence may be occupied by a copy pronoun. This syntax, traditionally called *casus pendens,* is frequent in biblical Hebrew (Gross 1987) and in Semitic languages generally (see Khan 1988). Sentences in the Greek NT exhibiting focus construction may be semiticisms. Matt 5:40 (D) is a clear case: "He who wishes to sue you and take your tunic, leave to him *(autō)* your mantle."

Generalizing statements (see (3) above) may employ focus construction, copying an initial relative clause with a pronoun. Thus, John 6:39: "everything *(pan)* which he has given me, I have not lost any of it *(ex autou),* and I shall raise it *(auto)* up on the last day."

D. Interpretation

Evaluation of the semiticisms in the NT, like much ancient historical and linguistic work, is very dependent on circumstantial evidence. The case for any given example will be strengthened if (1) it occurs in close contiguity with other suspected semiticisms, (2) its context is properly Jewish, and (3) its wider context also reflects knowledge of Jewish exegetical traditions. It may lead to a source theory, but must not presuppose one. Torrey's argument was tied to a documentary theory, which laid it open to needless question. The complex linguistic situation of the land of Israel in NT times requires other possible explanations, such as bilingualism, to be kept in view. Further, after form-criticism and redaction-criticism, not to mention common sense, a multiplicity of routes may have been taken by any piece of material which ended up in the text of the NT, and correspondingly, perhaps more than one different linguistic medium may have affected its transmission. Indeed, the very complexity of the apparent linguistic affinities of NT semiticisms coheres well with what is known from the contemporary Aramaic, Hebrew, and Greek texts, and warns against easy solutions. Every case must be judged on its merits and against its contexts, immediate and wider alike.

SENAAH (PERSON) [Heb *sĕnāʾâ* (סְנָאָה)]. Name of a family of Babylonian exiles who are listed as returnees under the leadership of Zerubbabel and others (Ezra 2:35 = Neh 7:38 = 1 Esdr 5:23 [Gk *Sanaas*]). The presence of Senaah in a section with many geographical names (Ezra 2:21–35) raises the possibility that this family's name was derived from the place 8 miles NE of Jericho which was later known as Magdalsenna (*IB* 3:582). If the names Hasenaah (Neh 3:3) and Hassenuah (Neh 11:9; 1 Chr 9:7) are alternate forms of Senaah, it is better understood as a clan of Benjamin whose name was derived from a personal name. Because of the unusually large number associated with an otherwise unknown place or clan, some have suggested that Senaah is a collective term, perhaps derived from the verb "to hate," which refers to lower classes or to persons unattached to any clan in Judah and Benjamin. (See discussion in Batten, *Ezra and Nehemiah* ICC, 81, and Clines *Ezra, Nehemiah, Esther* NCBC, 53.) For further discussion concerning the list in Ezra 2, see AKKUB.
CHANEY R. BERGDALL

SENATE [Gk *gerousia* (γερουσια)]. In origin a council of nobles organized as an advisory body to the kings of the city-state of Rome, the Senate survived the monarchy to become the de facto ruling body of the Roman Republic. Under the Empire, the Senate largely reverted to its advisory role, though functioning at times as a high court and as an electoral aembly.

The Senate was originally comprised of the heads of the Roman *gentes* or clans, known as *patres* or fathers, along with other individuals appointed by the kings and known as *conscripti.* This small group of nobles functioned in religious and civil capacity as lifelong advisors to a monarch whose selection they proposed. Under the Republic the same advisory function was fulfilled in relation to annually elected consuls who had replaced the kings as heads of state. In the second century of the Republic, after a protracted political struggle, the normally tightly closed ranks of the senatorial patricians opened to admit a large influx of wealthy and talented plebeian families to form an expanded senatorial aristocracy which again closed ranks to protect its elite status as Rome's rulers (de Francisci 1959:546–96, 760–73; Palmer 1970:189–288).

By the era of Rome's conquest of the Mediterranean, the Senate was the single most important component of the government. Elected magistrates, themselves members of the Senate, though not compelled by law to do so, nevertheless always abided by senatorial recommendations or *senatus consulta,* formally enacted opinions of the house. Through this method of giving advice which was invariably taken, the Senate in effect ruled Rome and the empire; it had guided Rome to win by its setting of policy and through military leadership provided at its direction by individual senators. Senatorial leadership deteriorated in the last century B.C. as a result of political factionalism which resulted in civil war and the termination of senatorial governance of Italy and the provinces (Scullard 1959:1–9; Taylor

1949:1–75). The history of the Senate of the Roman Republic is long, and its procedures varied and complicated. The best brief treatment is Momigliano's (*OCD,* 973–74) and the most complete, though somewhat dated, is that of Willems (1878).

Under the Empire, the Senate reverted in large measure to its former role as advisory body to a powerful ruling monarch. As an assemblage its powers were curtailed and its prestige diminished. Individual senators if favored by the emperor continued to exert tremendous influence, however, and were full participants in the governance of empire as agents of its ruler. The Senate as a body retained direct governance of provinces where troop concentrations were unnecessary. New powers, none threatening to imperial rule, were bestowed by Augustus and other early emperors seeking senatorial service in the administration of the empire. Direct legislative authority, appellate judicial powers, and electoral authority for self-perpetuation were among the most important (Talbert 1984:341–491).

The RSV uses the word "senate" exclusively as a translation of Gk *gerousia,* and only with reference to the governing council in Jerusalem from the Hellenistic period on. This is true of both the Apocrypha (Jdt 4:8; 11:14; 15:8; 1 Macc 12:6; 2 Macc 1:10; 4:44; 11:27) and the NT, which has a single reference to "the senate of Israel" (Acts 5:21). See SANHEDRIN.

SENATOR [Gk *gerōn* (γερων)]. The informal title by which members of the Roman Senate were addressed was senator; the technical term *patres et conscripti,* fathers and enrolled members, was the more formal mode of address for senators.

In the Senate of the ancient kings of Rome, membership was by royal appointment and was for life. Senators were the heads of Rome's clans, and addressed as *patres.* Additional members were appointed as *conscripti,* also for life-long terms. With the advent of the Republic, first consuls and then censors appointed members of the Senate. The monarchical practice of lifetime appointment was continued, and new members were regularly adlected from sons of senators. In this fashion membership in the Senate came to be a hereditary right. Moreover, from the Senate membership, state magistracies and priesthoods, military commands and other offices of distinction were filled. From 367 B.C. men from non-senatorial families, *novi homines,* had access to the Senate through election to state offices. Henceforth both election and adlection would stand as legitimate modes for attaining the rank of senator. Distinction between senators was based on elected office held. The highest ranking senators, and those with the greatest privilege within and without the Senate, were men who had served as consuls and were thereafter titled *consulares,* or consular senators. All senators were ranked by censors in an order of seniority based on the attainment of office. Adlected senators who had not yet held office were lowest in rank and known as *pedarii,* foot senators, because their only prerogative was to vote, accomplished by walking from one side of the chamber to the other. Under the emperors membership continued to be based on election to office which in imperial times was conducted by the senate itself, as well as by adlection through the individual appointment of the emperor who had assumed the powers of the censors. The senatorial class became in effect a court aristocracy without real power but privileged to honors and status. To control the action of senators imperial restrictions stipulated the travel, the service, the expenditure, the marriage and family activities of senators and family members (*OCD* 973–75; Gruen 1974:121–211; Talbert 1984:9–112).

In the RSV, the word "senator" is used once to translate Gk *gerōn* with reference to an Athenian senator (2 Macc 6:1), and in another passage is supplied to complete the implications of the verb *bouleuō* "deliberate" (1 Macc 8:15).

SENECA, EPISTLE OF. See PAUL AND SENECA, EPISTLES OF.

SENEH (PLACE) [Heb *senneh* (סֶנֶּה)]. One of two crags at the pass of Michmash, which Jonathan crossed in defiance of the Philistine garrison located there (1 Sam 14:4). The pass is 7 miles NE of Jerusalem, along the Wadi es-Suweinit. The first crag, which v 5 places to the N, was named Bozez. Seneh is the second crag, on the S. The etymology of the name Seneh is uncertain; it may be from *šēn,* "tooth," which would relate to the crag itself, or from *snh,* "thorn bush," which implies the difficulty of crossing.
SIDNIE ANN WHITE

SENIR (PLACE) [Heb *śĕnîr* (שְׂנִיר)]. An alternative name applied to Mt. Hermon. Deut 3:8 locates the range of Israel's conquests in Transjordan between the Arnon Valley (Wadi Mujib at a mid-point on the Dead Sea) on the S and Mt. Hermon to the N. The latter is stated in a note (v 9) to be called Senir by the Amorites and Sirion by the Sidonians. Hermon and Senir are collocated also in Cant 4:8, where the lover is allured to come down from the "summit of Senir and Hermon" (cf. 1 Chr 5:23 concerning the land allocation of half of the Manasseh tribe). The Hebrew "and" in this verse should probably be read as explicative, "that is, i.e." (Baker 1980), indicating the identity between the two names rather than suggesting two different locations (Kallai *HGB,* 310).

In an oracle against Tyre, Ezekiel mentions the import of wood, more particularly fir, from Senir, as well as other woods from Bashan and Lebanon (27:5–6). Both of the latter are also located in N Transjordan. This designation appears less precise, and could be an example of synecdoche in which the whole (the entire Anti-Lebanon mountain range) is identified by one of its parts (Senir/Hermon).

Senir *(saniru)* is known from Akkadian sources dating from the 9th to the 7th centuries B.C. In Shalmaneser's 18th year (841 B.C.), he defeated Hazael of Damascus despite the latter's resorting to his fortress on Mt. Senir "facing the Lebanon" (*ANET,* 280). Sennacherib also associates Senir with Lebanon, calling it its entrance and in another text placing it at the S of the Anti-Lebanon range (see Parpola 1970:304).

SENNACHERIB (PERSON) [Heb *sanḥērîb* (סַנְחֵרִיב)]. The king of Assyria (704–681 B.C.) mentioned in connection with the invasion of Judah during the reign of Hezekiah (2 Kgs 18:13–19:37 = Isa 36–37; 2 Chr 32:1–23). In Assyrian the name is spelled *Sîn-aḫḫē-erība* and means "the god Sin has substituted the dead brothers." The name therefore tells us that Sennacherib was at least the third son to be born to his father Sargon II, but the first one to survive childhood. The reign of Sennacherib (704–681 B.C.) is described in more detail under MESOPOTAMIA, HISTORY OF (ASSYRIA). The biblical narratives about Sennacherib concern two major events, Sennacherib's invasion of Judah and Judah's involvement in a rebellion against Sennacherib led by Merodach-baladan of Babylonia.

A. Sennacherib's Invasion of Judah

The invasion of Judah by Sennacherib has been the subject of much debate among modern historians since the biblical narratives seem to describe the events rather differently from the Assyrian sources. In the Bible, the main narrative is found in 2 Kgs 18:13–19:37 and essentially the same narrative is found in Isaiah 36–37. In brief we read here that Hezekiah, king of Judah, was allied to Egypt, but when Sennacherib invaded Palestine and laid siege to Lachish, Hezekiah sent a valuable amount of treasure to Sennacherib at Lachish in an effort to buy off the Assyrian. Nevertheless, Sennacherib sent an army S under the leadership of his Tartan, his Rabsaris, and his Rabshakeh. Upon arrival the Rabshakeh

approached the walls and addressed a speech to the inhabitants of Jerusalem who were sitting on the walls. In this eloquent speech he attempted to persuade the citizens to turn against their own king Hezekiah and their ally Egypt and surrender the city to the Assyrians without a fight. He pointed out that other cities of Syria and Palestine had had no success in withstanding Assyrian might and the Egyptians had not lifted a finger to help them. He called Egypt a "broken reed" which pierced the hand which leaned upon it. Hezekiah sent out emissaries to negotiate with the Rabshakeh and in particular to try and persuade him to stop speaking to the men on the wall in "the language of Judah." They pleaded with the Rabshakeh to speak in Aramaic since they did not want the common citizens to understand what was being said. The Rabshakeh however refused. The officials returned to Hezekiah reporting that their mission had been unsuccessful. Hezekiah asked the prophet Isaiah for advice. Isaiah counselled him not to submit to the Assyrians and predicted that they would withdraw of their own accord.

In the meantime the Rabshakeh returned to Sennacherib, who was now besieging Libnah, to report. At the same time a second report came in to Sennacherib that an army led by Tirhakah of Ethiopia was marching against the Assyrians. Curiously nothing further is said about this invasion. In response to the report of the Rabshakeh, Sennacherib sent a second message to Hezekiah which was essentially the same as the first. Hezekiah again consulted Isaiah, and Isaiah gave the same advice, do not submit for the Assyrians will withdraw of their own accord. The biblical narrative then proceeds to say that the "angel of the lord" descended upon the Assyrian camp at night and slew 185,000 warriors. When the survivors woke in the morning and saw their dead comrades, they retreated quickly to Assyria. The narrative concludes with a statement that Sennacherib was assassinated in Nineveh while worshiping in the temple of his god Nisroch. The assassins were two of his sons called Adram-melech and Sharezer, who subsequently fled to "the land of Ararat" (Urartu). Another son of Sennacherib, Esarhaddon, then ascended the throne in Nineveh.

The narrative in 2 Chr 32:1–23 is much shorter but similar to that of 2 Kings and Isaiah already summarized. The version of 2 Chronicles has one extra interesting piece of information, however. It describes how Hezekiah prepared for an Assyrian siege by building fortifications and arming his troops.

B. Judah and Merodach-baladan

The second major event in the Bible concerning the relations between Hezekiah and Sennacherib is described in 2 Kgs 20:12–19; 2 Chr 32:31; Isaiah 39. Once again the fullest version of the events is found in 2 Kings and Isaiah; only a brief summary is given in 2 Chronicles. In these passages we read that ambassadors were sent from Merodach-baladan of Babylonia to Hezekiah. Hezekiah received them cordially and showed them over his palace and treasury. Isaiah castigated Hezekiah for receiving them and predicted that in the future Babylonia would conquer Jerusalem.

To understand these two major events in the context of Assyrian affairs it is necessary to look at the Assyrian sources. From consideration of these it is reasonably certain that Merodach-baladan's ambassadors were sent to Jerusalem early in the reign of Sennacherib. From Assyrian sources it is known that Merodach-baladan led a major alliance against Sennacherib when the latter first came to the throne. This alliance consisted of Chaldeans, Aramaeans, and Elamites. If one dates the Babylonian embassy to Hezekiah to this time, it indicates that Merodach-baladan attempted, perhaps successfully in view of Hezekiah's attitude, to persuade the kingdom of Judah to join in the alliance against Assyria. This would certainly account for Sennacherib's later aggressive action against Hezekiah. The anti-Assyrian alliance was, after many years of fighting, finally defeated and Merodach-baladan eventually disappeared.

Sennacherib's invasion of the kingdom of Judah, as stated earlier, presents problems to modern historians since the Assyrian records and the biblical narratives do not seem to be very close in detail. Both concern an invasion of Palestine by Sennacherib during the reign of Hezekiah and both mention an Assyrian siege of Jerusalem but apart from these essentials they have little in common. According to Sennacherib's annals (*ANET*, 287–88), this king directed his third campaign (701 B.C.) against Syria. After Sidon and Ashkelon were taken by force a large number of other cities and states submitted without a fight and paid tribute. However, the people of Ekron (Amqarruna) were afraid of the Assyrians since they had sent their former king, an Assyrian vassal, as a prisoner to Hezekiah at Jerusalem. Egypt and

Ethiopia now came to the aid of Ekron. The allied forces met the Assyrians at Eltekeh and the Assyrians claimed a victory. The king of Ekron was released by Hezekiah but nevertheless Sennacherib laid siege to Jerusalem. During the siege various surrounding towns were plundered.

Surprisingly, the Assyrian records do not tell us the result of the siege but simply go on to say that Hezekiah sent a large amount of booty to Sennacherib at Nineveh. This concludes the relevant narrative for the campaign of 701 B.C. The only other pertinent Assyrian information is the portrayal of the sack of Lachish on sculptured reliefs found at Nineveh (and now in the British Museum), which is undated, and a broken text in which reference is made to the capture of the Palestinian town Azekah.

C. Historical Reconstruction

It seems that the biblical and Assyrian narratives are so different that they represent two different events. The first was the campaign of 701 B.C. and the second probably took place late in the reign (688–681 B.C.), a period for which no Assyrian annals are preserved. Sennacherib's first Palestinian campaign could have taken place more or less as he described it in his annals. The siege of Jerusalem came to an end when Hezekiah paid a huge tribute to Sennacherib (see 2 Kgs 18:14–16). In subsequent years, Hezekiah, encouraged by the absence of the Assyrian army, must have allied himself to Egypt. At the same time he took the precaution of fortifying Jerusalem to face a siege as narrated in 2 Chronicles. Sennacherib, late in his reign after he had dealt with other problems, was in a position to deal with Hezekiah. Thus, he probably led a second campaign into Palestine which involved among other things the siege of Lachish. It was possibly on this occasion that the Rabshakeh made his vain efforts to persuade Hezekiah to give up without a fight. Tirhakah led an Egypto-Ethiopian force into Palestine to raise the siege. Before the two armies met however a catastrophe befell the Assyrian camp and Sennacherib retreated in haste (cf. Herodotus 2.141). This is a hypothetical reconstruction of the events but it accepts the biblical narrative as essentially accurate while at the same time reconciling it with the Assyrian records. See also Cogan and Tadmor *2 Kings* AB; *CAH* 3/2/23.

SENTENCES OF SEXTUS. See SEXTUS, SENTENCES OF (NHC XII,*1*).

SEORIM (PERSON) [Heb *śĕʿōrîm* (שְׂעֹרִים)]. Head of a priestly family appointed to service by David according to 1 Chr 24:8. Aside from this mention, nothing is known of Seorim. In 1 Chr 24:1–19 twenty-four families of priests are chosen by lot for temple service. They were chosen from the descendants of the sons of Aaron, Ithamar and Eleazar. According to the passage, David was assisted by representatives of the family lines. One of these was the priest, Zadok. The other was Abiathar. The lots were chosen without discrimination, however, Zadok's lineage (Eleazar) contained more heads of families. For this reason, sixteen of the families came from Zadok's side and only eight from Abiathar's. Seorim was elected to the fourth course. Priestly duties rotated among the families according to the order of election.

DONALD K. BERRY

SEPHAR (PLACE) [Heb *sĕpār* (סְפָר)]. One of the boundaries, described as the mountain or hill country of the E, to which the territory of the sons of Joktan extended (Gen 10:30). The other boundary, Mesha, is usually located somewhere in N Arabia. Because of similarities between the names of most of Joktan's progeny and the names of many towns and regions in S Arabia, a location for Sephar in that area has been sought. Two places bearing the name Zafar, one, the site of the Himyarite capital near Sana in the interior of Yemen, the other, in the Hadramaut on the coast near Shihr, have been proposed. While some scholars are dubious about either equation because of the discrepancy in the initial sibilants of the Arabic and Hebrew names, others have felt that the appropriateness of the equation outweighs that discrepancy. Cohen (*IDB* 4:272) has noted that in post-biblical Hebrew *sĕpār* has the meaning "border country" and suggests that perhaps the phrase in Genesis does not refer to a locality but could better be

rendered as: "as far as the border country, that is, the hill country of the east." Without a firm location for Mesha or additional evidence, no conclusive identification is possible.
GARY H. OLLER

SEPHARAD (PLACE) [Heb *sĕpārēd* (סְפָרַד)]. The place where some inhabitants of Jerusalem were exiled (Obad 20). The biblical text gives no indication of the location of Sepharad, but at least three possible locations have been suggested: a city in Spain, possibly Sefarad; a city located in Media; and the city Sardis, located in Lydia of Asia Minor.

The least plausible suggestion originates from the *Targum of Jonathan* which placed Sepharad in Spain. Neiman (1963) suggests that there were at least two cities with the name Sepharad: one designated Sardis in Asia Minor and one called Sefarad in Spain. Jewish tradition preserves the name by calling the Jews from Spain (Sepharad) the "Sephardim" and thereby distinguishing them from the Ashkenazim Jews of Central Europe.

The second possibility comes from several Assyrian inscriptions which record a city named Saparda. One locates this city to the E of Assyria in Media. This location has been determined from a mention of Saparda in the Assyrian annals which record the campaign of Sargon II along the Lower Zab. Other Mesopotamian inscriptions, however, indicate that Saparda was located in Asia Minor. Saparda is mentioned as an ally of the Cimmerians, Medes, and the Minni in their attack on Assyria during the reign of Esarhaddon. This would then locate Saparda, if it is near its allies, to the NW of Assyria. More evidence of a possible Asia Minor location comes from the Behistun inscription which notes that Saparda is between Egypt and Ionia. While another inscription from the same period found at Naksh-i-Rustam, locates it between Cappadocia and Ionia.

The location of Sepharad is also identified with the capital city of Lydia, Sardis, which is located in Asia Minor and is near the modern village of Sart in Turkey (38°28´N; 28°02´E). An Aramaic-Lydian inscription was found at Sardis which preserves the Aramaic name of the city as the same four letters, *sprd,* as the text of Obadiah 20. The date of the inscription is debated (455, 394, or 349 B.C.), but it certainly attests that Sardis is a good candidate for Sepharad. Some have argued that Sardis was too distant to be a possible location of an early Jewish settlement. The city was, however, an important center of trade which would have far reaching contacts. If Sardis is Sepharad it would certainly indicate an early settlement of Jews in Asia Minor. Archaeological evidence at Sardis demonstrates a significant Jewish population in the 2d century A.D. as attested by a large synagogue.

JOHN D. WINELAND

SEPHARVAIM (PLACE) [Heb *sĕparwayim* (סְפַרְוַיִם)]. Sepharvites. One of the places from which the Assyrians, perhaps under Sargon II (722–705 B.C.E.), brought settlers to the cities of Samaria according to 2 Kgs 17:24. The taunting messages from Sennacherib (705–681 B.C.E.), king of Assyria, to the people of Jerusalem in 2 Kgs 18:34 (= Isa 36:19) and 2 Kgs 19:13 (= Isa 37:13) emphasize that the gods and the king of Sepharvaim were unable to resist the Assyrian onslaught.

Albright (*ARI,* 220), among others, located it at Sabarain, a city conquered (ca. 722 B.C.E.) by Shalmaneser V according to the Babylonian Chronicle 1:28 (TCS 5:73). However, Tadmor (cf. Cogan and Tadmor *2 Kings* AB, 199) argues that this place should be transcribed as *šamara›in,* and is to be identified with Samaria. Citing the dual ending on Sepharvaim, Driver (1958:18*) proposed identification with Sippar, an ancient Mesopotamian city (modern Abu Habbah some 20 miles SW of Baghdad, Iraq) which apparently consisted of two towns. The fact that Sippar did not have a king during the Assyrian period and other difficulties militate against Driver's suggestion. Zadok (1976:115) argues for identification with Sipraani, the Chaldean name of a city mentioned in the Murashu documents (5th century B.C.E.) from Nippur in S Mesopotamia, but more data is needed to render this conclusive. Identification with Sepharad by Astour (*IDBSup,* 807) has met with little acceptance. Albright (*ARI,* 220)

and other scholars view the Sibraim mentioned in Ezek 47:16 as a variant spelling of Sepharvaim, while others (e.g., Zadok 1976:116) argue that these were two distinct places.

A related problem is the identification of the gods worshiped by the Sepharvites. According to 2 Kgs 17:31, the people of Sepharvaim worshiped Adrammelech and Anammelech by burning children. Following A. Ungnad, Deller (1965) made the strongest case for equating Adrammelech with Adad-milki, a deity associated with the burning of children in texts from, among other places, Tell Halaf, an ancient town near the Turkish-Syrian border. However, Kaufman (1978) argues that the cuneiform signs read as *Adad-milki* may also have other interpretations. Anammelech has been identified with the enigmatic Anat-melek by some scholars (e.g., Weinfeld 1972:149), and with An (u), the Mesopotamian sky-god, by others (e.g., Cogan and Tadmor *2 Kings* AB, 212).

HECTOR AVALOS

SEPPHORIS (M.R. 176239). Sepphoris was one of the leading cities of Lower Galilee from the early Roman period. Yet much of its history extended back into the OT period. It lay scarcely 4 miles NW of Nazareth on a high hill in a mountainous plain at an elevation of 286 m above sea level. The territory of Sepphoris extended 10 miles NW to the territory of Acco-Ptolemais and 9 miles SE to Mt. Tabor, which suggests that Nazareth belonged to the territory of Sepphoris.

The rabbis believed that Sepphoris was founded by Joshua the son of Nun, and some identified Sepphoris as biblical Kitron (Judg 1:30) or even Rakkath (Josh 19:35; *b. Meg.* 6a). The name of the city means "bird," and one rabbi explained that it got its name because it perched on a hill like a bird (*b. Meg.* 6a).

Pottery sherds of the Iron Age II and perhaps earlier appear on the surface at Sepphoris. A beautifully molded rhyton or drinking vessel of the Persian period found at Sepphoris may hint at the importance of the city during that period. The priestly family of Amok may have settled there after the return from the Exile (Neh 12:7 and 20; *Mishmaroth* 2). Scant remains of the Hellenistic period are known, but the city clearly reached its peak beginning in the Early Roman period.

Sepphoris entered recorded history for the first time in 103 B.C.E. Ptolemy Lathyrus, the King of Cyprus, was at war with King Alexander Jannaeus of Israel. Ptolemy besieged Acco-Ptolemais, then successfully besieged Asochis hardly 5 miles from Sepphoris. He then besieged Sepphoris itself on a Sabbath, but with no success (*Ant* 13.12.5).

If Sepphoris was already a secure, walled city at this period, then it was likely Greek in character, as was Ptolemais, Shikmona, Dora, Strato's Tower, Joppa, Azotus (Ashdod), and other coastal cities. Since Ptolemy besieged Sepphoris on the Sabbath in order to gain advantage, it is likely that it had a large Jewish population.

There is no historical information about the city at the coming of Rome in 63 B.C.E. However in 55 B.C.E. Gabinius, Proconsul in Syria, recognized the strategic importance of Sepphoris and located one of the five Roman Synedria or Councils there, and the only one for Galilee (*Ant* 15.5.4 §91; *JW* 1.8.5 §170). During the winter of 39/38 B.C.E., Herod the Great took Sepphoris during a snowstorm immediately after Antigonus abandoned it (*Ant* 14.15.4; *JW* 1.16.2). Herod retained the city as his N headquarters for the remainder of his reign.

Judah the son of Hezekiah led the Sepphoreans in revolt immediately upon the death of Herod the Great in 4 B.C.E. The Roman governor of Syria, Varus, responded swiftly. He dispatched to Sepphoris a portion of his legions and auxiliary troops under his son and under Caius, a friend, while Varus marched on to Sebaste. His legions sacked Sepphoris, reduced the city to ashes, and sold its inhabitants as slaves (*Ant* 17.10.9; *JW* 2.5.1).

Herod Antipas, son of Herod the Great by the Samaritan wife Malthace, inherited Galilee and Perea (Transjordan) at the death of his father. Antipas immediately set to work to rebuild Sepphoris and its wall, employing craftsmen from villages all over Galilee. It was Sepphoris that Josephus called the "ornament of all Galilee" and "the strongest city in Galilee" (*JW* 2.511; *Ant* 18.27). Evidently it surpassed Tiberias and Julias in beauty and opulence (*Ant* 18.2.1). Antipas probably granted Sepphoris the rank of capital of Galilee (*Ant* 18.2.1).

The works of Herod Antipas at Sepphoris included a theatre that seated 3000, a palace, and an upper and lower city with an upper and lower market. The upper city was predominantly Jewish by the time of the Second Revolt and likely earlier (*b. Yoma* 11a). There was also an "old fort" (*m. ʿArak.* 9.6), which was under the command of a hyparch. There was an archive (*m. Qidd.* 4.6), and certain archives were brought from Tiberias to Sepphoris in the days of Nero (*Life* 38). The Romans later replaced the "old archives" with the "new archives." Excavations at Sepphoris show that workmen quarried stone on the site itself for Antipas' rebuilding of the city.

Other information about the appearance of this Roman city of mixed population comes from the rabbis. They knew the upper and lower market (*b. ʿErub.* 5b), a fortified upper city, a colonnaded street in the middle of the city (*j. Ketub.* 1.25d), a city wall that required repairs from time to time (*b. B. Bat.* 7b–8a), a city gate (*Eccl. Rab.* 3), many shops (*Bar.* B. Bat. 75a), inns, synagogues, schools or academies (*j. Peʾa* 20b, 27–31), private dwellings with upper stories and sometimes with a Roman-style dining room (*Lev. Rab.* c.16.2), and "the wheels of Sepphoris," evidently referring to water wheels that lifted water to the upper city (*Eccl. Rab.* 12.6). There was a flowing spring below the city (*m. Ketub.* 1.10). The territory of Sepphoris extended 16 miles in every direction, according to the rabbis, and flowed with milk and honey (*b. Ketub.* 111b, *b. Meg.* 6a). Water ran down to the city on two aqueducts from springs at Abel 3 miles to the E (*m. ʿErub.* 8.7). The road from Tiberias to Sepphoris was marked by stadia with castra and a "Syrian monument" (*j. ʿErub.* 6.31b).

The destruction of Sepphoris by Varus and its rebuilding by Antipas seems to mark its transition from a Greek city to a loyalist Roman city of Jewish and gentile population. Certainly the rabbis referred to the "old government" of Sepphoris (*m. Qidd.* 4.5), which suggests they remembered the change. After this period many Latin and Greek names appear in the record, including the names of Jews (*Sipre* Dt. 13; *Mid.* Tannaim 7.2; *t. Bab. Metzia* 3.11).

Pharisaic families are scarcely mentioned in the 1st century in Sepphoris. Instead we find references to those with some sort of priestly connection. Sepphoris was therefore likely a priestly or Sadducean city. For example, Jose ben Illem of Sepphoris served as substitute for the High Priest Matthias in Jerusalem on the Day of Atonement, and Arsela of Sepphoris led the scapegoat from the temple into the desert on the Day of Atonement (*m. Yoma* 6.5; *j. Ber.* 3.6b; *t. Taʿan.* 1 end; *j. Yoma* 6.43c; *j. Maʿas. Š.* 5.56a). In this regard it is important that, after 70 C.E. and the destruction of the Second Temple, the second priestly course of Jedʿaiah settled at Sepphoris (*Mishmaroth* 2).

R. Halaphta was a city official and religious leader in Sepphoris during the second half of the 1st century C.E. (*b. Taʿan.* 16b). The beginnings of Pharisaic Judaism at Sepphoris lie in the meeting of R. Halaphta, R. Eleasar ben 'Asaria the smith, R. Huspith the interpreter, R. Jeshebab, and R. Johanan ben Nuri. They met in the smith's shop to decide a religious question (*t. Kelim B. Bat.* 2.2).

Sepphoris did not figure directly in the ministry of Jesus, though it is worth noting that one logical route from Nazareth to Cana of Galilee ran through Sepphoris.

In the course of the devastating First Revolt against Rome, Sepphoris, a Jewish city, remained mainly pro-Roman. Even when the temple was in danger, the Sepphoreans refused to send aid (*Life* 65). The Sepphoreans met the Roman commander Vespasian at Ptolemais and petitioned him for help against their countrymen, who resented it that the city had already made peace with Cestius Gallus and received a Roman garrison (*JW* 3.2.3). Vespasian responded willingly, supplying the city with one thousand cavalry and six thousand infantrymen under Placidius the Tribune (*JW* 3.4.1). These forces successfully withstood an attack of Josephus himself (*JW* 3.4.1). The city responded by depicting Vespasian on one of their coins in the 14th year of Nero (or 68 C.E.), the year before Vespasian was proclaimed emperor. The pro-Roman

attitude of the city also helps explain the special titles for Sepphoris on the same coins. The full inscription reads "In the time of Vespasian, City of Peace, Neronia, Sepphor[is]." That is, the city was named for Nero (a name which did not stick) and was granted a peace title, while the city specifically honored Vespasian.

Hadrian visited Palestine in 130 C.E. In preparation for the *adventus Augusti*, the road from Legio to Sepphoris was built, though there is no record that he visited Sepphoris. There is also very little notice of the city during the Second Revolt of 135 C.E. However, it is said that R. Johanan ben Nuri read the Esther scroll at Purim at night "in the time of danger." (*t. Meg.* 2.4). R. Eleasar ben Perata of Sepphoris was sentenced to death, but escaped punishment through his clever answers (*Midr.* Tanhuma, mis›ai 23). During the Bar Kokhba Revolt every house in the Upper Market was examined for a *mezuzah* on the doorpost. If found, the owners were fined 1000 denarii (*b. Yoma* 11a).

The religious and political complexion of Sepphoris changed after the Second Revolt. Although the *boule* or council of Sepphoris had received permission from Trajan to mint coins before 117–118 C.E. (Sepphoris coin inscription: "Trajan Gave Authority"), no Sepphorean coins of the period of Hadrian are known. Hadrian may have denied Sepphoris the right to mint coins as punishment for the Second Revolt, simply holding responsible one of the largest Jewish cities in the province. When the right to mint coins resumed under Antoninus Pius, the city was known by its new, Roman name, Diocaesarea (the "Divine Caesar").

The 2d century saw the rise of the rabbis at Sepphoris/Diocaesarea. These sages perpetuated and participated in the reconstruction of Pharisaic attitudes and ideals. R. Jose bar Halaphta was a leather-worker and leading Tanna› of the third generation, active from around 120 C.E., and teacher of Judah I. He is the chief authority for the accepted Jewish chronology as fixed in *Seder Olam Rabba.* R. Jose reported that the priestly courses mourned during the week in which they were supposed to serve in the temple (*t. Ta‹an.* 2.3). The names of nineteen other rabbis in Sepphoris/Diocaesarea are known in the 2d century as the city came into its own as a great Jewish intellectual center.

It is also in the second half of the century that we have the first encounters between the rabbis and Jewish Christians at Sepphoris, including Jacob of Kfar Sakhnin (*Eccl. Rab.* 1.8.3). They debated proper interpretation of scripture (*b. Sanh.* 38b; *Ber.* 10a), though the rabbis also debated among themselves whether one should save the scriptures of the heretics, which seems to include Jewish-Christians, should a fire break out on a Sabbath (*m. Sabb.* 16.1).

Near the end of the century Sepphoris was famous as the residence of the Sanhedrin and of Judah the Prince, who compiled and redacted the Mishnah at his school in the city. This dazzling literary and religious development occurred during a period of increased urbanization and yet during a period of agricultural decline (*Gen. Rab.* 90.5).

It was in this period that the legends of the idealized relationship between the emperor and Judah the Prince emerged. These tales may reflect the life and times of the emperor Caracella (198–217 C.E.). Coins of Sepphoris/Diocaesarea from the reign of Caracella bear the legend "Diocaesarea the Holy, (city of) Shelter, Autonomous, Loyal, Friendship and Alliance (between the) Holy Council (of the city) and the Senate of the Romans." This inscription assumes a treaty between Rome and Sepphoris, a treaty as yet unattested in the ancient literature.

At the death of Judah the funeral train stopped at 18 synagogues in Sepphoris/Diocaesarea. This reflects a very strong Jewish population in the city at the beginning of the 3d century C.E. (*Eccl. Rab.* 7.11–12).

The 3d century was a time of major changes for Sepphoris/Diocaesarea. For example the Sanhedrin moved to Tiberias, perhaps even before the death of Judah (*t. Holin* 1). At this time R. Hanina, who lived in the (upper) market of the city (*j. Ta‹an.* 3.4) became Judah's successor in the Academy at Sepphoris. Severe drought also troubled the land, but it persisted longer in the N. The city coinage of Sepphoris/Diocaesarea stopped under Elagabalus, 218–222 C.E.

During the 3d century the problem of liturgies and excessive taxation became acute. Liturgies were levied both on the Council of the city, which was still Jewish, and on guilds (i.e., on the flax [or linen] guild of Sepphoris/Diocaesarea; (*j. Pe›a* 1.1). Economic problems were growing serious enough that

Jewish land around the city was passing into non-Jewish hands (*j. Dem.* 5.8; *j. Giṭ.* 4.9). Yet Sepphoris/Diocaesarea remained an important commercial center (*j. B. Mezia* 5.6).

In 4th century sources we read of the synagogue of the people of Gophna (*j. Sanh.* 10.28a) and the synagogue of the Babylonians (*j. Sabb.* 8a). A "Great Synagogue" of Sepphoris is also mentioned (*Pirqe R. Kahana* 18).

During the 1st half of the 4th century Eusebius claimed that all of Diocaesarea was Jewish (*m.P.*, p. 29). Epiphanius reported that Count Joseph of Tiberias built a church at Diocaesarea with special imperial permission, since there was as yet no large Christian population (*Adv. Haeres.* 1.30). In the same half century R. Jose ben Hanina and R. Abbahu debated about the books of the heretics, which seems to refer to the Jewish-Christians at Sepphoris/Diocaesarea. They certainly knew of a written gospel (Hebrew Matthew?:*b. ʿErub.* 53b; *j. Soṭa* 16b).

A synagogue inscription from a mosaic floor at Sepphoris likely dates to this period. It refers to R. Judan bar Tanhum bar [Buta], who also dedicated the mosaic floor in nearby Cana. Burial inscriptions from tombs S of the city mention a Hoshayah bar Tanhum, a Rabbi Yaakob, a Rabbi Nahum, and a certain Crispina. A Greek inscription is likely from the lintel of a synagogue or school. It mentions a certain Gelasius son of Aetios, Head of a Synagogue, whose family was from Tyre.

In 351 C.E. a man named Patricius led the city in revolt (Aur. Vict., *Caes.* 42.9–12). Gallus Caesar, an Arian Christian responded by destroying the city and selling the survivors into slavery (Socrates, *Hist. Ecc.* 11.33; Sozomen, *Hist. Ecc.* 4.7). The city was immediately rebuilt, and archaeology shows that the top of the city was dominated by a huge military enclave that included the fortress visible on the site to this day. The burn layer associated with Gallus extends everywhere in the 4th century layer at the site.

In 374 the emperor Valentinius exiled to the territory of Diocaesarea Orthodox Christians from Egypt (Palladius, *h.Laus.* ch. 117). This suggests that the city was no longer a cultural force to be reckoned with, as far as the emperor was concerned.

In the 5th century a bishop with a Greek name presided in Diocaesarea. This bishop, Doretheus, took part in the council of Chalcedon in 451 C.E. (Mansi 6.1091E). Probably gentile Christianity had finally gained a secure foothold. During the same century, in Bethlehem, Jerome thought that the tomb of the prophet Jonah was at Diocaesarea. He also believed that the Gath of 2 Kgs 24:25 was in the city territory of Diocaesarea (*Preface to the book of Jonas* 25.1119). The names of prominent rabbis from Diocaesarea are no longer to be found in the tradition.

During the 6th century Christians took the lead politically. In the year 512 C.E. Marcellinus, bishop of Diocaesarea, intervened in the Council of Jerusalem against Severus and the monophysites (Mansi 8.1071C). After 518 C.E. Theodosius reported—wrongly—that Simon Magus was from Diocaesarea (*Topo.* 4.139). The name of the city appears in a tax decree of the emperor Justinian dated 531–32 C.E. In this decree, posted in Beer-sheba, Diocaesarea is taxed 60 gold solidi per year. Its comparatively high tax assessment suggests that it had recovered from the poor economy of the 3d and 4th centuries. In 570 the Pilgrim of Piacenza visited Diocaesarea and other venerated relics of Mary the mother of Jesus, the first mention of this tradition at the city (*Travels* 161). By the 12th century the city was practically empty (Benjamin of Tudela, *Itinerary* 43). In the same period the name "Diocaesarea" had disappeared from memory, and the Arab village that remained was called "Saffuriyeh." This name survived to the early 20th century.

SEPTUAGINT. The most widely accepted designation for a diverse collection of Greek literature encompassing: (1) translations of the contents of the Hebrew Bible; (2) additions to some of its books; and (3) works written originally in Greek (or in some instances in Hebrew) but not included in the Hebrew canon. The word "Septuagint," (from Lat *septuaginta* = 70; hence the abbreviation LXX) derives from a story that 72 (other ancient sources mention 70 or 5) elders translated the Pentateuch into Greek; the term therefore applied originally only to those five books. That story is now acknowledged to be fictitious, yet the label persists by virtue of the tradition. The precise referent of the term Septuagint in modern discussions, and especially of "the Septuagint" is neither consistent nor clear.

A. Terminology

1. The Problem of Terminology. Some scholars use Septuagint (often in quotation marks) to refer only to the Pentateuch while others intend the term to include the entire collection of Jewish-Greek scriptures (1–3 above), reserving the rubric Old Greek (OG) for those books which are translations from Hebrew. Others, recognizing that all the extant Greek mss are corrupt and probably only partially representative of what the original translators intended, use the terms "Ur-Septuagint," "Original Septuagint" or "Proto-Septuagint" to describe the text as it presumably left the translators' hands. Septuagint for some scholars describes a "critical text," i.e., one chosen after careful reading and evaluation of all the available witnesses to the book(s) in question, and determined to be the "nearest approach" to the original translation. Where such critical texts are not established, these scholars would contend that it is inappropriate to speak of Septuagint, only of mss, papyri etc. Still other scholars, viewing the critical process as artificial, cumbersome, time-consuming and subjective, select one or two well-known uncial mss—Codex Alexandrinus (A) and Codex Vaticanus (B) being the most common—as sufficiently representative of the Greek translation. Citations such as LXX^{A}, LXX^{B}, or LXX^{AB} appear in their work—the last being considered more authoritative than either of the first two. Many other scholars, having subjected the matter to little or no critical scrutiny, use Septuagint to refer to any printed edition so labelled, which may be used to correct/adjust readings in the printed editions of the Hebrew Bible. There

are also scholars who dispute the idea of a single original translation to which all deviant witnesses could theoretically be traced. For them it is pointless to speak of Septuagint as a single enterprise since there were multiple translations each reflecting the concerns of specific communities.

The first desideratum concerning Septuagint then is some agreement, if not consensus, on the way the word is being or should be used. What relationships do the diverse Greek witnesses to the books of the Hebrew Bible have to each other on the one hand, and to the various Hebrew witnesses to those very books on the other? It is not sufficient to identify "Old Greek" in contrast to Septuagint (with or without quotation marks) as is so often done, unless one indicates the precise mss or editions in which either may be found.

2. Definition of the Term. For convenience, it is assumed throughout what follows that a single set of original translations of the Hebrew scriptures into Greek was effected in several stages, and in locations not known for sure; that the earliest parts (most likely the Torah) of the translation took place in the 3d century B.C.E. (perhaps in Egypt) and the last parts were completed by the first part of the 1st century B.C.E.; that, in the absence of "hard copy" of these translations, we can recover from the extant witnesses, texts sufficiently reliable to be considered equivalent to the originals, if carefully controlled text-critical principles are employed. This process is being carried out with extreme care in the editions of the Göttingen Septuaginta-Unternehmen (on which see below). It is to the printed texts of these editions (as distinct from readings in their apparatuses), that the term Septuagint as used herein primarily applies. Secondarily, in those books for which full critical editions have not yet been established, Septuagint is considered equivalent to the partially critical texts found in A. Rahlfs' manual edition (Rahlfs 1935). However, despite the long-established contrary practice (such as found in Rahlfs' manual edition), whole books without known Hebrew equivalents are not considered Septuagint. They are usually listed also as Apocrypha and even Pseudepigrapha, and again, since much of discussion concerns translation technique, that question is moot in such books. Where, as in parts of Joshua and all of Judges, Rahlfs prints two lemmata, the is deemed to have not yet been established.

B. Witnesses to LXX

1. Primary Witnesses. a. Papyri. Several papyri containing mostly parts of the Pentateuch and dating from the 2d century B.C.E. to the 1st century C.E. constitute the earliest and most important of the primary witnesses to LXX. Equally important are certain fragments from Qumran. Given their value, these early witnesses are listed below. Only by their number in Rahlfs' numeration (i.e., the number by which they are cited in the Göttingen Septuagint) are their contents, and approximate dates given.

Rahlfs' number	*Contents*	*Date*
957	about 20 verses from Deut 23–38	early 2d B.C.E.
941	fragments from Gen 7 and 38	Late 1st B.C.E.
847	parts of Deut 11 and 31–33	early 1st C.E.
848	parts of Deut 17–33	late 1st B.C.E.
819	Deut 11:4	2d B.C.E.
801	Lev 26:2–16	late 2d B.C.E./early 1st C.E.
805	Exod 28:4–7	ca. 100 B.C.E.
802	Lev 2–5 with lacunae	1st B.C.E.
803	Num 3:30–4:14, with lacunae	1st B.C.E.
943	Minor prophets fragments	late 1st B.C.E./early 1st C.E.

Other unpublished fragments found at Qumran and several papyri, more complete in some instances but later than those listed above, are extant. The most important of these are the Chester Beatty papyri IV and V (Rahlfs 961 and 962) containing with lacunae substantial portions of Genesis 8–46 and dating from the 4th and 3d centuries C.E. respectively. Chester Beatty VI (Rahlfs 963) contains Numbers and Deuteronomy with lacunae and dates from the 2d or early 3d century C.E. (Pietersma 1977). See also

CHESTER BEATTY PAPYRI. Detailed treatments of and Qumran (particularly the witness of the scrolls) are found in *QHBT;* Klein 1974; Ulrich 1978, 1987, 1989; and Jeansonne 1988.

b. Uncials and Cursives. A few fine uncial and hundreds of cursive mss from the 16th century C.E. and earlier, witness to all or parts of LXX. The oldest of these mss (Codex Vaticanus = B, Codex Alexandrinus = A) were printed as texts in some of the early editions of LXX (see below). Full references to these and other mss are found in any modern critical edition and in several Introductions. The definitive descriptions of LXX mss are found in A. Rahlfs, *Verzeichnis der griechischen Handschriften des Alten Testaments* (MSU 2, Berlin, 1914). Critical editions published by the Göttingen Septuginta-Unternehmen provide documentation of the mss, papyri and other witnesses used in each instance, and the reader is directed to these for specifics. Jellicoe has also provided tables of mss collated in the Göttingen and larger Cambridge editions, with cross references to the older edition of Holmes-Parsons in the appendices to his *The Septuagint and Modern Study* (Jellicoe 1968:360–69). The tools for Septuagint study—concordances, grammars, dictionaries and the like—are listed and discussed in the standard Introductions and surveys, and in several modern works (e.g., Tov 1981:142–44; Harl 1988:223–66; Brock, Fritsch, and Jellicoe 1973:23–28).

c. Printed Editions. The first printed text of the complete Septuagint was included in the Complutensian Polyglot prepared in the years 1514–1517 under the auspices of Cardinal Ximenes de Cisneros, of Spain. The Greek text of this Bible, produced with care from selected mss including some sent to the Cardinal from the Vatican Library, formed the basis for LXX columns of four other great polyglots—the Antwerp (1569–72) the Heidelberg (1586–87), the Hamburg (1596), and the Paris (1645). After the printing of the Complutensian but before its publication, Andreas Asolanus issued in 1518–19 a completed edition of the Greek Bible in Venice. That edition, issuing as it did from Aldine press, is usually referred to as the Aldine and seems not to have been based on as wide a selection of mss as the Complutensian. The third and most influential of the older editions of LXX appeared in 1587 under the auspices of Pope Sixtus V. This Sixtina Romana was based primarily on the great Vatican Codex B with its lacunae being supplied from other mss. Numerous editions of LXX have been based on Sixtina and it is to the publication of this great uncial that the practice of identifying LXX with the B text is to be traced.

The fourth major edition of LXX appeared in England in the 18th century (1707–1720). Based on Codex Alexandrinus and produced initially by John Grabe at Oxford, it was completed on his death by able assistants. While in the main the edition was a presentation of the readings of a single codex, it utilized the Hexaplaric symbols (see below) to mark those portions which did not correspond with Masoretic Hebrew. Additions of any kind to the printed text of A were printed in smaller type.

The first attempt to provide what we would call today a critical edition was made under the direction of Robert Holmes of Oxford in the years 1788–1827. The first decade of that period was spent collecting support and collating mss for the project with the aid of scholars both from England and the continent. The first volume, *Genesis,* appeared in 1798, seven years before Holmes' death; the remaining volumes were completed by James Parsons. The printed text was the Sixtine edition but the apparatus included readings of some 300 mss (including 20 uncials), evidence from the Old Latin, Coptic, Arabic, Slavonic, Armenian and Georgian versions as well as patristic citations. The notes included readings from the great editions-Complutensian, Aldine, Grabian and others. While the edition of Holmes and Parsons has been the object of criticism it still remains an invaluable and certainly the largest storehouse of materials concerning LXX.

The 19th-century edition which has had the most lasting impact was begun at Cambridge in 1883. Initially the Syndics proposed to present an edition of LXX and Apocrypha with a critical apparatus containing the variations of all the Greek uncial mss, of select cursives, of the more important versions, of quotations made by Philo and the earlier and more important ecclesiastical writers. As a first step, they produced, between 1887 and 1894, a portable text (edited by the well-known Henry Barclay Swete) using B as text and two or three other uncials as supplements. In time the larger edition of the Cambridge LXX appeared, the early volumes being edited by A. E. Brooke and N. McLean, the later ones by H. St John Thackeray. Though not as wide in scope as the Holmes and Parsons edition, the Cambridge LXX was

executed with greater care. The larger Cambridge LXX also printed the text of B, listing several other witnesses in an apparatus. Its citations, especially of the versions and the patristic citations, have not always proven to be accurate. The project was arrested in 1940 and shows no sign of being resumed.

Modern LXX studies owe much to the work of Paul A. de Lagarde (1827–1891) who, despite his failings, was an exceptionally accomplished scholar by any standard. His primary conviction—the basis for his own activities and the school of LXX thinking to which his name is attached—was that all mss of the LXX present mixed texts, the result of an eclectic process. Thus, the process of arriving at the *Urtext* of the Septuagint must likewise be eclectic. To restore the text, one: (1) needs to be acquainted with the style of individual translators; (2) should give preference to a free translation rather than the slavishly exact one, all other things being equal; (3) should give preference to readings pointing to a Hebrew original other than the MT. Although Lagarde never produced any critical edition, he had hoped, using principles like these, to arrive in due course to the original LXX.

While one may quarrel with the specific results of Lagarde's approach, it is difficult to fault his principles in view of the subsequent history. On Lagarde's death in 1891, his task was taken over by his able student A. Rahlfs. By the beginning of the 20th century, Rudolf Smend and Julius Wellhausen initiated a program to provide the necessary resources for the maintenance and extension of Lagarde and Rahlfs' work, resulting in the establishment of the Göttingen "Septuaginta-Unternehmen" in March, 1908. With this support Rahlfs was able to produce the first critical editions based on his mentor's principles. *Ruth* appeared in 1922, followed by *Genesis* in 1926 and *Psalms* in 1931. His popular edition of the Septuagint based on three major uncials was edited just before his death in 1935 and is perhaps still the most widely used edition of LXX today. From then till now the "Septuaginta-Unternehmen" has produced with unfailing determination the most reliable editions of LXX arranged on Lagardian principles (see below).

2. Secondary Witnesses. Secondary witnesses to the text of LXX consist of: (1) scripture quotations and allusions in Greek preserved in Jewish and Christian authors; and (2) the texts of various versions based on early mss of LXX.

a. Versions. The most valuable of the versions made from Greek are the Syro-Hexaplar, the Coptic, Armenian, Georgian, Arabic, Ethiopic, and Old Latin. The autographs of some versions would have been made from mss that predate considerably our oldest complete extant Greek mss. Vaticanus, for instance, is only a 4th century C.E. ms, whereas versions such as the Coptic and the Old Latin were known to have been prepared in the 2d or 3d century C.E. Thus, the accurate editing and evaluation of the versions illuminate our understanding of the textual history of LXX, if only because in each case their texts, when carefully established and retroverted into Greek, would provide a record of at least one Greek ms from the period of their composition.

Just as the translation from Hebrew into Greek produced changes reflective of the concerns of the Greek translators, so in each of the versions one finds further evidence of local coloring. And just as it is difficult to determine for sure whether a deviant reading in Greek reflects the translator's idiosyncracy or a different Hebrew parent text, so in the versions it is not always clear whether variance is due to the translator or to the text being translated. Likewise, the grammatical and syntactical limitations of each of the target languages affect the translation from Greek and by extension, the interpretation of the value of that version for text criticism.

The relationship of the various secondary witnesses to LXX is only now beginning to become clear. Earlier printed editions of LXX which collated the versions often culled their readings from an easily accessible ms, or from printed editions (of the versions) themselves often based on one or two convenient mss. Thus in many instances the full witness of the secondary version had not been utilized. Critical studies of the Armenian, the Ethiopic and the Coptic (Bohairic and Sahidic) of specific books of LXX have been concluded in recent times and their results would not be reflected everywhere in the Göttingen editions. The present writer's own work on the Bohairic has shown that while in the main the translation follows LXX, there are instances when the relatively late mss that are available retain deviant readings which, while probably the result of inner Coptic developments, could also point to the existence of a

Greek ms now no longer extant. Each of the other versions reflects its own idiosyncracies and the reader is urged to consult the individual studies on them (Fernández-Marcos 1985:15–80; Nagel 1985; 1987; Clear 1973).

b. Patristic Evidence. In addition to the versions made from Greek, the witness of the early Christian writers provides a valuable LXX resource. Though many writers are known to have flourished in a period contemporary with and antecedent to our oldest Greek mss, the record of their writings—commentaries, sermons and the like—comes to us in mss that are themselves much later. Our ability to determine what exactly was said is affected by this historic fact, and also by the fact that well-intentioned copyists often corrected the biblical patristic citation with that of a version of the Bible current in their time. To complicate matters further, the early Christian writer may merely allude to a text or may quote from memory or, what is most frustrating, may quote one form of a biblical text in one instance and a different version of the same text in another. Some fathers consistently quote accurately, others are rather cavalier. Thus recording and evaluating this evidence presents its own challenges.

In summary, the total witnesses to LXX have been estimated to be well over two thousand. Several mss contain only a single book or a small section of a book, other books are witnessed to by hundreds of mss and several are in between these extremes. But together all these sources provide a complete, if somewhat complex picture of the textual backdrop against which LXX studies must be executed.

C. Theories of Origins

1. Aristeas. As suggested above, the best known story of the origin of the Greek translation of the Hebrew Bible is the story of Aristeas, sometimes referred to as the Letter of (pseudo-) Aristeas. The details of this story are so often repeated that only its broadest outline and some of the reasons for its implausibility as history need be mentioned.

The Epistle of Aristeas describes how a King Ptolemy, probably Ptolemy II Philadelphus (285–247 B.C.E.), desiring to collect if possible all the books in the world, and having been informed by his librarian, Demetrius of Phalerum, that the royal library was lacking a copy of the laws of the Jews, sent a letter to Eleazar the high priest in Jerusalem (by the hand of the Aristeas and others) requesting six learned elders from each tribe to perform the translation. The letter is full with details seemingly extraneous to a modern reader—descriptions of the temple, qualifications of the translators, questions by the king to the translators, the nature of the High Priest's garments, and so on. On the arrival of the translators in Egypt, they are received immediately by the king, given the best accommodations and invited to a royal banquet. In due course, Demetrius conducts them to comfortable secluded quarters by the sea where they completed the work in 72 days—precisely as many as the number of the translators. The finished work is highly praised by the Alexandrian Jewish community and it was determined to be so final that a curse would be on any one who, by omission, transposition or addition, would change any part of it. The Egyptian king is impressed with the mind of the Lawgiver and comments on the divine origin of the Law. He dismisses the translators with gifts for themselves, for the High Priest, and with invitations to return.

The story has been augmented and retold by several subsequent writers—Aristobulus, Philo, Josephus, and in various patristic sources. (Extensive discussions of and references to it are found in Jellicoe 1968:29–58; 1974:158–225; Harl 1988:40–68.) It seems to be the product of an unknown Jewish writer in Alexandria writing in the last half of the second, or the first part of the 1st century B.C.E. The narrative contains a number of inconsistencies and inaccuracies, a condition unlikely to have been the case had the writer been a contemporary of the events being described. Most notable is the mention of Demetrius of Phalerum as chief librarian—a position he never held in the court of Ptolemy II since the latter, on his accession had banished him to exile. Another error is the mention of Menedemus of Eritria as being present at the banquet held in honor of the translators when he had already been dead two years before the end of Ptolemy I Soter's reign. Several other points of detail suggest the improbability of the story being historical, among which is the matter of a Greek king being so interested in the Hebrew scriptures, to go to great lengths to secure them. In fact the idea of Greeks translating the religious scriptures of such a minority of their population is highly improbable.

The dating of pseudo-Aristeas's work and the historical circumstances to which it points have generated intense scholarly discussion. Opinions on the date run the gamut from 200 B.C.E. to 50 C.E. As to the real purpose of the work, it has been variously considered as: (1) an apology for the Greek translation of the Torah; (2) a propaganda piece directed at Greeks to show them the superiority of Jewish religion and law; (3) a work which is intended to defend the literary activities of Alexandrian Jews against the attacks of other Jews in Palestine or elsewhere in Egypt; and (4) a propaganda for the original Greek translation against a contemporary revision.

Despite questions about dating and purpose, a broad consensus has emerged concerning the *Letter of Aristeas* on the following points. First, the events described in it relate only to the Pentateuch which was the first part of the Jewish scriptures to be translated into Greek. Second, the translation was an official undertaking supported by Jewish authorities possibly for synagogue and instructional use, and done in Egypt probably in the middle of the 3d century or earlier. Third, the number of translators is not certain.

2. Kahle. While the Aristeas story is the most popular, it is by no means the only theory of LXX origins. Much discussed in recent times is the explanation of the Aristeas account and of the origins of LXX identified with Paul Kahle. Using the analogy of Aramaic Targumim, Kahle suggested (first in 1915 and often thereafter) that the diversity of witnesses to the text of the Greek points to the fact that there was never one original translation but rather several designed to meet the needs of specific communities. The Aristeas story is propaganda for an official revision of earlier translations, not a description of a new one. Kahle finds evidence for his position in the Aristeas text itself, section 30 of which he believed (contrary to most scholars) alludes to the existence of other translations in Greek not in Hebrew; in the differences in the A and B texts of Judges; and in the existence of the different early papyri. For him, the task of scholarship in this field is not to reconstruct or even attempt a hypothetical reconstruction of the original text of the version, but to assemble and examine with the greatest care all the fragments and traces of the earliest forms of the Greek Bible we can discover. It is fair to say that while some reputable scholars found Kahle's thesis appealing if not persuasive, the majority of Septuagintalists have not been convinced by it.

3. Lagarde. More representative of the mainstream of contemporary scholarship is the theory of LXX origins identified with Paul de Lagarde and the Göttingen school. This *Urtext* theory as it is sometimes called, suggests that all mss of LXX can ultimately be traced to one prototype. In order to achieve this, Lagarde theorized that one needed first of all to attempt to reconstruct the original forms of each of the three main recensions of LXX—the Origenian, the Lucianic and the Hesychian—and from them to work back to the *Urtext.* No one, not even Lagarde himself, succeeded in the reconstruction of the *Urtext* conceived in this way. The recension of Hesychius has never been identified with any certainty and much controversy surrounds the Lucianic text. However the basic idea of an original translation for each of the books of LXX is accepted by the vast majority of Septuagintalists and constitutes the working hypothesis of the Göttingen Septuaginta-Unternehmen—the only active institute involved in the preparation of LXX texts.

4. Tov. Recently, a median position between Kahle and Lagarde has been articulated with some vigor by Tov (1981:42, and often elsewhere) who traces it back to Bickerman. Essentially, Tov identifies four stages in the development of the text of LXX: (1) the original translation; (2) a multitude of textual traditions resulting from the insertion of corrections (mainly toward the Hebrew) in all known individual scrolls; (3) textual stabilization in the 1st and 2d centuries C.E.; and (4) the creation of new textual groups and the corruption of existing ones through the influence of the revisions of Origen and Lucian in the 3d and 4th centuries C.E.

Attractive as this position seems in theory, it is problematic on two practical counts. First it assumes that the "original translation" was different from some identifiable "Hebrew" and thus was immediately in need of "correction." A corollary of this assumption is that the original translation was free of human failings so that no traceable "corrections" of any kind would have been present from the start. Second it implies that there was homogeneity in the Hebrew traditions from the earliest times. If we take for granted the possibility that the original translation may have included what to us might seem to be corrections of

and insertions in MT (and this seems eminently plausible), there is no need to make a distinction between (1) and (2) above, and the position is not a median position at all but rather a refinement of the Lagardian hypothesis.

5. Other Theories. Other theories have been posited but none has gained widespread acceptance; some have been rejected outright. The following are only representative not exhaustive. Originated by O. G. Tychsen (1734–1815) and revived by F. X. Wutz (1883–1938) is the so-called transcription theory. It suggests that the LXX translators used a Hebrew text translated into Greek characters. Moses Gaster is identified with a theory which places the milieu of the Greek Pentateuch not in Alexandria as is broadly accepted but rather in Palestine, because only a Palestinian origin could have generated sufficient prestige for the new translation. The decision to produce the Greek OT was a means by which Jews could assert their superiority and antiquity to the Greek speaking world. With H. St. John Thackeray has been identified the liturgical approach, which in its essence suggests that the LXX translation originated from the needs of the Jewish community of Alexandria, which required a translation of the Pentateuch for synagogue reading. In time, the Latter Prophets, a partial version of the Former Prophets, and then gradually the Writings were all translated. Thackery's position, though speculative, seems plausible enough especially for the Pentateuch.

Several modern scholars have seen the LXX translation as arising out of Jewish community needs other than liturgical—educational, apologetical, proselytizing, and so on. It has even been proposed that Greek Torah received the official sanction because it was a part of the judicial system of the Ptolemies intended to govern the activities of the Jews (Harl 1988:66–78).

D. History of the LXX Text

1. Revisions. Even though the circumstances surrounding the original production of what has become known as LXX are disputed, its subsequent history is much clearer. If Tov is correct, revision of the translations began almost as soon as they were copied for the first time but we can only speculate about the nature of such revisions. We know for sure that by the 2d century C.E., Jewish scholars, reacting to the widespread co-opting and polemical use of the LXX by Christians, began to produce editions intended to correct mistranslations, expunge Christian additions and to conform to the Hebrew text that had by then become normative in Palestine.

a. Aquila. One of these editions was done in 128 C.E. by a certain Aquila, a Jewish proselyte of Pontus and disciple of the famous Rabbi Akiba. Aquila's version was based on strict principles of Jewish interpretation and was slavishly literal to the Hebrew text, even though it is clear that he had a good knowledge of Greek. Aquila's literalism and precision even to the point of using words with similar sounds made his work particularly attractive to his Jewish contemporaries. The version of Aquila was respected for many years. Both Origen and Jerome were impressed with it, the latter even borrowing from that version's readings in the case of a few rare words. Aquila is considered in some circles to be identical with Onqelos, the compiler of a Targum of the Pentateuch and there is virtual unanimity in Septuagintal circles that the extant text of the Greek of Qoheleth is to be identified in some way with him.

The text of Aquila's translation is preserved in a number of different places. The longest text available is a palimpsest containing some 141 verses of the Psalms. In addition we have several other fragments of Origen's Hexapla (see below), the third column of which contained Aquila's translation. Several mss preserve in the margins readings not only from Aquila but also the other two well known revisers Symmachus and Theodotion. Finally, the Church Fathers (especially Eusebius, Theodoret and Jerome) cite the three Jewish revisers in their discussions and commentaries. See AQUILA'S VERSION .

b. Symmachus. Another revision is identified with Symmachus, who produced it toward the end of the 2d century C.E. The edition is distinguished for its literal accuracy and use of good Greek idiom. That is to say, the revision is very precise in some places, whereas in others it translates in keeping with the sense. Some sources identify Symmachus as an Ebionite and thus a Christian; others contend that he was a Samaritan convert to Judaism. SeeSYMMACHUS, SYMMACHUS' VERSION .

c. Theodotion. The third reviser of the Septuagint, Theodotion, presents one of the more intriguing problems in modern LXX studies. According to early Christian writers, there was a historic Theodotion

variously identified as an Ephesian proselyte to Judaism (Irenaeus), and an Ebionite (Jerome) who worked toward the end of the 2d century C.E. The text on which he worked as a reviser seems however to have been different from the standard LXX and to have been in existence since the early part of the 1st century B.C.E. For instance, NT citations from the book of Daniel, where a version generally considered to be Theodotion has supplanted LXX in all but two mss, are drawn from the former not the latter. Early Church Fathers—Clement of Rome, Justin Martyr, Irenaeus—cite Theodotion's text of Daniel. This situation has led many scholars to postulate an Ur- or a proto-Theodotion in order to explain the presence of Theodotionic readings before the time of Theodotion. See THEODOTION, THEODOTION'S VERSION.

d. Proto-Theodotion. The discovery in 1953 of a Greek Scroll of the Minor Prophets (Rahlfs 943 above) at Naḥal Ḥever (and its subsequent edition by D. Barthélemy) led to a rethinking in some circles of the Theodotion problem. Some scholars have been persuaded completely by Barthélemy, and now argue that a 2d century Theodotion is no longer necessary, suggesting that Ur-/proto-/*kaige*- Theodotion was all there was, and that this reviser flourished toward the end of the 1st century B.C.E., his work being the basis for both Aquila's and Symmachus' in light of the demonstrable similarity of all three in so many instances. Other scholars, recognizing that Barthélemy's thesis and assumptions raised as many problems as they solved, have been more cautious and maintain that the historic Theodotion may have worked as a reviser within the tradition reflected by the earlier so-called Ur-Theodotion. Questions have also been raised as to whether or not the so-called Theodotion text in Daniel is to be attributed to Theodotion, or whether the sixth column of Origen's Hexapla—traditionally considered to be Theodotion—is indeed what it has been claimed to be.

Whether or not one accepts a proto-Theodotion, there seems to be agreement on the following characteristics of the revision as per Barthélemy and his followers: (1) the use of *kaige* to translate Hebrew *gam* and *wĕgam;* (2) the use of *anēr* rather than *hekastos* to represent Hebrew *ʾîš;* (3) a tendency to use *ep/apanōthen* as a translation of Hebrew *mʿl* in contrast to LXX, which uses *apo* or *epanō;* (4) the elimination of the historical present in favor of the aorist as a translation of the Hebrew *waw*-consecutive with the imperfect in narration; (5) tendency to stress the atemporal nature of Hebrew *ʾên* by translating it as *ouk estin;* (6) use of phrase *egō eimi* as a translation of Hebrew *ʾānōkî* and to distinguish it from *ʾānî;* (7) avoidance of *eis apantēsin* as a translation of Hebrew *lqrʾt;* (8) a tendency toward transliteration, especially of unknown words; (9) a tendency to systematize the Greek equivalents of specific Hebrew words or roots. Further refinements and characteristics of this recension have also been proposed.

Barthélemy identified the work of the Reviser (who has been later called *kaige*-Theodotion) in the other parts of LXX—Lamentations, Ruth, the B text of Judges, the Theodotionic text of Daniel, the Theodotionic supplements to LXX Jeremiah and Job, and in the Quinta of the Psalter.

It is regrettable that the portion of the LXX—the books of Samuel-Kings—on which so much energy has been spent is not yet available in a truly critical edition. Many conclusions which seem valid with the state of the text that we now possess, may well be adjusted in the future. It is highly likely that several of the readings attributed to revisers of one kind or another would, on careful scrutiny of all the available evidence (not merely that listed in Brooke, McLean, and Thackeray), be determined to be original LXX.

2. Recensions. a. Origen's Hexapla. Next to the story of Aristeas, that of Origen and the Hexapla is perhaps the best known in the history of the LXX text. A native of Egypt and a Christian, Origen was one of those persons with an enormous capacity for detailed and hard work. He also had the benefit of a wealthy benefactor who provided the means to facilitate his voluminous publications. The Hexapla, a massive six-columned work estimated to have been about 6,500 pages long, was completed between 230 and 240 C.E. Origen's chief purpose was to equip Christians for their discussions with Jews, who frequently appealed to the original Hebrew. To this end he arranged in parallel columns the following texts: (1) the Hebrew of his day; (2) the Hebrew text transliterated into Greek; (3) Aquila; (4) Symmachus; (5) LXX, and (6) Theodotion. In some books of the Bible it is reported that Origen added even more columns which he called Quinta, Sexta and Septima; there is also evidence that a version

consisting of only the last four columns, a Tetrapla was in use, though some have argued that the Tetrapla was merely another name for the Hexapla.

Origen's main concern was the fifth column, LXX, which he hoped to link with the Hebrew of his day. To this end he borrowed from Aristarchus (217–145 B.C.E.) certain sigla, well known and used in Alexandrian philological studies, and incorporated them into his work. Words in his LXX without Hebrew counterparts were placed between an obelus and a metobelus. Words and passages in Hebrew without LXX equivalent were copied from another version (most often Theodotion) and inserted into the LXX column between an asterisk and a metobelus.

That would have been an acceptable condition had the Hexapla been retained in its original form, or if Origen did only what he claims to have done. But he seems in fact to have adjusted his text without always indicating where he did, and also the extant witnesses to the Origenian recension do not everywhere retain the hexaplaric signs. Equally problematic was the situation Origen faced when there was variance between the Greek and the Hebrew necessitating a choice from one of the three versions, and when those versions themselves were divergent from each other. His tendency to choose the version closest to the Hebrew meant that in effect the final form of the fifth column was conservative, mixed, and in the last analysis, not much more than a Greek version of Origen's Hebrew. As a result, the work of Origen, rather than helping to clarify a problem, has in many ways created one. The responsible modern text critic tries to get behind Origen—to identify pre-Hexaplaric readings—in order to approach in some reasonable way what might have been original LXX. Because Origen mistakenly believed that the Hebrew text available to him was identical with that from which the Greek translators worked, he unwittingly perpetuated the very confusion he tried to remove.

The Hexapla was not easily duplicated, but its fifth column was copied and widely circulated during the 4th century. A new recension was thereby created consisting of a mixture of Origen's Septuagint with random readings from Theodotion, and Aquila. In addition, the word order of this Hexaplaric Septuagint differed in places from that of the LXX on which Origen worked because he, believing in the primacy of the Hebrew, had deliberately changed the Greek word order to conform to the Hebrew. The copying of the fifth column in isolation from the Hebrew resulted in the gradual misapprehension of the meaning of the Hexaplaric symbols and in the tendency of scribes to omit them. As a result, many extant mss show the influence of Origen's work but do not retain the Hexaplaric signs.

b. The Syro-Hexaplar. Fortunately, the fifth column was translated into Syriac by Paul, Bishop of Tella (618–19) and is known as the Syro-Hexaplar. The translation was made in a monastery not far from Alexandria between 613 and 617 (Baars 1968:1). Opinions vary as to the fidelity and accuracy of the copying of the Hexaplaric signs retained in this Syriac work, but few question its importance.

c. Hesychius. While the Hexapla was copied in Caesarea for use in Palestine, two other revisions were in circulation, so Jerome informs us, one for use in Egypt and the other in Antioch. These recensions are identified with Hesychius and Lucian respectively. So little is known for sure about the Hesychian recension that it can only be mentioned in passing. In recent times Jellicoe (1963:409–18) has argued that the B text reflects this recension. Others have mentioned various witnesses including the Coptic (Bohairic) of the minor Prophets or even the A text.

d. Lucian. The more important revision is identified with a martyr who died in 312 C.E. The nature and person of Lucian and his activity can be established in a number of ways. Eusebius, in his *Church History,* refers favorably to Lucian, commenting on his competence in sacred learning. Jerome makes the most famous comment about the Lucianic revisions in his preface to the books of Chronicles: "… Constantinople to Antioch approves the copies [containing the text] of Lucian the martyr …" (Metzger in Jellicoe 1974:273). According to the description of Pseudo-Athanasius in his *Synopsis sacrae Scripturae,* Lucian, "Using the earlier editions [i. e., of Aquila, Theodotion and Symmachus] and the Hebrew, and having accurately surveyed the expressions which fell short of or went beyond the truth, and having corrected them in their proper places, he published them for his Christian brethren" (Metzger in Jellicoe 1974:274). The ancient witnesses thus attest to the life and activity of Lucian, but give no clear indication of the range of his revision or the sources he may have used.

Modern scholars have identified certain mss in which the text of Lucian is believed to appear. Seminal work in that area was carried out by Ceriani, Field, and Lagarde. Two devices assisted in this attempt: (1) the frequent agreement of the presumed Lucianic text with biblical quotations in the works of early Christian writers especially Chrysostom and Theodoret, both trained in Antioch and likely to have been influenced by the Lucianic revision; and (2) the presence of a siglum *kai "lambda*" (the Greek letter "l") in the marginal readings of several Greek mss, and of the Syriac letter "lomadh (L) marking variants in certain Syriac mss. These sigla, although open to other interpretations, were thought to confirm the existence of Lucian's revision and work. The mss 19, 82, 93 and 108 (Brooke and McLean's boc_2e_2) were identified in the historical books as Lucianic by Ceriani and Field, while Lagarde came to a similar conclusion on his own.

Thus began a detailed investigation for the past 100 years into the Lucianic recension. Rahlfs refined and extended the work of his mentor and confirmed the Lucianic nature of the four codices in the books of Kings. Several attempts were made by other scholars to identify Lucian outside Samuel-Kings; none of these has proven conclusive. In fact it has been shown that in much of the Pentateuch there is no evidence of Lucian at all.

e. Ur/Proto-Lucian. What has been of greater interest, however, is the so-called Ur/proto-Lucian debate. Many have observed the similarity of certain texts known to have existed before the time of the historic Lucian, to what was determined to be "Lucianic" readings. Among these "pre-Lucianic" readings according to Metzger (in Jellicoe 1974:285–88) are parts of the Old Latin version dating from the 2d century C.E., the Peshitta version of the OT, a papyrus fragment of Ps 77:1–18 dating from the 3/2d century C.E., quotations from Justin Martyr (mid 2d century), certain NT quotations, biblical quotations by Josephus of Samuel-Kings, and 2d-century papyrus fragments of Deuteronomy.

The debate on Lucian and proto-Lucian has proceeded into the modern period. Several of these witnesses to a pre-Lucianic text, especially in the Pentateuch (Wevers 1973, 1977; Fernández-Marcos 1978) and the Psalms (Pietersma 1978 and Perkins 1978), have been seriously questioned in recent discussions. Tov (1988:186–87) summarized the four main positions on Lucian research in Samuel-Kings in the following terms:

Rahlfs: Lucian brought the OG in conformity with the Hebrew and at the same time removed the OG from the MT by revising its language and style. Rahlfs also recognized that Lucian reflected ancient elements.

Barthélemy: Lucianic mss (19–82–93–108) in 2 Sam 11:2–1 Kgs 2:11 are the OG and the other mss (formerly considered OG) contain the *kaige*-Theodotion.

Cross: The Lucianic mss in the same passages consist of two layers: (1) a substratum consisting of a text (proto-Lucianic and) revised toward a Hebrew similar to that found in $4QSam^a$; (2) a layer consisting of the historical corrections of Lucian.

Tov: Data do not support Cross' proto-Lucianic revision. Lucian mss contain two layers both containing revisional elements made in the time of the historic Lucian.

One of the clearest syntheses of the issues involved in the Lucianic debate is given by N. Fernández-Marcos (1984:163–74). There he adds an element that should augment Tov's categories above. Marcos would locate the work of Sebastian Brock (1966) between Rahlfs and Barthélemy. Two of Brock's discoveries concerning Lucian in 1 Samuel deserve stressing: (1) the desire to improve the LXX text stylistically by eliminating Hellenistic forms and terms; and (2) the adaptation of the text to the needs of the public reading (e.g., by the insertion of proper nouns instead of pronouns, translation of transliterated words, etc.).

E. LXX as a Translation

The real value of LXX resides not so much in its function as a corrective to some Hebrew text of which we have a copy, but rather as a record of the way in which a group of Jews in the 3d century and for some time thereafter understood their traditions. In the pre-Christian centuries, there was wide textual variety as is evidenced in the discoveries of materials both in Palestine and Egypt, and thus it is well established that the parent texts (and certainly the translators) for each book of the LXX were probably different. It is also

quite clear that the revisional activity which took place after Origen was in fact taking place long before his time, both on the Hebrew and Greek texts. Thus, while it is convenient to use *BHS* or *BHK* as a starting point for understanding what undergirded the LXX translations, it is dangerous, dishonest and wrong to assume that Leningradensis B 19A (MT) lay before the pre-Christian translators (cf. Ulrich 1988). Even more reprehensible is the widespread practice of assuming that the text of one uncial represents LXX. It has been shown that the character of B, the ms most often mistaken for LXX, is by no means consistent throughout. In Daniel, for instance, it witnesses to the text of Theodotion.

In order to evaluate properly the value of LXX as a translation, it is necessary first of all to ensure that the Greek text in use is as close as possible to the original. The process by which this is achieved is not well known nor often discussed, and so the end products of the Göttingen Septuaginta-Unternehmen are mistakenly referred to as eclectic texts. The choice of the word eclectic, while appropriate for some kinds of literature, is misleading and to some degree pejorative in LXX criticism because it suggests that "bits and pieces" from "pure" mss are blended to create a product, the sum of which is less desirable than its parts. In point of fact, as any one who has worked with LXX mss will attest, and as Lagarde himself pointed out long ago, all extant LXX mss (including the great uncials) are corrupt, in view of the complicated history of LXX. (Equally corrupt, for that matter, is the so-called MT.) The task of the modern editor of LXX is thus not one of picking from equals but rather of sorting and making, at every stage, critical judgments about a vast array of uneven witnesses, following well established principles which only sometimes can be clearly articulated. In some rare instances the reading which appears in the text may not even be present in a Greek ms.

An editor gets that kind of confidence only after years of working intimately with the extant materials and reflecting not only on the grammatical and syntactical principles of Hellenistic Greek, classical and post-biblical Hebrew, and Aramaic, but also and especially on the tendencies present in each of the mss in question, and on the complicated textual history of LXX's relationship with the Hebrew traditions.

The process of establishing the critical text begins in Göttingen, where assistants with several years of classical Greek are employed to collate completely and then recollate each of the more than 120 (at least for the Pentateuch, more or less in other books) mss—uncial, cursive, and some fragments—cited in the apparatus. The collations are rechecked before the books are sent to the respective editors, who in turn establish textual groupings, and also identify unaligned mss. For most of the Pentateuch some 17 textual groups and subgroups with varying numbers of *codices mixti* have been shown to exist. The precise relationship of these textual groups to the critical text, to each other and to the unaligned mss is yet to be determined fully, although descriptions of the individual characters of each of these groups are given the Text Histories of the various editions.

The first task of the editor is to augment the collation books by adding the readings of the papyri; the readings of early versions known to have been based on the LXX—Arabic, Ethiopic, Armenian, Old Latin, etc.; other important witnesses to LXX such as the Syro-Hexaplar and the older printed editions—Complutesian, Aldine, Sixtina; the newer printed editions, especially Rahlfs and of course the Hebrew of *BHS*, the Samaritan Pentateuch and, where extant, fragments from Qumran.

One critical part of the editor's task is to address demonstrably Hexaplaric readings—both pluses and minuses—*en route* to determining the critical text. In this regard the readings of the early papyri are scrutinized carefully and given due consideration but not automatic preference, since they too may be corrupt. The dates and format of mss do not necessarily always indicate accurately the level of their reliability; cursive mss, though later than uncials and papyri, often preserve early traditions. Nor is the equation of Leningradensis (MT) with some segment of the Greek textual tradition taken automatically as indicative of original LXX. The governing principles are much more nuanced than that: readings are everywhere "weighed" not counted. When the final text (and detailed apparatus) has been established, it is then returned to Göttingen for careful checking and publication.

This means that it is not possible for average scholars with only the text and apparatus before them to understand fully all of the factors which entered into the textual judgment in every instance. It means also

that unless the scholarly community wishes to perpetuate widespread confusion, the judgment of each editor with respect to the critical text should be respected.

Once the critical text is chosen, the techniques of the translator in, and if possible, the textual character of the witnesses so that book should be examined carefully before any final statement is made about it. Each modern critical edition is accompanied with a textual history prepared by the editor, which attempts to explain the relationships of the various textual families to each other and also to describe particular tendencies in that book. Erroneous assertions about LXX have been published because scholars fail or are unwilling to compare the translation patterns in an entire book and thus confine their observations to isolated readings. Equally dangerous is the widespread practice in scholarship of making comparisons between words found in different books of LXX (or in critical and diplomatic editions) on the unexamined assumption that translators were acquainted with each other's work.

The last point is particularly apposite in view of the diversity of translation styles and textual anomalies which present themselves when one compares the critical LXX text with the text in *BHS*. Although critical texts have not been completed for the whole of LXX and thus any conclusions should be considered tentative, certain patterns of translation have begun to appear. The Pentateuch, it is fair to say, is in the middle of a continuum with wooden/mechanical/literalistic on the one extreme and free paraphrase on the other. On the wooden end is the translation of Ecclesiastes, on the other end is Proverbs and Job. Specific studies of particular books have been done and their conclusions are generally helpful (cf. Tov 1988:168 n. 22). In addition, it has been shown that several types of "exegesis"—theological, midrashic, actualizations and so on—are present in the various books of LXX. Thus, the nature of the LXX translations as a whole, the kinds of techniques and interpretational principles in specific parts, shape our view of the LXX books as translations. The textual anomalies of LXX vs MT are equally significant. Some of the more obvious are listed below:

Exodus: Chaps. 35 to 40 differ considerably from the MT. Some details in the Hebrew are absent, others abridged, and others transposed in the Greek text. Several theories have been proposed to explain the situation as it stands.

Deuteronomy: At the end of the Song of Moses (32:43) the LXX is longer by six verses than the Hebrew; the Greek version of the Shema is different also.

Joshua: Two different descriptions of the territory of Benjamin, Judah and Simeon (15:21–62 and 18:22–19:45) are attested in the main uncials A and B. The discussion of the institution of the cities of refuge (20:4–6) is present in the MT and not in LXX. There is also variance in the ending of Joshua and the beginning of Judges where the Greek contains fifteen lines unattested in MT.

Judges: Rahlfs prints two texts because the main uncials A and B differ so widely. It has been suggested that the B text reflects an early revision (possibly *kaige*-Theodotion?) whereas the A text reflects the Origenian recension. In both texts there are elements not paralleled in the MT. Despite the differences there seems not to be sufficient reason to postulate two translators but rather only two witnesses to a complex textual tradition.

1–2 Samuel: The Greek text is longer in general than the Hebrew, often providing smoother reading. There are also elements in the Hebrew that are not in the Greek. One of the more notable details is the portrayal of David in relation to the Goliath story (1 Samuel 17–18). The Greek text is shorter by 50 verses than the Hebrew.

1–2 Kings: The LXX portrayal of Solomon, Jeroboam, and Ahab differs considerably from the MT. In general the LXX text is more extensive, often giving two accounts of narratives attested only once in the MT. Some of these seem to point to the existence of two textual traditions concerning the schism between Israel and Judah.

1–2 Chronicles: There are differences in the listing of the genealogies of the descendants of Ham, the Greek in general shortening the list found in MT. The Greek text of 2 Chronicles 35 contains readings which, while absent in the MT, are attested in the same form in 2 Kings, 23 and 24.

Psalms: The numbering of the Greek Psalms from 9–147 is generally less by one than that of the MT. Hebrew psalms 9 and 10 and also 114 and 115 are, in both instances, combined in the Greek. Psalm titles in the Greek tend to be longer and more numerous than in the Hebrew.

Proverbs: Several verses in MT have no Greek equivalent and vice versa. Many of the Greek additions may be explained as fusions of two readings or additions from other known contexts, but some suggest that they were drawn from collections different from those reflected in the MT.

Job: The Greek text is shorter by approximately one sixth than the MT. The differences do not everywhere consist of abbreviations. There is a long final addition and alternate rendering of some passages.

Esther: Of the 270 verses in the Greek text of Esther, 107 find no parallel in the MT. The additions are widely distributed.

Jeremiah: The variance between the Greek and the MT is extensive and often observed. The Greek text is shorter by some 2700 words than the MT. It now seems assured that the shorter Greek version is based upon a different Hebrew text than the MT and is not merely a shortening of the latter. The "oracles against the nations" are situated in another place and in a different order than the MT. Chaps. 46–51 in the MT are placed in the LXX following 25:13 and there are significant differences in the contents of Chaps. 10 and 23.

The Minor Prophets: The order of the books differs in the two sources.

Ezekiel: The Greek version differs from the MT in many ways. The difference most often discussed is 36:23–38, the oracle of a new heart. The Greek text seems to have been based on a Hebrew original much shorter than that represented in the MT.

Daniel: Two Greek texts are available for this book, one a revision called Theodotion, the other LXX. Both of these differ with the MT in a variety of ways. In Chap. 4, for example, the LXX text is clearly longer than the MT even though it omits several elements present in the Hebrew. In addition to these differences there appear the well-known additions *Bel and the Dragon, The Prayer of Azariah and the Three Young Men,* and the *Story of Susanna.*

F. Importance of LXX

That the LXX is an important document in biblical studies has long been recognized, but the reasons why have not always been uniformly or clearly expressed. Mainline biblical scholars have therefore tended to use it primarily as a means to correct the MT where the latter is perceived to be corrupt. The foregoing discussions should make clear that the Greek version, although translated from Hebrew, was not necessarily translated from a text accessible to us. The most important reason for studying the LXX then is to read and understand the thought of Jews in the pre-Christian centuries. In the process we may obtain insights into the textual history of the Hebrew Bible. On the purely formal level, any Hebrew text retroverted from the Greek Bible will in fact predate by several hundred years the complete ms on which our Hebrew Bible is based. Septuagint studies are thus important for textual, canonical, and exegetical purposes.

A second reason western scholars especially specialists in Christianity, should consider the LXX, is that it was the Bible of the early Christian Church. It was not secondary to any other scripture; it was Scripture. When a NT writer allegedly urged his audience to consider that all scripture given by divine "inspiration" is also profitable for doctrine, it was to the LXX not the Hebrew that attention was being called. The LXX also provides the context in which many of the lexical and theological concepts in the NT can best be explained. Excellent syntheses of the relationships between LXX and NT have been made. Summaries and evaluations of these discussions and issues appear in Smith (1972 and 1988).

Before and after the adoption of the LXX by Christians—most of whom were former Jews—it was an important document in Hellenistic circles. Early Jewish writers in Greek, such as Philo (ca. 30 C.E.), Paul (ca. 50 C.E.), and Josephus (ca. 80 C.E.) allegorized, expanded and quoted it extensively. The sermons and commentaries of Greek and Latin Church Fathers show evidence that they were using a Greek not a Hebrew Bible; serious study of the early Christian writers cannot proceed without a secure Greek text.

A third reason the LXX is important is that it explains the way the Hebrew Bible was understood and interpreted in antiquity. To the degree that every translation is a commentary, the LXX, as the first translation of the Hebrew Bible, provides insight into the art of translation of a sacred text and the subtle (and at times blatant) way in which it was re-interpreted in the process.

The Septuagint is also important as a reminder to all who would wish for simplistic answers to scriptural and canonical questions, or shortcuts around the complexity surrounding most human endeavors. Some religious movements have sought uniformity of thought and action by destroying or curbing the propagation of dissenting voices. It is to the credit of Judaism and Christianity that the LXX and other materials—Pseudepigrapha, Apocrypha, Targumim, and recently discovered materials such as those found at Qumran and elsewhere—have been freely transmitted.

G. Bibliographic Resources

The International Organization for Septuagint and Cognate Studies (IOSCS) is the ongoing body dedicated to research on the Septuagint. The monograph Series of this group, *SBLSCS*, contains some 24 items all of which are relevant in some way to the Septuagint. In addition, its annual *Bulletin (BIOSCS)* records work published or in progress relating to the Septuagint, and also includes technical articles. The reader is urged to consult that publication for detailed current bibliographies. Many fine overviews on the Septuagint have already appeared and are recommended (Wevers *IDB* 4:273–78; Kraft *IDBSup*, 811–15, and Tov *IDBSup*, 807–11; Tov 1986a and 1988). Some of the more seminal discussions about Septuagint matters have been gathered in the essay collections, festschriften and bibliographies listed in part 1 below. Of these the Brock, Fritsch, and Jellicoe 1973 is the most comprehensive Bibliography to date. In part 2, M. Harl et al. (1988) is especially useful because it lists current extensive bibliographies following the discussions of specific topics.

1. Collections.

Brock, S. P.; Fritsch, C. T.; and Jellicoe, S. eds. 1973. *A Classified Bibliography of the Septuagint.* Leiden.

3. Modern Printed Editions.

Septuaginta, Vetus Testamentum Graecum. 1931– . Auctoritate Academiae Scientiarum Göttingensis editum. Göttingen. Twenty volumes have appeared to date. *Genesis* (1974, ed. J. W. Wevers); *Leviticus* (1986, ed. J. W. Wevers); *Numeri* (1982, ed. J. W. Wevers); *Deuteronomium* (1977, ed. J. W. Wevers); *Isdrae liber I* (1974, ed. R. Hanhart); *Esther* (1966, ed. R. Hanhart; 2d ed. 1983); *Judith* (1979, ed. R. Hanhart); *Tobit* (1983); *Maccabaeorum liber I* (1936, ed. Kappler; 2d ed. 1967); *Maccabaeorum liber II* (1959, ed. Kappler and R. Hanhart; 2d ed. 1976); *Maccabaeorum liber III* (1960, ed. R. Hanhart; 2d ed. 1980); *Psalmi cum Odis* (1931, ed. Rahlfs; 2d ed. 1979); *Iob* (1982, ed. J. Ziegler); *Sapientia Salomonis* (1962, ed. J. Ziegler; 2d ed. 1980); *Sapientia Jesu Filii Sirach* (1965, ed. J. Ziegler; 2d ed. 1980); *Duodecim Prophetae* (1943, ed. J. Ziegler; 3d ed. 1984); *Isaias* (1939, ed. J. Ziegler; 3d ed. 1983); *Jeremias, Baruch, Threni, Epistula Jeremiae* (1957, ed. J. Ziegler; 2d ed. 1976); *Ezechiel* (1952, ed. J. Ziegler; 2d ed. 1977 supplemented by D. Fränkel); *Daniel, Susanna, Bel et Draco* (1954, ed. J. Ziegler). [*Exodus* is expected in 1989 and *2 Esdras* in 1990].
Rahlfs, A. 1935. *Septuaginta, id est Vetus Testamentum Graece iuxta LXX interpretes.* Stuttgart.
Brooke, A. E.; McLean, N.; and Thackeray, H. St. J., eds. 1906–1940. *The Old Testament in Greek according to the Text of Codex Vaticanus Supplemented from Other Uncial Manuscripts.* Cambridge. The following books have appeared: *Genesis* (1906); *Exodus, Leviticus* (1909); *Numbers and Deuteronomy* (1911); *Joshua, Judges, Ruth* (1917); *1 and 2 Samuel* (1927); *1 and 2 Kings* (1930); *1 and 2 Chronicles* (1932); *I Esdras, Ezra, Nehemiah* (1935); *Esther, Judith, Tobit* (1940).

MELVIN K. H. PETERS

SEPULCHER, HOLY. See HOLY SEPULCHRE, CHURCH OF THE; GOLGOTHA

SERA, TEL (M.R. 119088). See ZIKLAG (PLACE).

SERAH (PERSON) [Heb *śeraḥ* (שֶׂרַח)]. The daughter of Asher (Gen 46:17; Num 26:46; 1 Chr 7:30).

Serah also was the granddaughter of Jacob and Zilpah, the maid whom Laban gave to his daughter Leah on the occasion of Leah's marriage to Jacob (Gen 29:24). Serah's name is included in every genealogical list of Asher and she was counted as one of the seventy people who descended to Egypt with Jacob at the time of the severe famine in the land of Canaan (Gen 46:8–27). Because her name also appears in the census list of the clans of Asher (Num 26:46), it is possible that she became the ancestress of one of the prominent clans of Asher. The presence of her name in all of the genealogical lists of Asher gave rise to many stories and legends to explain her prominence among the Asherite clans.

CLAUDE F. MARIOTTINI

SERAIAH (PERSON) [Heb *śĕrāyâ* (שְׂרָיָה)]. Name of eleven individuals in the Hebrew Bible and

Apocrypha. The name is a Qal perfect form of the Heb root *śrh* "to persevere, persist." On rare occasions, the root may mean "to rule." With the divine element, *yah (û),* the name probably means "Yahweh has persevered or persisted" (Fowler, *TPNAH,* 108).

1. The son of Neriah, and a high-ranking official in the government of Judah's last king, Zedekiah (597–587 B.C.E.), who also played a direct role in furthering the ministry of Jeremiah the prophet and lent his hand to help preserve the Jeremiah legacy among exiled Jews in Babylon. According to Jer 51:59–64, Seraiah accompanied Zedekiah on a trip to Babylon in the king's fourth year, i.e. 594/3 B.C.E. The purpose of the royal mission was apparently to reaffirm Judah's loyalty to Nebuchadnezzar following the rebellions in Babylon and Judah earlier that year. Before making this trip Jeremiah instructed Seraiah to take with him a scroll or oracles announcing doom on Babylon (Jeremiah 50–51). Upon arrival he was to read the oracles aloud, then roll up the scroll, tie a stone to it, and cast it into the Euphrates with the words of a curse also provided by Jeremiah. Seraiah's title at the time of the mission was *śar mĕnûḥâ* (Jer 51:59), commonly thought to mean "commander of the caravan," "general quartermaster," (Hitzig 1866:399) or something similar. The LXX has *archōn dōrōn* "officer of the gifts."

Seraiah was brother to Baruch the scribe who figures so prominently in the book of Jeremiah (note the same double patronyms in Jer 32:12 and 51:59). Both no doubt descend from a family of Judean scribes. The biblical tradition does not assign the title "scribe" to Seraiah as it does to Baruch (Jer 36:26, 32), nevertheless Seraiah can be assumed to possess the requisite skills of a scribe and can be considered competent to perform a range of scribal functions. A seal impression has been found which reads, "Belonging to Seraiah, (son of) Neriah" (Avigad 1978a: 56; 1978b), and the probability is high that the seal's owner is the biblical Seraiah ben Neriah. If so, the bulla confirms Seraiah's scribal competencies, while at the same time corroborates the biblical tradition of not labelling him a "scribe" (a seal impression found with Baruch's name on it does contain the title "scribe"; Avigad 1978a).

Jeremiah 51:59–64 is a colophon which Seraiah wrote originally for the scroll of Babylon oracles (cf. LXX 27–28), a scroll which had to be copied also by him before it was thrown into the Euphrates (Lundbom 1986). In the MT, where the foreign nation oracles are relocated to the end of the book, this colophon has an expanded role of concluding the entire book (less chapter 52). Seraiah may thus have been the one who, in Babylon, shaped the final form of the book of Jeremiah (or at least the form underlying our present MT). However, we have no independent evidence that Seraiah was exiled to Babylon, only that he went there on the mission of 594/3. However much Seraiah did help preserve the Jeremiah legacy, his role in any case was not as significant as that of his better-known brother Baruch.

JACK R. LUNDBOM

2. High-ranking government official who held the position of *sōpēr* (royal secretary) during the reign of David (2 Sam 8:17). In two other lists of David's ministers of state, he is called Sheva (2 Sam 20:25) and Shavsha (1 Chr 18:16). In a similar list of officials of the Solomonic period (Mettinger 1971), he is called Shisha (1 Kgs 4:3 (LXX reads "Sheva"); according to 1 Kgs 4:3, two of Shisha's sons held the office of royal secretary). What the original form of the name might have been is disputed. See Rüterswörden (1985).

3. One of the sons of Kenaz and member of the tribe of Judah (1 Chr 4:13).

4. A Simeonite (cf. 1 Chr 4:24–33) mentioned in a list of those who were "princes in their clans" in the time of Hezekiah (1 Chr 4:34–43). He is the son of Asiel and the father of Joshibiah (v 35).

5. Son of Azriel and officer at the court of Jehoiakim (Jer 36:26). Seraiah was one of those sent by Jehoiakim to arrest the prophet Jeremiah and his secretary Baruch following the reading of Jeremiah's scroll in the fifth year of Jehoiakim's reign (604/3 B.C.E.). Seraiah is named together with Jerahmeel "the king's son" and Shelemiah son of Abdeel (Shelemiah's name is omitted in the LXX [Jer 43:26]). Both Jeremiah and Baruch escaped (Jer 36:26).

6. Chief priest of Jerusalem, and one of the Judean royal officials put to death in Riblah by the Babylonians in 587/6 B.C.E. (Jer 52:24–27; 2 Kgs 25:18–21). Seraiah was the son of Azariah and the father of Jehozadak (1 Chr 6:14; alternately Jozadak [Ezra 3:2]). The Chronicler reports that Jehozadak was taken into exile by the Babylonians (v 15). Seraiah's grandson Jeshua, a contemporary of Zerubbabel, was high priest following the exile (Ezra 3:2; 1 Esdr 5:8). According to Ezra 7:1 (= 1 Esdr 8:1), Ezra was "the son of Seraiah, son of Azariah, son of Hilkiah." Although it is not possible that Ezra's father was the Seraiah under consideration here (whereby he would be the brother of Jehozadak), it is possible that Ezra was a direct descendant of Seraiah.

7. One of the Judean troop commanders who, following the destruction of Jerusalem in 587/6 B.C.E., chose to join Gedaliah, the ruler of Judah, at his administrative center at Mizpah (Jer 40:8; 2 Kgs 25:23). He is identified as the son of Tanhumeth, a Netophathite—in the parallel passage (2 Kgs 25:23), the words "the sons of Ephai" (Jer 40:8) are omitted. Presumably Seraiah and his men were among those

who, fearing Babylonian reprisals for the assassination of Gedaliah (Jer 41:18; 2 Kgs 25:26), fled to Egypt (Jer 43:5–7).

8. One of the leaders who returned to Jerusalem and Judah with Zerubbabel (Ezra 2:2; 1 Esdr 5:8). He is called Azariah in Neh 7:7.

9. One of the twenty-two "chiefs of priests" (Neh 12:7) who accompanied Zerubbabel out of exile (12:1). In Neh 12:12–21—closely connected with 12:17—Meraiah is named as head of the priestly family of Seraiah at the time of the high priest Joiakim (12:12), Jeshua's successor (cf. Neh 12:10).

10. One of the priests who was signatory to a legal document of reform associated with Ezra or Nehemiah (Neh 10:30—Eng 10:29). Although the term "covenant" is not used in Neh 10:1–40—Eng 9:38–10:29, the account probably relates to a covenant-making ceremony (cf. 10:30—Eng 10:29) which addressed itself to various concerns of the postexilic community. It would appear that the priests (unlike the Levites) are listed by their family names, and not as individuals. The individual signing under the name of Seraiah—the first name to appear in this list of twenty-one priests—does so as a representative of the high-priestly family (cf. 2 Kgs 25:18 [= Jer 52:24]; 1 Chr 6:14; see #6 above). In Neh 10:1–2, the LXX places "son of" following the name Zedekiah and before the name Seraiah, thereby removing Seraiah from the list of signatories (see Myers *Ezra, Nehemiah* AB; Rudolph *Esra und Nehemia* HAT).

11. A priest who is listed among those who resided in Jerusalem after the exile (Neh 11:3–24). According to the MT, Seraiah is named as "ruler of the house of God" (11:11). However, there is good reason to believe that the MT is to be emended. One possible reading of Neh 11:10–11 is "Jedaiah son of Joiarib, son of Seraiah, son of Hilkiah …" (NEB; JB emends the text to read "Jedaiah son of Joiakim, son of Seraiah …"). With this reading, vv 10–11 provide the genealogy of Jedaiah, the high priest—the names of Jeshua and Jehozadak (Jozadak) are missing. In the similar list in 1 Chr 9:2–34, Seraiah's name fails to appear in 9:11; instead, Azariah is named as the son of Hilkiah. It is very possible that two different individuals are intended (cf. 1 Chr 5:39–40—Eng 6:13–14 and Ezra 7:1 [=1 Esdr 8:1], where it is stated that Hilkiah is the father of Azariah and Azariah the father of Seraiah; see #6 above).

JOHN M. BERRIDGE

SERED (PERSON) [Heb *sered* (סֶרֶד)]. SEREDITES. The oldest of the three sons of Zebulun (Gen 46:14). Sered was the grandson of Jacob and Leah. His name appears in the list of the seventy people who descended with Jacob and his family to Egypt at the time of a severe famine in the land of Canaan (Gen 46:8–27). Nothing is known about Sered. In the census list mentioned in the book of Numbers he is listed as the ancestral head of the family of the Seredites, one of the clans of the tribe of Zebulun (Num 26:26).

———

A. Name

The name "Sermon on the Mount" (henceforth abbreviated SM) designates the first programmatic speech Jesus delivered according to the gospel of Matthew (5:3–7:27). The name SM (*sermo in monte*) was used by Augustine (A.D. 354–430), who in his early commentary (written ca. 392–396 [Mutzenbecher 1967:ix]), most probably the first ever written on SM alone, highlighted the famous text as a literary entity in itself. Since then, the name not only designates the particular text in Matthew, but, for the public mind and especially in the present debate, stands also for the text that sums up the uncompromising ethics of the historical Jesus as distinct from the post-Easter theology of the Christian Church. This simplification, however, proves untenable in the light of scholarship past and present.

Since "mountain" refers to the place where Jesus is said to have presented his sermon (Matt 5:1), the parallel speech in Luke 6:20 b–49 was called after the place where it was delivered (6:12, 17), of the "Sermon on the Plain" (henceforth abbreviated SP).

B. The Addresses

The sources are unclear concerning the question of the original addresses of SM and SP. According to Matt 5:1, SM is addressed to the disciples of Jesus after he had separated them from the crowd and moved to the mountain. In 7:28, however, Matthew says that all, disciples and crowds, praised the sermon because of its authoritative power. Further, who are the disciples? According to Matt 4:18–22, only four have so far been called: Simon Peter and his brother, Andrew, and the two sons of Zebedee. Matthew can hardly have believed that only four disciples were present on the mountain, however, for he certainly holds that Jesus spoke to all the disciples and, indeed, to all the people as well. Similar ambiguity is found in connection with SP: in Luke 6:12–16, Jesus goes up to the mountain in order to elect the Twelve, and in 6:17–19, all come down to the plain and meet with the people, so that according to 6:20a, disciples and people are present. Yet Jesus makes his speech "fixing his eyes on his disciples." Mark 3:13–19 also reports that Jesus went to the mountain to elect the Twelve, but of course there is no parallel to SM and SP in Mark. This situation would indicate that the gospel writers are certainly interested in having Jesus address both the disciples and the people, probably because the disciples (then and in their own time) have been called from the people who represent the general readership of the gospels. The address to the disciples only appears to have come from the earlier sources, SM and SP, and perhaps the Q-versions, Q^{Matt} and Q^{Luke}, into which they were integrated before their inclusion in the gospels (see Strecker 1984:26). In terms of the history of tradition, therefore, both SM and SP serve as instructions given to disciples, a function that is borne out as well by their literary genre and composition.

C. Present Situation of Scholarship

The present situation in scholarship regarding SM and SP shows little consensus. All the fundamental problems are debated: authorship, textual transmission and history of tradition, literary genre, composition and function, historical origin, location in early Christian theology, and relationship to other NT and extra-NT sources (gospels and epistles in the NT, Christian apocrypha, Jewish writings, Greco-Roman philosophy, ethics, and religion). Wide differences regarding the meaning of SM for the modern world characterize the present debates inside and outside the Christian churches. In comparison, SP has attracted little attention until recently.

D. Origin and History of Tradition

According to the gospel authors, both SM and SP go back to Jesus of Nazareth. The authors are historically correct in the general sense that the main theological doctrines expressed in SM and SP point back to Jesus; but their thesis is hardly demonstrable concerning the written texts, which are in Greek and which cannot be shown to be simple translations from the Aramaic. Both SM and SP were conceived in Greek by whoever composed them.

That SM and SP are parallel texts was recognized and debated in the patristic literature. Perhaps Origen (*fr. in Mt.* 79) and certainly Chrysostom (*In Matth. Hom.* 15) believed that the same sermon of Jesus was transmitted twice; but Augustine took the differences between them seriously, regarding them as two different speeches, one (SM) given before the apostles only and the other (SP) addressing all the people (*De consensu evangelistarum* 2.19). Both options have been held through the entire history of exegesis, up to the present time (see Lambrecht 1985:35–40).

Most scholars today assign the composition of SM to Matthew (Guelich 1982; Strecker 1984; Lambrecht 1985; Luz *Matthäus* EKKNT) and that of SP to Luke (Schürmann *Lukasevangelium* HTKNT, 385–86; Marshall *Luke* NIGTC, 243–45; Fitzmyer *Luke I–IX* AB, 627–62). For these scholars, Matthew received the basic material from Q and expanded it with other sources he found in his tradition or which he made up himself; he also made editorial changes in the material. Concerning the basic Q-material, some assume that it was, on the whole, identical with SP, while others hold that Q is represented in Matthew and Luke in two recensions (Q^{Matt} and Q^{Luke}) and that SM and SP were transmitted to the gospel writers as part of these two recensions (see Moffatt 1918:194–204; Streeter 1930:249–59; Kümmel 1975:63–80; Lindemann 1984:251–63, 335–39; Strecker 1984:9–12). Some scholars have attempted to reconstruct from SM and SP an earlier Q-Sermon (see, e.g., Schenk 1981; Polag 1982); but it is still uncertain whether SM and SP were part of Q, and if they were, whether there ever was *one* Q-Sermon, and if there were, whether it can be reconstructed from the two recensions. Wrege (1968:1–4, 57, 108–9, 131, 172), however, does not subscribe to the hypothetical Q-source but has Matthew compose SM from sayings clusters in the oral tradition of the sayings of Jesus. Yet Wrege cannot explain—and does not treat—the parallel literary integrity of SP. Betz (1985b) regards both SM and SP as presynoptic compositions older than Q. Constructed for specific purposes, they took their form from the literary genre and function. As the evolving collection Q—really a collection of earlier collections and clusters of sayings *(gnomologium)*—was expanded, SM and SP ended up in the two recensions.

Over the past decades, some scholars have assumed that SM originated in early Jewish Christianity (Streeter 1930:254–59; Dibelius 1953:97:ca. A.D. 50; so also Betz 1985b: 1). Accordingly, SM continues the teaching of Jesus, looking back at it from a later perspective and making a critical and pointed selection of what was then recognized as essential (see G below). More precise data are hard to ascertain, but the central position of Jerusalem, the only place ever named in SM, is conspicuous (5:14, 34d–35; 7:13–14); and an allusion to the Peter-rock tradition in 7:24–25 is conceivable. In later Jewish Christianity, SM exerted an extraordinarily strong influence (*Didache,* Jewish Christian gospels, *Pseudo-Clementines;* Elchasaites).

There are no clues to the origin of SP as a presynoptic source. The text is apparently designed from a Jewish-Christian perspective, although written for gentile Christians.

E. Literary Genre and Function

The literary genre and function of SM was investigated by Betz in 1978 (see Betz 1985b: 1–16), who proposes that SM conforms to the genre of the epitome, which he describes thus (p. 13):

> As a literary work, the epitome is secondary in nature. It is a condensation of a larger work, made by a redactor (who may of course be the same person as the author of the larger work) for a specific purpose. Its characteristics include brevity and precision in selection and formulation. But the epitome is not simply a collection of selected passages. Rather, the author has systematic goals and looks at the work to be epitomized as a whole. What he or she selects and composes into the new literary unit is intended to be a systematic synopsis. In composing the epitome, the author has considerable freedom to be creative, to reformulate, to transpose, to add and omit as necessary in view of the overall demands of the genre and purpose.

Applied to SM, that text conforms to the genre in this way: "The literary genre of the SM is that of an epitome presenting the theology of Jesus in a systematic fashion. The epitome is a composition carefully designed out of sayings of Jesus grouped according to thematic points of doctrine considered to be of primary importance. Correspondingly, its function is to provide the disciple of Jesus with the necessary tool for becoming a Jesus theologian. 'Hearing and doing the sayings of Jesus,' therefore, means enabling the disciple to theologize creatively along the lines of the theology of the master" (p. 15).

The text of SP also falls into the category of epitome and serves the same function. That SP on the one hand is composed in a similar way but on the other hand differs so greatly from SM is due not to a different genre or function but to the different addressees. SM is designed for Jewish Christians, SP for gentile Christians.

F. Composition

Careful literary analyses are indispensable for the question of the literary composition of both SM and SP. These analyses consider form and redaction criticism as well as rhetorical and argumentative strategies. Thus far such analyses have been proposed only in experimental form, but even on that basis one can say that both texts are exceedingly well constructed. Each in its own way is a textual unit with its own form, composition, and theological thought world, similarities notwithstanding. Number symbolism is one of the major elements in the composition of both.

1. The Sermon on the Mount. The number three is of great importance to the composition of SM. As a whole, SM falls into three parts: the exordium (5:3–16), the central section (5:17–7:12), and the concluding section (7:13–27).

a. The Exordium (5:3–16). The exordium begins with an impressive and highly complex series of ten beatitudes (macarisms), whereby the number ten is hardly fortuitous but corresponds to an ordering principle, frequently encountered in Jewish literature, which symbolizes perfection. See BEATITUDES. But matters are still more complicated, for in 5:3–12 two strata can clearly be distinguished. In 5:3–10, a series of eight macarisms, largely parallel in form, have been brought together. Each consists of a distich in the third person plural, the second line of which is invariably introduced by *hoti* ("that"). In patristic exegesis, the number eight (according to other reckonings, the number seven) symbolizes perfection as well. In 5:9–10, two further macarisms have been added secondarily. These secondary expansions bring about changes in form, though it is not clear for what reason. In any case, the symbolism remains constant, since both the number eight (seven) and the number ten express perfection. As a *theologumenon*, perfection itself plays an important role in the SM (5:48).

The phenomenon of the series of macarisms raises the problem of how individual macarisms are related to one another. Again there are wide-ranging discussions among the Church Fathers on this point. They noticed that the first in the series of macarisms speaks of the basic virtue of humility, while the last deals with the vision of God and deification. Thus some patristic expositors interpreted the design as a step-ladder for the ascent of the soul from the elementary virtue of humility to mystical union with God. Though one may be skeptical toward such speculative ideas, it remains necessary to find an explanation more appropriate to the text for why the Beatitudes are arranged in their present order.

In itself, the series of macarisms is by no means uniform, but is made up of four distinct types, each of two lines, with the exception of v 12, which is a tristich. The first and no doubt the "leading" macarism is found in v 3. It has its counterpart in v 10. The first line contains the macarism as such, "Blessed are the poor in spirit," formulated in the third person plural. The designation of those addressed is unusual (see below). The second line constitutes a *hoti*-clause, in which the grounds for the macarism are stated. However, the *hoti*-clause belongs to the macarism in only a qualified sense. The phrase "to them belongs the kingdom of heaven" was originally a verdict that had its place in the last judgment and is anticipated here (cf. Matt 25:34).

The second type is found in vv 4–9. Again the first line contains the macarism, cast in the third person plural, together with the designation of those who are addressed, while the second line is a *hoti*-clause giving the basis for the blessing. But in this instance the *hoti*-clause consists of an eschatological promise, formulated in the future passive. These promises arise through an eschatological interpretation of the *ius*

talionis (law of retribution). The series comprised by vv 4–9 contains macarisms that correspond to individual scenes in which the fate of the righteous in paradise is described. Thus one can see in this section a greatly abbreviated apocalyptic vision of the world to come.

The third type is found only once (v 11). The macarism is now formulated in the second person plural and is not connected with a designation of those addressed. The second line takes the form of a *hoti*-clause. It presents three situations of persecution that the addressees must be prepared to undergo.

The fourth type is a tristich, represented by v. 12. Also formulated in the second person plural, it begins with a double summons to "rejoice and be glad," then passes over into a *hoti*-clause in the second line, which provides the necessary justification. This line consists of a Jewish dogmatic judgment: "Great is your reward in heaven." This verdict is then furnished with its justification in the third line: "for so they persecuted the prophets who were before you." In other words, an historical verdict is rendered by which the present persecution of the community is equated with the persecution of the prophets, that, in accordance with Jewish thought, results in eschatological reward. One must read the argument in reverse, so to speak. The historical verdict rendered in v 12c leads to the dogmatic judgment in v 12b, and both together constitute the basis for the macarism in v 12a.

The beatitudes are followed by a commission of the "Church" (if at this point one can call the Christian community a church), stated as two declarations, each claiming a traditional metaphor of Jewish self-description: the salt of the earth (5:13) and the light of the world (5:14–16).

b. Central Section (5:17–7:12). The main body of SM (5:17–7:12) sets forth what is called in 7:14 "the way to the (eternal) life" (7:14), i.e., guidelines for a way of life. It consists of three parts, the first of which is devoted to the interpretation of the Torah (5:17–48).

This interpretation is introduced by a set of four *hermeneutical principles* (5:17–20) which are regarded as underlying all of the teachings of Jesus. The first principle (5:17) assesses the intention and purpose of Jesus as a Torah teacher and refutes the idea that he had come to abolish the Torah. The second principle (5:18) affirms the authority of the written Hebrew text of Scripture. The third (5:19) defines the status and authority of Jesus' interpretation of the Torah in the Christian community. The fourth (5:20) specifies what is to be understood by righteousness in distinction from Pharisaism.

These principles are then applied in six cases of *halakah*, the so-called *antitheses* (5:21–48). Taken together, all six cases comprise legal issues exemplifying the commandment of Lev 19:18, "Love your neighbor" (5:43). There are two sets of three "neighborly" conflicts, the first set dealing with family conflicts, second with friends and foes, thus covering in principle all interpersonal relationships.

The first antithesis is on murder and focuses on the brother, understood here also in the wider sense of the term (5:21–26). The second antithesis treats adultery (5:27–30), the third divorce (5:31–32). The second set is based on the assumption that broken friendship is the root cause of enmity, and it opens with the fourth antithesis on oath-taking as the opposite of speaking the truth, the mark of true friendship (5:33–37). The fifth antithesis then deals with retaliation (5:38–42), while the sixth leads up to the climax and the role diametrically opposed to treatment of the brother, treatment of the enemy (5:43–48).

The arrangement of the entire series is worked out with great skill down to the smallest detail, and as a whole it amounts to an interpretation of Jesus' love command in terms of Jewish Torah exegesis (cf. also Betz *Galatians* Hermeneia, 274–76). Each antithesis is carefully constructed as a legal and ethical argument interpreting in a parallel pattern Torah prohibitions and prescriptions. The argument proceeds by first refuting a false interpretation of the Torah in order then to submit the right interpretation of the same Torah and to argue the latter rhetorically with the help of illustrative examples, images, and metaphors. Each argument leads up to a conclusion justifying Jesus' interpretation as ethically valid.

The second section of the body (6:1–18) contains *cultic instruction* (see Betz 1985b: 55–69). After a general exhortation (6:1), three subsections deal with the improper and proper performance of the rituals of almsgiving (6:2–4), prayer (6:5–15), and fasting (6:16–18). Analysis shows (see Betz 1985b: 57–59) a highly stylized parallel structure of the three sections and also reveals the insertion of a separate instruction on prayer after 6:5–6 (6:7–15). Composed somewhat differently from the rest of the section, this insertion presents as well different theological ideas. It polemicizes against assimiliation with the

"heathen" and presents a Jewish (-Christian) doctrine of prayer (6:7–8), for which the Lord's Prayer (6:9–13) serves as the authoritative example; to this is joined a "sentence of sacred law" regarding forgiveness (6:14–15).

The third section of the body (6:19–7:12) is composed of seven compositions of *sententiae*, varying in length and character and concluded by their underlying hermeneutical principle, the Golden Rule (7:12). The collection begins with a piece on gathering treasures (6:19–21) and continues with a very succinct composition on vision (6:22–23; see Betz 1985b: 71–87). Next comes a short saying on serving two masters (6:24), followed by two long and highly developed arguments, one on worrying (6:25–34; see Betz 1985b: 89–123) and another on judging (7:1–5). A concise yet cryptic *sententia* on profaning the holy (7:6) is followed by a longer argument on giving and receiving (7:7–11), often thought to refer to petitionary prayer (see Luz *Matthäus* EKKNT, 382–87). While the arrangement appears to be somewhat loose, as is often the case in collections of *sententiae*, the Golden Rule (7:12) is assumed to underlie all components and, indeed, SM as a whole.

c. Concluding Section (7:13–23). The last major part of the SM consists of *eschatological warnings;* again there are three subsections. Indicating the importance of the Two-Way schema for SM, the first exhortation (7:13–14) combines the image of the narrow and the wide gates with that of the rough and the smooth roads: one leads to the eternal life and the other to everlasting destruction. The disciples of Jesus must struggle on the rough road and find the narrow gate, images describing the difficulties of a life lived in obedience to the SM itself.

The second exhortation (7:15–20) is a warning to be alert in view of false prophets invading and subverting the community. There is no identification as to who these "wolves in sheepskin" are, except that ways of detecting them are indicated.

The final exhortation (7:21–23; see Betz 1985b: 125–57) against self-delusion is cast in the form of a scenario of the Last Judgment. Jesus is shown to act as the advocate of his faithful and to reject those who are deluding themselves by claiming to have prophesied, cast out demons, and wrought miracles in his name but who have failed to observe his teaching of the Torah and are therefore in a state of "lawlessness" and unrighteousness.

The *peroration* (7:24–27; see Betz 1985b: 3–7) takes the form of a double parable describing success and failure in discipleship through imagery of the prudent builder who builds his house on the rock in contrast to the foolish one who builds on the sand.

2. The Sermon on the Plain. Falling into the same literary category, using much of the same tradition, and showing a similar arrangement in composition, SP is nonetheless very different from SM. SP has three parts: an exordium (Luke 6:20b–26), a main body containing rules for the conduct of the disciples (6:27–45), and a peroration (6:46–49).

a. The Exordium (6:20 b–26). The exordium combines four beatitudes (macarisms) with four contrasting threats ("woes"). The former describe the poor as hungry and weeping and the rich as stuffing their stomachs and laughing indecently (6:20 b–21, 24–25b). This description conforms to a social typology, used here to identify the Christian experiences of discrimination and harrassment of the faithful and to warn against seeking the approval of opportunists and flatterers (6:22, 26). Between the beatitudes and the threats lies a call for joy (6:23), formulating a doctrine of reward in the Last Judgment for sufferings endured.

b. Main Body (6:27–45). The rules for the conduct of the disciples in the body of SP can be divided into two subsections, the first dealing with the outside world (6:27–38) and the second with specific guidelines for education (6:39–45).

The first subsection (6:27–38) comprises a lengthy argument concerning Jesus' fundamental command to love the enemy. The command is given in the form of four parallel ethical maxims, the first of which is Jesus' love command, while the others provide interpretations through variations (6:27–28). This set is followed by an elaborate argumentation designed to prove that Jesus' commandment makes sense in terms of Greek ethical discourse. First, critical objections are taken into account through a set of four examples demonstrating the seeming absurdity of the commandment (6:29–30). The Golden Rule is

introduced (6:31) as the principle which makes the command intelligible. Since the Golden Rule can be misinterpreted, however, a commentary follows that refutes its erroneous interpretation (6:32–34) and sets forth the correct one (6:35) and concludes with a maxim (6:36) stating the imitation of God as the theological doctrine undergirding both the Golden Rule and the commandment of Jesus. Finally, there is paraenetical application in the form of four maxims (6:37–38).

The second subsection (6:39–45), contains the guidelines for education and opens with a demonstration of the need for and a formulation of a doctrine of Christian education. Christian education is needed as a means to prevent ignorance: "Can the blind guide the blind?" (6:39). Three rules for the learning community follow: first a rule concerning relationships between students and teachers, including their status both before and after graduation (6:40); second, a rule concerning the relationship between students, demonstrating the need for self-criticism and self-correction (6:41–42); and third, a rule concerning the relationship to oneself (6:43–45), proving the need for self-knowledge and spelling out the elements of an anthropology ("the good person" versus "the bad").

c. The Peroration (6:46–49). The concluding section begins with a rhetorical question describing the typical behavior of immature students (6:46), and concludes with the double parable of the two builders portraying the successful and the failed disciple. Although elaborated somewhat differently, the double parable is the same as in SM.

G. Theology

In theological concepts, both SM and SP are at the same time characteristically similar and different. Both show dependency on presuppositions coming from the teachings of Jesus, but these have been developed into independent and coherent theological concepts of faith (the term faith, however, is not used by either SM or SP). While doctrinal presuppositions are frequently stated, the whole of the theologies must be inferred from the arguments presented in the texts. These theologies are characteristically different from, although not irreconcilable with, the secondary contexts (Q [?], Matthew, Luke) into which they have been integrated. As compared with other NT texts, both theologies appear archaic insofar as that they show christology and ecclesiology at relatively early stages of inception, and their soteriology is essentially Jewish. Their views on God, the world, and eschatology although in many ways peculiar, do not go beyond what is conceivable in Judaism (see Betz 1985a). Apart from these general agreements, the theologies of SM and SP are strikingly different.

1. The Sermon on the Mount. "*The message of Jesus* is a presupposition for the theology of the New Testament rather than a part of that theology itself" (*BTNT* 1:1; for the current state of the question, see Sanders 1985:1–58). The position of SM is that Jesus' teaching was orthodox in the Jewish sense (5:17–20; see Betz 1985b: 37–53), but that this view is contested and must be defended against adversaries. There are those, apparently other Jews, who say that Jesus was a heretic, one who came to abolish the Torah (5:17). In fact, SM must admit that there are Christians who say this and who disregard Jesus' teaching of the Torah. These seem to be gentile Christians, probably adherents of Paul (cf. Gal 3:23–25; Rom 10:4). SM warns that they will surely fail in the Last Judgment (7:21–23). However, even Jewish Christian teachers must be strongly warned against such thinking (5:17–20). Not to be overlooked are his warnings against assimilation (5:47; 6:7, 32) and self-doubt (6:30). SM, therefore, presents Jesus' teaching as decidedly Jewish, and it contains no trace of what we know from contemporary (e.g., Q or Paul) or later NT sources as Christian theology. Conspicuous is the absence of the kerygma of the crucifixion and resurrection of Jesus Christ, even in places where one would expect it (e.g., Matt 5:11, 12, 44; see Betz 1985b: 151). Jesus has no salvific function apart from the obedience to the Torah (5:17, 18; 7:12: *hō nomos*) that he teaches through his commandments (5:19: *hai entolai*) and sayings (7:24–27, 28: *hoi logoi*; see Betz 1985b: 48–49). His eschatological function is understood entirely in Jewish terms as the advocate for his faithful in the Last Judgment (7:21–23; see Betz 1985b: 151–54). Because of this role, Jesus is able to pronounce the beatitudes in the here and now (5:3–12). Constituting a complicated literary creation in themselves, these beatitudes anticipate the eschatological verdict to be rendered by God in the Last Judgment. Such anticipation is based on the knowledge of the legal and doctrinal terms according to which that Judgment will be conducted. Since every Jewish teacher of the Torah ought to

possess that knowledge, no "messianic" consciousness or "higher" christology is needed for pronouncing the verdict (differently, of course, when Matthew is considered as the redactor of the Gospel who is followed by most modern commentators; e.g., Guelich 1982:27; Strecker 1984; 27 Luz *Matthäus* EKKNT, 189). The promises made in 5:3–12 are, of course, conditional upon verification in the Last Judgment, from which the disciples of Jesus are not exempt (see 7:21–23 and Betz 1985b).

The soteriology of SM, however, is not based simply on observance of the Torah. Both this soteriology and the teachings of the Torah are based on the notion of "the kingdom of the heavens" *hē* basileia tōn ouranōn, i.e., of God), the interpretation of which is unique in the NT (see Betz 1985b: 89–123). The kingdom of God is otherworldly and eschatological (5:19, 20; 6:10, 33; 7:21), but is simultaneously at work in the present world. The faithful disciples participate in it during their life on earth. In fact, all creation participates in it, consciously or unconsciously, but the disciples do so knowingly. Jesus taught his disciples the Torah as the way revealed by God which corresponds to his kingdom and which leads one into it (7:13–14). The Torah has salvific force, therefore, because of its coordination with God's reign. The disciples who study and practice this Torah can count upon eschatological reward (5:12, 46; 6:1, 5, 16). With the help of the Torah as taught by Jesus, righteousness (5:6, 10, 20; 6:1, 33: *dikaiosynē*; 5:45: *dikaios*) can actually be produced; its opposite is lawlessness (7:23: *anomia*; see Betz 1985b: 52). The task of the disciples in this life, therefore, is "to seek after the kingdom [of God] and his righteousness" (6:33), guided by the Torah as Jesus taught it.

Salvation in SM is thus primarily identical with the kingdom of God. Drawing upon an archaic mythology (5:45: God "makes his sun rise on the evil and the good, and he rains upon the just and the unjust"), SM describes God's reign as that of the Father of the cosmos (6:9 [Lord's Prayer]; 5:16, 45, 48; 6:1, 4, 6, 8, 14, 15, 18, 26, 32; 7:11, 21). His reign stands in stark contrast to that of the political despots (cf. also 5:35, where God is given the title, "the great king," *ho megas basileus*). Unique in the NT is the concept of the divine Fatherhood as *creatio continua,* the evidence of which is observable in the natural order (6:25–34; see Betz 1985b: 108–18, 121–23) by those whose eyes function properly (6:22–23; see Betz 1985b: 71–87). The heavenly Father treats Jesus' disciples as his own sons, and they in turn are called to understand themselves and act as "sons of God" (5:9, 45; 7:9–11; see Betz 1985b: 122–23). Like all sons, the disciples of Jesus must mature to perfection (5:48: *teleios*). To provide the necessary guidance for this learning and maturing is the aim of SM. Its goal is to teach the disciples to imitate their heavenly Father in their daily lives, even as they themselves are fathers (7:11). In this sense the entire Christian existence as taught by SM is imitation of God *(imitatio Dei).*

2. The Sermon on the Plain. Although SP is designed from a Jewish-Christian perspective, its addressees were in all likelihood disciples of Jesus coming from a Greek cultural background. None of the material in SM concerned with matters of Jewish religion is found in SP. The language, conceptuality, and ideas, as well as the construction of the arguments, conform to Greek presuppositions. The teaching of Jesus is centered in the maxim, "Love your enemies" (Luke 6:27b), without prooftext as in SM/Matt 5:43) and, argued in terms of Greek ethical discourse, dispels all doubts about its absurdity (6:29–30). Salvation comes to these disciples (the notion of "disciple" occurs in 6:40) as an extension of Jewish eschatological promises, very similar to but not identical with those in SM. As disciples of Jesus, the addressees can expect great reward "on that day," that is, the day of the Last Judgment (6:23). The verdict will be admission to the "kingdom of God" (6:20: *hē basileia tou theou*), when they will be made "sons of the Most High" (6:35). Then there will be the traditional celebrations: good food, fun and games, and wild dances. Hence there can be joy even now (6:21, 23) in anticipation.

What are the theological grounds for extending these promises? They are not based, as one might expect, on the kerygma of the death and resurrection of Jesus Christ; there is no doctrine of "grace" and no concept of "faith in Jesus Christ." The great reward which is said to be stored in heaven (6:23b) will be given to the faithful disciples "on that day" because of the sufferings they have endured "on account of the Son of Man" (6:22). These sufferings seem to be discriminations coming primarily from Jews (6:23c, 26c; note "*their* forefathers" instead of "the prophets before *you*" in SM/Matt 5:12c), and are said to be the same as those endured by the prophets of old and hence deserve the same reward. Since their reward

was great, so will be that of Christians who suffer (6:23, cf. 26). Discipleship of Jesus, however, does not consist primarily of ugly sufferings. SP conceives of that discipleship in terms of Greek education *(paideia),* by which the ethics of Jesus is learned as a way to realize one's humanity and as a means of survival in an evil and dangerous world.

Like Greek ethics, SP is primarily concerned with the realization of one's humanity. How such realization is to be accomplished is explained in clear, extremely concise terms. Basic is the Greek ethical concept of "the good person" *ho agathos anthrōpos).*"The good person brings forth the good out of the treasure of the heart, but the bad produces the bad out of the bad" (6:45). Notably, the bad is denied the honorific term, "human person" *(anthrōpos).*

The central ethical demand of Jesus is to love one's enemies (6:27b–28). Properly understood, this demand conforms to God's philanthropy and mercy, both of which are key terms of Greek religion and ethics. God is "kind to the ungrateful and the evil" (6:35d). He is "your Father who is merciful" (6:36). Therefore, the proper human response can only be that one is both generous and merciful and thus imitates God (6:35–38). Love of the enemy, however, not only corresponds to divine philanthropy but also exemplifies the Golden Rule (6:31) rightly understood (6:32–35). Loving the enemy (6:27c–28) means taking the initiative in turning the enemy into a friend, a theory rooted in Greek ethics. Later, Polycarp (*Phil.* 12:3) can rightly comment: "Love those who hate you, and pray for those who curse you, and you will have no enemy." Therefore, a life of generosity and mercy in every respect is the proper response to divine generosity and mercy.

This message was common in both the Greek and the Jewish world, especially in the Hellenistic-Jewish diaspora (see Betz *2 Corinthians 8–9* Hermeneia on 2 Cor 9:6–15). As a presupposition, it is also the basis for the rules of Christian education (6:40–45). Salvation can thus be experienced even now in overcoming ignorance (6:39), in improving one's relationship within the community (6:37–38, 41–42), in becoming a good human person (6:43–45), and in surviving the hazards of life in general (6:47–49). This life of discipleship is, however, threatened from within at every point, so that constant self-examination and self-correction remain indispensable (6:41–46).

H. Literary Influences

The literary influences of SM have been and continue to be immense. Comprehensive studies do not exist and probably never will because of the number of sources involved. Bibliographies, despite their efforts, remain incomplete. In comparison, SP has been far less influential. In fact, until recently not much attention has been devoted to it, apart from the gospel of Luke (see Wellhausen 1911:59–60; Knox 1957:9–17; Kahlefeld 1962; Schürmann *Lukasevangelium* HTKNT, 323–86; Robinson 1982:391; Worden 1973; Lambrecht 1985:206–32).

1. Within the NT. Literary dependencies and influences exerted by SM and SP upon other NT writings is a problem recently investigated by many scholars. There is a multitude of hypotheses and methodologies, and most questions remain open. What were the relationships between SM, SP, and Q, or versions of Q? Whatever these were, what was their influence *upon* Q? If Matthew and Luke included these texts in their gospels, did they influence these gospel writers elsewhere? Why do Mark and John have no knowledge of either SM or SP? Did Paul know of SM or SP? The parallels in his letters are too close to be accidental, but the significant differences have so far prevented any agreeable solution; see especially 1 Thess 4:2, 3–12 (cf. SM/Matt 5:16, 27–32; 6:33); 5:15 (cf. SM/Matt 5:38–42); 1 Cor 4:12 (cf. SM/Matt 5:44; SP/Luke 6:28); 7:10–16 (cf. SM/Matt 5:31–32); Gal 5:14 (cf. SM/Matt 5:43–48); Rom 2:1–3 (cf. SM/Matt 7:1–5, 37–42); 12:9–21; 13:8–10 (cf. SM/Matt 5:43–48; SP/Luke 6:27–28, 32–36). Did Paul obtain access to these texts through SM, SP, a version of Q, or from the oral tradition? One of the greatest puzzles remains the literary and theological relationship between SM and the Epistle of James (see Shepherd 1956; Dibelius and Greeven *James* Hermeneia, 28–29; Davies 1966:401–14), but also 1 Pet 3:14; 4:14 appears to be familiar with the beatitudes (cf. SM/Matt 5:10; SP/Luke 6:22; see also 1 Pet 2:19, 20, 23; 3:16; and Best 1969–70:95–113).

2. In the Post-NT Period. As Koester, Robinson, and many others have pointed out, early collections of Jesus' sayings developed side by side with the Gospels well into the 2d century (see Robinson

1982:389–94 with references). Evidence of such collections has surfaced in papyrus findings such as Papyrus Egerton and the Oxyrynchus Papyri nos. 1, 654 and 655, both of which contain important parallels to SM and SP (noted in Aland 1982:nos. 51–75, 78–83, and pp. 584–85; *NTApocr.* 1:97–116). Such sayings collections are also related to the Nag Hammadi texts, especially the *Gospel of Thomas* (see Koester 1980:238–61; Robinson 1982:393–94). As some of the sayings collections made their way into the NT (notably SM, SP, and Q), others did not, which may account for many similarities and differences among all sources concerned. These developments may also be responsible for the parallels to SM and SP in the Apocryphal Gospels and the Apostolic Fathers, where clusters of sayings can be found (see especially *1 Clem.* 13:2; *2 Clem.* 4:1–7:7; 13:2–4; Polycarp, *Phil.* 2:3; 6:2; 7:2; 12:3; see Koester 1957).

Strongly reminiscent of the Two Way schema in SM/Matt 7:13–14 is its appearance in the *Doctrina apostolorum,* probably originally a work of great proximity to *Did.* 1:1–6:3 and *Barn.* 18–20 (see Rordorf and Tuilier 1978:22–34, 206–10; Wengst 1984:13 with references and bibliography). The relationship of SM and SP to the *Shepherd of Hermas* is as yet unexplored. For Justin Martyr and the Pseudo-Clementine literature, doctoral dissertations have been published but they do not deal explicitly with the problem of SM and SP. All Christian writings of the post-NT period up to and inclusive of Justin Martyr contain numerous references and allusions to SM and SP with most of them textually different and independent from the canonical gospels as we have them. Even after the gospels of Matthew and Luke became generally accepted, this process of transmission may have continued for some time, especially in the Sayings of the Desert Fathers, the monastic rules (e.g., the *Regula Benedicti*), and the liturgical, martyrological, hagiographical, and mystical literature of the East and West. Specialized studies on most of these aspects are lacking. For preliminary surveys, see Massaux 1950; Mees 1975; Beyschlag 1977; Grant 1978; and the indexes of passages in *Biblia Patristica* 1–3 (1975–1980).

SERON (PERSON) [Gk *Sērōn* (Σηρων)]. A commander of a unit of the Syrian army, which he led against Judas Maccabeus. He was the second Syrian commander to oppose Judas on the battlefield. See also APOLLONIUS. He is mentioned only in 1 Macc 3:13–14, with the parallel passage in Josephus (*Ant* 12.288).

The information these sources give about Seron is minimal and his position is thus far from clear. He is described as "commander of the army of Syria" (1 Macc 3:13), which Josephus turned, wrongly, into "governor of Coele-Syria." This could not have been so, since the governor of Coele-Syria at that time was Ptolemy son of Dorymenes. "Commander of the army of Syria" is meaningless in this context and was coined after biblical phrases.

It was suggested that he might have been an official of higher rank than Apollonius, and that he commanded some unit of the Syrian army not far from Judea. Its location was suggested at Dora by Goldstein (*1 Maccabees* 246), and at Gazaro or Jammia by Bar-Kochva (1989:133). Bar-Kochva also suggested, according to his name, that he was Thracian by origin, and so might have been a commander of a garrison of Thracian mercenaries (Ibid.). Seron was defeated by Judas Maccabeus, sometime in the spring of 165 B.C.E. at the Ascent of Beth-Horon.

URIEL RAPPAPORT

SERPENT (RELIGIOUS SYMBOL). In comparative religions the term "serpent" refers to a number of creatures, real and imaginary, distinguished by physical serpentine characteristics. Serpents play a major role in mythological and religious traditions throughout the world from arctic peoples (where snakes are rare or nonexistent) to equatorial cultures (where snakes are plentiful). The diversity of serpent figures within a culture may be demonstrated by N European traditions where this category includes, in

addition to snakes, such beasts as sea serpents (usually huge, scaley ocean monsters), dragons (snake-like reptiles with four legs), wyverns (two legged dragon-like creatures with wings), cockatrices and basilisks (rooster-headed wyverns), and hydras (multi-headed serpents). Though each religious tradition views its own serpent symbols within its own world-view, certain correspondences may be found in several widely separated cultures. The ANE peoples shared in the use of serpentine symbolism, though the extant artifacts often leave an imprecise understanding of the snake images. Serpents do appear in literary texts, however, so some idea of their significance to the culture may be determined.

The creation of the universe arising from a titanic struggle of deities, monsters, or both is a fairly common motif. In Enuma Elish the monster Tiamat is defeated by Marduk; with her defeat the cosmos can be designed. It has often been posited that Tiamat was a dragon or some form of serpent; though the text is quite unclear on her nature, it is certain that monstrous serpents aided her in her battle with the gods. In the Bible, God is pictured as struggling with sea serpents, which are controlled, and such texts have been interpreted as examples of creation myths. Serpents aid other deities in the creation of the cosmos in certain Indian, African, South Pacific, and South American religious traditions (Ions 1967:108; Parrinder 1982:25; Poignant 1967:94; Sullivan 1988:297); yet in some cultures the serpents are themselves the creators. Wollunqua, an Australian rainbow serpent, set out the souls of humanity (Butterworth 1970:189) and for various peoples in Angola it is claimed that the python is the creator of all life (Mundkur 1983:260), a notion which finds its parallel among the Warao of Venezuela (Wilbert 1975:168). Moreover, serpents may be representations of both chaos and creation simultaneously (Sullivan 1988:58; Roe 1989:16–17) or the benevolent side of creation which saves people from the chaotic events of creation itself (Reichel-Dolmatoff 1971:26).

In cosmic terms the universe always sits on the threshold of relapse into chaos. In numerous cultures the ordered cosmos includes serpents as central figures in the vision of the created world. Often it is the serpent which holds the universe together by lying in the sea surrounding the land, tail in mouth, physically containing the ground (Parrinder 1982:24; Roe 1989:12; Wilbert 1975:164–65; Davidson 1964:32, 34–35). In this form the serpent symbolizes both the boundaries of the created world and the notion of eternity. By holding the universe together tightly in coils, any movement by the snake will cause ground to buckle and quake; therefore the serpent is both protection against chaos and a potential danger. The fact that the serpent surrounding the land is clearly enormous and powerful provides for a cosmic sea serpent; not unlike *Itn* from Ugarit's myths or the biblical Leviathan.

Also common in world mythology is the notion of the world tree which forms the center of the created universe. This is understood to reach from heaven to the netherworld forming a natural pillar on which all levels of the cosmos exist. Either at the roots or around the trunk of the tree there is usually a serpent which appears contrasted with an eagle in the branches above (Butterworth 1970:49–50, 85, 149; Davidson 1964:26–27). Both the Etana myth and the story of Gilgamesh and the Huluppu tree reflect these notions (Kramer 1938:5). The serpent may either be guarding the tree or destroying it. The eagle and serpent as a symbol of perpetual animosity appears to be a common motif portraying the eternal battles between good and evil or, more properly, order and chaos, which are then represented as the extremes of the cosmos (Jordan-Smith 1989:64).

In some traditions the central axis of the world is a serpent, either transversing the planes of existence or upholding the center of the earth (Ions 1967:25, 108; Wilbert 1975:164–65; Paper 1978:28). Common among Indian and American religious traditions, it has been argued to have been represented as early as the 5th millennium B.C.E. in the Ukraine (Gimbutas 1982:101–13). Within the cosmic realm serpentine beings form bridges from the area of human habitation to other abodes; most common is the perception of the rainbow as a snake bridging this land with heaven, a pervasive belief throughout Oceana, South Asia, Africa, and the Americas. Serpents also convey souls to the land of the dead for the Ojibwa and Dauavani (Paper 1978:29; Sullivan 1988:532). As with certain serpentine deities who are related to rivers in Mesopotamia (and possibly with Ug *ṯpṭ nhr*), snakes create, inhabit, and are rivers in various cultures (McEwan 1983:226–29; Parrinder 1982:25; Roe 1989:9).

The final area of the cosmos in which serpents play a significant role is the underworld. In western Christian tradition the serpent as a sign of evil belongs to the realm of hell, but long before Christian iconography the ancient Egyptians could use the serpent Apophis as the very underworld through which Re had to travel; not to mention the myriads of snakes which could destroy the soul of the dead on the way to the afterlife should the departed not know the correct spells for getting by them. Among the Dinka of the Sudan there is some notion of a world beneath the earth inhabited by cobras which act as humans; in India the nagas, who appear in both human and cobra forms, also exist as a counterpart to human life (Lienhardt 1961:117; Rawlinson 1986:137). In South America such python-people are thought to live on an island (Roe 1989:27).

If there are human-like serpents, it is natural that for several peoples around the earth their own ancestors are seen as snakes. In these situations the particular species of snake becomes a symbol for the group. In Oceana the snake is one of four animals from which all people derive (Poignant 1967:90–91); in Africa and the Americas particular snakes (python, cobra, anaconda, rattlesnake, etc.) commonly are held to be the direct ancestors of tribes who then hold the serpents in honor (Mundkur 1983:57, 91, 96; Lienhardt 1961:118; Luckert 1976:124; Voth 1903:352). For these people snakes can be very much like humans and may breed with them.

Serpents have been connected to the destruction of life in several cultures. As in Gen 3:1–15, ANE and African narratives tell how serpents diverted a form of immortality meant for humans. This usually refers to a plant or extra skin which is taken by or given to a snake before the humans could make use of it; therefore snakes may become young again but people may not, a motif which may be seen in the tales of Gilgamesh and Adapa (Joines 1974:70–71; Parrinder 1982:56–59; Wrigley 1988:375). Serpents appear in several fashions with the dead. In Africa, classical Greece and South America the souls of the dead may appear in the form of snakes (Mbiti 1970:216; Cole 1982:61; Küster 1913:67; Burkert 1985:195; Sullivan 1988:544). Pythons convey messages between the dead and God in Turu belief (Mbiti 1970:91), but more often poisonous serpents are sent as messengers of death by sorcerers (Mbiti 1970:255–56; Sullivan 1988:485). Of course chthonic deities and deities of death may take the form or attributes of snakes (Hultkrantz 1979:63; Burkert 1985:201:Lawuyi and Olupọna 1988:2). Finally, the shed skins of snakes have been taken as symbols of immortality of the soul and the mortality of the flesh in Hinduism (*Brihad-Aranyaka Upanishad* 4.4.7 and *Prasna Upanishad* 5.5).

The serpent as the end of life is also found in cosmic scope. Those serpents which surround the earth may also destroy it. In Norse mythology this is a certain fate, for the Midgard serpent eventually will destroy the universe and kill the god Thor in the process (Davidson 1964:37). In the same vein, the Fon believe that if the serpent around the earth is not properly fed it will consume itself, destroying the universe (Parrinder 1982:27). In an Oaxacan myth of Mesoamerica gigantic snakes attempt to devour the earth (Vázquez 1983:9, 13) while South American traditions see periodic cycles of destruction in the universe precipitated by the slaying of two mythical anacondas (Sullivan 1988:197).

Serpents clearly are used for symbols of both good and evil. Few serpent symbols are as unambiguously positive as the use of the boa constrictor among the Tukano to reflect the joy of dancing (Reichel-Dolmatoff 1971:103). Yet as ancestors of various peoples serpents appear as positive symbols. They also are beneficent as signs of gods and royalty. Deities may appear as serpents or have aspects of snakes and still be good gods; this is especially true in East Asia where serpents (dragons in particular) are perceived as beneficial (Paper 1978:29; Faure 1987:338). Buddha may, in fact, be represented by the Naga Mucilinda which had protected him (Rawlinson 1986:136). Among the Elamites serpent figures are common and may reflect divine attributes reflected in "Master/Mistress of the animals" representations, often with snakes, and in the thrones, which appear to have held deities, composed of entertwined serpents for a base and with four hooded serpents crawling up the back, for which comparisons with the Naga thrones of Indian tradition should be made (Amiet 1966:58, 310–11 fig. 233 A-B, 378–79 fig. 286 A-C). Mesopotamia had several minor serpent deities, the exact realms of which are largely unknown (Joines 1974:70–71; Frayne 1982:512; McEwan 1983:215). Major deities of Latin America have been portrayed as serpents, including Tlaloc, Cihuacoatl, and the reknowned Quetzalcoatl (Luckert 1976:49;

Delhalle 1982:130; Carrasco 1982:79, 96–98). The terror or power of serpents may also be ascribed to deities in the form of serpent attributes, as with Athena (Burkert 1985:229), where in Greek myth some serpents may slay with a glance.

Serpents also serve as royal symbols. In Egypt the uraeus was worn by the ruler as part of the crown and serpent-shaped sceptres have been found in Elam (Amiet 1966:382). In China the dragon was a standard royal symbol into the 20th century and the sword, one of three symbols of emperorship, in Japan is said to have come from a dragon, probably representing lightning (Paper 1978:29; Holtom 1972:24). Moreover, the poison of serpents may give mortals an invincibility in battle if bathed in or drunk in European and South American traditions (MacCulloch 1973:139–40; Sullivan 1988:444). In some cultures of Africa and America the first ruler of the world, the origin of royalty itself, was a serpent (Wrigley 1988:375; Carrasco 1982:79).

Serpents have been used as representations of lightning throughout the Americas and often are associated with rain throughout the world. In China it is the dragon which causes or witholds rainfall and this is a common belief across Asia including India where the nagas hold such power (Cohen 1978:255; Vogel 1926:4). In Latin America and Oceana the great gods of rain are the celestial serpents (Roe 1989:9; Mountford 1978:23–24). In Africa the same serpent who may "be" a river or the rainbow also can supply rain (Wrigley 1988:372). With this symbolic use of the serpent, however, the snake creatures become ambiguous figures, for drought also is caused by the serpent and hail, flooding, and ruination of crops may come with the rains if the serpents in charge wish to punish people.

The most ambiguous function of the serpent as symbol is as killer/healer. The naga serpents of India are often evil and bite people, causing death; but they may also use their poisons to save lives (Vogel 1926:17–18). Similar attributes are found concerning serpents in South America (Sullivan 1988:444) and Europe in the healing cults of Asclepius and Glycon. The caduceus has become the symbol of medicine in European tradition. The story of the firey serpents sent to kill and the serpent image used to heal in Num 21:8–9 may reflect this aspect of serpent symbolism. It may be noted that in some cultures the serpent only brings disease not a cure (Walker 1980:91).

In some cultures serpents play the role of the villain. Pali belief allows no nagas to grow in dharma and the Lakota believe that snakes are not allowed into the spirit world (Rawlinson 1986:137; Walker 1980:71). As symbols of chaos and gluttony, snakes are a constant threat to the existence of the universe and humans. In Asia and Europe dragons are often seen as killing people, consuming vast amounts of livestock, and holding young women captive or eating them. Evil spirits, monsters, and demons come in the shape of snakes throughout Europe, Asia, Africa, and the Americas. Classical mythology has a number of serpentine chaos monsters, including Hydra, Typho, Echidna, and Skylla; Illuyanka, the vast serpent of the Anatolian myth falls into this chaotic vision of the serpent (Beckman 1982:11). Volcanoes can be seen as monstrous destructive serpent mouths (Luckert 1976:44–46; Burkert 1985:127–28). Finally serpents are presented as examples of slyness, lying, and seduction all of which would conform to the serpent which appears in Eden (Ions 1967:113; Hultkrantz 1979:63; Walker 1980:122).

Snakes may be used for sexual symbols. In Europe and the ANE there seems to be reason sometimes to view serpents as symbols of sexuality (Mundkur 1983:180–208). Clearly the serpent has been a symbol for fertility in many cultures among the Oceanic peoples, Africans, and Latin Americans (Poignant 1967:91; Hauenstein 1978:529; Luckert 1976:46; Hultkrantz 1979:236). But there is no universal gender distinction in the use of serpents. While Moor (1988:111) has seen serpent references in the ANE as masculine symbols, it must be noted that in East Asia and Japan serpents are more apt to represent women (Mundkur 1983:176–77); this is true also in Borneo and West Africa (Davidson 1964:193; Hauenstein 1978:530) while Celtic tradition seems to use serpents for a male symbol (Mundkur 1983:180). The Tukano of South America use one snake, the anaconda, to represent women and another, the boa constrictor, to symbolize men (Reichel-Dolmatoff 1971:102). So while serpents are related to gender, they are multivalent symbols with regard to sexuality.

Serpents also appear consistently as guardians and as companions to the divine realms. As guardians they are perhaps most noted for protecting pools and wells (Vogel 1926:4; Poignant 1967:92; Ross

1967:348; Mountford 1978:23; Paper 1978:29; Roe 1989:12), though they also protect territory and can stand guard at boundaries (McEwan 1983:221–22). Serpents as guards for people are attested in the Eastern Mediterranean and South America (Burkert 1985:30, 130; Sullivan 1988:493); in the same manner, serpents guard the deities and their dwellings (Grimm 1888:1491; Butterworth 1970:80; McEwan 1983:219). Buddhist monks, from the time Mucilinda protected Buddha, have had guardian serpents (Faure 1987:339, 356). In the heavenly realm fire-spitting snakes protected the divine drink in Indian tradition (Ions 1967:102) in much the same manner that beings interpreted as fire-serpents stand in the presence of God in Isa 6:2. Finally, serpents are renowned for guarding treasures of gold and jewels in both East Asian and European traditions.

As companions of the deities serpents usually serve as a means of transportation. Vishnu floats along on the cosmic sea on his snake raft (Ions 1967:108); Mawa, the Fon creator deity, rides about in the mouth of a snake (Parrinder 1982:25); the Japanese goddess of fortune, Benten is conveyed on the back of a dragon (Piggott 1969:132); while in South America the boa may carry a deity on its back (Sullivan 1988:143). The Elamite representations of serpents with deities mounted on them may reflect the same traditions (Amiet 1966:286). In Hindu mythology the serpent Vasuki is used by the gods and the demons to churn the milk ocean into amrita, the sacred drink and then becomes a constant companion of Shiva. The Fon of Africa perceive snakes to be the intermediaries of the ritual experts and the gods (Mbiti 1969:91).

This relationship between the gods and humans through serpents is perhaps best represented by the serpent as symbol of wisdom. In Japan, Siberia, Africa, and South America one becomes a shaman through the intermediary of snakes (Kitagawa 1969:318; Mundkur 1983:77; Mbiti 1970:91; Sullivan 1988:282, 444). Wisdom may be conveyed to humans through serpents either as oracles or through the consuming of parts of the serpent (Grimm 1888:1491; MacCulloch 1973:140). Magic is a particular form of wisdom which serpents can impart to humans (Piggott 1969:93; Rawlinson 1986:137). However, culture itself may be a product delivered to humans by a serpentine agent. This is clearly the case with Quetzacoatl in Mesoamerica, but in South America as well anacondas bring culture and art (Roe 1989:27); even the snakes which are evil by nature may be forced to impart valuable information for the culture as with the Algonkian tradition that snakes taught humans about poison and medicine (Hultkrantz 1979:63). Within the various Buddhist traditions, in fact, serpents, especially the nagas, can be used as examples of the devout followers of the Buddha, filled with wisdom.

Finally, serpents appear as regular objects of omens. For the most part a snake is an ill omen, but not always. Among the ANE omen texts the sighting of snakes often reflects an impending death or ill fate (Whiting 1984:208); this is a common notion with the sighting of snakes, especially pythons, in Africa, where the snake is taken to be the soul of an elderly man who is about to die (Cole 1982:61, 202). Messages may be sent to humans by the gods through the intermediaries of common snakes and these then will tell the future or diagnose illness (Kitagawa 1969:319; Piggott 1969:132; Hauenstein 1978:532).

SERPENT'S STONE (PLACE) [Heb *ʾeben hazzōḥelet* (אֶבֶן הַזֹּחֶלֶת)]. A symbolic landmark at En Rogel where Adonijah, a rival of Solomon for King David's throne, made sacrifices during his abortive attempt to become king (1 Kgs 1:9). The Hebrew word, *zōḥelet* is derived from a verb that means "to shrink back, crawl, glide." The LXX translation, *lithou tou Zōeleth,* where serpent is simply transliterated, would seem to support that the stone was a recognized landmark near En Rogel. This landmark was most likely a sacred stone dedicated to a deity whose symbol was a serpent—frequently a sacred symbol on objects in Palestine—and thus a logical place for Adonijah to legitimize his attempt to seize the throne with sacrifices and feasting.

Various attempts have been made to locate the landmark geographically. The most frequently recognized location is En Rogel at the S end of the Kidron Valley near its confluence with the Hinnom

Valley. Another interpretation attempts to locate more precisely the Serpent's Stone with reference to the Serpent (Heb *tannîn,* "serpent, dragon") or Jackal (Heb *tan*) Well mentioned in Neh 2:13. This well is outside the city in the vicinity of the Dung Gate. This would place the well (identified by many with Job's Well at En Rogel [Myers *Ezra, Nehemiah* AB, 104, 118]) most likely near En Rogel and the sacred Serpent Stone. Some link the word *zōḥelet* with a modern Arabic word *zahueileh,* "a slippery rock slope." This has been identified with a rocky slope at the modern village of Silwan, opposite Gihon. This interpretation has two difficulties. First it changes the meaning from a stone to a rocky slope. Second it places the location too far N at Gihon, the location where Solomon legitimized his right to the throne (1 Kgs 1:38–39). Locating the Serpent's Stone farther S at En Rogel fits the biblical description that Adonijah could hear but not see the royal enthronement of Solomon (1 Kgs 1:41; Smith 1907:109–11; Simons 1952:160–62).

W. HAROLD MARE

SERPENT, BRONZE. Serpent figures crafted from copper alloy or bronze have been found throughout the ANE. Some fine examples have been recovered on plaques with deities or as independent figurines (Yadin et al. 1960:117, pl. 181; Macalister 1912:399, fig. 488; Speiser 1935:111–12, pl. 50; Loud 1948:pl. 240, no. 1). To date, the most exquisitely wrought of these serpentine figures is the copper alloy snake with gold foil overlay found at Timna (Rothenberg 1972:159, pls. 19, 20). These objects have been assumed to be cultic images and the appearance of the serpent in artwork in the hands of a god or goddess would seem to confirm this. The serpent appears to have been a stock religious character in Syria-Palestine from the middle of the 2d millennium through the 1st millennium B.C.E. (Joines 1974:62–63) often appearing on pottery or pendants of various types, more attested than in bronze. See also SERPENT (RELIGIOUS SYMBOL).

The most famous bronze serpent, however, is the one called Nehushtan which Hezekiah is recorded as having destroyed (2 Kgs 18:4). It has long been recognized that this object stood for a deity (Kittel *Die Bücher der Konige* HKAT, 278–79; Lods 1930:469), but exactly which one is uncertain since the name of the god is not given. The MT states that the name *nĕḥuštān* (LXX *neesthan*) was given to the object by Hezekiah; it clearly is a play on the words bronze/copper *(nĕḥōšet)* and serpent *(nāḥāš).* It has been suggested that the deity represented by the snake figure was the little known Horon and was related to the Greek Asclepius who was represented by a snake symbol (Gray 1949:32). Exactly where this object was revered in Judah is unclear, but it has often been assumed that it had a place in the pantheon of the temple of Yahweh in Jerusalem; wherever it was maintained, it was worshiped as a deity since the people sacrificed to it.

Rowley (1939:136) believed Nehushtan was a deity from the Jebusite cult of Jerusalem which David retained after having taken the city; the god would then have no relation to the cult of Yahweh. In Num 21:8–9, however, the story of the fashioning of the image is recorded; this story is alluded to in the Hezekiah passage so it is clear that the cult assumed that there was a relationship between Yahweh and this god. According to the Numbers narrative the image was created to cure snakebites. This intermediary between God and the people reflects the divine world of the ANE where an important deity would produce a lesser deity to handle mundane matters such as curing the sick (Levine and Tarragon 1988:518); such an incident is recorded in the Kirta Legend from Ugarit (*KTU* 1.16.V.10–VI.14) where El creates Shatiqatu to save the king's life.

The bronze serpent which Hezekiah destroys was clearly part of the Judean pantheon and almost certainly a deity of healing. The fact that snake divinities which can heal are also capable of killing should be kept in mind (Pardee 1988:213); it is often the very god who harms people who is needed to protect them. This god had a very specialized sphere of expertise (curing those bitten by poisonous snakes) and therefore would have been on a lower level of divine rank than most deities, what Smith (1984:359) has given as the third level, which might be called "craft-gods." This deity appears to be the only biblical

example of a Judean god of this level of deities. There is no evidence from the biblical text or, as of yet, from ancient Syro-Palestinian sources to connect this bronze serpent image with fertility cults rather than healing, though this has been a popular interpretation of the snake figure (Joines 1974:74).

LOWELL K. HANDY

SERUG (PERSON) [Heb *śĕrûg* (שְׂרוּג)]. Son of Reu when Reu was 32, father of Nahor at 30, Serug lived to be 230 (Gen 11:20–23). The name has been related to URU *sa-ru-gi* appearing in texts from the region W of Harran in the 7th century B.C. (Johns 1901:29, 33, et passim). Attempts to identify this with a *ṣe-er-ki* on an Old Babylonian itinerary from Harran to Emar (Hallo 1964:64, 78–79) must now be discounted and the site's name read as *ṣe-er-di/-da* (Dossin 1974:28; Beitzel 1978:212). However, *sa-ru-gi* may be named in a broken context in the annals of Shalmaneser III. It is also possible that *sa-ru-gi* is to be identified with the site described by the later place names Batnai and Sürüç (Kessler 1980:197–202). A Neo-Assyrian place name *Šá/Še-ri-gu-ú* (Zadok 1977:325–26) and an Ur III period personal name *ša-ru-gi* (Barton 1909:plate 94; Schneider 1952:521) have also been compared with Serug. The root thus appears primarily in place names of the 1st millennium B.C. Like others in the ancestry of Abram in Genesis 11, it is possible to relate the name to a geographical location in N Syria. See also HARAN (PERSON), NAHOR (PERSON). However, the occurrence of a similar form in a 3d millennium B.C. personal name, implies that the 1st millennium attestations of the place name cannot be used to date its occurrence. In Hebrew the root *šrg* means "to intertwine" and can refer to a twig or a tendril (Wenham, *Genesis 1–15* WBC, 251–52).

RICHARD S. HESS

SERVANTS. See SLAVERY.

SESTHEL (PERSON) [Gk *Sesthēl* (Σεσθηλ)]. A descendant of Addi who was required by Ezra to divorce his foreign wife (1 Esdr 9:31). In the parallel text of Ezra 10:30, the name Bezalel, son of Pahathmoab, appears in the position that Sesthel holds in 1 Esdr 9:31. However, whether they are

identical cannot be determined, and any grounds for identification are based solely on the order of these two lists.

SETH (PERSON) [Heb *šēt* (שֵׁת)]. Var. SHETH. Third son of Adam, born when Adam was 130 years old (Gen 5:3–8). At 105 years of age, Seth sired Enosh, and subsequently lived to the age of 930. Eve explained the name of her son as the divine "establishing" of a replacement for the murdered Abel (Gen 4:25). Seth establishes the line of righteous antediluvians culminating with Noah in Genesis 5 and continuing to Jesus according to the NT (Luke 3:38). Sir 49:16 describes Shem and Seth as highly honored among humanity. The expression, "children of Seth" (*bĕnê šēt;* RSV SHETH) appears in Num 24:17 in what may be a reference to humanity in general (from the perspective of Genesis, Seth through Noah was the ancestor of all of postdiluvian humanity) or more particularly to the nomadic tribes known as the Sutu (attested in the Egyptian Execration texts and in the Amarna texts, but never located in the region of Moab where Numbers 24 occurs [Rouillard 1985:438]). Later Jewish, Gnostic, and Christian writings assigned a special significance to Seth and his righteousness (Klijn 1977).

The paronomasia on the name of Seth in Gen 4:25 has evoked some discussion in the commentaries. Although the *kî* particle introducing the second half of the verse may be understood as explaining the meaning of the name, this is not necessary. It may simply mark the beginning of a statement (whether as an emphatic *kî* or otherwise) which includes wordplay on the name Seth, with a loose, unspecified relationship to the name itself (e.g., She called his name Seth, "God has (indeed) provided another seed for me in place of Abel whom Cain slew."). The assonance of the proper name Seth and the verb *šāt* serves to emphasize the sense in which Seth's birth brings to an end one line and begins a new line of descent (Strus 1978:66). Attempts to assign the Seth of Genesis 4 to a J source and that of Genesis 5 to a P source prove of little value in understanding the traditions underlying the figure. In both chapters he is the "son" of Adam and Eve, and in no case does the text assign Seth to the Cainite line of Genesis 4. Reconstructions of such an association (*GHBW,* 158–66) are conjectural. Also speculative and discredited are suggestions relating Seth to the figure of Alalgar, second name in the antediluvian line of the Old Babylonian king list (cf. Zimmern 1924:24; Westermann 1984:348–52).

RICHARD S. HESS

SETH, SECOND TREATISE OF THE GREAT (NHC VII,*2*). This Christian-gnostic treatise is the only one of all the Nag Hammadi tractates which has been perfectly preserved. It occupies pp. 49.10–70.12 of Codex VII. *Treat. Seth*, which almost certainly was translated from the Greek, is written in pre-classical Sahidic Coptic. It is likely that many of its serious grammatical and syntactical difficulties are due to the ineptitude of the translator. The title which is found at the end (70.11–12) retains the Gk case endings and appears to be secondary. Already during its transmission in Gk someone must have added this subscript in the belief that the work was another treatise by the heavenly revealer Seth. This is surprising in view of the fact that Seth is nowhere mentioned in the tractate. The likely reason for the mistake is the fact that the speaker in *Treat. Seth* is identified only near the end as Jesus Christ (65,18 and 69,21–22). Someone already familiar with a treatise of Seth, e.g., *The Gospel of the Egyptians* (NHC III,*2* and IV,*2*), might on the basis of a brief look at the beginning have considered it a second one by the same author.

The genre of *Treat. Seth* is that of a revelation discourse, but the pattern is often broken due to what appear to be traditional blocks of material which the author has incorporated. The lack of transitions, unexpected shifts in personal pronouns, and apparent doublets give the work a disunited and confusing appearance. Two main parts can be distinguished. In the first one (49,10–59,19), which is didactic, the

speaker asks and receives permission from the heavenly "Church" to descend to the world and reveal "the glory" to "my fellow spirits." He takes over a human body and causes great consternation among the archons. Only one archon, Adonaios, also known as Sabaoth, joins the side of the savior; the others are put at ease by the boast of the cosmocrator, Yaldabaoth. The cosmological framework which is assumed in the account is similar to the one found in *The Apocalypse of John* (NHC II,*1*; III,*1*; IV,*1* and BG 8502,2), *The Hypostasis of the Archons* (NHC II,*4*), and *On the Origin of the World* (NHC II,*5*). In 54,14 a doublet begins which repeats in different words the descent myth and adds the plan of the archons to kill the savior. The passion account (55,15–56,13) at first appears typically docetic in that Christ's suffering and death are not real but only in appearance. This, however, is followed by the claim that Simon of Cyrene was crucified while the savior looked on from on high laughing at the ignorance of his enemies (56,4–19). This interpretation of the passion, based on Mark 15:21–22, is attributed to Basilides by Irenaeus (*Haer.* 1.24.4) and Epiphanius (*Pan.* 24.3.2–4). In 58,17–59,11 there is a third passion account which consists of an allegorical reading of Matt 27:45–53. Though the interpretation is gnostic, it does not appear to be docetic in origin. The profundity and literary quality of this piece is far beyond the vulgar level of most of the rest of the treatise.

The last part of *Treat. Seth* is homiletical and polemical (59,19–70,10). The gnostic readers are exhorted to live in unity with each other and Christ in the face of persecution by Christians who "proclaim a doctrine of a dead man" (60,20–21). A similar anti-orthodox polemic is found in *The Apocalypse of Peter* (NHC VII,*3*) and *The Testimony of Truth* (NHC IX,*3*). The section includes also a dramatic litany in which Adam, Abraham, Isaac, Jacob, David, Solomon, the twelve prophets, Moses and John the Baptist are called laughingstocks and counterfeits of the Hebdomad, i.e. the cosmocrator, since "none of them knew me nor my brethren" (62,27–64,1). The litany may have been borrowed from a Marcionite source. The theme of the heavenly wedding, which is the model for union among the gnostics, appears to be dependent on Valentinian speculation (57,7–27 and 65,33–68,16).

Treat. Seth gives striking evidence of the eclectic nature of gnostic literature. It is able to borrow freely from other traditions and writings without much concern for theological or literary unity. It is unlikely that such writings reflect the doctrines of specific sects. The author and intended readers of *Treat. Seth* in contrast to their orthodox opponents, were not discriminating readers. Evidently they found comfort and inspiration in a wide variety of esoteric sources. What makes *Treat. Seth* of special interest is that the conflict with orthodox Christianity has become open and confrontational. The rejection of the OT and of the death of Christ have become unambiguous, even though there is no standard formulation for this. Persecution may have brought some clarity and unity in what Christian Gnostics denied, but it appears that they remained individualistic and eclectic in what they affirmed. The polemical nature and dependence on other gnostic traditions makes it unlikely that *Treat. Seth* was written before the 3d century, and it could be as late as the early 4th. Nothing in the tractate betrays the identity and provenance of the author.

FREDERIK WISSE

SETH, THREE STELES OF (NHC VII, *5*). The fifth and final tractate of codex VII (pp. 118–127) of the Nag Hammadi codices. The well-preserved text is a Coptic translation of a Greek original and represents the only surviving witness to this document. The dialect is Sahidic with the presence of some non-Sahidic forms.

Steles Seth presents itself as a revelation received by a certain Dositheos, probably the obscure Samaritan teacher of Simon Magus (Schenke 1981:592–93; Tardieu 1973:551; Claude 1983:3). The revelation consists of the contents of three steles composed by Seth in the distant past and now, through the agency of Dositheos, being transmitted to a latter-day Sethian gnostic community. The single reference to Dositheos at the beginning of the text, however, together with the limitation of the term revelation (used twice) to the opening and closing lines of the tractate betray the apocalyptic imagery or genre as part of a secondary redaction (Robinson *NHL*, 362; Claude 1983:9–13).

In its present form, *Steles Seth* is divided into three sections or steles which preserve three hymns addressed to a divine triad presented in Neoplatonic terms. The original form of the hymns, however, has been corrupted by the secondary redaction which integrated them with the Sethian gnostic conception of four races (Adamas, Seth, Proto-Sethians or Dositheos, and latter-day Sethians or elect) (Claude 1983:9–12). The original three hymns are addressed to the divine figures of the Self-begotten *(Autogenes),* Barbelo, and the Unbegotten Father. The triad expresses the relationship between the unknowable god and the perceptible world of humanity. Barbelo, the mother (though never so named in the text) of the divine triad, is the active nature of the stationary Father (the divine as non-being), and the Self-begotten is the vehicle through which that activity is expressed in the perceptible world. This functional relationship of the triad betrays its strong indebtedness to Neoplatonic thought. Numenius, for example, speaks of a movement from the stationary unity of the primordial god through a motion or energy expressed first in the noetic realm and then in the perceptible world (Numen. *Fragment* 15; Tardieu 1973:560–61). The prevalence of Neoplatonic vocabulary in *Steles Seth* (e.g., the existence-life-mind triad; 122, 20–23) is extensive (Tardieu 1973:560–67; Claude 1983:20–31; Robinson 1977).

Steles Seth, which presupposes this ontological system, is best understood in its present form as a liturgical document. The three redacted hymns, addressed in ascending order to the triadic nature of the divine, represent a mystery of ascension (Schenke 1981:601–602). In *Steles Seth* one encounters the members of a community in the act of appropriating salvation through liturgical participation in the primordial ascent of their spiritual ancestor Seth. The hymns were likely recited as part of a liturgical process through which the individual ascended and descended from the vision of the divine.

The date and provenance of the original work is difficult to determine. The strong Neoplatonic influence on the text together with Porphyry's mention of Plotinus' confrontation with sectarians whose books apparently included the related Sethian texts of *Zost.* (8.1) and *Allogenes* (11.3) suggests a date in the first half of the 3d century C.E. (Robinson 1977:132–33; *NHL* 362–63). The speculative nature of the text and the survival of the only copy in Coptic translation support Alexandria as the most likely place of composition (Claude 1983:31–33).

The text is an extremely important witness to the interaction of Neoplatonic and gnostic ideas in the latter 2d–3d centuries. It offers also a rare opportunity to look into the social or worship setting of a gnostic community.

JAMES E. GOEHRING

SETHUR (PERSON) [Heb *sĕtûr* (סְתוּר)]. One of the twelve individuals sent from Kadesh in the wilderness of Paran to spy out the land of Canaan (Num 13:13). Mentioned only in this list of scouts, Sethur was the son of Michael and a representative of the tribe of Asher. He is numbered among the ten who returned from their adventure with a negative report.
TERRY L. BRENSINGER

SETTLEMENT OF CANAAN. The biblical account of how Israel took possession of the land of Canaan presents at first glance a deceptively straightforward picture. The Conquest fulfills Yhwh's promises to the patriarchs and to the generation of the Exodus. It marks the beginning of that period in which Israel, liberated by Yhwh from bondage, enters fully into a treaty-partnership with him, responsible to abide by his ordinances. It ratifies and proclaims Israel's passage into nationhood through her passage from the limbo of landlessness to a franchise in the soil; from a protected, but bereft, perambulation in the wasteland to a fruitful, settled possession of the land. The Conquest is the capstone of Israel's national epic. See also ISRAEL, HISTORY OF (PREMONARCHIC PERIOD) and (ARCHAEOLOGY AND THE ISRAELITE CONQUEST).

Nevertheless, biblical narratives concerning the Conquest take an inferior place to those of the Exodus. Joshua does not tower, Moses-like, over the consciousness of biblical authors. Indeed, no text outside the book that bears his name explicitly attributes the Conquest to him.

Except as a conclusion foregone from the moment of the Exodus, or from the crossing of the Jordan, the Conquest plays only a small role in Israelite literature outside the book of Joshua. Hosea, Isaiah, and Deutero-Isaiah utilize the Exodus as a conceptual model for Israel's return from exile, but never come to grips with the concrete historical, strategic details of its sequel. Micah (6:1–4) recalls the conflict with Balaam and Balak that threatened Israel's initial entry into Cisjordan: the implication is that the transition from the wilderness to the Promised Land was the moment of peril, the Conquest itself a mere corollary; the Conquest, like the seizure of Troy, demanded the powers of an Apollodorus to describe it, but on it those of a Homer would be sadly squandered. The same attitude suffuses the Pentateuchal account, and informs the notion that one should divide off the first five books of the Bible as a Torah, "the five books of Moses." Only a philistine would demand, after the climactic vision of Moses surveying from a Moabite crag the Promised Land denied to him, an explicit, literal account of Canaan's reduction. That there had been a Conquest was self-evident: Israel possessed the land. Describing the Conquest after Moses' death could be nothing more than belaboring the aftermath.

Nevertheless, Israel's historians have indeed provided us with a reconstruction of the Conquest. The tale itself they have confected from the ingredients of old traditions, an occasional written source, and surmise; it is mounted as a component of the Deuteronomistic History, the historical work putatively stretching from Deuteronomy through 2 Kings, a work in large measure assembled in the 7th century B.C.E. In this setting, the tale of the Conquest furnished a crucial link between the prose epic that described the nation's birth, in the Torah, and the history of Israel's life in the land until the twin catastrophes of subjection and exile overtook it—for Israel, the north, at Assyria's hands, and, for Judah, the south, at Babylon's.

A. The Biblical Presentation

The accounts of this fateful epoch in Israel's historical odyssey deserve to be read not just singly, but as an organic reconstruction. Discrepancies in the Israelite view of the Conquest, with the possible exception of Ezekiel's (if Ezekiel 16 comments on the Conquest), are less significant than scholars have generally claimed. In any event, the treatment of the theme begins in the Pentateuch.

Yhwh had promised Canaan to Israel's ancestors, starting with Abraham (Gen 15:18–21; 26:3; 28:13; 48:6, 16, 21f.; Exod 3:8, 17; 13:5, 11; 23:23, 28–33; 33:1–3; 34:11; Gen 17:8; 28:4; 35:12; Exod 6:8). Scholars have quibbled over the unanimity of these texts concerning the dimensions of the territory vouchsafed—the Priestly source (P), at least, does not reckon Transjordan as part of the land. But the prolusory promise is consistent: Yhwh affirms it in both major Pentateuchal narrative strands (P [Priestly] and J [the Yahwistic source]) to each of the patriarchs and to the generation of the Exodus.

The Exodus follows, of course, its goal, i.e. the Conquest and settlement. Yet a lack of faith, when Israel's spies have reconnoitred Canaan's landscape, leads to the abortion of the appointed day (Numbers 13–14). Condemned to delay, the Israelites ultimately invade not from the south, the most natural and quickest route from Egypt, but from Transjordan. The "wanderings" determine the geographical sequence and the extent of Canaan's vanquishment: the Israelites must brand Transjordan with destruction, under the leadership of Moses, before proceeding to capture the prize Yhwh had promised them.

1. The Transjordanian Conquests. The Mosaic accessions in Transjordan are recalled in two somewhat different recensions in the books of Numbers and Deuteronomy. In the Deuteronomic resumé, Israel avoids contact with the Transjordanian powers—Edom, Moab, and Ammon—and purposefully engages the Amorite kingdom of Sihon, centered on Heshbon (Deuteronomy 2). The succeeding episode recounts the overthrow of Og. Here, Og is king of the Bashan and a region stretching to the Hermon; the operation, thus, entails a daunting detour from the primary objectives of Israel's military thrust in Cisjordan (Deut 3:1–11; 29:6f.). But according to Deuteronomy, Transjordan is an integral part of the land pledged to the patriarchs (see 2:24f.,31). So like Joshua's, Moses' conquests must envelop everything up to the Hermon (Deut 3:8).

The tradition of Transjordanian confrontations in Numbers is of a different cast. Sihon's subjection is incidental, a by-product of his refusal to permit Israel passage through his territory to its promised land, Cisjordan. It leaves Israel master of the land from the Arnon, Moab's border, to Ammon's border at the Jabbok. Northward expansion embraces the districts of Jaazer, Gilead, and, in the southern Bashan, Kenath (Num 21:21–32; 32:39–42). All these areas were traditionally understood to have been peopled by Amorites—the race whose sin, in the theology of Gen 15:16; Deut 9:4f., laid the moral foundation for its extirpation of Yhwh's hands.

The Amorites are consistently portrayed (Amos 2:9) as the aborigines of the Cisjordanian interior, particularly its highlands (Num 13:29; Deut 1:7, 19f.; Josh 10:6). Their rightful successors, apart from the Philistines on the coast of S Canaan, are the *Hebrews.* Biblical ethnography links the *Hebrews* to an eponym, Eber, who is an ancestor of Abraham (Gen 10:21, 25; 11:14). Thus, the *Hebrews,* Abraham's descendants and collaterals, comprise in Transjordan Israel, Edom, Moab, and Ammon, as the delimitations of Num 20:14–21; 21:13–15, 24 (and Deut 2:4f., 9–11, 19–23) make clear.

In sum, Israel's historians identified the kin-based, territorial kingdoms of the Iron Age as Yhwh's avengers against an autochthonous population organized politically into individual city-states. Possibly,

the identification of Sihon as an Amorite rather than a *Hebrew* contributed to the Deuteronomic notion that Transjordan was doomed to Israelite conquest from the first. This corollary is absent in Numbers.

Num 21:33–35 does recount the digressive expedition against Og in the Bashan. This text stems from a tradition more closely related to that infusing Deuteronomy. But it does not press the claim that Og was an Amorite (as Deut 3:8; cf. v 11). It conflicts with the more modest reports about Israel's initial penetration only into the southern reaches of the Bashan. And, since Wellhausen observed that Judg 11:22f., Num 22:2, and Josh 24:8 reflect no knowledge of the Og tradition in Bashan (1963:109), scholars (e.g., Noth *ÜgS*, 35) have widely regarded the notice as an accretion. One sees the tendency for Og to be attached to Sihon secondarily also in 1 Kgs 4:19, where territory S of the Bashan is associated with him (as against 1 Kgs 4:13).

The ideological profile of the reports in Numbers is most distinctive when silhouetted against their attitude toward Transjordan. This substantiates the thesis that the text concerning Og is a late correction of the tradition. As opposed to Deuteronomy, where Transjordan is the first object of Israel's ambitions, Numbers regards any territorial acquisitions in Transjordan as incidental. The sole value of Transjordan is as a springboard for invading the western bank.

Indeed, of the generation that had balked at invading Canaan when the spies returned (Numbers 13–14), only Caleb, in J (Num 14:23f.), or Caleb and Joshua, in P (Num 14:35, 38; 26:65; cf. the layered Deut 1:34–39), are accorded the privilege of entering that consecrated zone plighted to the patriarchs: Moses' death, thus, preempted his entry into this region (P in Num 27:12–14; Deut 32:48–52). This view even underlies some Deuteronomic pronouncements (e.g., Deut 19:1–10; 31:20–23), despite Deuteronomy's otherwise consistent insistence that the Conquest of the Promised Land had begun in earnest in Transjordan (esp. 2:24, 30–31; 3:24, 26f.; 34:1–4). Similarly, the Mosaic legislation of Deuteronomy is phrased as though it is to come into effect in the future, "when you come to the land that Yhwh your god is giving you" (as Deut 17:14; cf. 6:1, 3; 7:1; 11:10–12, 23, 29; 30:18; 31:13; esp. 31:21). Yet the legislation is proclaimed at the brink of the Jordan crossing; the implication is that the Canaan of the patriarchal promises did not include Transjordan. The stratification of this perspective inside Deuteronomy indicates that it is the older view, on which the authors of Deuteronomy's historical recitations imposed a revisionist position (contrast Weinfeld 1983).

This old view of the Transjordanian occupation comes to most lucid expression in Numbers 32. Here, P portrays the decision by Reuben and Gad to dwell across the Jordan as a betrayal of faith—a refusal to take possession of the allotted inheritance—potentially equivalent to the sin of the spies (32:7–15). These tribes must help master Cisjordan before returning to the portions they have selected on their own. The text also has a reflex in Joshua 22. On returning from the Conquest, the Transjordanian tribes erect an altar, purely for symbolic purposes. Again, the idea that Transjordan is not a part of the land of the promise colors the narrative. Transjordan is impure, profane, and its Israelite inhabitants have the option—even the duty—of abandoning it for "the land of Yhwh's possession, where the Tabernacle of Yhwh abides" (22:19).

Much of this material stems from P, and may have no origin earlier than the 6th century B.C.E. The same probably applies to Num 34:1–15, which define "Canaan" as the Cisjordanian entity, though one stretching to Hamath (Hama) in N Syria (cf. Num 35:14). Still, Deuteronomy's pre-conscious ambivalence on the issue, the occasional reference in J, and the invariable description of Moses' achievements as "bringing Israel up from Egypt," but not as enfranchising her in the land, all indicate that P here followed traditional lines of thought: the Mosaic conquests, across the Jordan (and in the far south, at Hormah; Num 21:3) were supererogatory; the terminus of Israel's migration was west of the Jordan only. This was the region whose subjugation Joshua ben-Nun engineered.

Both the Deuteronomic and the more traditional scenarios locate the Cisjordanian conquest in a clearly defined chronological sequence. Moses' death marks the end of Israel's circuitous migration from Egypt. It rings in a new epoch, in which Yhwh will redeem his second pledge to the Israelites in their Egyptian thrall, and give to them the land of the Amorites, Canaanites, and other residents of Cisjordan (Exod 3:8;

6:8). The transfer of authority from Moses to Joshua takes place amid intermittent action and legislation (Num 27:15–23; Deut 3:28; 34:9). It provides the only tangible continuity from the first era to the next.

2. The Cisjordanian Conquest. a. The First Movement: Emblematic Victories. (1) The Crossing. The book of Joshua opens with two cycles of tradition concerning the entry into Canaan, deftly interwoven and partially rephrased by the ("Deuteronomistic") historian. The first focuses on the miraculous and ceremonious fording of the Jordan at Gilgal (Joshua 1:3–5), a site whose location is uncertain, but which lay most probably in the vicinity of the Adam[ah] (Damiya) crossing (B. Mazar 1985). As the narrative unfolds, Israel waits encamped by the Jordan near Shittim from the 8th until the 10th day of Nisan. On the 10th day, the Levites bear the ark into the riverbed: the current upstream comes to a halt, and the people pass dryshod. They pitch camp at Gilgal, where Joshua circumcizes them—responding, apparently, to the P (Genesis 17) and possibly E traditions that circumcision was introduced earlier (Gen 34:13–24; Exod 4:25f.), the narrator explains that the practice was in hiatus during the wanderings (Josh 5:4–7). So fortified, in accordance with the specifications of Exod 12:43–48 (P), Israel celebrates her first Passover in the land (5:9–12). It is at this point that Joshua encounters the "commander of Yhwh's army", at Jericho (5:13–15), though this tradition may conceivably belong to the Jericho cycle (Josh 2:6).

This impressive foundation legend for the shrine at Gilgal figures the Conquest in a miraculous river-crossing. The marvel deflates "all the kings of the Amorites", reducing them to that state of fatalism whose tactical reflex is rout (5:1). An identical reconstruction of events surfaces in the Song of the Sea (Exodus 15), one of the earliest extant Hebrew lyrics: awe at Yhwh's might struck the peoples and leaders of Trans- and Cisjordan dumb, until Yhwh's people had passed over Jordan, into the land of the inheritance (vv 13–16). In Joshua 5 (vv 13–15), as in Exodus 15 (v 17), there follows the consecration of Yhwh's sanctuary. This occasion, and the concomitant appearance of the captain of Yhwh's hosts, foreordains, for the second time, the Amorites' destruction.

The tradition that transformed the Jordan crossing into Israel's proleptic triumph probably negotiated the gap between the time when Exodus 15 was written and that of Joshua 1:3–5's composition in the form of an annual ritual. Such a ritual progress from Shittim to Gilgal is alluded to in Micah 6:5; the prophet associates it with commemoration of the Exodus, and with the story of Balaam (Numbers 22–24). Joshua 24 juxtaposes the same events with a sudden and miraculous Conquest (in the Pentateuch, a number of P texts separate Balaam from the fording) in a (Deuteronomistic) framework that presents Moses' work in Transjordan as the start of, not the prelude to, the settlement (vv 8–12):it represents this historical rehearsal as a history of salvation, the reason for Israel at Shechem (not Shiloh) to make fast its commitment to Yhwh. Interestingly, Hos 6:7–9, in the context of 6:1–10, suggests that both Mic 6:5 and Joshua 24 reflect a single ritual: Hosea refers to a ritual movement from Adam in Transjordan (through Gilgal? Hos 9:10, 12, 15; 12:12; B. Mazar 1985) to a climax at Shechem (cf. Deut 11:29–32; 27:1–13; Josh 8:30–35). This unopposed processional march furnishes the basis for later prophetic transformations of the motif (esp. Isa 11:14–16; see Cross *CMHE*, 99–111).

It is no coincidence that the narratives of Abraham's (Gen 12:5–7) and Jacob's (Genesis 32–34) arrival in Canaan both recapitulate the pattern—the pattern of Israel's entry after the Exodus. The processional route is triply enshrined in the nation's ancestral lore. All these indications concur on the point that the materials reformulated in Joshua 1:3–5 constitute one of Israel's oldest, most carefully preserved traditions concerning the Conquest. They are the fruit of a sanctuary's foundation legend and a ritual hallowing it. In fact, liturgical elements associated with the ritual may survive in Exodus 15, Deuteronomy 33, Psalm 114, and, in embedded form, in Psalm 68 and Hab 3:3–6 (Cross *CMHE*, 99–105). An association with royal ritual seems also to have taken hold, sometime early in the era of the monarchy. 1 Sam 11:12–14; 2 Sam 19:16, 32, 40–44; and, probably 2 Sam 2:8–9, 12 all situate confirmations of the king's accession at Gilgal after a crossing from Transjordan.

(2) Jericho and Ai. The second narrative cycle in Joshua chronicles the overthrow of Jericho and Ai (chaps. 2; 6–8). It begins with a reconnaissance of the former town, an act that is set (in the present edition) during the three days Israel encamped by the river in Transjordan (2:22f.):Israel's spies in Jericho

find themselves in the home of Rahab, a prostitute, who barters their abetment for immunity from the Holy War. Rahab recounts how Israel's experience at the Reed Sea and victories over Sihon and Og in Transjordan had demoralized "all the inhabitants of the land" (2:9–11). This information the spies carry back to Joshua; it leads, as the opening cycles are edited, to the fording of the river (2:24).

The narrator resumes this strand after Joshua's encounter with Yhwh's divine commander (5:13–15). Jericho is invested. The ark and the army circle the city over the course of a full week; on the seventh day, down fall the walls. Joshua annihilates the population, Rahab and her family excepted, and the livestock. Captured metal is dedicated to Yhwh, in accordance with the precepts of the Holy War (ch. 6).

Joshua 24 portrays this event as the decisive confrontation, as an emblematic victory over all those groups with which later generations understood pre-Israelite Canaan to have been peopled (24:11f; correspondingly, the Clementine liturgy breaks off at just this point). Conceivably, the reference in Josh 24:12 to "the two kings of the Amorites", an expression elsewhere applied to Sihon and Og (Deut 3:8; 4:47; 31:4; Josh 2:10; 9:10), twins the account with that of the siege of Ai. This is uncertain, however. The LXX of Josh 24:12 refers to twelve Amorite kings instead of two. And v 12 may in fact allude to a rout of the Amorites derivative from and not identical with the battle at Jericho (v 11). But even if Joshua 24 did once preserve a tradition focused on Jericho alone, the narrative in chaps. 6–8 will now allow no dismemberment: the spectacular dismantling of Jericho leads without discontinuity to Ai's storming by subterfuge.

The direct link between events at Ai and Jericho is Achan ben-Karmi of the tribe of Judah (Josh 7:18). His peculation from the consecrated booty of Jericho forestalls the first attempt on Ai. Only his stoning permits the successful renewal of the assault (7:1–8:29). Hos 2:16f. (in the Valley of Achor, as Josh 7:25f; cf. 1 Chr 2:7; and note Hosea's play on Karmi) plainly associate the Achan incident with the first check encountered in Israel's advance from the wilderness into Canaan. This part of the Conquest cycle, like that surrounding Gilgal, had already been constructed, thus, in the oral or written sources that antedated the Deuteronomist's work.

At this juncture, the historian lowers the curtain on the first movement of the Conquest. He does so by taking the Israelites to Mt. Ebal, in fulfilment of the command of Deut 11:29f; 27:1–14 that they write the law mediated by Moses on stones there, and recite the blessing and curse associated with that law. Deut 27:2, 4 assign this duty to "the day when you cross the Jordan." One might suspect that the delays at Jericho and Ai were not envisioned by the authors of the Deuteronomic texts. But "the day when" in Hebrew can mean, "the time when." Too, the narrative as it stands brings Israel past Jericho and directly into the central hills, in a path that intersects the road from Ai or Bethel to Shechem: from Jericho, no other debouch would be more swift. It is to Shechem, in any event, that the historian draws his subjects for the climactic confirmation of their loyalty to Yhwh, in preparation for the practical part of their penetration of the land. That is, significantly, the last point in Joshua at which the ark, a regular element in the narrative from chap. 1 on, plays a role.

b. The Second Movement: The Big Battalions. A different sort of history begins in chap. 9. Instead of being dispirited, or magically expelled by hornets, the Amorites fashion formidable coalitions and engage Israel in pitched battles. 9:1, originally placed before 8:30–35 (with G), introduces this shift as a consequence of the foregoing action. It describes an assembly of "all the kings that were across the Jordan" (cf. 5:1), "in the highlands and in the lowlands and in all the shore of the Great Sea opposite the Lebanon—the Hittite, Amorite, Canaanite, Perizzite, Hivite, and Jebusite— … to war with Joshua and with Israel, with one accord" (for the resemblance to EA 366, see C.5.c below). Through the succeeding three chapters, the details of this extraordinary engagement, differing somewhat from the expectations this exordium evokes, unfurl compellingly.

The first palpable step in the plot takes place at Gilgal. Edified by the fate of Jericho and Ai, the Hivites of Gibeon and three other towns, located N and NW of Jerusalem, persuade Israel that they dwell in a "distant" land. By this ruse, they lure Israel into a treaty guaranteeing their lives. Only later, when they have already been rendered powerless to act by their leaders' sworn oath, do the Israelites learn where Gibeon really lies (chap. 9).

On the heels of Jericho's and Ai's devastation, the alliance with the Gibeonite tetrapolis creates a cordon in the central hills separating Jerusalem from the north. This strategic situation impels the king of Jerusalem into action. He forms an alliance with the other Amorite city-states of the southern hills and Shephelah (with Hebron, Jarmuth, Lachish, and Eglon), whose joint field force then beleaguers Gibeon. Joshua relieves the town after a night march from Gilgal and scores a resounding rout down the Aijalon Pass. During a two-day period when "the sun was still, and the moon stayed" for illumination, he pursues his antagonists, already enfiladed by hailstones, past Azekah to Makkedah (10:1–14). There, Joshua hangs his royal adversaries (10:16–27; v 15 is to be omitted, with G).

The next segment portrays Joshua as reducing systematically six strongholds in the Shephelah and hills—Makkedah, Libnah, Lachish (where he eradicates as well a field force led by the king of Gezer), Eglon, Hebron, and Debir—all according to the precepts of the Holy War (10:28–39). The historian summarizes: Joshua had taken the mountain, the S, the Shephelah and the "declivities" (*ʾăšēdôt*), establishing an ascendancy from Kadesh-barnea to Gaza in the S to Gibeon in the N. The rather extreme claim that Joshua had eliminated all life within these borders (except on the plain) also appears (10:40–42). The inheritance of Judah had been gutted.

The logical sequel to the southern clash is, of course, a northern one. The king of Hazor organizes a coalition similar to that in the S, but embracing his royal colleagues from the Hermon to the Jordan Valley, from the coast to the Chinnereth. They risk battle at "the waters of Merom," where Joshua annihilates them in a rout stretching to Sidon. Joshua again sets about reducing fortresses, but the only one named or burned is Hazor. Of the rest, Joshua destroys the population, but spares the architecture. The summary discloses that Joshua captured all the territory from the Negeb to the Hermon (the coasts and Jezreel Valley are not explicitly named), ridding the country of all its former inhabitants (Anakim) except in the Philistine littoral. "And the land was tranquil from war" (11:1–23).

This observation marks the juncture of the Conquest with the implementation of Yhwh's plans for the Israelite settlement. The historian provides two reviews, one of the areas conquered (chap. 12), the other of those unsubdued (Philistia, the southern Lebanon, the coast, and the region from the Hermon to Lebo Hamath: 13:1–6). Joshua assigns the tribes' territories (13–19), designates cities of refuge (20; responding to Num 35:9–34; cf. Deut 4:41–43; 19:1–13; Exod 21:12f.) and Levitical cities (21; responding to Num 35:1–8), and dismisses the Transjordanian contingent (22; following Num 32). Thus, the Conquest effectively closes with the confrontation at Merom. At the end of the book of Joshua, two final orations (chaps. 23; 24) punctuate it definitively.

3. After Joshua: the Nations Remaining. Joshua's military activity winds down over the course of "many years" with the consolidation of his gains at Merom (11:18). Israel's borders are extended to Lebo Hamath and the Euphrates much later: it is under David (2 Samuel 8) that Israel first fulfills its ultimate territorial destiny. More germane to earlier times are local traditions, which emerge in something of a tangle in Joshua and Judges.

One encounters the first of these traditions in the tribal allotments in Joshua. Manasseh cannot displace the inhabitants of the Jezreel fortresses; Ephraim does not take Gezer. More confusing, Josh 15:13–19 impute the conquest and settlement of Hebron and Debir to Caleb and Othniel, respectively; yet, the towns are already reduced in Josh 10:36–39 (Joshua deeds Hebron to Caleb five years after crossing the Jordan in 14:6–15). Judges 1 seems to place Caleb's conquest after Joshua's death (1:1, 10–15, 20). This text may in fact be drawn from Josh 15:13–19. In it, Hebron is taken by Judah, but Debir by Othniel; Debir is handled similarly in Josh 15:15–17. Yet even Hebron, it is implied in 14:11f., may have succumbed specifically to Caleb's arms (see further C.4).

The border lists assert that Judah (15:63), Ephraim (16:10), and Manasseh (17:11–13) failed to "supplant" (*hôrēš*) some inhabitants of their territories (cf. also 13:13). A comparable note in 19:47 about Dan's taking Laish glosses over the action's roots in Dan's failure to supplant the population of its allotment (Judg 1:35; 18:1, 27). But the primary repository of such recollections is Judges 1, an old text adapted for its present use by the Deuteronomistic Historian (Halpern 1983:179–182; Soggin *Judges* OTL, 26–27). This Cisjordanian compendium is peculiar in two respects: first it claims that Israel's task

after Joshua's demise was not the extension of the collective borders, as Joshua 10–13 might suggest, but making exclusive their grasp on the territories already theoretically in their possession; and, secondly, the chapter presumes that in this stage of the Conquest, the tribes fought singly for mastery within their allotments.

Judges 1 reports victories only for Judah (1:2–16, 20), Simeon (1:17), and Joseph (1:22–26), precisely the tribes concerning whom the Joshua border lists present notices of failure. For Ephraim and Manasseh (Joseph), Judges 1 preserves these notices (1:27 = Josh 17:11–13, Manasseh; 1:29 = Josh 16:10, Ephraim). Judah's failure notice, concerning Jerusalem, is transferred to Benjamin in Judges 1 (Josh 15:63; Judg 1:21). A Judahite sack of Jerusalem is supplied (Judg 1:8). The only mitigation of Judah's success is the remark in 1:19 that the Judahites were unable, because of the "iron chariotry" there (see Sawyer 1983:130–32), to supplant the inhabitants of the coastal lowlands.

Some scholars discover inconsistencies in Judges 1. These are chimerical: one produces them only by equating capture with "supplanting," between which the chapter distinguishes carefully. Joshua had taken the country; Israel must settle it. Judah had burnt Jerusalem (1:8); its inhabitants were not supplanted (1:21). Judah conquered (*lkd*) Gaza, Ashkelon, and Ekron (1:18; read MT), but could not supplant (*yrš*) the denizens of the lowlands (1:19, read with G); in this instance, only the distinction between conquest and supplanting dissolves an outright contradiction between two adjoining verses.

The logic of the chapter, like that of Joshua 13–19, is that military domination does not translate mechanically into supplanting Amorites. Victory at war, however sweet, is merely a preface to the work of rooting out the existing population and colonizing the land. As in Joshua, in short, de- and repopulating the country are two separate steps. This distinction permits the historian to explain how Israel came into political control of parts of Canaan (or, under David, of all of it) without discharging Yhwh's injunction to blot out the memory of the indigenous peoples (Deut 20:16–18; Num 33:52–56; Deut 7:24–26; 12:2f).

Between Judges 1 and Joshua there may seem to be a certain tension, which in some respects cannot be denied. Thus, the summary in Josh 10:40–42 maximizes the achievements recorded earlier in the same chapter, where no activity outside the hills region is described. It interprets the detailed campaign reports to imply Joshua's thorough execution of Yhwh's plans. Nevertheless, it differentiates between highlands and lowlands, just as the segment on Judah in Judges 1 is so careful to do. Joshua smote both (v 42), but destroyed all life only inland (vv 40f.). The summary reflects a desire to inflate Joshua's achievements without violating the limits of historical possibility as the historian perceived it. It is the urge, not the formulation, that creates a sense of tension or contradiction.

More problematic is the relationship between Judges 1 and Joshua 11. Josh 11:16–20 mentions Joshua's "taking" the land from the Negev to Baal Gad, as though without exception. Judges 1 lists the exceptions. But if the historian in Judges 1 relates Josh 11:16–20 (whether or not he wrote them) only to the cities whose forces Joshua met at the battle at Merom (11:1–9), there is no necessary conflict. Alternatively, the historian in Joshua may have distinguished between eradication and Israelite colonization. This would explain the exaggeration of 10:40–42 as well, though it would not altogether relieve the tension occasioned by Joshua 12 (below).

Josh 11:21f. confirms that the text demands such a nuanced reading. These verses must be consistent with Josh 10:40ff. That they rehearse 10:40–43 suggests that they take 11:16–20 not to describe Joshua's ousting the populations of the southern hills. Indeed, this represents a sharp reading: 11:16–20 speak of "taking" territory, of capturing the cities of specific kings (those of vv 1–15), but not of "supplanting" the indigenous populations either in whole or in part. It does not, in the reading of 11:21f. or of Judges 1, present the Conquest as fully accomplished.

The final segment of the Joshua narrative, the list of kings in Joshua 12, corresponds to Josh 11:10–15 in the sense that it enumerates which towns Israel depopulated. The list includes Taanach, Megiddo, and Dor, whose populations were not supplanted, according to Judges 1. It is to be remembered that Judges 1 is placed deliberately after Joshua's death. The chapter presumes that Joshua's campaigns established a generalized control of the countryside; it remained for the several tribes to carry through the settlement thereafter, each in its own territory. This is the meaning of the sequence in Joshua as a whole: one

proceeds from Israel's irruption from Transjordan to the overcoming of indigenous resistance (chaps. 10–12) to the distribution of tribal territories (chaps. 13–22). That individual areas were left unmastered or unsettled may be a tradition alien to some of the sources subsumed in the account. In the presentation as a whole, however, it is a consistent element, one with which the account of the tribal allotments in fact begins (Josh 13:1–6). In all, the qualification of Israel's success at colonizing Canaan may represent the historian's overlay on traditions (like that of the Amorite giants) that were more schematic, and more self-aggrandizing.

At issue in Judges 1 are the nations remaining. Unlike Joshua 13, Judges 1 focuses on interstitial regions, areas within the confines of Israelite control. It denies Israelite dominance in the Jezreel and the Aijalon Pass as well as on the coast, and points to Canaanite enclaves in areas under Israel's heel. Further, where those earlier texts, in which Yhwh's "hornet" is the medium of expulsion, speak of the "remaining peoples" as Yhwh's deliberate provision against the countryside's collapse into uncontrolled wilderness (Exod 23:29f.; cf. Deut 7:22; Josh 24:18), Judges 1 furnishes grounds for the verdict that Israel had willfully failed to execute the command to expunge the former population (2:1–5).

Consistent with this view, where Josh 15:63; 17:11–13, 18 spotlight the invaders' *inability* to expel their foes ("they *could* not supplant"), Judges 1 reserves this excuse for Judah (v 19, the formulation taken from Josh 17:18). Otherwise, it reports only that individual tribes "*did* not supplant" certain antagonists. And what appears as a Danite success in Josh 19:47, Judges 1 translates into a consolation prize, unworthy of mention, for the tribe's failure (vv 34f.). Other than Judah, thus, Israel has turned its back on Yhwh's command: Yhwh ceases, in the remarkable theology of the chapter, to subjugate Israel's (peripheral) foes for them, because Israel had failed, after subjugating them, to eradicate them (2:1–5).

The materials after Judges 1 develop this view. Judg 2:6–10 present an epanaleptic account of Joshua's death (after Josh 24:28–31). This synchronizes the events reported in 2:11ff. with those of Judges 1 (and especially 2:2–4), developing in parallel with Judges 1 an account of Israel's infidelity during what amounts to an interregnum. Thus, there remain (Judges 1) Canaanites whose presence the Israelites suffered after Joshua's death. After the demise of Joshua's generation, who "knew" Yhwh and his acts, Israelites unfamiliar with the wondrous Exodus and entry begin to worship the gods of the peoples around them—the influence of and Israel's fraternization with the Canaanite remnant here asserts itself, as predicted in Josh 23:13; Num 33:55.

In retaliation for Israel's infidelity, Yhwh repeatedly subjects them to the power of aliens. But when they repent, he relents, raising up "judges" (*šôpĕṭîm*) to save them. Yet, at the "judge's" death, the Israelites revert to cultivating gods of "the peoples who were around them." Yhwh therefore resolves against "supplanting" those nations Joshua has left (2:11–21).

By this expedient, Yhwh exploits the "nations remaining" to "test" Israel's fidelity—to wage war on Israel when it is necessary to reprove Israel for its waywardness, to instruct those who "did not know the wars of Canaan" (with G), who could not draw on first-hand experience of Yhwh's intervention for Israel, in wars over Canaan of their own (2:22f.; 3:1f,4). The nations in question are the peripheral powers enumerated among the unconquered in Josh 13:2–6 (cf. Judg 3:3). This presentation, then, links an interpretation of the book of Judges—in which the cycle of apostasy, oppression, and salvation plays itself out (Judg 3:7–11; 3:12–15, 30; 4:1–3, 23f. + 5:31c; 6:1–6, 11–17 + 8:28; 10:6–18 + 11:1–11, 33)—to the major historiographic framework in Joshua, specifically that recounting Joshua's complete subjugation of the interior (as chap. 23; contrast Weinfeld 1967; Kaufmann 1966:632–44).

Both Judg 1:1–2:5 and Judg 2:6–3:6 ascribe Israel's failure to capture and depopulate all the appointed lands to infidelity to Yhwh after Joshua's death. How Judg 1:1–2:5 defines this territory is uncertain (Cisjordan to the Hermon?). Judg 2:6–3:6 defines Canaan after the manner of Joshua 12–13; 23, as embracing all of Syria up to Lebo Hamath (roughly congruent with the dimensions of Egypt's Ramesside empire, and of David's). Both concede that Joshua's death left the Conquest incomplete, effectively confined to the central highlands. Even when David repaired this defect, an indigenous population remained (Judg 1:21, 28, 30, 33), the process of their extirpation having been irrevocably suspended (2:1–

5; 2:20–3:6; 1 Sam 7:14). It is to their presence that Joshua 23–Judges 3 traces Israel's failure to fulfill her divinely appointed destiny.

B. Scholarly Treatments of the Conquest

1. The Beginnings of Modern Criticism. Even in the 19th century, by which time source-criticism and the inroads of Enlightenment historical method had compelled most scholars to abandon the Pentateuch as a historical record, the book of Joshua continued to command a healthy respect. As late as 1909 a scholar as eminent as Paul Haupt was speculating in print as to the seismic character of the events at Jericho (Haupt 1909:361f.). Moreover, historians of Israel uniformly reconstructed the Conquest as a concerted Israelite entry from Transjordan, climaxing a migration aimed from the first at the overthrow and colonization of the country. Often, they thought of this migration as ending a period of nomadic wanderings, on the model of Numbers 13ff.

Judges 1, taken, it must be said, out of context, furnished the first focus of skepticism about this view. E. Meyer ushered in the new era by arguing (1881) that this chapter recorded a series of triumphs by individual tribes rather than a united invasion, as in Joshua 10–12. The former type of Conquest he assigned to the J source of the Pentateuch, the latter to the Elohist (E). Meyer stressed that the two traditions were not to be harmonized by being placed sequentially (as in the present recension), that they represented contradictory historical variants touching different tribal groups.

Meyer's *tour de force* bore the encumbrance of all the 19th-century biases about the patriarchal narratives. Especially from the time of Ewald's *Geschichte des Volkes Israel* I (1843), students of Genesis looked to these narratives as troves of information concerning mass population movements and other early, national history. Thus, the patriarchal life-style reflected Israelite nomadism in the pre-Conquest period. Genesis 34, relating Dinah's ravishment and the curse of Simeon and Levi, memorialized an early Israelite settlement at Shechem and the expulsion of the tribes (not individuals) accursed. The Rachel tribes could be linked to the stories of Conquest in the central hills; the Leah tribes were southern, tied to a penetration from Kadesh (below). Scholars mined the eponymic lore as though it were a mathematical notation of pre-Occupation history. Assuming that the tribes had existed discretely and in perpetuity, they sought to explain their coalescence outside Canaan. Most assumed it had taken place in Transjordan.

Not unnaturally, this posture among the pundits threw the relative chronology of the Exodus and Conquest out of whack. Which tribes belonged to what stages of each? Many scholars chose to harmonize, as they thought, the cacophony of Judges 1 and Joshua. Wellhausen (1894) and Guthe (1900) resolved it into two invasions from the east in the post-Mosaic era. Kittel (1888) and Procksch (1906) read the relative sequence of the patriarchs and Exodus to imply one invasion was pre-Mosaic. Still others (Paton 1900, Steuernagel 1901, Gressmann 1913) posited an early onslaught from the S by the Leah tribes: they unearthed traces of it, now buried beneath the literary structure of a unified incursion from Transjordan, in Israel's reconnaissance from Kadesh (Numbers 13–14; tellingly, J takes the spies only as far as Hebron), and in Num 20:14–21 (confrontation with Edom); 21:1–3 (the defeat of Arad). They also appealed to the fact that in Judges 1, Judah and Simeon proceed first of all the tribes. These scholars associated the later intrusion of the Rachel tribes with a movement of the Exodus-community from Transjordan after Moses' death (Joshua 9–11; Judg 1:21–27). The Leah invasion had been piecemeal (associated with Judges 1 and J); the Rachel invasion (Joshua, E) was unified.

The appearance of the *ḫa-bi-ru* (Eg *ʿapirū*) in the archive from the 14th-century court of Akhenaten at El Amarna undergirded these speculations. The Habiru were identified with the Hebrews *(ʿibrîm),* and the latter, even more speculatively, with the Israelites. The Amarna letters from Egyptian vassals in Canaan were taken to reflect the first stage of Israelite occupation (some in fact exploited them to date the Conquest as a whole to the 15th or 14th century, citing also the problematic 1 Kgs 6:1). A number of scholars identified the Habiru of Amarna with the Leah tribes. A 13th-century allusion to a "chief of Asher" being treed by a bear somewhere in the neighborhood of Megiddo ratified the hypothesis: Israel, or elements of it, had been in the land from the 14th century on. These were the Hebrews who had destroyed Jericho, the fall of which before Late Bronze IIB (ca. 1300–1200 B.C.E.) had embarrassed the

dominant school of thought, which placed the Exodus in the 13th century. The Exodus, by contrast, involved only Rachel.

These analyses all coordinated three dichotomies: between Judah (the south) and Israel (the north), between Leah and Rachel, and between Judges 1 and Joshua. None of these was indissoluble, and that between Judges 1 and Joshua was forced. The theories further attached great weight to the peregrinations of the patriarchs, and to traditions of Israel's wilderness wanderings, even though these were now viewed as a literary device to connect the southern to the northern thrusts. They relied, ironically, on the details of these sources, including their insinuations of the tribes' discrete existence, all the while they rejected the sources' overall historiographic framework; no real inquiry into the interrelationship between the details and the framework was essayed. To anchor all this surmise, though, the traditions of "nomadism" had to mirror authentic conditions in the era before Israel's invasions: how else could diverse groups of Israelites keep sweeping in off the desert? Testimony as to these nomadic origins thus emerged as a nodal point for inquiry. At the same time, these reconstructions affirmed in essence the value of the reports in Joshua 1–11.

2. The Sociological View. This consensus was first restructured by Albrecht Alt in 1925. Alt observed that the sources in Joshua portrayed the events from a considerable chronological remove, and that they were insufficiently extensive to permit on this basis alone a detailed reconstruction. He saw that the translation of patriarchal legend from eponymic folklore into national history was arbitrary, and the use of its results solipsistic. He also understood that the reconstruction of pre-Conquest Israel as a medley of marginal nomads had implications for the history of the settlement incompatible with the conclusions at which his colleagues had arrived. Heavily under the influence of Max Weber, he therefore reframed the problem as one of historical geography and political structures: instead of concentrating on the airy problem of the intentions of a people, Israel, immune from historical scrutiny in a sort of wilderness limbo—instead of asking what "tribes" were where in the twilight of Israel's prehistory—Alt asked what it was that the Conquest had meant on the ground.

His answer: in the coastlands and Jezreel, where in the LB Age Egypt's empire had flourished, the old city-states continued to dictate the shape of Canaan's political divisions. Even those city-states vanquished by the Philistines and other Sea Peoples retained their traditional territories; the territories continued to be named after the towns. Conversely, the interior initially occupied by the Israelites lay outside the lowlands system—in the Amarna texts, Shechem, and Jerusalem were the only city-states of the central and southern hills. These Israelite zones, defined by Judges 1 and roughly coincidental with the shape of Saul's kingdom (2 Sam 2:9), took the name not of a town, but of a nation. Their political culture was national, ethnic rather than local and territorial. Indeed, Israel achieved *geographical* continuum only when David took the Jezreel Valley: this was the first era in which the lowland city-state was broken down and subordinated to a national structure, that of a territorial state.

Alt concluded that Israelites had first entered and occupied those hinterlands least fitted to withstand their penetration. Their movement into Canaan resembled that of semi-nomads fixed on a course of sedentarization, a model contoured to the paradigm of Israel's wandering in the wilderness. Yet Alt's scenario incorporated the healthy qualification, based on the model of Bedouin sedentarization, that such a people could have entered the land only by infiltration: they could have mastered territory only outside close political and military control, which is to say, in regions not systematically tesselated with city-states; even here, they must at first have cooperated with the city-state system. The destruction of the city-states was a second stage in the process. Even the coalescence of Israelite ethnicity into articulated peoplehood (which Alt identified with statehood) took place in the land itself.

Alt's emphasis on bedouin infiltration capped the trend focusing on Israelite nomadism as a formative historical and cultural element. Fresh was the element of sociological theory applied almost formally in picturing the nature of sedentarization and the complex interdependence between the pastoral and urban populations, and in emphasizing the development of the state as a measure of meaningful transition in political history. Alt further diverted scholarly attention from Joshua's exploits in storied battles to Israel's and David's achievements across historical Canaan. The issue was not what Joshua had done so

much as what measurable benefits had accrued from his and from any other hypothetical early efforts. Correspondingly, the question of the character and composition of the original incursion into Canaan paled into virtual invisibility beside the issue of what territories Israel in her early years secured: the consciousness of the incoming Israelites ceased to be material, in line with Alt's conviction that they grew together as a political unit only on Canaanite soil. The notion of "conquering" Canaan evolved only slowly out of the gradual consolidation of Israel's ethnopolitical condition there.

Alt's position entailed evaluating Israel's conquest literature as a telescoped compendium of subsequent honors, devoid of direct or literal value. He himself stressed its etiological character, and drew strength from the fact that excavations at Ai showed the site to have been vacant during the LB Age (ca. 1570–1200 B.C.E.), when the Israelites should have been destroying it. Subsequent exploration at Jericho disclosed, too, that the walls did not "come a-tumblin' down" because there were no walls to have tumbled in LB II (though Garstang's "city wall" section has never been relocated and reinterpreted). Stressing that Judges 1 and the record of Hazor's undoing in Judges 4–5 contradicted Joshua's personal association with the struggle against the northern city-states, Alt and his followers dissociated Joshua from any action other than that in the Aijalon Pass (Josh 10:1–15).

The more conservative scholarly positions that antedated Alt did not altogether wither under Alt's attack. In the 1930's, William Foxwell Albright and his disciples emerged as the staunchest advocates of the older constructions, with Israel howling in off the desert and sweeping Canaan before it (Albright *ARI*). The wrinkle of the double-entry (once from the south) was retained from the 19th century. And the concession was made, against the most extreme claims of the text, that the Conquest confined itself to the hills, and even there was only partially successful. Alt's crucial distinction, thus, between the lowlands in the hands of the Canaanites and the hills controlled by Israel, prevailed, though no clear correlation of this point to the distinction between conquest and supplanting in Joshua and Judges was essayed. But Albright pointed to destructions at LB II Lachish and Tell Beit Mirsim, and, later, at LB II Hazor as evidence of a violent entry. He proposed, somewhat more feebly, that the story of Ai's destruction had been displaced from Bethel. Finally, Albright's partisans observed that Judges 1's tribe-by-tribe reportage could not be used to buttress Alt's scenario, as the latter claimed in 1939. Judges 1 was a list, not a narrative, and therefore necessarily presented a fragmented view: further, "tribe-by-tribe" was not a normal process of sedentarization, which takes place at the individual or expanded family (*hamula*) level (Wright 1946).

This whole vantage-point must be seen today as something of a rearguard action. Proponents of Alt's *"Landnahme"*—"occupation," a term that embraces the process through to David's time—retorted that destructions did not imply Israelite action: Egyptians and earthquake, fire and Philistines all had to be reckoned as possible causes. Even where Israelite settlement succeeded the destruction (Bethel, Hazor, and in the Albrightian brief, Lachish, Tell Beit Mirsim), one had evidence only of occupation, not of the identity of the attacker.

Further, they contended, biblical historiography concerning the Conquest took its shape from various concerns—etiological, ideological, political—not all historical, that worked in cumulative synergy from the era of the events to that, much later, of the writing. One could not match textual claims to archaeological results from LB sites without analyzing the claims diachronically: the literature, like the sites, needed to be approached as a stratigraphic cipher. Thus, Jericho (Bienkowski 1986) and Ai (Callaway 1968) were unpopulated in the Late Bronze, so that those elements of the Conquest account were incorrect. At Gibeon, the only signs of a "great" LB city were a few rather inconsequential tombs—so the tradition of alliance had to be called into question or dated later. Debir, probably to be identified with Khirbet Rabud, not with Tell Beit Mirsim, apparently experienced no interruption in occupation (Kochavi 1974). And there are no signs, to date, of LB IIB settlements either at Hebron or at Tell Yarmut. Indeed, epigraphic data from Lachish places the end of the Canaanite city there around 1150 (Ussishkin 1985), some half century after the Israelites are known—from the Merneptah stele—to have established themselves in Canaan. Archaeology does as much to disprove the Joshua narratives as to support them: those who use it to buttress a theory of a unified Conquest must use it, and the texts, very selectively.

As to the issue whether the Israelites entered united, bent on war, or in smaller groups, Alt's disciples observed that one had only to note how exiguous their early impact had been on the city-states. Indeed, the logistics and coordination of the venture imagined by Albright defied rational reconstruction (as Weippert 1979:31–32); and, why the supposedly centralized Israelites dispersed after vast victories into the undesirable hinterlands and the plight of powerlessness seemed puzzling.

3. The Internal Conquest. These strictures had great force, and for 40 years the "infiltration" hypothesis furnished the dominant paradigm for reconstructing the Occupation. "Conquest" advocates more or less accommodated to it by debating, as they had since the 19th century, which tribes came to Canaan when. But upon this asymptotic movement, a new model supervened. In 1962, G. E. Mendenhall turned the flank of Alt's position by calling its strongest, yet least defended bulwark into issue.

Mendenhall denied that the Israelites had been desert nomads at all, or underwent any collective transformation from wanderers in the steppe to farmers in the Canaanite interior; he found Alt's supporters at a disadvantage, for the biblical text affords evidence of migration, even of pastoral pursuits inside Canaan, but none of nomadism. Moreover, the model of nomadism with which Alt's supporters most often worked was not that of transhumant communities or transhumant pastoral specialists inside agricultural communities, but one of the groups of wanderers with no special territorial affiliation. It agreed with no known ANE reality, but leaned heavily on the model of Arabian camel-nomads, only superficially understood. This defect, of course, was one inherited from the bedouin ideal of the 19th and 20th centuries (Budde 1895; Flight 1923), an ideal concretized in the popular imagination by the exploits of Colonel Lawrence.

Mendenhall proposed instead that Israel conquered Canaan through a "peasants' revolt." Stressing the importance of the Habiru as an element in Amarna Canaan, Mendenhall defined the term to denote those disenfranchised from a role in the city-state system. He regarded this as a phenomenon more widespread than the case of Israel alone, just as the "gentilic" (his social class) "Hebrew" comprised a group of people of which Israel was only one part. In the Amarna era, he claimed, such alienation was progressing apace: the peasants of the villages yearned for relief from the oppressive cities; they made common cause with the Habiru to this end. Ultimately, he suggested, these peasants must have withdrawn from the city-state structures, drifting off to a refuge in the highlands. Galvanized by a radical new religion, Yahwism, carried across Jordan by a few survivors of the Exodus, these "Hebrews" carved out for themselves a community, ecumenical (Gottwald 1979 adds "egalitarian"; cf. Mendenhall 1983) in character—as reflected in Israelite covenant law—and radically opposed to the feudal despotisms of Canaan. The list of kings killed in Josh 12:9–24 testified powerfully to the zeal with which the Habiru prosecuted their mission to liberate all the prisoners of pagan autocracy.

Mendenhall's "ideal model" stood off against earlier efforts in two respects. Against the Conquest model, it posited no sizable invasion from Transjordan. Against the Occupation model, it restored the element of an early, collective Conquest, repudiating the unteleological notion of nomadism Alt's followers had fostered. It represented a sort of Internal Conquest hypothesis (see further esp. Gottwald 1979; Chaney 1983).

Scholars were not wanting (esp. Weippert 1967) who applied their ingenuity to confute the arguments toward the Internal Conquest. The arguments have been various. The most important of the contentions may be reduced to six.

First, Mendenhall's characterization of the situation at Amarna is misleading. It is true, there are cases in which Canaanite townsmen kill their kings. But uniformly, where the evidence permits us to say anything at all, the old king is replaced with a new one. There is, in short, no evidence of a reaction against the institution of monarchy itself. Indeed, most of the evidence on which Mendenhall, and his defenders, Gottwald and Chaney, draw comes from the Byblos correspondence. Here, the Habiru are allegedly present in greatest number, and the party that deposes the king of Byblos, Rib-Addi, is the Habiru party. Yet these supposedly disaffected ruffians immediately set Rib-Addi's brother on the throne—a development no doubt more reassuring than disconcerting to the pillars of the social order. Similarly, the letters furnish no evidence whatever of peasant flight from the city-states. The only

population withdrawal at Byblos occurs when siege conditions result in a shortage of grain; and the deserters take refuge not among a community of disenfranchised fugitives, but at the next city-state, not under siege, down the coast. The disaffection of which Mendenhall speaks is nowhere in evidence (Halpern 1983:56–88). Unattested in Canaan either before or after the era of Israel's entry, it was, if it ever existed, a cut-flower phenomenon without textual reflex.

If the peasantry does not exhibit the restiveness on which Mendenhall bases his case, the Habiru are positively discouraging. There are a few unequivocal references to real—ethnic or sociological—Habiru in the archive (EA 195; Edzard et al 1970:1,2; possibly EA 71:20–22, 28–31; 76:17–20; 288:25–33, etc.). And scholars frequently stress the fact that Amarna vassal kings complain loudly that their lands, towns, or people are controlled by or have linked hands with the Habiru (Helck 1968:473; Chaney 1983:72–81). But when one asks, what does this mean concretely, the answer is, the lands, towns, or people have fallen into the hands of royal political opponents. Rib-Addi complains loudest and longest about the Habiru: but by "Habiru," he usually means the king of Amurru—another vassal king of the pharaoh—and its allies, i.e., the party that enthroned Rib-Addi's brother. This is the situation in the letters from other vassals as well. Whatever Habiru were, there is absolutely no textual evidence of a large number of them in Amarna Canaan. Almost always, Habiru is a term of opprobrium, denoting rebels against the pharaoh's authority (Halpern 1983:55–56; Na'aman 1986:276–278). One "joins the Habiru" but does not become one (Moran 1988):They are "the brigands," people accused of subversion against Egyptian overlordship; not coincidentally, the same nomenclature is used by the Romans for restive elements (including, retrospectively, Brutus and Cassius).

This understanding of the Amarna evidence finds stark corroboration in the archaeological and historical record. If the Canaanite peasantry in the 14th century was seething with anti-monarchic activism, as Mendenhall supposes, one would expect that large numbers of the disaffected took refuge in the hill country, out of reach of the plains city-states with their Egyptian-supported armies. Likewise, if there was a significant, powerful, and militarily active population of Habiru, locked in an unceasing struggle with the kings of the city-states, they must have settled off the plains. Yet the hill country of Ephraim in LB II was all but devoid of settlements outside the city-states (Finkelstein 1983; *AIS*). The more fertile hills of Manasseh have revealed only exiguous levels of occupation (Zertal 1986b). That is, there is no sign of organized or settled Habiru even in the land of Shechem, notorious for being the stretch of Canaan whose king "gave it to the Habiru" (EA 289:23–24). The Galilean uplands, too, seem to have been bare (Gal 1990; Amir 1980). The simplest explanation for this situation is that there was no significant Habiru population, and no significant flight from the city-states.

Gottwald (1979:296–97, 655–58) has attempted to shore up this soft spot in Mendenhall's armor. He suggests that the peasantry shunned the hills because without lime-slaked cisterns and iron tools for terracing, the hills could not be settled. But the uplands were heavily settled in the MB II—the cisterns must have been lined effectively wherever the bedrock was permeable, though the bedrock did not require this in all places (as Callaway 1976:30). And there is little evidence of iron in the hills in Iron I (Waldbaum 1978; Stager 1985a). Moreover, in LB II-Iron I, Assyrian kings still preferred bronze pickaxes for cutting roads through mountain country (Grayson 1987:272. 40–46; *ARI* 2:7.13). This preference actually lasts into the late 8th century (Thureau-Dangin 1912:3:24):iron implements from this era suggest that quality control remained a serious problem (Pleiner 1979). In light of this difficulty, Chaney has suggested that the kings of LB Canaan deprived their cultivators of all metal (1983:64–65). This, however, is sheer conjecture; the widespread representation of bronze in LB sites, including even relatively simple burials (note Khalil 1984), speaks compellingly against it. The weight of the evidence is that the peasants of the Amarna-era had the means to domesticate the hills. What they lacked was the motive.

One further consideration should be added. The designation, Habiru, may originally have had an ethnic connotation. This interpretation is difficult to disprove if one identifies, as Mendenhall did, the Habiru with the Hebrews: early biblical texts see the latter as an ethnological designation, embracing in one tradition the Israelites and their Transjordanian, south Arabian and south Syrian neighbors (J in Gen

10:25–30; 16:10–14; 19:30–38; 22:20–24; 25:25). If so, early Israel was not, as Mendenhall supposes, ecumenical (see below), but rather an ethnic entity.

In sum, conditions in Canaan in the LB Age do not resemble Mendenhall's characterization: the peasants are not on the verge of withdrawal; the Habiru are not present in any great number; and, there is no evidence of a population of disaffected anti-royalists. Mendenhall's view of the Amarna era is a conjecture whose accuracy is an aleatory matter, not a case argued on the basis of firm evidence and probability.

Mendenhall's position on early Israel is no more apt. Mendenhall's supporters are quick to point out that there are lines of continuity between Canaanite and Israelite material culture. The "collared-rim" style for ceramic ware so characteristic of Israelite settlements is found also in Canaanite strata, stretching back into the 14th century at Beth-shan, Megiddo, Tell Abu Hawam, and Tell Beit Mirsim. Collared-rim storage jars, which are particularly typical of Israelite pottery repertoires, appear in some number at Megiddo VI, an Iron-Age layer the identity of whose inhabitants is disputed (but see Fritz 1987:97). However, only one appears in a LB context, at Canaanite Aphek, and this one occurs at the very end of the period, and in a site with Israelite neighbors close nearby (Beck and Kochavi 1983). Further, there is a change in Iron I from pottery "thrown" on a fast wheel to pottery coil-built and hand-made. There is also discontinuity between Israel and Canaan in the relative frequency of collared-rim ware in the pottery finds of Iron I, and especially in housing stock, where the dominant architectural types and the village plans are entirely divorced (below, C.3).

Too, the settlement pattern in Iron I contradicts Mendenhall's model. The manpower of urban LB Canaan was depleted (Gonen 1984). Yet, the hills population burgeons in Iron I, at a rate far exceeding that of natural increase. Nor were the settlers fugitive peasants: they first homesteaded regions suited to an economy based on pastoralism; only later did settlement extend to regions suited to an autarkic or cash-crop economy (Finkelstein 1983:110–77). So the settlers were not refugees, but migrants, who had converted their assets into livestock, and entered the hills with established herds: this is why 65–80% of the hills villages' area consisted of enclosure space (Finkelstein 1986b: 116–21). They were of recent agrarian background (Callaway 1976:29; Stager 1985b: 60*), but they certainly had not withdrawn from local city-states, which did not have the spare manpower to sustain such an extensive population movement, and whose rulers would not have tolerated the nomadization of their agrarian population.

This point, too, has confirmation. Merneptah's "Israel stele" contains a portrait of "the people, Israel" (Stager 1985b: 59*–60*). However, this portrait actually stems from the artists of Ramesses II, when it functioned as a depiction of Shasu (Redford 1986:192–200). Shasu is the Egyptian term for the pastoralists of Transjordan (Weippert 1974:270–71). In short, the Merneptah stele identifies Israel with pastoral elements from outside Cisjordan. Its record, thus, conforms to that of Israel's own ethnography, for it is with Edom, Moab, Ammon, and Aram, in Transjordan, that Israel claimed the closest affinities—claims that in turn reflect the authentic relations of the Israelite language (see below). All this is what the pattern of settlement leads us to expect, and both contradict the Internal Conquest model.

Mendenhall's cultural arguments are equally unconvincing. The case for Israelite king-killing boils down to the list in Josh 12:9–24—a text that is composite and late, and integrally bound up with the presentation in chaps. 1–11 (above A.3). Even if the text were early, it would constitute evidence of activity not against kings, but against *enemy* kings, a distinction lost on Mendenhall. The distinction is important from all viewpoints: Israel identified the interest of the king with that of the people (Judg 3:15–30; 4; 6–8; Josh 10:1–39). The role of the list in Joshua 12 in the Conquest narratives bears witness only to this prejudice: how does one separate the commemoration of kings killed in Joshua 12 from that of populations extirpated in Joshua 10–11? Further, early Israel was precisely xenophobic, as Judges 5 (esp. v 19) and Exodus 15 (esp. vv 13–17) testify, and as Saulide policy confirms (2 Sam 21:1–14; 4:3). Maintenance of the ethnic distinction between allied Hivites (Joshua 9; 2 Sam 21:1–14), or other local groups within the compass of Israelite territorial ambitions (Judg 1:27–36), and Israelites, reflects a long consciousness and defense of ethnic or national distinction. If early Israel killed kings, it did so not

because kings defended the privilege and social stratification of an *ancien regime*, but because the kings were Canaanites.

This is a major blow to Mendenhall's thesis. That Israel was not egalitarian is a state of affairs Mendenhall acknowledges (1983). But his whole theoretical structure comes crashing down if Israel was not ecumenical. Nevertheless, not only is the early poetry characterized by extreme xenophobia, but the Israelites actually practiced mutilation (male circumcision), the function (although not necessarily the origins) of which is to inhibit connubium with neighbors, such as the Philistines, and perhaps non-Hivite (Genesis 34) Amorites (see Goody 1969). Statistical evidence is also accumulating (Wapnish and Hesse fc.; Hellwing and Adjeman 1986:145–46, 151) for a distinctive Israelite dietary profile, which included the avoidance of pig even in zones bordering on Canaanite and Philistine centers where pig-consumption was regular (Hesse 1986, forty percent of the meat diet in a Philistine site, eight percent in a Canaanite). In the dietary evidence, Israelite xenophobia leaves a firm archaeological reflex.

Here, again, Alt enjoys a firm purchase on the high ground. Israel was first a consanguinary and only secondarily a territorial entity. It afforded no refuge for out-groups. Early Israel may have been, as Mendenhall's adherents claim, egalitarian. Its egalitarianism, however, embraced Canaanite elements roughly under the conditions and in the proportions in which Spartan egalitarianism extended to the Helots. That is a lesson that the reduction of Canaanites to forced labor under Solomon firmly teaches. This xenophobic posture is incommensurable with the view that Israel was ecumenical in origin and disposition. Correspondingly, there exist records of local accommodation to the invaders (Joshua 9; Judges 1), but none of active connivance with them. The implication is not necessarily that no such cases occurred; but the circumstance reflects the hostile attitudes toward such allies that governed the course of Israelite memory. Mendenhall's scenario, again, consists of more imagination than inference.

Had its exponents to labor under none of these considerable disabilities, the Internal Conquest would nevertheless suffer from a fundamental flaw. Unlike either the Conquest or the Occupation hypothesis, it draws no direct support from Israelite sources: Mendenhall (1962) cites such texts as Joshua 12; the Song of Heshbon (suppositiously preserved by defectors to Israel); and links between Reubenites and Gileadites and places in Judah and Ephraim (uninhabited in LB) respectively. All these hints are based on the decontextualization of particular claims. The literature not only contains no recollections of Israelites swarming out of Canaanite villages, but explicitly affirms the opposite. Israel's distinction from Canaan, blemished only by the pact with Gibeon, persisted until the era of the entry had ended. In Mendenhall's case, "the ascent of reason was aided by the wings of imagination." The model can never therefore amount to anything but one among innumerable possible scenarios. Its inherent probability is low.

4. Résumé. Each of the reconstructions reviewed above is coherent within the context of the facts. The Conquest scenario responds both to the claims of Joshua 9–11 and to the archaeological data especially from Hazor and Tell Beit Mirsim. The Internal Conquest model focuses on conditions in pre-Israelite lowlands Canaan. One should note that neither model dispenses with the element of invasion from abroad: The Yahwistic invader is reduced, at best, from an agent of radical change, or, in Alt's case, of gradual change, to a catalyst of reactionism; even in this case it remains the fulcrum of historical development.

The Occupation model, however, is methodologically most mature. By asking first what change Israel's entry effected, it sets out from facts immediate to Israel's early life in Canaan. It involves no necessary recourse to the history of Israel before the Occupation. The Internal Conquest presupposes that Israel existed latently among disaffected lowland peasants; the Conquest model presumes that Israel arrived on the brink of Canaan ready-formed, and intent on broad conquests (it effectively presupposes the Exodus). The Occupation model's explanatory power consists in its narrow adhesion to palpable fact: early Israel peopled the hills and backwaters of Canaan.

This very strength proved in the end the theory's Achilles' heel. Alt's view presumed that there was outside Canaan's confines a fund of potential settlers, who fitfully drifted in to homestead the empty hills. Left to him was the 19th-century model of the Bedouin as a means to construe the pre-community community; no doubt the texts in Genesis and Numbers that portray Israel and its progenitors as migrants

encouraged him to exploit the legacy. Here, Alt, too, left the firm ground of historical geography and political structures on the wings of sociological typology. Although his recourse avoided the historically sterile issue of the connection of Israel's Hebrews to the Habiru, and relegated to abeyance the destruction and repopulation by Israelites of Bethel, Hazor, and Tell Beit Mirsim, its implications for Israelite history in an eking existence on the steppe, strike discordantly on the register of verisimilitude: pastoralism is an activity intimately connected with settled culture, with markets for meat, with material plenty. Pastoralists in Canaan belong not to the untamed wilds of the land, but to the fringes of the most heavily cultivated districts. Even a neo-Altian scenario, like that offered by I. Finkelstein, must acknowledge that the failure of archaeological surveys to locate any significant Israelite presence in the hills prior to 1200 contradicts the thesis that a large population could have been engaged in pastoralism there.

C. The Emergence of Israel in Canaan

The variables whose isolation is an assault on the Conquest demands are daunting in their diversity. One must mate evidence biblical and extra-biblical, textual and archaeological, intrinsic and ideal. One must distinguish pre-Israelite Canaan from that of subsequent eras. One must distinguish pre-Canaanite Israel from Israel in the land. Finally, one must justify in historical terms the attested condition of pre-monarchic Israel, holding parts of Canaan, on the basis of the process of occupation. In all these enterprises, Alt is to be emulated. The unknown should be approached through the medium of the concrete. Otherwise, guided by "ideal models" and prejudices, the quest after the Conquest is merely a blind groping toward origins—lent a superstitious significance—that lie beyond the glimmer of measurable historical circumstance.

1. Canaan Before Israel. Israel's emergence as a people in Canaan coincides with the end of the LB Age (LB II, ca. 1400–1200 B.C.E.) and the beginning of the Iron Age (Iron I, ca. 1200–1000). Various textual sources illuminate the former time: Egyptian monuments deposited at Megiddo and Beth-shan document the pharaoh's domination, and periodic internal and external challenges to it. Hittite archives corroborate them in regard to Canaan's periphery. The diplomatic correspondence from El Amarna (and letters found in a few Canaanite tells) elucidates brilliantly the petty "politicking" of the mid-14th century, during the reigns of Amenhotep III and Akhenaten. To the N, the Ugaritic tablets afford a glimpse of a great kingdom approaching the end of its days in the 13th/12th century. And, starting at about this time, Assyrian texts commemorate campaigns to the West and to the Sea. The archaeological record mirrors the textual record closely, a circumstance rather different from those surrounding Israel's origins, though whether this means that the Sea Peoples or Achaeans caused the collapse of Asian civilization is a difficult question (see Tadmor 1975; Millard 1981, on the age as a whole). Relatively, the era basks in a liberal light.

Late Bronze II Canaan was fashioned from the rich block of the Middle Bronze IIC by the chisel of the Egyptian pharaohs. From the mid-16th to the mid-15th centuries, monarchs from Ahmose to Thutmosis IV, perhaps in common with their local competitors, cut a swath of destruction across SW Asia, reducing the hollow shell of Hyksos Canaan to ash. What Israel later inherited these forces denuded of its numerous, prosperous settlements; they left behind an empire of ruins. In all the Late Bronze Age, Canaan never recovered the density of settlement it enjoyed in the Middle Bronze II.

In the 14th century, a renewed city-state system represented the means of administering the empire, which Amenhotep III's armies consolidated against threats from Hatti and Mitanni. The empire consisted of a series of petty kingdoms, governed by local dynasts whose positions were dependent on the pharaoh's confirmation; it embraced all the land from Gaza to the doorstep of Ugarit. The disruptive element in this conglomerate were the mountain states, territorially extensive entities inland from the coast. Controlling them was difficult at the best of times—logistics and communications considered—and uneconomical at all. Sparsely populated, they remained rugged and refractory. In the plains and valleys, at the same time, a drama of dubious allegiances, alliances with foreign powers (Hatti, Mitanni), and reliance on pharaonic support played itself out. Distance vaccinated the southern lands against the ambitions of Hittite overlords. In the S, the region of later Israel, purely local ambitions dictated the

course of the political maneuvers. In the N, however, in collusion now with this, now with that restive Egyptian vassal, Hatti gradually wrested dominion from the decline of the 18th dynasty.

The landmark development in the relationship between the twin contestants was the battle of Qadesh. Fought early in the reign of Ramesses II, it arrested the erosion of Egyptian control in northern and central Syria, and on the coast south of Hatti. It led to a formal Egypto-Hittite condominium in Canaan. Yet this ratification of the *status quo* by coequal partners was not fated to endure. By the end of the 13th century, the Peoples of the Sea were a third force crashing onto the shores of Egypt and Canaan, and associated developments engulfed hapless Hatti, which beneath their tide sank helplessly from view, affording scope to Assyrian vigor west of the Euphrates, from the mid-13th century onward.

2. Canaan in the Earliest Israelite Eras. At the close of the LB Age, a series of new nations crystallized in Syria, Transjordan, and Canaan. For the first time, Egyptian sources during the interminable reign of Ramesses II surely speak of Moab and Edom. The celebrated reference to Israel in the Merneptah stela occurs only slightly later, around 1220–1207. Ammon's development cannot have lagged far behind. These are the nations that J in Genesis classifies as *Hebrew (ʿibrî)*—descendants of the eponym Eber (**ʿi/abr*), a group that includes proto-Arameans in S Syria—which emerged in the Cisjordanian interior and along the line of the King's Highway in Transjordan at the end of LB II. While Egyptian reports of Shasu in Transjordan antedate this era (see Helck 1968), the names later adopted by Iron-Age *Hebrew* kingdoms appear only in the 13th century.

Egypt in adversity maintained a grip on Canaan. This land weathered the Sea-People onslaught and mastered or possibly even installed their colonies on the Canaanite coast (see Singer 1988). Ramesses III, in particular, in the first half of the 12th century consolidated this domination. Locked in a martial struggle with the Sea-Peoples, he memorialized his campaigns against them in Canaan from Megiddo to Medinet Habu.

Ramesses III left his mark on Canaan's architectural complexion with public works at Beth Shean, Megiddo, and Lachish. Yet Egyptian control, like Egyptian interest, centered on the lowlands and trade-routes; even there, it was insouciant and sporadic (cf. Weinstein 1981:22). Just before Ramesses III's reign, the Philistines in the south and the Tjekker at Dor thus began to dislodge earlier Egyptian vassals or were settled in their place (as by Merneptah at Ashkelon?) on the coast. They were unceremoniously absorbed as new vassals into the old empire by the pharaoh (see Ussishkin 1985:222 on the date). Off the trade routes, the *Hebrew* nations appeared. Egypt could tolerate or adapt to considerable flux in its Asiatic possessions.

It is ironic that Israel retained no recollection of Egyptian domination in the land. Egyptian armies went calling in Canaan's valleys through the middle of the 12th century (Ussishkin 1985:218–19, 221, 224–26; Oren 1985:188), at a time when Israel was certainly at home in the hills (the Merneptah stela). We see the indirect influence of Egyptian dominion in Israel's adopting as its national myth an account of liberation from Egyptian bondage: slaves were one of LB Canaan's major exports to Egypt, and this practice probably continued into the 12th century. Famine, occasioned either by political turmoil or by drought, inevitably intensified the level of traffic. Thus, the Joseph story was based on conditions with which all inhabitants of Canaan were conversant. Servitude in Canaan and slavery in Egypt were the Canaanite lot: a story of a slaves' revolt and the overlord's overthrow at the Reed Sea was calculated to comfort all those still under the pharaoh's iron heel in Canaan. All the more, though, should the Canaanite subjects recall an era of Ramesses' revenge.

This conundrum has its key in the nature of Egyptian administration. Israel encountered it as exercised through the medium of local chieftains. Even when the Egyptian army itself appeared, it most often operated under the command of local commissioners (Sisera?) and in close cooperation with the vassals. An Israel subsumed within the territories of the city-states, not itself an administrative unit of the empire, would have had no reason to remember an Egyptian oppression, along the lines of those described in Judges; still less would an Israel in the hills have cause to recall participating in the Egyptians' expulsion. In other words, an ethnic Israel not recognized as a political unit by the pharaoh—because its demography violated the administrative lines of the Asiatic empire—and an Israel whose communal political influence

was confined to the topographic backwaters of Canaan could have encountered and remembered only the demands of local suzerains. The aggregate of these figures Israel claimed to have bested in a melee by the waters of Megiddo (Judges 5).

The Canaan that Israel settled at the start of the 12th century was a land in intermittent turmoil. On the chaos, Egyptian arms imposed a superficial order. It was an order against which Israel could not prevail. Indeed, during Israel's earliest years in Canaan, it was positioned neither politically nor geographically to offer a challenge to the pharaoh's forces. The Merneptah stela portrays Israel as an ethnos, not as a geographical entity. Its representation matches the bulk of the textual evidence as Alt construed it. It also fits precisely the contours of the archaeological data.

3. Israel on the Ground. Archaeological data adduced in defense of the Conquest model proved in the end a "recoiling bow." Results were mixed or negative at Jericho, and wholly falsified the claims of Joshua concerning Ai. But these setbacks affect only the symbolic portion of the Conquest, and it is natural to withdraw, as the Albright school did, to the more defensible line of Joshua 9–11. Here, after all, one could take cover behind the bulwark of an Israelite occupation succeeding that of the Canaanites at Hazor and, theoretically, Lachish (contrast Ussishkin 1985) and Tell Bet Mirsim (contrast Greenberg 1987), the two occupation levels divided by a violent destruction. The same was true at Bethel, whose defeat is recorded in Judg 1:22–26. Similar claims have been lodged regarding Beth Shemesh, Tell Zeror, Beth-shan, and, in Transjordan, Tell Deir Alla.

The pungency of this corroboration, however, is neutralized by two factors. Most of the destructions are not at sites to whose conquest Joshua 9–11 lay claim (Gezer, another case, is re-occupied by Philistines). And, at Lachish (V) and Hazor, Israel occupies the post-destruction site only after a gap in occupation. This is a quibble, since Joshua presumes, as noted, only destruction, not necessarily resettlement. But the gaps, even more than the late destruction of Lachish, are embarrassing. Further, if Khirbet Rabud is indeed ancient Debir, there is a flat contradiction: Rabud suffered no discontinuity in the period in question.

Second, as noted above (B.3), several towns named in Joshua 9–12 were either completely or virtually unoccupied at the end of LB IIB; others exhibit no sign of Israelite takeover in this era. The most embarrassing instance is that of Gibeon, hardly "a great city" (Josh 10:2). Jerusalem's ally in the same chapter, Jarmuth (10:3; no destruction is reported), was wholly or partly deserted. Taanach seems to have been devoid of LB IIB remains, despite Josh 12:21. And Arad (Josh 12:14, after Num 21:1–3) was abandoned from EB II until Iron I. Conversely, Lachish, whose destruction Josh 10:31f. describes, survived intact into the mid-12th century under Egyptian control (Ussishkin 1985). Tell Beit Mirsim was not occupied by Israelites until the 11th century (Greenberg 1987). The case of Bethel may be similar. All this poses more serious a difficulty, insofar as the testimony of the book of Joshua is concerned, than the paucity of early Israelite settlement.

The prize cases of exaggeration in Joshua 9–12 come in summaries claiming that Canaanites were uniformly annihilated (10:40–43; 11:12–23). This has precipitated the inclusion of such kings as those of Taanach, Aphek, and Megiddo in Josh 12:18, 21. If one takes this to imply the envelopment and capture of these towns, as scholars have usually felt Josh 11:12, 14 licensed them to do (but see above, A.3.), the archaeological record is damning: LB Aphek fell into non-Israelite hands, thence to the Philistines (note Beck and Kochavi 1983); Megiddo VIIA remained Canaanite into the second half of the 12th century, and it is unclear that Megiddo VI was held by Israel. Yet, discounting for slight exaggeration in the telling, the only specific town whose sack Joshua 11 asserts is Hazor (for whose fall ca. 1200 see the argument of Yadin 1972:108 [Yadin holds for 1230]). Nor can archaeological investigation falsify claims that Joshua met and routed enemy kings in the field.

As noted, the main danger in applying excavation results against the text is identical with that in applying them for it: the textual problems are in the process apt to be oversimplified. The case of Lachish has been cited. One might take the gap in occupation after Lachish VI to contradict the claim of Josh 10:31 that Israel took the town. But the text explicitly distinguishes Conquest from colonization as chronologically separate phases—a distinction presupposed by and indispensable to a sensible reading of

Judges 1. Israel did ultimately gain control of the town. Like that of Jerusalem in Judg 1:8, Lachish's role in Josh 10:31f. probably reflects only the natural telescoping of gradual achievements and their attribution to the emblematic Conqueror, Joshua.

Individual archaeological results are more likely to cast doubt on the biblical testimony than to confirm it. Where destruction and resettlement occur at times and places that coincide with those for which we might expect Israelite activity, the conqueror's identity and the timing of reoccupation can be called into question. Where excavations contradict biblical evidence—at Heshbon, for example, no remains antedating the Iron Age except a tomb (Harding et al. 1953:27–41) have been found (cf. Num 21:21–32)—the evidence can be devastating (though the ongoing settlement at Rabud or Lachish is perhaps more damning). The passage in point must be abandoned as an accurate record, and attempts to explain its origins elaborated without prejudice to surrounding records. Here, however, there is a lesson to be learned: in reconstructing the history, the issue is neither solely what is in the ground nor solely what is in the text; the object of research is the genetic relationship between them, their common, collateral antecedents.

In this connection, the most important archaeological data are not those directly related to textual claims. In a defense of a neo-Altian view, Finkelstein (1983; *AIS*) has adduced the data concerning Israelite population distribution in Iron I; he draws particularly on surveys conducted by Israeli archaeologists of settlement in the fringe areas (including especially mountain ridges and the inter-montane valleys). The picture is instructive: the earliest Iron Age saw the multiplication of small villages especially in the central hills, with minor development in the mountains of Judah and the Galilee (on the Galilee, see Aharoni 1970:264; Gal 1990). The picture in the hills of Manasseh is similar (22 sites in toto), and cult sites are among the remains (Mazar 1982; Zertal 1986a: 43–53). By the 11th century, this trend toward cultivation and squatting in the central hills had grown feverish. For example, where the hills of Ephraim sustained 4–5 settlements in LB II, they hosted something like 125 in Iron I (Finkelstein 1983:110–77). Barren areas, earlier abandoned, such as the Beersheba basin (Cohen 1985; note Finkelstein 1984) and the lower Galilee, began somewhat later to attract pioneers as well, and the countryside swelled with extensive and intensive agriculture and pastoralism.

Transjordan yields up a picture that is, generally speaking, comparable. Surveys tend to confirm that the Wadi Hasa region (to et-Tafileh) and the territory north of it to the Yarmuk experienced significant increases in settlement early in Iron I (Mittmann 1970; Weippert 1979:28–30; MacDonald 1983). Here, it may be added, evidence may be accruing that the process of settlement began effectively in LB, continuing into and snowballing in Iron I (see Miller 1982:172; Ibrahim, Sauer, and Yassine 1976:55–56; Sauer 1986:4–14). Finkelstein has linked this process hypothetically to the expulsion of the settled population from their various domiciles in MB IIB, which propelled them into pastoral nomadism in the fringes of Canaan. The process of resettlement reflects, then, their sedentarization some centuries later.

Archaeologically, however, the settlement increase in Iron I (or Late Bronze and Iron I) does not suffice to distinguish a sudden, massive influx from a slower stream of immigration from abroad, or the stream of outsiders from peasant flight to the hills. Still, when excavated, the Iron I sites in the hills and in Transjordan yield characteristic early Israelite pottery, particularly the "collared rim" ware ubiquitous in Israel's Iron I settlements. Like the rest of the Iron I pottery repertoire (esp. Kempinsky 1985; Albright 1932:53–54; Albright and Kelso 1968:63–65), this has been shown to have clear antecedents in LB II (Ibrahim 1978:121–22; above, B.3). Nor is it necessarily limited in Iron I to Israelites alone: it is heartily represented in Transjordan, for example (Ibrahim 1978). That is, it is a feature of early Israelite culture (the relative proportions of the pottery being particularly diagnostic, with roughly a third of rim fragments at Israelite sites composed of collared-rim store jars, and, at Giloh, another thirty percent of cooking pots—Mazar 1981b: 31). Insofar as this resembled that of the Transjordanian "Hebrews" (esp. Ammon, Moab, Edom; see Sauer 1986:10–14), and of elements inside Canaanite society, it also characterizes the cultures of other, associated peoples—whose settlements and states developed in parallel with Israel's.

The settlements also disclose either the prototypes or the realized form of a characteristic house-plan, that of the "four-room house," in which three rooved rectangles form a U about a courtyard; the parallel

rooms (the sides of the U) are separated from the courtyard sometimes only by pillars; the entrance, normally, is through the courtyard. Again, there is a possible prototype of the plan in LB IIA—an elegant building whose first floor was dedicated to industry was recently unearthed at Tell Batashi (Mazar 1981b: 91). Possibly, therefore, the housing stock is no more discontinuous with that of LB Canaan than is the pottery. Again, however, the common Canaanite house is not identical with the common Israelite: the Canaanite house is a square with a courtyard at its center. Speaking broadly, collared-rim ware and the four-room house characterize Israelite settlements of the Iron Age in Cisjordan, and some Transjordanian "Hebrew" sites (Sauer 1979). They are not characteristic of LB Canaanite centers.

There has been a controversy whether the four-room house was Israelite, and whether it developed from the pastoralist's tent (Fritz 1981:65; Fritz and Kempinski 1983:31–34); this, by definition, reaches beyond our historical grasp. But Israelite settlements also manifest a tendency to erect their housing in a ring, kept hollow in the Negeb, an arrangement convenient for pastoralists. Finkelstein linked the pattern of village planning to the exigencies of hills architecture (1983:192–94); but both factors probably played a role (see Finkelstein 1984:193–95; 1986b: 116–21). The four-room house itself is designed to accommodate small-scale family animal husbandry: the stock sleep under the areas parallel to the courtyard (the sides of the U, which can also serve as storage areas); the cross-room (the bottom of the U) stores feed and provisions for or sleeps the family. See HOUSE, ISRAELITE. Indeed, troughs are often found between the pillars separating the side-rooms from the courtyard (Holladay fc.). And the storage jars and other items of the household economy appear regularly in the cross-room. This design must have disseminated because of its functional advantages. Like the shape of the village, it implies a specific socioeconomic dynamic inside—what the common shape of the pottery shows is a shared economic microcosm. The predominance of this dynamic in its context weighs heavily against a theory that the Israelites originated as peasants in the plains. The Iron I hills pioneers were pastoralists, not peasants, first—a point corroborated by Merneptah's equation of Israelites with Shasu.

Finkelstein's survey (1983; *AIS*) stressed other impinging factors as well. Most of the Iron IA Israelite villages appear in the northern and central reaches of the central hills, clustering alongside the five established Canaanite centers in that region: the earliest settlers did not choose to establish themselves in the least populous and most isolated regions, such as Judaea. It does seem to be the case that the earlier settlements concentrate primarily on the eastern (wilderness) side of the mountain ridges, which afford adequate pasturage for their established herds of sheep. Still, the inhabitants of Izbet Sartah, possibly along with those of several nearby villages, set up shop on land suited to a mixed farming-pasturing strategy within shouting range of Aphek, which they no doubt supplied with meat in exchange for processed goods (see Finkelstein 1986).

The earliest Israelite pioneers thus brought their herds to regions suited to pastoralism. As they expanded their encampments, and erected permanent, agricultural dwellings, they deliberately exploited less densely forested patches in the uplands (thus near towns). This would have helped them avoid some of the intensive capital investment reclaiming the land involved; by the same token, the earliest settlements in the central hills were located in inland valleys (though no excavation results are yet available to determine how these compare to the hilltop villages), where terracing could be kept to a minimum (Finkelstein 1983:161–62; 1986:179).

All this is only to be expected. The new elements seem to have thought their settlements relatively secure—inadequately defended and often unwalled (Callaway 1976:29) as they were—whether because they were negligible or because prevailing conditions were relatively peaceful—as in the case of Izbet Sartah III–II. And, although they depended to some extent on the market for meat in the hills and plains towns of Canaan, many of them, especially the later ones, invested long years of hard labor clearing the farms of trees and rocks, terracing them, planting olive trees and vines, and cutting cisterns and grain silos into the hillsides. These pioneers also built enclosures to protect their property from their neighbors'; they planed the wood of their houses, built pillars and troughs, and participated in public works.

The nature of these projects was such that the families involved required labor for clearing, for improvements, and for harvesting. They needed labor exchange for the herds and fields, which involved a

certain critical mass of population involvement. Allowing that half of the Iron I population was present in Iron IA, the minimum influx into the region of the central hills, (the net Israelite population of which can be estimated at 40,000–80,000; Finkelstein *AIS*, 330–35), must have been something on the order of 15,000 people. That is, the total immigration into the hills of Cisjordan will, minimally, have reached the vicinity of 25,000:the influx simply must have continued over the course of the whole 12th century (and note the two waves of settlement at Ai—Callaway 1976:29–30 and the alterations from unstructured pastoral to a hierarchical, probably patriarchal, agricultural village at Izbet Sartah—Finkelstein 1986:5–23). The immigrants elected to clear, to cut, and to work the rock and the forest.

These are not in the end choices one would expect of peasants fleeing to an uncertain refuge from the plains. Indeed, as noted above, the historical behavior of such peasants had been to seek haven in other plains communities, not in a strange environment. It is difficult to imagine that the massive gamble of labor and materials involved in settling the hills would have come naturally to a plains population, or that marketing meat in the lowlands—and failing to fortify themselves against military constabularies sent to repatriate them (Finkelstein *AIS*, 313)—was a natural course for lowlands fugitives. Whether this movement reflects the sedentarization of peoples uprooted at the end of MB, or simply the influx of migrants from outside Cisjordan (and outside Transjordan), it suggests less the flight of urban peasantry than the homesteading of pastoral elements already integrated in economic interdependence with the plains. The continuity in pottery forms coupled with the distinction in the frequency of pottery types and in the dominant form of domestic (and public) architecture, and the settlement history of Transjordan, are consistent with this reconstruction (see Kempinski 1985). The clearing of trees and the clearing of stones, the building of terraces and the cutting of cisterns, the cutting of silos and the building of enclosures all stand in this tradition.

Still, it must be observed that neither the architectural evidence, which answers to function rather than style, nor the pattern of settlement, decisively contradicts the peasants' revolt. It is rather the textual evidence (above) that disqualifies that theory. One may add, in contrast to the Hivites, Kenites, and others who were absorbed as cohesive ethnic communities distinct from Israel—the list of Judges 1 furnishes numerous examples—whatever fugitive peasants took to the hills could have assimilated to Israel only singly. These would have had the characteristics of clients, at best, among the Israelite kin-groups (see, for example, Khazanov 1983:152–64). That they made a material contribution either to the culture or to the manpower of the hills communities seems unlikely.

4. Israelite Traditions in the Light of Modern Knowledge. Attention to archaeology and the history of the tradition has made it plain that the key to interpreting the Joshua traditions as history lies in critical distance and felicitous judgment. The narratives concerning the Jordan crossing, Jericho and Ai must be altogether discarded. The first reflects an annual ritual crossing, whose survival both attested to and re-shaped the traditions of earliest times (A.2.a. (1)); the latter attest the process whereby the sight of an Israelite settlement, or of no settlement at all, atop a noble tell inspired Israelite storytellers and historians to deduce that Joshua had taken the place. The participation of Yarmuth in the coalition of southern kings (10:3) reflects this sort of thinking, as does the confrontation with Arad in Num 21:1–3; 33:40; Josh 12:14. If Tell Hesi proves to be Israelite Eglon (10:34f.), it would represent another instance: the massive EB tells became the objects of Israelite romance.

All this damages the testimony of Joshua 9–11, for this cycle is intimately connected in the historian's presentation with that of Jericho and Ai (esp. 9:3, central to the nuance of vv 10, 24; 10:28, 30; 12:9). Nor does the historian distinguish the "symbolic" Conquest from that in Joshua 9–11 in terms of genre—the two are equally historical. Possibly, diverse sources underlie the account: the narrative in Josh 9:3–10:15 understands itself to focus on a battle against the kings of the southern hill country (esp. 10:6); even the continuation, in 10:16–39, does not exceed the confines of the Shephelah. One might go so far, since the distinction between "smiting" and "supplanting" corresponds to that between lowlands and hills, as to claim that the summary in 10:40–43 goes no further itself (so above, A.3.).

Conversely, 11:1–23 depict Israel as conquering everything Canaanite that moved, except on the coastal plain and in Syria N of the Hermon. This latter material stands in close continuity with chaps. 12–13; 23;

Judg 2:6ff., where it is the peripheral nations who remain unsubdued. Again, it should be noted that Josh 11:16–20 reports the "taking" of the land, not the supplanting of all indigenous populations. "Taking" in 11:23 is a prelude to tribal allotments, which (as Judges 1) precede the "supplanting" of the Canaanites; 11:23 can claim that the whole land was "taken" even though v 22 cites an ongoing Amorite presence in the Philistine region. Still, even the more modest interpretation of the chapter's assertions entails the conclusion that it exaggerates, telescopes, distorts the historical process beyond recognition.

Nor does detaching the southern campaign of chap. 10 from the northern of chap. 11 produce a separate, reliable account. The Albright school appealed to the destruction of Hazor XIII as support for Joshua 11. But the identification of Deborah's opponent in Judg 4:1–3 as the same Yabin, king of Hazor (Josh 11:1) illustrates that later Israel believed pre-Israelite Hazor to be the leading power in northern Canaan (Josh 11:10), the key to the Galilee.

This tradition is probably founded in a hazy combination of historical recollection and geopolitical reality; whether it was in fact Israel that overthrew Hazor remains obscure. Certainly, the more exaggerated claims that the historian suspends from this peg (11:1–4, 12) reflect only his hardened conviction that Joshua's victory was total, his prosecution thorough (11:18–20, 23). Even the locus of Joshua's supposed northern decisive battle, "by the waters of Merom/the height (*ʿal mê mērôm*)" (11:5, 7) reads as though it hatched from a conflation of Judg 5:18–19: these verses locate the other big battle joined by Sisera, identified in Judges 4 as the general of Jabin, king of Hazor, "by the waters of Megiddo" (*ʿal mê mĕgiddô*)" and "on the heights of the field" (*ʿal mĕrômê śādeh*)".

The story of the southern confrontation has been incorporated into the framework of 9:1f.; 11–13. No doubt, the historian received this tradition already partly shaped. Yet *it* is the one in which deserted LB Gibeon, the abiding LB settlement (to 1150) at Lachish, and probably unoccupied Jarmuth play prominent roles. The key to understanding the historian's reconstruction may lie in his use of a quotation from "the book of the Jashar":" 'Sun, be still in Gibeon, and, Moon, in the Aijalon Valley!' And the sun was still, and the moon stood, so that the nation acquitted itself of its foes" (10:12–13).

This old couplet had been attributed to Joshua before the historian of chaps. 9–10 laid his hands on it. 10:12 heads it with a superscription closely resembling those of some psalms, "when (lit., on the day when) Yhwh delivered up the Amorites before the children of Israel" (cf. Ps 3; 7; 9; 18; 34; 51f.; 54; 56f.; 59f.; 63; 142). This is redundant in context, and must have been drawn from a written source. It sufficed to place the apostrophe to the luminaries in Joshua's mouth. Moreover, Isaiah cites the incident in connection with an oracle against Jerusalem, as a case of Yhwh's wrath consuming his foes (28:21). His allusion presumes that his hearers recognized the historical reference in all its bearings.

It is around this notion of a decisive confrontation at Gibeon that Joshua 9–10 were built. 2 Sam 21:1–14, in which David decimates the Saulide establishment in expiation of that king's attacks on the Gibeonites, appeals explicitly to old traditions of a hoary alliance between Gibeon and Israel. It was not unnatural for those who wove the narratives of Israelite antiquities, then, to relate the battle at Gibeon to the ratification of Israel's treaty there. That any early Israelite community really contracted such a formal pact with the Hivite tetrapolis is unlikely, and there could have been no such pact at the start of Iron IA, with Gibeon yet to be reoccupied. What seems probable is that Gibeon's role in the literary formulation of the confederates' common history grew as the fortunes of the site waxed during Iron I. After Shechem's destruction in the mid-12th century (Judg 9:45–49), Gibeon seems to have blossomed into one of the larger and more strategically placed towns in Israel (2 Sam 2:12–16 after 2:8–11), and one of the most prestigious (1 Kgs 3:4–14; 2 Sam 21:1ff.). Its eminence among the Hivites by David's time led traditionists thereafter to regard Gibeon's residents as having been the leading element in all earlier Hivite transactions.

Against an Israelite-Hivite axis in the Aijalon Pass, the Amorite opponents mentioned in the Book of the Jashar had to be sought in the S hills. Isa 28:21 may already reflect the view that Jerusalem was the head of the anti-Israelite front: as noted above, it threatens a repetition of Yhwh's "strange deed" in the context of an oracle against the Jerusalem establishment. Certainly, the geopolitical logic of the reconstructed league with Gibeon (above, A.2.b) demanded such a deduction. The old poetic snatch in

Josh 10:12–13 also defined tolerably the extent of the hostile community: "Amorite" is a term deployed primarily to designate denizens of the hills. The enemy thus consisted of city-states in the Judean uplands and in the Shephelah. The knowledge that Israelite settlement did not overflow such areas until the time of David must have informed the tradition and corroborated the reconstruction.

Originally, the song in Josh 10:12 comprised an appeal for the bestowal of a favorable omen—that the sun should be visible in the east and the moon in the west. The omen and its significance are known from Babylonian sources. The granting of the omen and the confirmation of its efficacy are the subject of v 13 (Holladay 1968). But the historian (or his sources) interpreted the text literally to mean that the sun and moon stood still, extending the time in which Joshua could pursue the broken foe. This defined the course and length of the rout—down the defiles of the Aijalon Pass, spilling out into the Shephelah. For the purposes of integrating this reconstruction with that of Joshua's sweeping triumph, the logical sequel was a campaign in the Shephelah and an incursion from the S Shephelah into the hills (10:28–39).

Extensive portions of this concept of the Conquest must have been antique. The association of the old song with "the day in which Yhwh delivered up the Amorites"—and references to the climactic battle in Isa 28:21, and to the confrontation with towering Amorites in Amos 2:9—already contain the skeleton of the treatment in Joshua, even if none mentions Joshua himself by name. The idea that the Amorites were giants implies that they were obliterated—at least in the popular imagination—since the titans did not survive to be examined by later Israel. Similarly, the Gilgal and Jericho cycles derive from old traditions, here reinterpreted in line with the "Deuteronomist's" theology of history. The tradition of a treaty with Gibeon also stems from antecedents in the time of David (2 Sam 21:1f.). Though David's treatment of the Hivites merely implies the prior existence of a traditional *modus vivendi*, it was natural enough for folklorists to concretize the relationship by reconstructing a formal pact (cf. also 1 Sam 7:14; Genesis 34). For the most part it is impossible to date the growth of the traditions on which the historian depends (though Judges 1 probably stems from the time of Solomon, as Halpern 1983:179–82). Still, a good deal of the treatment originates in traditional perspectives on Israel's entry into the land.

Nevertheless, nothing in the literary evidence suggests that the details of the reconstruction antedate the Deuteronomistic History. The Shephelah campaign of 10:28–39 probably represents the historian's systematization of different claims concerning local victories in that region, or his extrapolation, based on a strategic reconstruction, from such claims in the tradition elsewhere (Hazor?). This is the campaign that establishes Joshua's control over the borders he is said to have secured. One might say that he had "conquered" the country from the S up to Gibeon (10:41f.). The appropriation of credit for the conquest of Hebron and Debir (10:36–39; 11:21f. vs. Josh 14:6–15; 15:13–19; Judg 1:10–15, 20; cf. A.3.) may represent either a normal accretion to Joshua of victories dated later elsewhere (cf. Hazor) or an adumbration of his consolidation of the Conquest within the territory whose perimeters he had seized. (The contrast between Joshua's and Judah's or Judah's and Caleb's taking Hebron is a matter of emphasis, partly on conquest or supplanting, and partly on the identity of the groups named.) Conversely, the actual choice of specific Shephelah forts has no plain motivation. Significant towns are excluded. However, since three of the four sites are not yet positively identified, no hypothesis should be advanced on this point.

In light of all this, and with the exception of the confrontation of Gibeon, the most fruitful approach to Israelite traditions may be to note what they do *not* claim, rather than what they do. For example, even the author of Joshua 11–12 does not assert an Israelite colonization of Megiddo and the Jezreel: traditions such as those encapsulated in Josh 17:11–13; Judg 1:27 inhibited the historian from such overweening hyperbole. Thus, Josh 12:21–23 can reflect a success in the field, or at most a raid (born of braggadocio), not the supplanting of lowlands populations. Monarchic Israel generally understood that its forebears in Canaan stuck to the hills.

On this basis, the geographic extent of Joshua's victories could be identified with that of Canaan S of the Hermon. He could be said to have bested opponents from all regions of the land (11:2; 12). And attributing to him some later regional successes, he could be said to have left Israel ascendant in a Canaan it claimed, but alone, as Israel aspired to be, only in parts of it. The territorial framework and nationhood

of a later Israel is thus retrojected to the first moment of Israel's intrusion into the land. The process by which this occurred was no doubt entirely innocent, one of historical reconstruction, based in part on reifications of embellished cultic confessions, in later times, not willful or wholesale invention.

The texts' reluctance to claim that Joshua made permanent gains in the lowlands matches the archaeological and extra-biblical materials from the LB-Iron I transition. There is, beside it, another rather loud silence in the text, the one surrounding Israel's movement into the central hills. It is true that Judg 1:22–26 record a sack of Bethel—typically, for early Israel, by strategem rather than direct assault; the death of Bethel's king is toted up in Josh 12:16. In the Ephraimite hills between Gibeon and Shechem, this is the only conflict any record of which survives (of a town, it should be noted, that was indeed occupied in LB II). And the record itself places the accession after Joshua's time, in the era of internal consolidation.

Outside of Bethel, Josh 12:17 (Tappuah, Hepher), 24 (Tirzah) contain the only assertions that Joshua killed kings of towns in the Manassite hills. In the scheme of Joshua 11–12, the kings in question would have fallen "by the waters of Merom/the height" (11:8). The same scheme dictates that Joshua should have depopulated their towns, though, in accordance with a suspicious proviso (11:13), without doing injury to the buildings. Yet the presentation posits that Joshua fought a battle in the Aijalon Pass that enabled him to encircle the southern hills, then fought another in the north, giving Israel control of the Galilee. The idea of a battle for the central hills, or of extensive operations to gain a foothold there, is alien even to the latest strata of the history. It is unclear whether any tradition ever envisioned these areas as subject to conquest in the same sense that Judea and the Galilee were.

This argument is susceptible to the objection that the historian responsible for the Conquest accounts concerned himself with Israel's mastery only over a large territory, from the far south to the Hermon; he did not imply systematic eradication of the Amorites in Joshua's lifetime (or thereafter). This, after all, is the view presupposed in Judges 1. In accordance with it, one may imagine the central hills, as the history now runs, as a region encircled, awaiting the detailed attention reserved for the period after Israel had stilled the sound of opposing armies, marching in concert against Israel in the field. The objection, however, is vulnerable to the counterstroke that the historian claims that Joshua cleared Israel's hills territory of foreign elements (11:16–23). It also ignores the most piercing hush of all: there is no conquest of Shechem.

In LB IIA, Shechem was the dominant town of the central hills: its king, Lab'aya, had reduced all the region from Jerusalem in the south to Megiddo in the N to his sway. Shechem *was* the central hill country in that era. Yet confrontation with the power fails Israel's memory. Genesis 34 assigns a treaty with the town and Israel's violation of it to the patriarchal era. Judges 9 conversely sets Shechem's sowing with salt in the time after Gideon, in the middle of the era of the "judges." Between the two, Josh 8:30–35; 24 locate ceremonies of covenant confirmation at Shechem, responding in part to Deut 11:29f.; 27. There is a broad tradition of activity at Shechem, but none of siege and capture (cf. Toombs 1979).

The Joshua narratives contain other lacunae, in the northern hills and even in Judah. But in the context of an account of securing perimeters, the omissions are no surprise. The extent to which exaggeration might accrue to accounts of Joshua's time is clarified in Judg 1:8, assigned to the years after his death: in the face of pre-Davidic reality, the verse affirms a Judahite destruction of Jerusalem (but no occupation). No comparable claims concerning Shechem appear. The silence is loud indeed.

Overall, it seems legitimate to speak of a Conquest tradition that stems at least from the 10th century B.C.E.—the time when the ritual crossing of the Jordan to Gilgal is first clearly attested, when the earliest compilation of Judges 1 was made, and when a violation of a "treaty" with Gibeon was remedied. The story of Abimelech (Judges 9) attests incidentally that ambivalence as between local and national or ethnic administration rent the early Israelite community: would the city-state or the nation become the articulated political musculature of Canaan? A central government, like that of the United Monarchy, would have seized on and fostered national traditions—the J source of the Pentateuch may have originated in this concern (its final form is, however, later). The later historian responsible for the

Conquest accounts that survive today overlaid and reinterpreted the sources such elements had mediated to him.

5. The Israelite Conquest. a. The Earliest Phases. The absence of traditions of violent entry into the central hills so dovetails with the archaeological evidence of Israelite coexistence in that region with the scattered Canaanite remnants of LB II (and Toombs 1979) that it affords one of the few footholds in the morass of the Conquest. It complements the tradition of Israelite coexistence with the Hivites of the Gibeonite tetrapolis. It resonates harmoniously with the tradition of early (and originally pacific) relations with Hivite Shechem. One may justifiably infer a peaceful Israelite presence among the Hivites of the central hills in general, whose expansion into the region N of Jerusalem was coeval with the Israelite influx.

Israel's early cultic community at Shechem may have centered on the ratification of this relationship (Judg 8:33; 9:4, 46). In any event, the "covenants" in Josh 8:30–35; 24 and Genesis 34 presumably reflect ongoing cultic activity at Shechem during the monarchic era. This would have been inherited and reinterpreted from the time before Abimelek; after his destruction of Shechem, the focus of the action there would have shifted, perhaps from the town to the surrounding hills (as in Deuteronomy 27). It is not impossible that the Iron I installation unearthed in 1983 on the N slope of Mt. Ebal was associated with this displacement, and with pilgrimage coming from the Jordan up the Wadi Far'ah, then down from the N. But this is a matter of speculation; the excavator places the Ebal pottery at the outset of Iron I (Zertal 1986a), which would rule it out.

The character of the earliest Israelite hills villages is consonant with this general understanding. Though the Negev sites, starting in the 11th century (such as Tell Esdar, Arad, Beer-sheba, and, earlier, arguably, Tell Masos) exhibit a stronger predilection for pastoralism and more architectural variety, they differ more in the proportion than in the identity of their constitutive elements. The pioneer study in the socioeconomics of uplands settlements is that of L. E. Stager (1985a), which focuses particularly on the close-knit structure of the sites, uniformly modest in scope. The tendency in them is for houses to cluster together in a few small groups, representing no doubt two or three generations in the life of a nuclear family. The whole of a site might thus consist of only a few families, probably all related within the context of an "expanded" family (see Cohen 1965:56), along the lines of the Arabic hamula (so Izbet Sartah III and II):working, breeding, and relating to the outside world in common.

In the courtyard of the four-room house stood the oven and industrial installations for agricultural and animal produce. In the early settlements this included small, inefficient grain pits, often lined with stone, or storage jars sunk into the earth. The stables underneath the rooved areas parallel to the courtyard (the verticals of the U; see Holladay fc.) indicate that most nuclear families had herds. If the stable space is a guide, the flocks were rarely extensive. See STABLES. Indeed, some of this physical plant may have been given over to draught animals (Gen 49:14?) and fatlings (1 Sam 28:24; 2 Sam 12:3; Amos 6:4). The family, that is, kept a small flock (Judg 6:4, 11; 1 Sam 17:28) while cultivating the soil; no doubt this provided an occupation for young boys (as 1 Sam 16:11) and other unemployables (Amos 7:15). However, occasional large flocks were probably bred by some families, who would have exploited the village commons and supplementary, makeshift enclosures, as well as more distant pastures (e.g., 1 Sam 9:3–5; 25:2–8; 2 Sam 13:23f.). The Negeb settlements, where pastoralism (and, at Tell Masos, as at Izbet Sartah, large cattle) loomed larger, reflect this fact unmistakably. The reference in the Song of Deborah to (large?) Reubenite flocks bedded at home (Judg 5:16; cf. Gen 49:14; Ps 68:14, both with verbs meaning "to lie down") may refer to a similar situation early on in Transjordan.

Overall, the flocks were a significant component of the village economy; but the Israelite family as a whole did not *specialize* in pastoralism. The elements of their extensive cultivation have been touched on above (C.3). The olive and the vine—their exploitation solidly attested later, in the Samaria ostraca—and cereals required some clearing, planting, terracing, provision for processing, storage arrangements that would minimize spoilage, and other capital investments (including defense against freebooters). The suggestion, corroborated by the location of the earliest settlements in the vicinity of Canaanite towns, and by the integration of Shechem into the Israelite economy as witnessed by its Iron I pottery repertoire

(Toombs 1979:no conquest need be posited), is that the first Israelite homesteaders dwelled in peaceful symbiosis with their local Canaanite neighbors. The pastoral component of Israelite industry demanded such markets for meat and wool, and one presumes that this produce was welcome enough among the hills' few tenants, who offered processed goods in exchange (see Rosen 1986:180–81). For the herders in particular, open communications were vital, razzias a catastrophe (Judg 5:6; 1 Sam 25:2–8). Except for royal caravans, hill country commerce may have depended wholly on their wanderings.

All indications thus point toward cooperation between the Israelites and the earlier population from Shechem to (newly-settled) Gibeon (with similar patches in the upper Galilee and along the virgate ridge of the Judaean highlands; in the Negev, assuming Tell Masos was an Israelite settlement, there were no nearby Canaanite towns [as Gen 21:22–34; 26:16–33]), but the inhabitants of Tell Masos, and, later, those of Beer-sheba VII, were no doubt suppliers of meat to the Philistine coast and mediators of the Egypto-Philistine caravan trade with Arabia. This sort of symbiosis is precisely what the earliest Israelite traditions concerning relations with the Hivites N of Jerusalem have led us to expect. Nor would it come as a surprise if, in line with the old song in Josh 10:12f., an Israel so distributed fought one of its earliest memorable battles—one of its earliest battles as "Israel," instead of as a collection of highlands families—in the Aijalon Pass, against a bloc led by Jerusalem.

b. Where They Came From. The archaeological situation does not unequivocally demand that the Israelites should have entered Canaan from Transjordan. However, the textual situation does. In no way is Israelite insistence on Israel's ethnic distinctiveness—from the earliest times on (Judg 5:11–19, 31; Exod 15:14f.)—compatible with the hypothesis of an Internal Conquest. As noted above (B.3), despite long coexistence and ongoing life with the Israelites, the Hivites remained ethnicly distinct into the monarchy (2 Sam 21:1–14), as did other indigenese (Judges 1). The monarchy itself arose in part as a result of this xenophobia (Halpern 1983:12–16). From at least the 12th century, Israel understood itself as a people allochthonous and apart in Canaan. Merneptah's equation of Israel with Shasu—otherwise unattested in Cisjordan north of the desert—corroborates the Israelite view.

No precise point of origin outside Canaan can be stipulated with any confidence. Some indications are, however, present. The emergence of the Iron I nations of Canaan—the Philistines and other Sea-Peoples in Cisjordan and the "Hebrew" kingdoms across the river—was an event never lost to Israel's memory. Later historians wrote that the Transjordanian "Hebrew" nations had dispossessed inhabitants there who were "Amorite," that the Philistines had done the same in their territory, just as Israel had done in Cisjordan and in the region from the Arnon to the Jabbok (Deut 2:9–12, 19–23; Judg 11:16–26; Num 21:24–26). All these Iron I peoples Israel regarded as rightful successors to the Amorites (A.1):Amos 9:8 memorializes their migrations in Yhwh's work, bringing "Israel from the land of Egypt, and the Philistines from Caphtor, and Aram from Kir" (Amos 1:5 threatens Aram with a return to Kir).

It is to the "Hebrews" of Transjordan that the Israelites felt themselves most closely related, and, in terms of language (Halpern 1987), forms of social organization, material culture, and religion (each people its own god—Mic 4:5), rightly so. The narratives of Genesis extend both this sense of kinship and the term "Hebrew" also to the peoples of the neo-Hittite kingdoms in Syria (Aram), whose crystallization dates to the same general time (Genesis 24, J; 29f., JE). These Aramean elements fell heir to the remnants of the Hittite empire. Their languages, in this era, were not discontinuous with those of the southern Hebrews; though certain differences, largely phonological, already obtained, they were inconsiderable compared with those that afterward developed. Nor should the tradition of Israel's ultimate origins among these groups be neglected (Gen 11:28–31; 12:1), especially as it embraces (patrilateral parallel cousin) connubium (Genesis 24; 29).

Altogether, the evidence suggests that Iron I "Hebrew" elements were in the ascendant in areas peripheral to the great empires during the last decades of the LB Age. In the Iron I period settlement in Transjordan, as in Canaan, snowballed. Some of these "Hebrews"—a term whose basic meaning is best explained as an ethno-linguistic one (cf. Eber, their eponym, in Gen 10:21, 24; 11:14)—had long been in contact with Canaanite civilization (as Kempinski 1985; from a slightly different perspective, Finkelstein *AIS*).

Scholars misled by exorbitant rhetoric and the use of the term, *ḫabiru*, in an extended sense ("traitor," "outlaw") have significantly overestimated the role "Hebrews" assumed in Amarna Canaan; in reality, the only "Hebrews" attested are bit players, working for minor figures in the political landscape (Halpern 1983:55 & nn. 24). But there is no denying that small "Hebrew" bands were present (EA 195). Seti I commemorates a campaign against some ʿPR.W (*ʿ*abirū?*) in the Beth-shan region at the end of the 14th century; most likely, he uses the term in its basic, not its extended sense. In any event, the Iron Age newcomers *were* Habiru, "Hebrews," crystallizing from band- into regional organization wherever the parallel administrative structures of the empire and the city-states weakened. Israel is most plausibly viewed as an instance of this contemporary phenomenon.

Some of the "Hebrews" may have been propelled into Transjordan by the stick of Assyrian expansion at the end of the 13th century, then again in the 12th. Under Adad-Nirari I, Shalmaneser I and Tukulti-Ninurta, Asshur extended its control over the western bank of the Euphrates and the Habur basin. The initial deportations, followed by a routinization of Assyrian taxation and the imposition of a harsh bureaucratic commercial control (see Machinist 1982), will have created migrants; these elements can have transported their property only in the form of livestock. The relatively effete rule of Egypt might represent a carrot, drawing the migrants on. By the end of the 13th century, these had congealed into ethnic communities.

The route by which the Cisjordanian elements came is thus recorded both in the patterns of "Hebrew" national development and in the patriarchal narratives (Genesis 12; 24; 31–35; Halpern 1983:91–92; B. Mazar 1985). Some time after the process halted, it was ritualized skeletally in the pilgrimage linking Succoth, Penuel, Gilgal (?), Shechem, and Bethel (see A.2.a). Like their Ammonite, Moabite, and Edomite counterparts across the Jordan River, such migrants would have developed a close set of kinship ties and a sense of communal identity, reinforced both by their habitation in a limited territory and by the characteristics (religion and a shared historical identity among them) that divided them from the administrative units and populations near which they settled: "a fugitive Aramean was my father" (Deut 26:5; Millard 1980).

Even on this scenario, one must posit that an early, important constituent of later Israel came from the direction of Egypt. This component furnished the national myth, and conceivably the god, of the Cisjordanian "Hebrews." This group cannot be identified as the ancestor of an individual tribe or set of tribes, for the "tribes" took their shape in the land. We may justifiably suppose nevertheless that its members occupied some of the earliest Israelite villages in Transjordan, and in the hills of Judah, Ephraim, and the Galilee. The possibility that this group originated with "Hebrews" engaged in commerce with Edom in Transjordan and the Negeb, and ended in bondage to Egypt, is an attractive one. The appeal of their historical identity to other "Hebrews" has been canvassed briefly above (C.2). It can be added that the persistence, until the time of the United Monarchy, of a dichotomy between the Israelites of the hills (whose god was thought to be a god of the hills—1 Kgs 20:23) and the Canaanites of the valleys (and some in the hills) illustrates that the appeal of the new identity did not extend to much of the local population.

c. How They Came. A problem that has persistently plagued proponents of a gradual- or multiple-entry hypothesis is that of Israelite solidarity, of common subscription to the Yahwistic-Israelite syndicate. Authors reasoning to northern and southern or to southern and eastern entries repeatedly wrestled with the question, how did their groups come together. Israelite texts furnish an explanation. The homesteaders maintained an ethnic and perhaps even a religious identity distinct from that of their previously-settled neighbors. They maintained, too, a culture, a style of life, alien to that of LB Canaan. Not that intermarriage and commerce played no part in their lives, nor yet that in the pre-Saulide era fraternization was forbidden; only, the settlements and economy and customs of the Israelites were distinctively Israelite ("Hebrew"), those of their neighbors Amorite. For one thing, Israelites ate no pork (though no pig was found at Lachish VI, either). For another, they practiced the mutilation of circumcision. No doubt conservative and endogamous marriage patterns directed against property-alienation helped to perpetuate

the distinction (except, probably, at Shechem). Highlands Canaan—such as it was—was a mosaic, not a melting-pot.

Other data sustain this view. The scattered villages in the highlands and in the hitherto empty Negeb, with their heavy capital investment but without fortification, betoken an atmosphere of toleration, not of strife. This is inconsistent with a mass, unified migration. Even to the S of LB Jerusalem, isolated Israelite communities took root (Giloh, just outside Jerusalem, Beth Zur, probably Hebron, the Negeb sites), contradicting the notion that a threat from a whole body of newcomers was perceived. Most likely, the "invaders" came not in waves, but in tiny bands, as Alt divined, intent on taming intractable lands beyond the grasp, if not beyond the reach (Judg 5:6), of the plains city-states, in the relative freedom of the backwaters. The lords of Shechem may finally have "given [their land] to the Habiru," as the king of Jerusalem precociously accuses them of doing in the Amarna letters (EA 289:23f.); inviting "Hebrew" settlement enhanced capital accumulation and manpower. Local authorities had less of an interest in resisting the migrants than in subjecting or coopting and regulating them.

Again, Judges 9 implies that much the same concerns applied shortly afterward in Iron I: this chapter reflects local nervousness about fealty to a king located outside one's own town in an Israelite community that must antedate the 10th century. Though kingship is desirable over against oligarchy (9:2), an absentee kingship is intolerable (9:28). The local competition of the Israelite era is nothing more than an extension of the lie of the land in LB. Under the circumstances, contests for the loyalty of incoming populations, and especially of pastoral elements and bandits, may have raised the stakes in the bidding to very attractive levels.

It is appropriate, in short, to speak of the stick (the advance of hostile or predatory powers in Syria) and the carrot in connection with Israel's emergence. The pattern of early Israelite settlement, in thinly populated regions, but in the vicinity of LB settlements there, is suggestive. The dwindling of settlements in LB Canaan left land available for pasturing, and, ultimately, farming, that was not closely regulated (as the pastoralists at Mari were—at least in theory—by the Mari regime). As the "Hebrews" spread down from northern Transjordan, they tended to migrate to such areas, their common culture leading ultimately to political crystallization based on the development of an infrastructure of villages (below). One might almost envision the operation of a territorial corollary to Parkinson's Law here. But it is important to recall that the wealth of urban LB II Canaan—or of Egypt's vassals there—may have had an important influence in creating markets for meat and for cereals and cash-crops raised in small lots in the relative security of the upland valleys.

It is tempting to suppose that the "Hebrew" pastoralists were present in number in LB II Canaan (so Finkelstein *AIS*). This would account for the overlaps in material culture between Israel and the earlier Canaanites. Since surveys in the hills have not, however, turned up any evidence of pastoralist encampments (in the form of sherds), this notion should be played diminuendo. Herders were doubtless present in the valleys, but not necessarily in large groups. Instead, the more recent model, which sees the "Iron I" settlement of the hills as coincidental with the last era of "LB II" in the city-states, should be adopted (Kempinski 1985; Ussishkin 1985). The pastoralists *migrated* to LB II Canaan, bringing with them the culture that would become characteristic of Iron I. Their settlement in the hills was gradual; it did not result from the transhumance of herders based in the plains, but from the attempt of alien elements to penetrate new markets.

Two factors accelerated the "Hebrew" inroads into Cisjordan. The first was the economic and political success of the pioneers in diversifying types of production and avoiding fatal conflicts. This would have enticed further homesteaders (as at Izbet Sartah and at Ai). Particularly if the migration was accompanied by a transition in the families concerned (not of their earlier social world) from medim-scale pastoralism (flocks fluctuating from about 10–30) to a mixed economy partly rooted in cereals and cash crops, this impulse could only have been enhanced by Assyrian pressure, and especially by the accommodation of local authorities. These incentives would have remained substantial even if the "Hebrews" migrated without fundamental changes in their economic order (and this is difficult to believe of those who came to Cisjordan). They would have been self-perpetuating: human and material capital accumulation would

create a pool of collaborators for labor-exchange, wife-exchange, and common defense. Simultaneously, economic success would have issued in natural increase, resulting again in a multiplication of settlements, an ongoing, leapfrogging movement into contiguous areas. To this process over the course of Iron I, the archaeological record, and the history of Israel and the other "Hebrew" nations bear unanimous witness.

The Shasu connection, and Merneptah's identification of Israel with the Shasu, warrant that a similar process characterized the arrival of the "Hebrews" in Transjordan, probably in LB IIB. The terrain and textual traditions (as Judg 5:16) suggest that pastoralism was relatively more important there. Still, the success of Iron Age elements penetrating early into the framework of existing LB society encouraged others to come; it reinforced itself, too, with a flourishing of the population. Again, the incoming elements were probably those who had formed part of the pastoral component of Syrian society until the upheavals of LB II (Idrimi 15f.); at any rate, all must have converted their capital into stock when undertaking the trek SW. This process produced the Transjordanian nations and kingdoms of Iron I; it is not to be distinguished from that that produced those kingdoms' Cisjordanian counterparts (Philistines and other Sea-Peoples excepted). In Cisjordan, where Egyptian control was not so early or so carelessly withdrawn, the process of political unification was more extended and more gingerly. One could effectively pyramid the band-structure of the immigrants regionally only when the Egyptian-supported city-states lapsed into a natural, insolvent, internecine chaos, desperate for money and laborers.

At some point, the confrontation between Canaanite city-states and a force that Josh 10:1–15 attributes to Joshua must have taken place in the Aijalon Pass. It is unnecessary to assume that the "Hebrews" had just arrived by way of Shittim, but a substantial body of them (in the hundreds, at least) should be assigned to this encounter. The most significant historical characteristics of the collision are its apparent direction against those domiciled in Judea, and its coordination (if one may extrapolate) with the Hivite elements north of Jerusalem. Here is a reprise of the antagonism between Shechem and Jerusalem so familiar from Amarna. Indeed, as if foreshadowing Josh 9:1; 10:40–43; 11, EA 366 reports a coalition of Jerusalem and S and N allies against "the Habiru-man":the term perhaps refers to Lab'aya, ruler of Shechem, and the principle, of the coordination of peripheral city-states against the center, remains constant.

As the occasion of the engagement by Gibeon, one must not think of a challenge to locally-delegated Egyptian authority. In Iron I, as in LB IIA, pharaonic imperium inhered, in theory, as much in Shechem as in Jerusalem; the contretemps between these towns were local, within the context of formal submission to Egypt. Still, the "Hebrews" of the long, uneven LB II—Iron I transition eventually comprised a threat. In the ridges, they created consternation among the southerners, then worsted them in the Pass marking the southern off from the central hills. It is likely that these Israelites made common cause with the Shechemite state in the enterprise, and that the outcome permitted the Hivite towns that dominated the interior routes of trade to flourish at the expense of their southern neighbors over the course of Iron IA (poorly attested in Jerusalem; see Shiloh 1984:26f.)—this was the strategic thrust of the Hivite settlements in the Gibeonite tetrapolis in the first place. Until Abimelech's destruction of Shechem (Judg 9:45–49), the Israelite "Hebrews" probably represented a parallel sociopolitical structure within the city-state's territory. Like the older Habiru, they had no natural attachment to the city-state system; their political relations with the Shechemite state, like their economic, consisted less of competition than of connivance, but fell short of undifferentiated social integration. In all, the reconstruction of Joshua 9–10 does not seem too wide of the mark.

Even if the success in the Aijalon Pass was a victory for a whole bloc of highlands dwellers, Israelite and Hivite, it would have had two ramifications for the "Hebrews." First, it would have buttressed their political position and prestige in the highlands, enabling them to augment the territory and markets available for their exploitation. Second, it would have promoted still further immigration from Transjordan, from Syria, from other "Hebrews." If the Hivites of the central hills had "given all the land of Shechem to the Habiru," the "Hebrews" had not been patient, passive partners in the process. Nor had they restricted themselves solely to the "land of Shechem."

d. The Development of Israelite Identity. Of two things regarding Iron I we may be certain: that an explosion in population not explicable on the basis of natural increase transformed conditions in the areas of Israelite habitation (predicted in Halpern 1983:98–99 and confirmed in Finkelstein 1983; Gal 1990; Zertal 1986), registering particularly in an expansion in area cultivated and the number of villages; and, that the burgeoning population had a sense of unity, however loose, which they expressed in the name Israel, in their common devotion to a god, Yhwh, and in their general assimilation of a national history, of ancestral lore, embracing them as one and articulating their identity (compare the American myths of Jamestown and the Mayflower). Just as the Edomites, Moabites, and Ammonites had crystallized into national units transcending the bournes of individual towns, so Israelite identity evolved across older territorial boundaries based on endogamy, religion, and culture.

Propinquity and natural obstacles lent this concept nuance. The inhabitants of the central hills, themselves divided into three districts (tribes, lit. "staves") corresponding to differences in location and terrain, constituted a distinct *ʾummâ,* or mother-unit (the etymology of Ar *hamula:* Cohen 1965:2f.), Rachel, in the eponymic folklore. The tribes of this *ʾummâ* were all full brothers, expressing their close relation to one another. But the tribesmen outside the central hills, conceived of, like the Rachel-tribes, as children of the father Israel, had other eponymous matriarchs (Leah, Zilpah, Bilhah):to these tribes' eponyms, the eponyms of the Rachel-tribes were only half-brothers, that is, more distant relations. The ancestral lore thus functioned to express economic, ecological, geographic, and political relationships. Yet it could do so only approximately: the tribal divisions themselves represented no more than a mode of organizing discussion and thought about the components of the basic unit, Israel. In the early period, "tribes" were not programmatic, mutually exclusive administrative entities, as the relationship between Simeon and Judah, or between Joseph and the Joseph tribes, or between the clans of Reuben and those of Judah, illustrates (de Geus 1976:124–80; Gottwald 1979:295–318).

How soon this sense of identity came to be shared by those who frequented the territory between the Arnon and the Jabbok is unclear. Here, geographic discontinuity had led local "Hebrews" to dissociate themselves from the national networks of Ammon to the N and of Moab to the S. Already by the time of Deborah (Judg 5:15–17), they had declared themselves, linking their destinies probably through commerce and kinship to those of their Cisjordanian neighbors. The choice may reflect a desire to elect looser, less organized "protectors" over against more structured ones. Though Gilead was a source or channel for Cisjordanian homesteaders, it might have developed affinities for Moab or Ammon instead of for Israel, and the fact that it did not, merits consideration.

The Song of Deborah (Judges 5) affords a chronological framework for these developments. Under no circumstances can the events described in the song be placed later than the 12th century B.C.E., and a situation in the middle of the century suits them best. The ode already gives vent to a vision of Yhwh as setting forth on his march to war from Edom (v 4), an element typologically infusing or extracted from the Exodus-Conquest cycle (as Deut 33:1–3; Ps 68:8–9). Under the circumstances, it is probable that elements in Transjordan had also had experience of the Exodus. This conclusion sustains and draws support from the opinion that the "Mosaic" community consisted of "Hebrew" migrants through Transjordan down to the periphery of Egyptian control.

As noted above (B.3; note C.4.), the Song of Deborah, the Song of the Sea (Exodus 15) and all of subsequent tradition testify that these "Hebrews" distinguished themselves ethnicly from their neighbors. Even the Hivites of Gibeon and Shechem, alongside whom the Iron I community dwelt, remained distinct into the monarchic era. Only as Egyptian power waned, however, and its own demographic fortunes waxed, was Israel able to exercise its ambitions to revise the political map of Canaan. Egypt's decline drew into the N part of its Asian empire Assyrian as well as "Hebrew" elements—the Assyrian in the shape of Tiglath-Pileser I's foray to the Mediterranean. Egyptian withdrawal precipitated a struggle for the succession, a wolfpack's fierce fighting over scraps and over dominance.

The parties to this affray were the old city-states of the Canaanite lowlands, the Philistines and other Sea-Peoples, and the highland-dwelling Israelites. Their fortunes varied over the succeeding century, often called "the period of the Judges." What is significant, if natural, is that it is at this point—the start of

the clamor for Canaan—that Israel emerges, in the Song of Deborah, from the mists of her proto-history (and the Merneptah stela) to the light of day. It was in the aftermath of imperial Egypt's demise that Israel developed into the grand entity on which David's dominions would be based. Like those of the Transjordanian powers, like that of the Philistines, Israel's path into Canaan was slow and rocky. Like theirs, Israel's "Conquest" was in any conventional sense the consequence of the melee among Egypt's successor states. The war for the succession lasted a century. It culminated in the rise of the Davidic Empire, which reconstituted that of the Ramessides in Asia. In this respect, as in so many others, Alt's understanding of the *Landnahme* has proved prescient and compelling to many scholars.

SEVEN CHURCHES [Gk *hai hepta ekklēsiai* (αἱ ἑπτα ἐκκλησιαι)]. The seven churches are those in seven cities of the Roman province of proconsular Asia on the west central coast of Asia Minor. They are the addressees of Revelation (1:4, 11, 20), and individual letters are addressed to each of them in Revelation 2–3. The use of the article indicates that the seven churches were a recognized group: Ephesus, Smyrna, Pergamum, Thyatira, Sardis, Philadelphia, and Laodicea.

The question arises, "Why does the author only write to seven churches when there were others in the province of Asia?" These other churches include Troas (Acts 20:5–12; 2 Cor 2:12), Colossae (Col 1:2; 2:1), and Hierapolis (Col 4:13). Ignatius addressed letters to Magnesia (*Magn.*) and Tralles (*Trall.*) less than two decades later. More fanciful explanations are that these seven churches are symbolic of the types of churches to be found during the church age, or of seven sequential periods of church history. A more accepted explanation takes into account that seven is a number of completeness. The seven churches are representative or heads of all the churches in the region with which the author is familiar and expects his letter to reach, or are representative of the Church at large.

The explanation of William Ramsay (1904:171–96) has received wide support. He proposed that these church cities were selected because, in their given order, they are the postal and judicial districts which a courier from Patmos would encounter and from which his letter could be distributed most effectively throughout the province of Asia. From Patmos, the letter courier would arrive at Ephesus, travel N to Smyrna and Pergamum, and then turn SE to Thyatira, Sardis, Philadelphia, and Laodicea. This forms a circular route through the west central portion of the province. Other church cities not mentioned are located beyond the main circular route and could easily be reached on a secondary route from one of these seven cities.

Ramsay's explanation has the advantages of fitting the geographical positioning of the seven cities, maintaining the sequential order in which they are presented, and explaining why other church cities are not mentioned. It also corresponds to what we know of early Church communication elsewhere. For example, if Ephesians is an encyclical, then it may have been similarly distributed to neighboring churches. Also, when Paul sent his letter to Colossae, the Colossians were to send it on to Laodicea, and Laodicea was to reciprocate with their letter from Paul as well (Col 4:16).

SEX AND SEXUALITY. Sex is at once much-discussed and ignored in the Bible. In the narrative portions of the Bible, sexuality appears only occasionally as a motive or force for actions and history. The beauty of women may set them up as victims of men who abuse their superior strength and position in order to possess them: the Pharaoh desired and took Sarah because she was beautiful (Gen 13:10–20), as did David with Bathsheba (2 Samuel 11). Similarly, the beauty of Tamar induced Amnon to rape her (2 Samuel 13). In the Bible, women are not depicted as being in control of this erotic attraction: the Hebrew Bible has no story in which a woman exploits her beauty or erotic attraction as a weapon by which to control or manipulate men. Granted, Tamar (Genesis 38) and Ruth maneuver men into sexual liasons, but they do so not to weedle something else from them as much as to attain the direct benefits of the liason itself: family and progeny. Unlike the later Judith of the Apocrypha, who uses her sexual charms to seduce and murder Holofernes, Jael defeats Sisera with her deceptive nurturing (Judges 4). Unlike the Delilah of modern Western lore who likewise weakens Samson's resolve by toying with his sexual passions, the biblical Delilah instead simply nags him into revealing the secret of his strength (Judges 16).

———

A. Sex, Marriage, and Family

The lack of a *femme fatale* figure in biblical narrative might suggest that the Bible had a cavalier attitude about sexuality. However, the mythological and legal portions of the Bible show a deep concern for sex and its proper manifestations. In the Bible, the appropriate locus of sexuality is the monogamous nuclear family, the ideal human relationship. The creation account of Genesis 2 emphasizes the fundamental nature of such marriage, for God created woman to be the suitable companion to man. The message is reinforced by an interruption in the narrative, a direct aside to the reader: "therefore a man leaves his father and mother and cleaves to his wife and they become one flesh" (Gen 2:24). Marriage in the real world was somewhat problematic, particularly for the wife, who was economically dependent on her husband and at least nominally under his control, and who faced the danger and difficulties of childbirth and child-rearing. The glue that held marriage together and caused women to accept these conditions was sexual attraction: "your desire will be for your husband and he will rule over you" (Gen 3:16).

The Bible considers a strong marital unit essential to societal well-being, with sex cementing the marital bond. The societal interest in conjugal sex is reflected in Deuteronomy's provision that new bridegrooms be exempt from military campaigns for a year in order to cause the wives to rejoice (Deut 20:7; 24:5). Intact families demand sexual fidelity, and the best way to ensure this is to find sexual satisfaction in marriage: "find joy in the wife of your youth … let her breasts satisfy you at all times, be infatuated with love of her always" (Prov 5:18–19).

1. Adultery. Israel viewed extra-marital sexuality in the severest light, prescribing death for adultery. As in the rest of the ANE, there was a double standard: males could have sex outside marriage, most notably with prostitutes: "adultery" meant copulation with a *married* woman. Beyond concern for property rights or clear paternity, the demand for sexual exclusivity for wives sought to prevent married women from establishing bonds that could weaken the family unit. Women's sexual behavior increasingly became a matter of public interest rather than the sole jurisdiction of the head of the household. In the

Middle Assyrian laws, husbands had the right to pardon or determine the penalty for his adulterous wife and, with her, her partner in adultery. Biblical laws demand the death penalty absolutely. A hint of husbandly jurisdiction is nevertheless found in the book of Proverbs, in which the young man is warned against adultery for "the fury of the husband will be passionate; he will show no pity on his day of vengeance. He will not have regard for any ransom; he will refuse your bribe, however great" (Prov 6:34–35). This passage indicates, perhaps, an awareness that the husband had (by custom) the right to pardon the adulterer, but an expectation that irate husbands would not do so. See also ADULTERY.

2. Chastity. A lessening of father's disposition over daughter's sexual behavior may be detected within the biblical period. In premonarchic times, the head of household had great authority. Lot's offering his daughters to the men of Sodom (Genesis 18–19), the Levite's offering his concubine to the men of Gibeah, and the Ephraimite's offering his daughter to them (Judges 19) were responses to emergency rather than normal actions. Nevertheless, the narratives do not condemn their actions; Lot, in particular, is considered righteous for offering his virgin daughters in order to save wayfarers. The laws of Exodus reflect this parental authority. At all periods, girls living in their father's house were expected to be chaste. In the laws of Exodus (22:14–16), a man who seduced a single girl had to offer to marry her and pay the proper brideprice. But the father had the option to refuse this offer of marriage and determine the fate of his daughter. The father's right of determination seems weaker in the Deuteronomic laws: if a man grabs an unbetrothed girl he must pay the father 50 shekels, and he *must* marry her, without the possibility of divorce (Deut 22:28–29). No mention is made of father's right of refusal. The Deuteronomy section deals with rape, rather than seduction, but the difference between Exodus and Deuteronomy does not seem due to this, but rather to the emergence in Deuteronomy of *public* concern and control over sexual behavior: in Deuteronomy, the entire community has an interest in assuring the chastity of young girls.

A similar example of Deuteronomy's *public* concern for female chastity is the rule of the non-virgin bride (Deut 22:20f). If her unsuspecting bridegroom accused her, with proof, of being non-virgin, she was to be stoned, a communal form of execution reserved in the Bible for offenses that upset the order of the universe and thus threaten the entire community. The mode of "proof" reveals this law as an object lesson in public concern. If the parents of the girl produced the bloody nuptual sheet before the elders, then the accusing bridegroom was flogged and fined and had to remain married to her for life. If they did not produce a bloody sheet, then she would be stoned. She and her parents would have to be ignorant not to find blood for the sheets, and knowing this, it is unlikely that a bridegroom would make such a charge. But the rule clearly indicates that the elders as judges and the people as executioners have an interest in the girl's chastity and will act to protect their interest.

3. Rape. Deuteronomy also prescribes stoning when a man "comes upon" a betrothed girl in town and sleeps with her. The girl is stoned because she did "not cry out," meaning that the sex was consensual (Deut 22:23–24); the man because he had illicit sex with his neighbor's wife. The term used for the man's behavior is *ʿinnâ,* normally translated "rape," but *ʿinnâ* is generally "statutory" rather than forcible rape. A man who has sex with a woman without proper arrangements is said to "rape" (*ʿnh;* cf. *BDB,* 776) the woman even if she consents. This usage is found in the story of Dinah and Shechem (Genesis 34). Dinah had gone out and Shechem, seeing her, lay with her and had illicit sex *(ʿnh)* with her. In this way he treated her as a "whore" (Gen 34:31) rather than as a proper woman whose parents have to be consulted. Forcible rape is punishable by death and is explicitly linked to murder, a realization that rape is a crime of aggression and violence rather than sex, and that the girl is a victim (Deut 22:25–27).

4. Incest. The Bible defines the parameters of sexual behavior by forbidding intolerable relationships. Sexual relationships may not infringe on another family; they may also not blur the lines in one's own family through incest. Leviticus 18 and 20 and Deuteronomy 27 detail strong incest prohibitions. In one's parent's generation, sex with parents, step-mother, paternal uncle and wife, and both maternal and paternal aunts was prohibited. One's mother's brother and wife are not mentioned: were they considered from a different family (and therefore not prohibited)? One's father's brother's children (first cousins) and one's brother's and sister's daughters (nieces) are also not mentioned; but since one's paternal uncle is prohibited, we might infer that his daughter is also. In one's own generation, both sister and brother's

wife were prohibited. In the succeeding generation, one's daughter-in-law is prohibited, as are one's granddaughters. One's wife's lineage is also off limits: mother-in-law, wife's sister (while wife is alive), wife's daughters and granddaughters.

There is a difference in the amount of control that Israel could exert to forbid these incestuous relationships. In Leviticus 20, adultery, homosexuality, bestiality, and copulation with step-mother, mother-in-law, and daughter-in-law are all punishable by death. However, sex with sister, sister-in-law, aunt, uncle's wife, and menstruant, although equally prohibited, are beyond societal control. They are to be punished by God. The startling omission of "daughter" from the list of forbidden women may be an indication that paternal position was still considered so strong in the family that the text hesitated even to list an absolute prohibition. From the expectation that an unmarried girl would be virgin, it is clear that father-daughter incest at least was not expected.

Taken together, the incest laws define and clarify family lines. Since marriage creates a family, sexual intercourse with one's father's wife, father's brother's wife, and brother's wife is explicitly prohibited because the *ʿerwâ* (normally translated "nakedness," perhaps meaning exposed genitalia) of the woman is tantamount to the *ʿerwâ* of her husband. So, too, the wife's bloodlines *(šĕʾēr)* are parallel to his own and prohibited. The use of a special term, *zimmâ,* for incest with mother-in-law, wife's sister, wife's daughter and granddaughter, indicates that this intercourse, which is not with blood kin, is a special category of incest. Another term, *tebel,* " (improper) mixing," used for sex with daughter-in-law, demonstrates the biblical concern that sex within the family could blur and collapse family structures.

B. Commingling: Bestiality and Homosexual Practices

Israel's intense interest in regulating sexual behavior is an aspect of its concern to prevent intermingling between individuals and groups who should be separate. The commingling of divine beings and human women threatened to blur the distinction between divine and humans and thereby eradicate "humanity" as a distinct species (Gen 6:1–4). Bestiality contains the same potential, and is strongly forbidden for both males and females (Exod 22:28; Lev 18:23; 20:15–16; Deut 17:21). Like sex with a daughter-in-law, sex with an animal is also called *tebel,* " (improper) mixing." Homosexual intercourse is not labeled *tebel,* but the extreme prohibition of homosexuality by the death penalty (Lev 29:13, cf 18:22), not inherited from other ANE laws, is best explained as a desire to keep the categories of "male" and "female" intact. Anything that blurs the lines, such as cross-dressing, is also prohibited (Deut 22:5). Lesbian interaction, however, is not mentioned, possibly because it did not result in true physical "union" (by male entry). The biblical view of creation is one of organization and structure; collapsing the categories of existence is a return to chaos. See also PUNISHMENTS AND CRIMES.

C. Sexuality and Purity

This ability of sexuality to blur existential categories makes it a cosmic national issue. Like murder, aberrant sexuality could pollute the land and endanger the very survival of Israel. Israel felt that its right of occupation was contingent upon its preserving the purity of the land: if Israel indulged in the same behavior as the people before it, the defiled land would spew them out as it spewed out the nations before Israel (Lev 18:28). The people had to guard the land by not permitting murderers to go free or accidental homicides to leave the cities of refuge (Num 35:31–34) and by not leaving unburied the corpses of those who had been executed (Deut 21:22–23). Similarly, they had to refrain from forbidden sexual relationships, and to observe more technical regulations of sexuality, such as not allowing a man to remarry his divorced wife who had since remarried (Deut 24:1–3; Jer 3:1–4). There were no rituals to purify the land, but two rituals sought to prevent imminent pollution. One, the ritual of the decapitated heifer, was concerned with the pollution of murder. When a corpse was found and the murderer could not be identified, the elders of the city nearest the corpse went to a wadi and decapitated a heifer. They declared their lack of culpability and prayed to avert the blood-pollution of the land (Deut 21:1–9). The trial of the suspected adulteress was concerned with the pollution of adultery. A suspicious husband brought his wife to the temple, where she drank a potion made from holy water, dust from the floor of the sanctuary, and dissolved curse words. At the same time, she answered "amen" to a priestly adjuration that

the water would cause her grave consequences if she was guilty. She can then return to her husband, and they can continue normal marital relations.

D. The Metaphysics of Sexuality

In these laws of social control over sexuality and its consequences, we can detect a respect for the power of sexual attraction. Controlled and confined within the marital system, it reinforced the social order. Allowed free reign, it might destroy social arrangements and threaten the existence of civilization. This metaphysics of sex, however, only finds explicit statement once in the Bible: "for love is fierce as death, passion is mighty as Sheol, its darts are darts of fire, a blazing flame. Vast floods cannot quench love, nor rivers drown it" (Song of Songs 8:6–7). Otherwise, there is no explicit reflection on the meaning of sexuality nor its place in the cosmic order.

The reason for this absence may be monotheism itself. There is no sexuality in the divine sphere. God, usually envisioned as male in gender, is not phallic; God does not represent male virility, and is never imaged below the waist. The prophets use a powerful marital metaphor for the relationship between God, the "husband," and Israel, the "wife," but the relationship is not described in erotic language. God neither models nor grants sexual potency or attraction. This absence of sex from the divine realm and of God from the sexual realm is accompanied by a separation of sexuality from the realm of the holy. Moses and the people had to abstain from sexual activity for three days before the revelation at Sinai (Exod 19:15). So too, David assured Ahimelech that he and his men could eat hallowed bread because they had been away from women for three days (1 Sam 21:4–5). The priests of Israel were not a reflection of God, and celibacy was a totally foreign idea; yet they modelled controlled sexual behavior. When the sons of Eli slept with the women who came to worship, they forfeited their family's right to be priests (1 Sam 2:22–24). The priest could not marry a prostitute or a divorcee (Lev 22:7), and if his daughter was not chaste, she was to be burnt for profaning her father (Lev 22:9).

All hints of sexuality were to be kept far away from cultic life and religious experience. People had to wait a day after sexual intercourse or nocturnal emission before coming to the temple (Lev 15:16–18), and the wages of a prostitute could not be given to the temple as a gift. There were *qĕdēšôt* in the temple until the time of Josiah. Until recently, these were understood as temple prostitutes, implying sacred prostitution. However, more recent studies have revealed that there is no basis for finding sacred prostitution in Israel. See PROSTITUTION; PROSTITUTION (CULTIC). Similarly, previous theories about Canaanite orgiastic rites or pagan sexual fertility rituals cannot be substantiated. The separation of sexuality from the realm of the holy should not be seen as a polemic against pagan religion but as a result of the lack of sexuality in the conception of the divine. This created a vacuum in thinking about sex, one that was ultimately replaced by the negative Greek ideas about women and sexuality which entered Israel in the Hellenistic period.

TIKVA FRYMER-KENSKY

SEXTUS, SENTENCES OF (NHC XII,*1*). A collection of Greek wisdom sayings assembled by a Christian redactor probably near the end of the 2d century C.E. A 4th century Latin translation by Rufinus enjoyed popularity in the West. Also copies in Syriac, Armenian, and Georgian are extant. In the

nineteenth century two mss of the Gk *Sent. Sextus* were discovered. Codex XII from Nag Hammadi adds to these a fragmentary copy of a version in Sahidic Coptic. No title or page numbers survive; of the estimated original 39 pages only 10 are extant and all have suffered considerable loss. They represent maxims 157–180 and 307–397 of the 451 maxims known to Rufinus.

The value of the Coptic *Sent. Sextus* is textual. It proves to be a faithful, consistent translation which lends significant support to the critical Greek text established by H. Chadwick (1959). The only differences are the omission of maxim 162a and two minor changes in sequence. No attempt was made by the translator to change the theological or ethical outlook of the Greek text. Since the Coptic text predates the Syr mss by two and the Gk mss by five centuries, it is an important witness to the text, order and the divisions of the Gk maxims known to the Coptic translator near the beginning of the 4th century or perhaps even earlier.

Sent. Sextus are not gnostic in origin. Most of the maxims appear to have been drawn from Stoic and Pythagorean collections. Their appearance among gnostic writings is not more surprising than the popularity they enjoyed in Christian orthodoxy. The gnostic tractates in the Nag Hammadi collection contradict the belief that gnostics put no value in the virtuous life or that they tended towards libertinism. Evidently their spiritual elitism was matched by a profound asceticism for which the heavenly life was the model. This is also the preoccupation of the *Sent. Sextus* as well as such other non-gnostic, Nag Hammadi tractates as *The Exegesis on the Soul* (NHC II,*6*), *The Book of Thomas the Contender* (NHC II,*7*), *The Acts of Peter and the Twelve Apostles* (NHC VI,*1*), *Authoritative Teaching* (VI,*3*), and *The Teaching of Silvanus* (VII,*4*). The ascetic outlook is the only obvious link between this diverse collection of texts. It lends support to the conclusion, based on the waste papyrus in the cover of Codex VII, that the Nag Hammadi codices were produced and used in a Pachomian monastery before they were buried in a jar near Chenoboskia.

SEXUAL IMPURITIES. See DISCHARGE.

SHAALBIM (PLACE) [Heb *ša‹albîm* (שַׁעַלְבִים)]. Var. SHAALABBIN. A city within the tribal territory of Dan (Josh 19:42 note var. spelling Shaalabbin [Heb *ša‹ălabbîn*]), probably to be identified with Selbit (M.R. 148141), about 3 miles NW of Aijalon. It was one of the cities where the Danites failed to dislodge the old Amorite population, but the Ephraimites later succeeded in suppressing the Amorites and putting them to forced labor (Judg 1:35). Shaalbim also appears in the list of cities that made up Solomon's second administrative district (1 Kgs 4:9). Possibly one should also identify Shaalbon, the home of one of David's thirty mighty men (2 Sam 23:32; 1 Chr 11:33), as the same city.

Excavations carried out at Selbit in 1949 uncovered the foundation of a building which was identified as a Samaritan synagogue constructed in the 4th or 5th century C.E. The building was built to face in the direction of Mount Gerizim, the holy mountain of the Samaritans. Its mosaic floor was decorated with two seven-branched menorahs with fragments of a Greek inscription appearing above them. The mosaic also contained two fragmentary Samaritan inscriptions, one of which was the Samaritan version of "The Lord shall reign for ever and ever" (Exod 15:18). See D. Barag in *EAEHL* 4:1070–71.

WESLEY I. TOEWS

SHAALBON (PLACE) [Heb *hašša‹albōnî* (הַשַּׁעַלְבֹנִי), lit. "the Shaalbonite"]. Apparently the hometown of Eliahba, one of David's elite warriors (2 Sam 23:32 = 1 Chr 11:33). The town should

probably be identified with SHAALBIM, a town which is spelled either *š‹lbym* or *š‹lbyn* in various Heb mss.

SHAALIM (PLACE) [Heb *ša‹ālîm* (שַׁעֲלִים)]. An area crossed by Saul as he searched for his lost asses (1 Sam 9:4). Shaalim appears to be a specific territory in the land of Ephraim, mentioned nowhere else in the Bible, between Oprah and Rimmon. It is possible that Shaalim is an error for Shaalbim (Judg 1:35; 1 Kgs 4:9) or Shual (1 Sam 13:17). Both of these are geographical names which are in the same general location as Shaalim. Shual is mentioned in relation to the Philistine camp at Michmash; it is near Oprah, in the region N of Bethel in the central hill country. Shaalbim is an Amorite city given to the tribe of Dan, which becomes part of Solomon's second administrative district. It is identified with modern Selbit (M.R. 148141), 3 miles NW of Aijalon.

SIDNIE ANN WHITE

SHAAPH (PERSON) [Heb *ša‹ap* (שַׁעַף)]. **1.** The youngest of the six sons of Jahdai (1 Chr 2:47). Shaaph was the name of a Judahite, who descended from Jerahmeel's brother Caleb. It should be noted, however, that the precise relationship of Jahdai and his children with any of the individuals mentioned in v 46 is not stated. "Shaaph" was apparently a non-theophoric name, meaning "balm" (as does also the Jewish Palestinian Aramaic term *ša‹ăpā›*). The name gave expression to the parents' joy over the child (*IPN*, 223).

2. The third son of Maacah, Caleb's second concubine (1 Chr 2:49). Shaaph founded the town of Madmannah (Josh 15:31), which has been identified with Khirbet Tatrît in the N Negeb/S Judean hill country (*LBHG*, 353, 439). Pace (1976:146) thinks a name was omitted in 1 Chr 2:49 before "father of Gibea"; the missing person would be parallel to Shaaph and Sheva as descendants of Caleb. Sheva, incidentally, carries the same name *(šw›)* as that of a few Jews recorded in Aram correspondence from Elephantine (*TAD* A, 38; *BMAP*, 284). The rather abrupt beginning of v 49 might reflect a textual displacement. Some suggest changing the verb from *wattēled,* "she (Maacah) bore," to *wayyôled,* "he (Shaaph) begot" (cf. Vg). This would solve as well the problem of the absence of an expected "and" before "Sheva" (though it is present in the LXX). Under this view Shaaph here would be identical with Jahdai's son of v 47 but would merely have been called the son of Caleb and his concubine.

EDWIN C. HOSTETTER

SHAARAIM (PLACE) [Heb *ša‹ărayim* (שַׁעֲרַיִם)]. 1. A town in the Shephelah district of Judah (Josh 15:36). It is listed after Soco and Azekah, and before Adithaim and Gederah. After the defeat of Goliath by David, the Philistines fled "on the Shaaraim road" on their way to Gath and Ekron (1 Sam 17:52). Although its location has not been identified, it has been sought in the region N and W of Azekah in the Elah Valley (Wadi es-Sant; Rainey 1983:6–7; for a discussion of possible sites see Galil 1985:61–62). The mention of *Saraein* in Eusebius' *Onomast.* does not aid in identifying the site. Some scholars have advocated following LXX B in reading Shaaraim as a regular noun "gates" (Wellhausen 1871:109–10) or as corresponding to the town of Tar‹in in the environs of Ashkelon (Tosefta *Ahilot* 18:15; Abel *GP* 2:439; but see Smith *Samuel* ICC, 165 and Rainey *EncMiqr* 8:244).

2. A town in the tribal inheritance of Simeon in the Judean Negeb (1 Chr 4:31). In the parallel Simeonite list in Josh 19:6 Sharuhen appears in its place, whereas in the list of towns in the Judean Negeb Shilhim is mentioned (Josh 15:32). Albright (1924:134–35 n. 6) speaks for the majority of scholars in viewing this mention of Shaaraim as a later scribal error for Sharuhen (but see *CTAED*, 173).

CARL S. EHRLICH

SHAASHGAZ (PERSON) [Heb *ša*ʿ*ašgaz* (שַׁעַשְׁגַּז)]. A eunuch in charge of one of the two harems of king Ahasuerus (Esth 2:14; note vocalization in *BHS*, *ša*ʿ*ăšĕgaz*). His specific office "the keeper of the concubines" (Heb *šômēr happîlagšîm*), entailed the oversight of the harem of Ahasuerus' married wives as opposed to the harem of virgins waiting to be wed to the king under the care of Hegai (Esth 2:3). The LXX confuses these two individuals giving them both the name *Gai* (cf. LXX of Esth 2:8 and 2:14). Shaashgaz is an incidental character in this story being mentioned only in the context of how Ahasuerus selected a new queen. Each prospective wife would leave Hegai's harem and spend just one night with the king at which time she became one of his lesser wives and was sent to Shaashgaz's harem—unless the king liked her enough to make her queen in place of Vashti (Esth 2:13–14). Esther would have been sent to this second harem had she not been chosen as the new queen (Esth 2:16–18). Several scholars have noted similarities between this subplot in the story of Esther and the harem tale of king Shekriya in *1001 Arabian Nights* (Moore Esther AB, 23–24, Clines *Ezra, Nehemiah, Esther* NCBC, 266). Shaashgaz's name may be the Heb equivalent of Old Bactrian *saskšant,* meaning "one anxious to learn" (Paton *Esther* ICC, 69).
JOHN M. WIEBE

SHABBAT [Heb *šabbāt* (שַׁבָּת)]. See SABBATH.

SHABBETHAI (PERSON) [Heb *šabbĕtay* (שַׁבְּתַי)]. A Levite who was present when Ezra enacted the edict against having foreign wives (Ezra 10:15; 1 Esdr 9:14). The accompanying Hebrew phrase ʿ*āmĕdû* ʿ*al-zō*›*t* can be translated as either "they supported this" or "they opposed this." However, the introductory particle ›*ak* ("only") in Ezra 10:15 suggests an exception, and the fact that overwhelming support for the edict did exist further indicates a minority opposition. In other words, Shabbethai was among the few who apparently voiced disapproval of the edict. Such opposition, however, was perhaps not directed against the edict itself, but against its perceived leniency. Shabbethai, it must be noted, is not listed among those who had such a wife to give up, so he might very well have sought stricter measures. Furthermore, if we can assume that additional occurrences of the name refer to the same person, then Shabbethai was a man of deep religious convictions. He is described elsewhere as a chief Levite who was responsible for external business pertaining to the temple (Neh 11:16), and he also provided interpretive assistance during the great reading of the Law (Neh 8:7; 1 Esdr 9:48). Shabbethai's opposition to the edict, therefore, quite likely indicates that he was a member of a more rigid or demanding minority (Blenkinsopp *Ezra-Nehemiah* OTL, 194).
TERRY L. BRENSINGER

SHADDAI [Heb *šadday* (שַׁדַּי)]. See ALMIGHTY; GOD IN THE OT.

SHADOW [Heb *ṣel* (צֶל)*;* Gk *skia* (σκια)]. Both the Hebrew and the Greek word for shadow are used in the Bible in a literal and in a metaphorical sense.

In the literal sense it is used for the place where the (sun)light cannot penetrate, especially the shadow of a tree (e.g., Jonah 4:6; Judg 9:15, Ezek 31:6, 12, 17; Hos 4:13; Ps 80:10; Mark 4:32); also of a rock (Judg 9:36); of a cloud (Isa 16:3; 25:5); of a roof (Gen 19:8); etc. Since shadow protects against the heat of the sun, the word develops the metaphorical meaning of "protection," e.g., by a man (Cant 2:3); by a city (Jer 48:45); by a rock (Isa 32:2); but especially—this is the most frequent usage—by God (e.g., Ps 17:8 "Hide me in the shadow of thy wings;" Ps 36:8 "The sons of men seek refuge in the shadow of thy wings;" Ps 57:2 "I will take refuge in the shadow of thy wings;" Ps 63:7 "I am safe in the shadow of thy wings"), the

image being here that of God as a mighty eagle; see also Exod 19:4 and Deut 32:11. For other images in connection with God's shadow see Hos 14:7; Isa 49:2; 51:16.

Another metaphorical use of "shadow" is found in its application with the negative sense of "transience" and "vanity" (e.g., Ps 102:11 "My days dwindle away like a shadow;" Ps 109:23; 144:4; Job 8:9 "Our life on earth passes away like a shadow;" Job 17:7; Qoh 6:12 "Who knows what is good for man in those few days of his empty life which he spends as a shadow?"; *IDB* 4:302).

Traditionally, the Hebrew *ṣalmawet* (Amos 5:8; Jer 13:16; Ps 44:20; Job 3:5; etc.) was translated as "shadow of death" (already in the LXX), because popular etymology wrongly divided the word into *ṣl* (shadow) and *mwt* (death), but it is now certain that it has the meaning of "deep darkness" (Thomas 1962).

In the NT the word has an additional metaphorical meaning, which has its background in Hellenistic ideas. In Col 2:17 the Mosaic commandments are called "no more than a shadow of what was to come" and are posited over against the "body" which is Christ. This opposition of shadow and body is ultimately of Platonic origin. The same applies to Heb 8:5 and 10:1, where the author says that the earthly sanctuary of the Jews is only a copy and shadow of the heavenly, and that the Law contains but a shadow and no true image of the good things to come. The Platonic antithesis between heavenly reality and earthly adumbration is at the background of these passages (*TWNT* 7:400–01).

There are two passages in the work of Luke, one with a literal and one with a metaphorical use of "shadow," that belong together and have a different background than other passages in the Bible, namely Luke 1:35 and Acts 5:15. In the first passage Mary is told by Gabriel that the power of the Most High will overshadow her (the verb *episkiazein* is used) so that she will become pregnant. In the second, the same author tells that the inhabitants of Jerusalem carried out their sick into the streets in order that the shadow of Peter might fall upon them (again *episkiazein* is used) so that they would be healed. Here the person's shadow is equivalent to his soul or vital power or *alter ego* (Frazer 1911:77–100). This soul-concept is well-known from anthropological study of primitive peoples and medieval Western societies (Rochholz 1867; Negelein 1902; Pradel 1904; Bieler 1940; van der Leeuw 1933; Fischer 1965).

The idea that the shadow was a vital part of a human being or an animal (or even of a tree) was also widespread in antiquity and is attested for Mesopotamia, Egypt, Greece, Rome, and Israel (George 1970; Cook 1914; Röscher 1892; Frazer 1911; van der Horst 1976–77; 1979). Humans and animals are liable to be injured if violence is done to their shadows. If the shadow is trampled or urinated upon, struck or stabbed, one will feel the injury as if it were done directly against the person (Pliny the Elder, *HN* 28.69; *Defixionum tabellae* 190:4–13, ed. Audollent). It is dangerous to let one's shadow fall upon particular persons or objects because one's soul might then be purloined by them; to lose one's shadow meant to die within the very near future (Cook 1914:66–68). Certain trees have beneficial, other ones noxious shadows (Pliny *NH* 17.18; Lucr. *de Rerum Natura* 6.783–85; Verg. *Ecl.* 10.75–76). To be touched by the shadow of a criminal will have a very harmful effect upon the person touched (Ennius in Cic. *Tusc.* 3.12, 26). Very famous and much discussed in Hellenistic-Roman times were stories about the extremely powerful and dangerous shadow of hyenas (Arist. *Fr.* 369 Rose = Ael. *NA* 6:14; Pseudo-Aristotle, *Mir. Ausc.* 145; Pliny *HN* 8.106; Solin. 27:24; *Gp.* 15.1, 10; see further van der Horst 1979:28–30), and about the loss of one's shadow when one entered Zeus' sanctuary on Mount Lycaeus in Arcadia (Polyb. 16.12, 7; Paus. 8.38, 6; Plut. *Quaest. Graec.* 39, 300C; further Röscher 1892; Cook 1914:66–68), which meant that death was soon to follow.

That these magical ideas were current also in Jewish circles is proved by several texts in the LXX (Job 15:29; Exod 40;35; Ps 139:8) in Targums (e.g., *Tg. Ps.-J* on Num 14:9), in the Mishna (*ʿAbod. Zar.*; *Ohol.* 2:1–2), and the Talmud (*b. Hor.* 12a; *b. Ker.* 5b–6a; *b. Pesaḥ.* 11a–b; see van der Horst 1979:34–35).

The idea that a shadow could have a powerful positive or negative effect upon another person is the background of the story about the miraculous healing of the sick Jerusalemites by Peter's shadow in Acts 5:15 (van der Horst 1976–77). Egyptian texts prove that a god's shadow could even be thought so powerful as to fertilize a woman (George 1970:112–13; the texts speak about the ejaculation of the god's

shadow). A similar conception is probably the background of the otherwise enigmatic passage in Luke 1:35 about the overshadowing of Mary by the Most High (van der Horst 1976–77:211–12).

SHADRACH, MESHACH, ABEDNEGO (PERSONS)

[Heb; Aram *šadrak* (שַׁדְרַךְ), *mêšak* (מֵישַׁךְ), *ʿăbēdněgô* (עֲבֵדְנְגוֹ)]. Babylonian names given to a special group of Jewish noblemen by Nebuchadnezzar's chief eunuch Ashpenaz in the exilic period. Along with Daniel, who was similarly named (see BELTESHAZZAR), they constitute the central heroes of the series of court tales recorded in the 1st half of the book of Daniel (chaps. 1–5). Shadrach appears to be a deliberate perversion in spelling of Marduk, the patron deity of the city of Babylon, and likewise Abednego is a clever deformation of Abednebo which corresponds to Akk *arad - nabu* "servant of (the god) Nabu." Meshach has all the appearance of a further disfigurement of a Babylonian original no longer recognizable. The changing of names, on this occasion from the familiar sounding Hebrew Hananiah, Mishael, and Azariah (see Dan 1:7), was a familiar practice in the ANE, signifying a change of destiny *(nomen est omen).* Parallels may be seen within the OT in Pharaoh's renaming Joseph (Gen 41:45) and Nebuchadnezzar's new name for Judah's last crowned head (2 Kgs 24:17).

Shadrach, Meshach, and Abednego are first mentioned in a list which is headed by the principal hero whose name is given to the canonical book of Daniel (Dan 1:6–7). It has been argued that Daniel alone was the protagonist in the oldest tradition of the court tales and only in the later stages of the book's composition were the heroes incorporated into the narrative as Daniel's companions (*Daniel* AB, 131). It is possible that in the tale of the colossal statue mention of Daniel's companions could be a later addition (2:17–49) but they are not intrusive here or when they are introduced in the first chapter, although Daniel is given a certain prominence. Chap. 3 does not fit happily with this view since only the three companions are the heroes.

From a literary standpoint the Hebrew names and their Babylonian counterparts do not appear at random in the texts. In fact they are subtly woven into the narrative fabric in order to reflect the cultural and religious dichotomy which existed between the Jewish people and their Babylonian overlords. In the introductory chapter the authorial voice uses Hebrew nomenclature in referring to the three companions (1:6, 11, 19) and it is left to Nebuchadnezzar's chief of the eunuchs to change their names (1:7). In the story of the colossal statue it is Nebuchadnezzar who bestowed high office on Shadrach, Meshach, and Abednego (1:4–9) even though in their personal relationship with Daniel they keep their Hebrew names (2:17). In the tale of the furnace of burning fire the Babylonian names are declaimed 13 times within the space of 19 verses (3:12, 13, 16, 19, 20, 22, 23, 26 (twice), 28, 29, 30). Such reiteration seems to be a

rhetorical rather than a structural device but it is worth noticing that the sonorous repetition is set firmly in the context of the confrontation between the Jewish heroes and Nebuchadnezzar, the king himself declaiming the Babylonian names 5 times (3:14, 16, 28, 29). Babylonian nomenclature thus provides an authentic local touch to the narratives while at the same time the deft deformation of the spelling satirizes Babylonian cultural values.

PETER W. COXON

SHAGEE (PERSON) [Heb *šāgēh* (שָׁגֵה)]. At 1 Chr 11:34 Shagee the Hararite is the father of Jonathan, one of David's mighty men. In place of "Jonathan son of Shagee the Hararite" we find two separate names in the parallel at 2 Sam 23:32 b–33a: "Jonathan; Shammah the Hararite." It is difficult to reconcile the two texts. Wellhausen (1871:216) prefers Shagee (or Agee; see 2 Sam 23:11) at 1 Chr 11:34, saying that Jonathan was a brother of Shammah (2 Sam 23:33) as both of them were Hararites. For 2 Sam 23:33 many suggest that an original *ben* has fallen out of the text and restore it to "Jonathan son of Shammah the Hararite" (NAB; NEB). According to Elliger (1935:31 n. 3) "Shagee" might be a cross between the names Shammah and Agee, the father of Shammah in 2 Sam 23:11. Wellhausen, while pointing out that either the name in v 11 should be *šg*› or that of v 33 should be ›*g*›, prefers *šg*›. In the Gk mss the form of the name in the Lucianic text of 1 Chr *(samaia[s])* reflects the variant at 2 Sam 23:33 MT and may indeed be a modification based on it. The reading in the Vaticanus and Sinaiticus codexes *sōla,* can be explained by a confusion of the Greek letters *gamma* and *lambda.* Codex Alexandrinus, which reads *sagē,* reflects the MT.

While the possibility of textual confusion may be a factor in seeking the original form of this name, it seems best nevertheless to accept the MT reading "Jonathan son of Shagee the Hararite" for 1 Chr 11:34 as the authentic reading of the Chronicler's tradition here.

STEPHEN PISANO

SHAHAR (DEITY) [Heb *šaḥar* (שַׁחַר)]. The Hebrew word meaning "dawn," often personified in the Bible as a reflection of its status as a god in the ANE (Ps 139:9). Although spelled *šahar* in Hebrew, the second *a* vowel *(pataḥ)* is a later Hebrew development; its original pronunciation is preserved in Akkadian syllabic spellings as *šaḫru* (Emar #369, 371). The frequent absence of the definite article with this noun in Hebrew (i.e., instead of "the dawn" simply "Dawn" in Isa 14:12; Hos 6:3; Amos 4:13; Ps 57:9—Eng 57:8; 108:3—Eng 108:2; 139:9; Job 3:9; 41:10—Eng 41:18; Cant 6:10) points to the awareness within the biblical tradition of the personification of this natural phenomenon. In addition, the title "Hind of the Dawn" (Heb ›*ayyelet haššaḥar*) occurs in the context of a Psalm title (Ps 22:1—Eng title), presumably indicating the melody to which the psalm was sung.

Many details concerning this deity surface from widely separated cultures over a period of two millennia, and one must be cautious in assuming that the resulting picture represents what was recognized at any one time. The Syrian environment of the 2d millennium is most appropriate as a background for the biblical text, and this also provides the most detail. An entire mythical/ritual text from Ugarit (*KTU* 1.23) is devoted to describing the birth of this god along with his half-brother Shalim. The father of these two "gracious gods" is the chief god, El, who impregnates two of his wives (perhaps Athirat and Rahmay). Shahar nurses at the breasts of the Mother-goddess, but his voracious appetite remains unsated, depicted graphically as "one lip to earth, one lip to heaven, the birds of the sky and the fish of the sea entering their mouths." As time passes, Shahar and Shalim are found frequenting the wilderness where—when the text breaks off—the issue remains one of satisfying the needs of their diet.

Shahar is the divinity of the dawn while Shalim is that of the evening, bearing the appropriate epithet "sons of day" in *KTU* 1.23. Wherever the two brothers appear together, Shahar is named first before

Shalim, pointing to the sequence dawn-dusk in contrast to the biblical sequence "evening and morning" (Genesis 1).

Dawn's moral place in the cosmos is fraught with ambiguity. Although Dawn brings light and dispels darkness (note the phonetic correspondence with the root for "dark" *šḥr*), it is also the begetter of the rebel morning star (Isa 14:12–13), a star which is associated with the underworld (*KTU* 1.6; Isa 14:15). God acknowledges that the daily commissioning of Dawn is a Herculean task with moral consequences (Job 38:12–15), a task described between the apparently comparable effort required to tame a rebellious Sea and survey the Abyss and the Gates of Death. Sharing contexts with the chaos monster Leviathan places Dawn in a morally charged environment (Job 3:8–9; 41:10—Eng 41:18). Outside the Bible, sacrifices for Shahar are accompanied by offerings to underworld deities (Emar #369.24–25). Appropriately in this regard, the most common verb which describes the dawn's activity in Hebrew is that it "rises" *(ʿlh)*, probably echoing the old notion of the underworld connections of Dawn.

An astral orientation of Shahar is suggested in his juxtaposition with other celestial elements (sun and moon in Cant 6:10; one may favorably compare Eos, the Greek goddess of the dawn, and her brother and sister sun and moon). A connection with the sun is frequently made at Ugarit where after Shahar's birth in *KTU* 1.23, offerings are made specifically to the sun and the stars (1.54). Elsewhere, Shahar and Shalim along with eight other pairs of deities assist the sun goddess (*KTU* 1.107), while the sun goddess in another text is the central deity around which Shahar and Shalim with eleven other deities (or pairs of deities) are mustered in an incantation to neutralize a snake's venom (*KTU* 1.100). In this text, Shahar's characteristic location is said to be the heavens *(šmmh)*. The astral divinity Athtar (identified with Venus) also appears in conjunction with Shahar at Ugarit (*KTU* 1.123) and even more regularly in Epigraphic South Arabic (ESA) texts where the two are invoked as a pair. Allusion to Shahar's offspring is so far known only from biblical texts such as Isa 14:12 where he is depicted as the father of Hellel (RSV "Day Star;" Vg *lucifer*), the morning star, again connecting Shahar with the heavens.

A further biblical text which identifies the offspring of Shahar is Ps 110:3, but it raises the problem of Shahar's gender. Like the Greek goddess Eos, along with Moabite which preserves the feminine form Shahrat (*KAI* 181.15), Psalm 110 explicitly personifies Shahar as a female, for the offspring of Dawn's womb is the dew, Ṭal (consistently masculine in Hebrew; Dawn as the bestower of the dew also may lie behind the imagery of the parallelism in Hos 6:3). The goddess of the dew, Ṭallay, is a female at Ugarit where her progenitor is identified as Shower (*rb; KTU* 1.3–4); Syrian and Hittite rituals juxtapose the storm god with Shahar although the gender of the latter in this case is not clear (Emar #369.24, 52). In spite of this feminine imagery, wherever gender marking is observable in Hebrew, the noun Shahar is masculine. Therefore, one must be prepared to see variable gender in the deity associated with the dawn, a fluctuation observable with other gods and goddesses (e.g., the masculine sun in Hebrew is feminine at Ugarit and in ESA, just as Dew is masculine in Hebrew but feminine in Ugaritic). Note also the Babylonian comment: "Venus is seen in the west, she is male … Venus is seen in the east, she is female" (*Enūma* Anu Enlil 50/4.6–7).

A gargantuan mouth with corresponding appetite seems to place this creature in the company of giants, as does the comparison with Leviathan (Job 41:10—Eng 41:18; cf. Job 3:8–9). The eyelids of Dawn are a characteristic feature (Job 3:9; 41:18), no doubt a reference to the gradually spreading rays of sunlight which presage the sunrise, again pointing to the gigantic stature of Dawn whose eyelids spread over all the earth. Shahar is also winged to allow him to fly as other supernatural beings (Ps 139:9). Although the symbol of Shahar in ESA is a horned dragon, this may not represent the god himself but the animal with which he was associated.

The prominent place of this deity in popular religion is confirmed by its appearance in personal names in Hebrew (e.g., Ahi-Shahar 1 Chr 7:10), Phoenician, Ugaritic and Akkadian. A pious attraction to this deity may be explained by the general perception of the dawn as an envigorating moment, anticipated as the sign of renewal of strength, the realization of vindication and victory (Isa 58:8), and the expeller of darkness and the forces of evil (Gen 32:25, 27—Eng 32:24, 26; Job 38:12). Just as other astral elements

are traditionally cited as the most stable features of creation (Ps 72:5, 17; 89:37, 38—Eng 89:36, 37; cf. Jer 33:25), so the dawn is included in this class as a certainty which can be trusted to recur (Hos 6:3).

SAMUEL A. MEIER

SHAHARAIM (PERSON) [Heb *šaḥărayim* (שַׁחֲרַיִם)]. A Benjaminite (1 Chr 8:8). Shaharaim is listed by the Chronicler as the progenitor of a clan of Benjaminites who lived in Moab. This mention of Shaharaim by the Chronicler, however, has no connection to what precedes it, and there is no hint of the source of the list headed by Shaharaim. The mention of Israelites living in Moab is rare, though not unheard of (see Ruth and 1 Sam 22:3–5). Shaharaim's descendants are said to have built Ono and Lod, though the names Ono and Lod are not found outside the Chronicler's work; see further Myers (*1 Chronicles* AB, 52–53).

Noth (*IPN*, 223) classified the name as part Hebrew and part Aramaic, and therefore postexilic. The name could be a copyist's error for Shehariah (1 Chr 8:26) or Ahiram (Num 26:38), though neither option has any textual support.

TOM WAYNE WILLETT

SHAHAZUMAH (PLACE) [Heb K *šaḥăṣûmâ* (שַׁחֲצוּמָה); Q *šaḥăṣîmâ* (שַׁחֲצִימָה)]. A border town in Issachar, located between Tabor and the Jordan River (Josh 19:22). The location of the town is uncertain, as is its correct name. Naʾaman (1986) notes that the name is non-Semitic in appearance. Albright (1926) suggests that the name may be a conflation of the elements *šḥṣ* and *ymh* (reading with the Qere), that is, "Shahaz-which-is-toward-the-sea" (of Galilee, contrary to *yammâ*'s usual sense of "westward"). A possible location for the site was found by Alt (1928), among others, at Tell Mukharkhash (M.R. 194228), at the confluence of the wadis Sirin and esh-Sherrar, 5 miles SE of Tabor. This site was occupied in the MB, LB, Iron I, and Byzantine periods. However, Mukharkhash has since been more convincingly identified with Anaharath (*HGB*, 195–96; *LBHG*, 155). Another possibility is to locate Shahazumah at Tell el-Hadatah, in the district between Tabor and Beth-shemesh, or according to Kallai (*HGB*, 195), at el-Karm, a tell near el-Hadatah. Kallai (ibid., 196) also suggests a third possibility: if Shahazumah is part of a town list of Issachar and not part of the border document, then it may be identified with Shekh el-Muzegit, below Beth-shemesh. However, the exact location of Shahazumah remains uncertain.

SHALEM (DEITY). Shalem is attested as a West Semitic minor deity in the 2d millennium B.C.E. The god appears in the mythological and ritual texts from Ugarit; however, these documents provide little information by which the divine function of Shalem might be determined. The provenance of the cult of the god is unknown, though both Mesopotamia and South Arabia have been posited as the original area of the deity. While evidence for the existence of the god is clear, how widely the divinity was revered and for how long is impossible to determine. Personal names among the West Semitic peoples may suggest that the god was worshipped into the middle of the 1st millennium B.C.E. Among these personal names are several biblical names which have been construed as containing the divine element Shalem, which makes the deity important for the study of biblical religious history.

Among the myths from Ugarit is one in which the two deities *šḥr w šlm* appear as the offspring of the god El and a pair of "women" whom he impregnates on a beach (*KTU* 1.23). The myth then seems to imply that other gods are sired by El with these women (Caquot and Sznycer 1980:8). The ambiguity of the intent of this myth (del Olmo 1981:437–39) precludes any certainty as to whether the gods mentioned at the end of the narrative include Shalem or not. These latter deities are sent by El into the desert to live for seven, even eight, years; after this period of time there is a reference to imbibing wine. The only characteristic provided for these deities is that of insatiable consumption, presented in the manner used of Mot. Clearly the text assumes a knowledge of the principal deities and therefore does not define or distinguish them.

Because Shalem appears with *šḥr,* not only in the mythological text, but in some of the ritual offering lists (Xella 1981:391), it has been generally taken for granted that the two gods are related to "dawn" and "twilight" either as the divine representations of the two times of day (Gaster 1946:54; Xella 1973:107) or as two aspects of the planet Venus appearing as morning and evening star (Gray 1949:73; *IDBSup,* 821). For this it has been necessary to define Shalem with respect to the slightly better known Saḥar and, to the extent that these two gods appear together in the Ugaritic texts, such an interpretation is possible; however, Shalem also appears on the ritual tablets from Ugarit without *šḥr* which should mitigate against too facile an integration of the two deities such as the interpretation which has declared them the astrological Gemini (Gaster 1946:70; Gibson 1977:29). See also SHAHAR (DEITY).

If evidence of the divine name Shalem is not pervasive in the West Semitic world of the 1st millennium B.C.E., personal names containing the divine element Shalem can plausibly be identified in the period (Tigay 1986:67–68). However, the god's name is written with the root *šlm* which is a common verbal and noun form and might be used in personal names without referring to a god as the meaning "wholeness" or "well-being" (Eisenbeis 1969:50–51) carries a positive connotation. This makes using the personal names containing a *šlm* element for evidence as the worship of Shalem uncertain, though by no means improbable (Tigay 1986:80).

The god Shalem has been correlated with the city of Jerusalem since it was observed that the final element in the city's name could be read as a divine name. It was then proposed that the city must have been named after the deity and therefore Shalem must originally have been the major deity of the area. Support for Jerusalem having been named for Shalem is derived from the story of Melchizedek, who is called the "king of Shalem" (Gen 14:18). In Ps 76:3—Eng 76:2 Shalem is used in a parallel construction with Zion thereby locating it in Jerusalem. It is clear that the biblical text is not using an early Judaic tradition, because already in the Egyptian execration texts, from the early 2d millennium B.C.E., the name Jerusalem was known; though this might suggest a double tradition of the city's name known to the psalmist. Julius Lewy (1934:62) argued that Shalem and Yahweh had originally reigned together in the city of Jerusalem and the town was named for the former. At some time after the Davidic capture of the city Yahweh replaced Shalem as the major deity and then ruled alone. He later (1940:519–21) expanded on his theory and posited that the Mesopotamian deity Shulmānu, in the guise of Ninurta, was the patron god of "*Bêt Šulmān,*" the Jebusite Jerusalem.

The relation of Jerusalem to the god Ninurta led other scholars to posit that the original cult in Jerusalem was dedicated to Saturn; this theory was derived from Mesopotamian astrological reflection on Ninurta (Lewy 1950:353). A continuation of this trajectory produced a vision of Shalem as a deity of violence, destruction, and death (Curtis 1957:168). Rosenberg (*IDBSup,* 820–21) assumes that the identification of Shalem with Saturn is correct, but also wishes to accept the Ugaritic evidence for a possible "evening star" equation, and declares that the deity is a solar god. These theories must be seen as failures. There is little, if any, reason to presume Mesopotamian influence on the origins of the city of Jerusalem. Moreover, the West Semitic Shalem serves sufficiently as a source for the name of the city, even if the nature of the deity is obscure.

Further evidence for the early, and continuing, interest in the cult of Shalem in Jerusalem is seen in the names David gave his sons; both Absalom and Solomon have been argued to have been named after the god. The fact that Absalom is supposed to have been born in Hebron (2 Sam 3:2–3), before David

captured Jerusalem, precludes a facile use of the name to show David's veneration for the god of Jerusalem (*IDBSup,* 820). If Solomon was named after Shalem, which is less than certain, it would appear to have been his throne name, used more often in the Bible than the Yahwistic Jedidiah. Proper names containing *šlm* continue throughout the monarchical periods in the biblical texts which may reflect a continuing cult of Shalem; it is unlikely that they reflect aspirations of the populace for peace (Coogan 1976:85). One last name has been suggested as related to the cult of Shalem in Jerusalem; the Shulamite maiden (Cant 7:1) has been suggested as the consort of Shalem (*IDBSup*, 820) and a fertility cult has been suggested for her in the city (Ahlström 1963:84). Neither the identification nor the intent of the poems is clear and therefore any connection between Shalem and the Shulamite remains speculation.

LOWELL K. HANDY

SHALISHAH (PLACE) [Heb *šālišâ* (שָׁלִשָׁה)]. A region through which Saul passed on his search for his father's lost donkeys (1 Sam 9:4). The context implies that the region is outside Benjamin, presumably in Ephraim to the N. It is probable that the settlement known as Baal-shalishah (2 Kgs 4:42) was located in that region and that the one will have suggested the name for the other.

ELMER M. DYCK

SHALLECHETH GATE (PLACE) [Heb *šaʿar šalleket* (שַׁעַר שַׁלֶּכֶת)]. An inner gate of Jerusalem that was part of an enclosure that surrounded the sacred temple precincts and the royal residences (1 Chr 26:16). The name of the gate possibly means "Gate of Departing." This gate was known at different periods by several other names: the "Foundation Gate" (2 Chr 23:5, LXX "Middle Gate") and the "Sur Gate" (2 Kgs 11:5, LXX "Gate of Departing or Turning Aside"). In Hebrew, *sûr* and *šalleket* share similar indicative meanings and the LXX renders both of these words with *ekspan* "draw out" (Isa 6:13 and Ezek 11:19 in Codex Alexandrinus) and with *ekpiptein* "go forth" (Isa 6:13 and Job 15:30 in Codex Vaticanus and Codex Sinaiticus).

When King David assigned gatekeepers for the Temple complex (1 Chr 26:16), Shuppim, Hosah and their sons were assigned the W gate of the sacred Temple precincts as well as the Shallecheth Gate of the outer royal enclosure, the walls of which stood between (hence the LXX "Middle Gate" of 2 Chr 23:5) the Temple precincts and the outer defensive wall that was W of the city. The area between the W gate of the Temple enclosure, (possibly the mysterious Parbar or Parvar Gate of 1 Chr 26:18 [BDB, 826] and the Shallecheth Gate may have been a forum or "Priests' Chambers" as suggested by the Septuagint's use of *pastophoriou* "priest's chamber," and it may have been in this forum that the guards were stationed as mentioned in 1 Chr 26:16. This forum apparently exited (through the Shallecheth Gate) onto a roadway that "ascended" or "went up" (Heb *lamsillah* [1 Chr 26:18]) to the Fish Gate on the NW corner of the city.

The Shallecheth Gate (and the possible forum associated with it) may have functioned much like the later "Kaiaphon Gate" of Josephus or the "Kiphonas Gate" of the Mishnah (*Mid.* 1:3) as an entrance for priests who were entering the area for Temple service (Mackowski 1980:131–32, 194 n. 4).

DALE C. LIID

SHALLUM (PERSON) [Heb *šallûm* (שַׁלּוּם)*; šallūm* (שַׁלֻּם)]. Some fourteen individuals bear this name, which may mean "the requited" or "he for whom compensation has been made" (Gray *1 and 2 Kings* OTL, 621; *IPN*, 174). In the so-called Barley Letter (Samaria ostracon C1101) the form of this name is attested (*ANET*, p. 321; *KAI*, # 188; *TSSI*, pp. 14–15). Shallun in Neh 3:15 may be a variant spelling; Myers (*Ezra, Nehemiah* AB, 111) compares Ug *bn ṯlln* (*KTU* 4.63:I: 16).

1. A son of Jabesh, probably a reference to a clan or district rather than to his father, and may be translated, "a man of Jabesh." This might indicate that opposition to Jehu's dynasty came from Jabesh-gilead in Transjordan (Jones *1 and 2 Kings* NCBC, 521) for he gained the throne of the northern kingdom over which he ruled for one month about the year 750 B.C. (2 Kgs 15:10, 13–15) by assassinating Zechariah, the last king of Jehu's house, before being himself murdered by his successor Menahem. The prophets Amos and Hosea allude to these events. Amos foretells Zechariah's murder (7:9, 11) and Hosea speaks of royal assassinations (7:6–7, 16). Both see them as signs of the corruption that will take Israel into exile. These strokes plunged the country into civil war shortly before the renewed advance of Assyria into the West.

2. Son of Tikvah and husband of Huldah the prophetess (2 Kgs 22:14; son of Tokhath in 2 Chr 34:22).

3. The fourth son of Josiah, king of Judah. He succeeded his father in 609/608 B.C. (Jer 22:11; 1 Chr 3:15) and took the throne-name Jehoahaz by which he is usually called.

4. An uncle of the prophet Jeremiah (Jer 32:7). His son Hanamel sold a field at Anathoth to Jeremiah during the siege of Jerusalem.

5. The father of Maaseiah, a keeper of the threshold of the temple in the time of the prophet Jeremiah (Jer 35:4).

6. Son of Sismai and father of Jekamiah; a descendant of Jerahmeel of Judah (1 Chr 2:40–41).

7. Son of Shaul and father of Mibsam; a descendant of Simeon (1 Chr 4:25).

8. The fourth son of Naphtali by Bilhah (1 Chr 7:13). In Gen 46:24 and Num 26:49 he is called SHILLEM (Heb *šillēm*). See also SHILLEM.

9. Son of Zadok and father of Hilkiah; a high priest (1 Chr 5:38–39—Eng 6:12–13; Ezra 7:2; 1 Esdr 8:1; 2 Esdr 1:1; Bar 1:7). Ezra is descended from him. He is perhaps identical with MESHULLAM in 1 Chr 9:11; Neh 11:11; 12:13.

10. A gatekeeper in the camp of the Levites (1 Chr 9:17). He was the head of a family of gatekeepers in postexilic Judah (Ezra 2:42 = Neh 7:45; 1 Esdr 5:28) and one of the first to return from exile in Babylon. He occupied an especially honored position as the gatekeeper of the east gate through which the king usually entered (cf. Ezek 46:1–8) and the one which faced the entrance to the sanctuary. He is perhaps identical with Shallum the Korahite, son of Kore, mentioned in 1 Chr 9:19, 31. He is called SHELEMIAH in 1 Chr 26:14, MESHULLAM in Neh 12:25, and MESHELEMIAH in 1 Chr 9:21. According to Ezra 10:24 (= 1 Esdr 9:25) he was one of those who had married a foreign wife while in exile but by the law of the postexilic community he was compelled to put her away.

11. The father of Jehizkiah and a member of the tribe of Ephraim (2 Chr 28:12).

12. An Israelite who had married a foreign wife while in exile (Ezra 10:42).

13. The son of Hallohesh; head of one of the eight groups working to repair the wall of Jerusalem between the Jeshanah Gate and the Valley Gate in the time of Nehemiah (Neh 3:12). He administered half of the district of Jerusalem, postexilic Judah being divided into five districts.

14. Son of Colhozeh (Neh 3:15). He administered the district of Mizpah in the time of Nehemiah and repaired the Fountain Gate as well as the wall of the Pool of Shelah at the King's Garden as far as the steps going down from the City of David.
ROBERT ALTHANN

SHALMA [Heb *šlmh* (שׁלמה)]. A N Arabian tribe which is probably mentioned in Cant 1:5: "Black I am, but beautiful, O daughters of Jerusalem, like the tents of Kedar, or the tentcloths of Shalma." The MT has vocalized this "tentcloths of Solomon" (Heb *šĕlōmōh*). What, however, connects the luxurious textiles of King Solomon with the rough goathair of bedouin (Kedarite) tents? Wellhausen (*WPGI,* 227, n. 1) suggested, therefore, reading *šlmh* as *šalmâ* or *śalmâ.* The tribe lived in the vicinity of Hegra/Madāʾin Ṣāliḥ S of the Nabataeans. "Kedar" may in Cant 1:5 actually refer to the Nabataeans. See KEDAR. Shalma is mentioned in the Targums under the name of *šalmāʾā* and *šlmyʾ,* in Nabataean as *šlmw,* in Safaitic as *slm,* in Greek as *Salámioi* (Knauf 1989:107, and n. 586). Part of the tribe may have immigrated into S Palestine in the exilic or early post-exilic period, if *śalmāʾ* (1 Chr 2:51, 54) can be linked to *šlmh.* See also EPHAH; MENUHOTH.

ERNST AXEL KNAUF

SHALMAI (PERSON) [Heb *šalmāy* (שַׁלְמָי)]. Var. SHAMLAI. Head of a family of NETHINIM (Temple Servants) who returned from the Babylonian exile to Jerusalem with Zerubbabel and Jeshua, between 538 and 520 B.C.E. (Ezra 2:46; Neh 7:48; 1 Esdr 5:30). Written Shamlai in Ezra 2:46, the correct form is Shalmai as in Neh 7:48 (see also 1 Esdr 5:30, and the Qere in MT notations to Ezra 2:46). The name is one of the few among the Nethinim to have a Semitic root. It is noteworthy that this name appears in a 4th century B.C.E. seal which had been transcribed as "Shalmi the messenger" (Becking 1986:446), although no connection between the bearers of the names can be supposed.

As members of the guild of Nethinim (Levine 1963), the family of Shalmai would have had a special role in the Temple cult, perhaps assisting the Levites. Although some scholars consider the Nethinim to be foreigners or of foreign origin, it appears that during the postexilic period the Nethinim, as cultic personnel, were considered neither foreigners nor slaves. Rather, like the Levites, they had been devoted to cultic service the precise nature of which can not longer be identified. The size of Shalmai's family, its origins and specific role are no longer discernible. Together with thirty-four other families of Nethinim and ten of families of Solomon's servants, the group included 392 members (Ezra 2:58; Neh 7:60) or 372 (1 Esdr 5:35). See also Blenkinsopp *Ezra-Nehemiah* OTL; Williamson *Ezra, Nehemiah* WBC.

TAMARA C. ESKENAZI

SHALMAN (PERSON) [Heb *šalman* (שַׁלְמַן)]. The person who ransacked Beth-arbel (Hos 10:14). Shalman's destruction of Beth-arbel must have been both particularly brutal and well-known. The prophet Hosea cited the event as a warning to Israel of the utter devastation God was about to bring upon it.

Both Shalman and Beth-arbel are mentioned only in Hos 10:14; neither can be identified with confidence. Many scholars interpret "Shalman" as a hypocoristic form of Shalmaneser, the name of several Assyrian kings. Common proposals include Shalmaneser V, who died while besieging Samaria (722 B.C.E.) and Shalmaneser III, whom Astour (1971:383–89) believes invaded Israel in 841 B.C.E. However, elsewhere Shalmaneser is fully spelled out. Other scholars identify Shalman with Salmanu, a Moabite king contemporaneous with Hosea, who is listed among those paying tribute to Tiglath-pileser III (*ANET,* 282).

CAROLYN J. PRESSLER

SHALMANESER (PERSON) [Heb *šalman·eser* (שַׁלְמַנְאֶסֶר)]. In Assyrian the name Shalmaneser is spelled *Šulmānu-ašarēd* and means "the god Šulmānu is the foremost." There were five kings in Assyrian history who bore this name but only the fifth and last such king is mentioned in the Bible. Of the preceding four kings only Shalmaneser I (1273–1244 B.C.) and Shalmaneser III (858–824 B.C.) were important. See MESOPOTAMIA, HISTORY OF (ASSYRIA) for a discussion of their reigns.

Shalmaneser V (726–722 B.C.), although a relatively insignificant king in Assyrian history, played an important role in biblical history since he laid siege to Samaria, capital of the kingdom of Israel, as narrated in 2 Kgs 17:1–41; 18:1–12; cf. 2 Esdr 13:40. According to this narrative Hoshea became a vassal of Shalmaneser, king of Assyria, but then changed his mind and made friendly overtures to the pharaoh of Egypt. When Hoshea withheld tribute from the king of Assyria, the latter shut him up in prison. Eventually the king of Assyria laid siege to Samaria and after three years the city fell.

The Israelites were carried off to live in exile in Assyria, along the River Habur, and in the cities of the Medes. In their place the king of Assyria settled in Israel people from various cities such as Hamat in Syria and Babylon and Cutha in Babylonia. The exiles from Syria and Babylonia continued to practice their own religions and these practices were condemned by the biblical narrative as evil.

The passage in 2 Kings is the most detailed narrative of the fall of Samaria to the Assyrians which has been preserved. In Assyrian records the event is scarcely mentioned. This is not due to lack of interest on the part of the Assyrians but rather to the lack of Assyrian sources in general for the reign of Shalmaneser V. Samaria's fall is given due prominence in the *Babylonian Chronicle* which singles this out as the only significant event in Shalmaneser V's reign. Given the paucity of our sources there has been much debate among modern historians about the exact date of the fall of Samaria, and some historians have even suggested that it was Sargon II rather than Shalmaneser V who captured Samaria (see *ANET*, 284–87). The most attractive solution to the problem is that Samaria fell in 722 B.C., the year of Shalmaneser V's death and the accession of Sargon II. Thus the leading of the Israelites into exile by the Assyrians was probably carried out during the reign of Sargon II (721–705 B.C.). Consequently, references to Shalmaneser (Gk *Enemessaros*) in the book of Tobit (1:2, 13, 15, 16), in connection with events during the exile of the people of Samaria at Nineveh, actually relate to the period of Sargon II. See also SARGON.
A. KIRK GRAYSON

SHAMA (PERSON) [Heb *šāmāʿ* (שָׁמָע)]. A son of Hotham the Aroerite and one of the Reubenites associated with King David's chief military men (1 Chr 11:44). The name means " (YHWH) has heard" or "May (YHWH) hear." The Chronicler's expansion (1 Chr 11:41b–47) of the parallel lists of David's military elite (1 Chr 11:10–41a = 2 Sam 23:8–39) includes Shama and fifteen other men from the Transjordan, suggesting that Moabite AROER (1 Chr 5:8) is more likely Shama's hometown, although Judean Aroer (1 Sam 30:28) is also possible. There is general agreement that these expanded verses were not part of the original list. The addition of the sixteen names may have been inspired by 1 Chronicles 12 (Myers, *1 Chronicles* 90), while Williamson (*1 & 2 Chronicles* NCBC, 104) and others (Mazar 1986:101–102; Rudolph *Chronikbücher* HAT 1st ser., 101) have argued that the Chronicler or a later redactor did not fabricate these names.

SHAMGAR (PERSON) [Heb *šamgar* (שַׁמְגַּר)]. One of the early saviors of Israel in the premonarchy period, according to one prose statement (Judg 3:31). In Shamgar's days caravan trade came to a virtual

standstill, according to one line of poetry (Judg 5:6). In both the prose and the poem Shamgar is further identified in Hebrew as *ben-ʿănāt,* "son of Anath" or "Anathite." In the prose Shamgar is credited with single handedly disabling an entire Philistine brigade. The figure "six hundred" is probably not to be taken literally. "Six hundred" is a unit of military organization, an optimum figure rarely reached in practice (cf. Judg 18:11; 20:47) and often, presumably, deliberately kept below strength. Even so, Shamgar's achievement is impressive. His weapon is a metal-tipped pole, some eight feet long.

The name Shamgar is non-Semitic and probably of Hurrian origin, occurring in texts from Nuzi. That he was "Anathite" has long been thought to relate Shamgar to the town of Beth-anath in Galilee (Josh 19:38 Albright 1921). But the Hebrew label *ben ʿănāt* may be a military designation involving the name of the goddess Anath, who was consort of Baal and warrior-goddess in her own right. Analogical evidence connecting Anath with the seminomads known as Ḫaneans in Mari texts, who on several occasions provide the king of Mari with sizable military contingents, lends support to the identification of Shamgar as a mercenary (Craigie 1972). (Another "Ben Anath" is known as a Syrian sea captain with whom Pharaoh Rameses II was allied, a century earlier than Shamgar.)

In the Song of Deborah and Barak, the "days of Shamgar" are seconded in parallelism as being also the "days of Jael" (Judg 5:6). The mention of disruption of the caravan trade, together with the modern opinion that 1125 B.C.E. is too early for Philistine presence in the N, has meant to some interpreters that Shamgar was, rather, one of the causes of hard times for Israel. On such a view, Shamgar was a Canaanite chieftain, perhaps a Hurrian newcomer menacing the entire countryside. On this view, Shamgar could perhaps be said to have "saved Israel" (3:31) in some less direct sense. There is, however, no longer any difficulty in understanding Shamgar, Jael, Deborah, and Barak as contemporaries in one period of success and achievement.

The *pĕlištî* were only one of the Sea Peoples, for whom "Philistine" became the generic label in Israel. It is likely that Sisera (another non-Semitic name), who commands the Canaanite forces in Judges 4–5, had a "Sea People" origin. What the Song of Deborah and Barak celebrates is disruption of the caravans by Israelites living in the highlands, so that Israel prospered to the point that it was able to defeat (thanks to a timely cloudburst and flash flood) the mercenaries sent against them by the N coalition. The activities of Shamgar and Jael lent support.

The brief mention of Shamgar's rescue work, killing six hundred Philistines, may be secondary in the prose, which lacks the familiar formulas about judging and giving the land rest for a number of years. The verse appears to be awkwardly inserted, for the beginning of the Deborah and Barak story (4:1) implies direct continuation of the Ehud story. Some LXX recensions have the Shamgar notice following the conclusion of the Samson cycle at 16:31, taking the reference to "Philistines" at face value. Some interpreters consider the Shamgar notice in 3:31 to be entirely a late piece of creative writing, based on 5:7 and perhaps a supplementary oral tradition. This is conceivable but unlikely.

SHAMHUTH (PERSON) [Heb *šamhût* (שַׁמְהוּת)]. One of twelve commanders supervising monthly courses of 24,000 men, or possibly 24 "units," rather than "thousands" (Myers *Chronicles* AB, 183, 53, 98), in the armed service of the king (1 Chr 27:8). Shamhuth was in charge of the course of the fifth month (v 8). This list of commanders and their functions is possibly a construct of its author/redactor, since (1) no such monthly, conscripted, civilian army is mentioned elsewhere during David's reign; (2) the large number of 288,000 men, if the term is understood correctly, seems improbable; and (3) one of the commanders, Asahel (v 7) was dead before David had rule over all Israel (Williamson *Chronicles* NCBC, 174–75). However, the author/redactor's thesis that David made preparations for the proper ongoing cultic and national life of Israel, as illustrated throughout chaps. 23–27, draws on the fact that David took a census (cf. vv 23–24; chap. 21) which could have been utilized for designing a monthly plan

of conscription, a plan which would have been analogous to Solomon's monthly courses for his provision (1 Kgs 4:7–19).

Because the names of the other eleven commanders appear again in the list of David's Champions in 1 Chr 11:10–47 (= 2 Sam 23:8–39), it is probable that Shamhuth is to be equated with Shammoth of 1 Chr 11:27 and Shammah of 2 Sam 23:25 and, therefore, was a member of this select class of warriors directly attached to the king for special assignments. The form, "Shamhuth," can be explained as a combination of the variant spellings of "Shammah" and "Shammoth" (*IPN*, 259; Allen 1974:190). Shamhuth, however, is not to be confused with the Shammah of 2 Sam 23:33 (= SHAGEE of 1 Chr 11:34), for the latter is probably to be equated with SHAMMAH, the son of Agee listed in 2 Sam 23:11–12 (see Driver *NHT*, 371 who reconstructs 2 Sam 23:33: "Jonathan, son of Shammah the Hararite").

Shamhuth is identified as an Izrahite, which is probably intended to be a gentilic designation for one from the place "Izrah," a place which is otherwise unknown. However, since variants of this designation occur with the other forms of "Shamhuth," it appears that this form has arisen through textual corruption.

RODNEY K. DUKE

SHAMIR (PERSON) [Heb Q *šāmîr* (שָׁמִיר)]. The son of Micah in the levitical genealogy in 1 Chr 24:20–31. Shamir's descent was traced to Levi through his grandfather, Uzziel, son of Kohath, son of Levi. The mention of Shamir in 24:24 is one of several additions to the genealogy in 23:6–23. Due to the absence of Gershon in the list in chap. 24, some consider it secondary. The family of Gershon was probably not active at the time of the composition of the book. Also, the passage does not seem to fit the context in which it is placed. Shamir, as a personal name, occurs only in 24:24. The K, *šmwr,* denotes a passive participle based on the triliteral *šmr.* The meaning of the name is uncertain, but the word *šāmîr* means "thorns" and may carry the connotation of hardness as well as sharpness.

DONALD K. BERRY

SHAMIR (PLACE) [Heb *šāmîr* (שָׁמִיר)]. **1.** A town situated in the SW hill country of Judah (Josh 15:48), within the same district as Debir. This settlement, whose name perhaps means "thorn bush," is listed among the towns within the tribal allotment of Judah (Josh 15:21–62). The theory that this list is derived from an administrative roster compiled under the Judean monarchy (Alt 1925) has been widely accepted, although controversy continues over the precise make-up of the districts, the proper context of the town lists of Benjamin and Dan, and the period of the monarchy to which the original roster belongs (Boling and Wright *Joshua* AB, 64–72). The ancient name appears to be reflected at Khirbet es-Sumara, approximately 20 km SW of Hebron (Boling and Wright *Joshua* AB, 388; M.R. 143092). Although the location seems correct, archaeological confirmation of occupation during the appropriate periods is lacking.

2. A town in the hill country of Ephraim which became the home and burial place of Tola, first of the so-called "minor" judges (Judg 10:1–2). Mentioned only once in the OT, the precise location of this ancient town remains unknown. Based on the similarity between their names, Shamir has often been associated with Samaria, better known as capital of the N kingdom (*IDB* 4:307; *LBHG*, 223). However, such an association is difficult to reconcile with 1 Kgs 16:24, where we are told that Omri named his new royal city after Shemer, the man from whom he had purchased the hill. If Samaria was the home and burial place of a famous Israelite hero, it seems unlikely that this would have been forgotten or ignored in later generations. On the other hand, 1 Kgs 16:24 does not necessarily rule out prior occupation on the hill.

WADE R. KOTTER

SHAMLAI (PERSON) [Heb *šamlay* (שַׁמְלַי)]. The variant for the name Shalmai used in Ezra 2:46. It is also the RSV rendering of the Gk name *Sybai* in 1 Esdr 5:30. See SHALMAI (PERSON).

SHAMMA (PERSON) [Heb *šammāʾ* (שַׁמָּא)]. One of the eleven sons of Zophah listed in the Asherite genealogy in 1 Chr 7:37. Shamma is descended from Helem (perhaps to be identified with Hotham) and hence falls within the dominant line of the clan. This name does not appear elsewhere in the Hebrew Bible and its etymology is uncertain. While some scholars consider such unique names as fabrications of the Chronicler, Johnson and others suggest that they derive from military census lists, themselves drawn up in genealogical fashion (Johnson 1969:64–66).

Bibliography

JULIA M. O'BRIEN

SHAMMAH (PERSON) [Heb *šammâ* (שַׁמָּה); *šammāʾ* (שַׁמָּא)]. Var. SHIMEA; SHIMEAH; SHIMEI; SHAMMOTH? 1. The third son of Reuel and the grandson of Esau (Gen 36:13, 17; 1 Chr 1:37). According to Gen 36:17, he was one of the Edomite "tribal chiefs" (Heb *ʾallûpîm*), and as such the name probably represents a clan within the Esauite-Edomite tribe of Reuel.

2. The third son of Jesse of Bethlehem, and older brother of David the king (1 Sam 16:9; 1 Chr 2:13, MT *šimʿāʾ,* RSV "Shimea;" cf. 1 Chr 20:7). Shammah took part in the battle against the Philistines (1 Sam 17:13). Apparently the son of Shammah (MT *šimʿâ,* RSV "Shimeah"), Jonadab, was the crafty friend (and cousin) who helped Amnon concoct a plan to lure the unsuspecting Tamar to Amnon's bed (2 Sam 13:3), and it was also he who subsequently reported that Tamar's brother Absalom had murdered Amnon in revenge (13:32–33). This same Jonadab eventually distinguished himself in battle (21:21, MT *šimʿay,* RSV "Shimei").

3. The son of Agee the Hararite, and one of David's elite fighters (2 Sam 23:11). He may also be listed after Jonathan in 2 Sam 23:33, although the parallel text 1 Chr 11:34 reads "Jonathan the son of Shagee the Hararite."

4. A man from Harod, and one of David's elite fighters (2 Sam 23:25). The orthographic similarities between Heb *d* and *r* mean that this soldier from Haro*d* could be the same as the Hara*r*ite mentioned above (#3). The parallel text 1 Chr 11:27 reads Shammoth (Heb *šammôt*) of Harod.

With respect to Shammah #3–4, one should not put too much weight on the attestations in 1 Chronicles 11, which represent a later attempt to harmonize the parallel attestations in 2 Samuel 23. The meaning of the name "Shammah" and its variants is not clear. See also SHAMMA; SHAMHUTH. It is most probably a variant or a shortened form of a theophoric personal name containing the verb *šmʿ,* "hear," although derivations from **šmm* or *ṯmm* are also possible. See *IPN*, 38–39, 185.

ULRICH HÜBNER

SHAMMAI (PERSON) [Heb *šammay* (שַׁמַּי)]. **1.** The son of Onam, a descendant of Jerahmeel (1 Chr 2:28, 32).

2. The son of Rekem, a descendant of Caleb (1 Chr 2:44, 45).

3. The son of Mered, who married Bithiah, the daughter of Pharaoh (1 Chr 4:17).

H. C. LO

SHAMMAI, SCHOOL OF. Talmudic tradition (collected in Neusner 1971) describes the 1st-century Pharisees and their early rabbinic successors as having been divided into two wings or schools, called "houses" in Hebrew; these were named after the two great sages Hillel and Shammai, who flourished toward the end of the 1st century B.C.E., about 100 years before the Jerusalem temple was destroyed by the Romans. The very existence of such division in the movement of the Sages was a cause of some perplexity among later authorities, who explained (*t. Ḥag.* 2.9) that it arose among students

paying inadequate attention to their teachers, but since Hillel and Shammai themselves are reported to have disagreed on occasion this explanation must be understood as homiletical.

A very large proportion of early Tannaitic and pre-tannaitic rabbinic traditions take the form of disputes (Neusner 1981:19–21 considers many of them pseudepigraphic) between the two "houses." Most of these disputes concern details of halakhic practice, and in general the School of Shammai is reported to have held a view more restrictive or more stringent than that of its rival (*ʿEd.* 4 offers a catalogue of exceptions to this rule). Numerous modern scholars have attempted to explain this "conservative" tendency by reference to the Shammaites' social standing (Ginzberg 1962) or theory of law (Safrai *EncJud* 4:737–41), but all such attempts rest on a very narrow base and must therefore be considered speculative. It should also be noted that not all reported disputes between the schools concerned legal matters; they are described as having argued for two and a half years over the question whether it would have been better for Adam never to have been created, only to agree that now that Adam has been created he ought to examine his deeds.

Later traditions do not agree in their descriptions of the relations between the two schools. *Yebam.* 1.4 reports that despite their serious differences over matrimonial law members of the two "houses" did not refrain from marrying women who belonged to the other, but *b. Šabb.* 17a contains a story that in the days of Hillel and Shammai themselves a dispute over purity law got so out of hand that "a sword was planted in the Study House … and that day was as hard for Israel as the day the golden calf was made."

At a later time the rulings of the School of Hillel were adopted as normative and those of the School of Shammai in most cases set aside. This decision was remembered as having been authorized by explicit heavenly instruction (*b. ʿErub.* 13b; *j. Soṭa* 3.4 19a). The fact, however, that in the great majority of cases the Shammaite opinion is reported first in extant traditions and often gets the last word as well suggests that at an earlier time the size and influence of the two factions was rather more balanced. The general impression is that the Pharisaic/rabbinic movement eventually came under the domination of the School of Hillel but preserved the memory of a time when the School of Shammai was the equal of the other in all respects. Later mystical teaching (*Zohar, Raʿva Mehemna* 3:245a) held that in the "World to Come" the present situation would be reversed and the rulings of the School of Shammai would become law. Thus in the end the original parity of the houses would be restored.

ROBERT GOLDENBERG

SHAMMOTH (PERSON) [Heb *šammôt* (שַׁמּוֹת)]. According to MT 1 Chr 11:27 Shammoth the

Harorite is one of David's mighty men. In the parallel at 2 Sam 23:25 he is called Shammah the Harodite. Greek ms B for 1 Chr 11:27 reads *samaoth ho hadi,* reflecting MT for the personal name but perhaps indicating an attempt to modify the gentilic according to MT for 2 Sam 23:25 *(ḥărōdî).* In any event, between 1 Chronicles *hărôrî* and 2 Samuel *ḥărōdî* there appears to be some confusion between the Heb letters *he* and *ḥet* and *dalet* and *reš.* Because of the similarity of these names, there is either textual confusion or a confusion of the persons and the places themselves. As Driver (*NHT,* 362) remarks concerning the list of David's men as found in 2 Samuel and 1 Chronicles, "the names in several instances vary, nor is it always possible to determine which form is original, or whether both may not be corrupt."

It has been suggested (e.g., Curtis *Chronicles* ICC, 191) that Shammoth here is identical with Shamhuth, the fifth army commander for the fifth month, mentioned in 1 Chr 27:8, and/or with Shammah, son of Agee the Hararite, one of David's soldiers mentioned in 2 Sam 23:11 (*HDB* 4:901).

STEPHEN PISANO

SHAMMUA (PERSON) [Heb *šammûaʿ* (שַׁמּוּעַ)]. Var. SHIMEA. **1.** One of the twelve spies—one from each tribe—sent out by Moses to survey the land of Canaan (Num 13:4). He was the Reubenite representative chosen, the son of Zaccur.

2. A son of David born in Jerusalem (2 Sam 5:14; 1 Chr 14:4). According to 1 Chr 3:5 (where his name is Shimea), his mother was Bathsheba (Bathshua) and he had three full brothers: Shobab, Nathan, and Solomon. In addition, his father had six sons born in Hebron to six different wives, and nine born in Jerusalem to unnamed wives, as well as many sons born to his concubines in Jerusalem (1 Chr 3:9). See also DAVID, SONS OF.

3. A Levite in postexilic Jerusalem (Neh 11:17), one of 284 in the holy city (11:18). He is called Shemaiah in 1 Chr 9:16. He was father of Abda (Obadiah), and son of Galal, a descendant of Jeduthun, who was one of three musicians appointed by David to oversee the musical service of the Temple (1 Chr 25:1; 2 Chr 5:12).

4. A priest, son of Bilgah, in postexilic Jerusalem (Neh 12:18). Despite their identical names, similar occupations, and contemporary status, it is probable that this Shammua and the one in #3 above are different persons, since their fathers' names are different and especially since Shammua #3 is clearly listed as a Levite and not a priest.

DAVID M. HOWARD, JR.

SHAMSHERAI (PERSON) [Heb *šamšĕray* (שַׁמְשְׁרַי)]. One of the Benjaminites who dwelt in Jerusalem in postexilic times, a son of Jeroham (1 Chr 8:26). The name Shamsherai is only found here in the OT. Noth (*IPN*, 259) suggested Shamsherai was a combination of *šāmray* and *šimšay,* and that *šimšay* should be read at 1 Chr 8:26, following the Lucianic recension of the LXX. The name *šimšay* is found several times in an Aramaic portion of Ezra (4:8, 9, 17, 23).

TOM WAYNE WILLETT

SHAPHAM (PERSON) [Heb *šāpām* (שָׁפָם)]. A Gadite, who was one of four (or three; see SHAPHAT) tribal leaders named in the genealogy (1 Chr 5:12). He was designated "the second" after Joel, who was called "the head" or "chief." The translator of the probably interpreted "the second" to refer to Shapham's birth order, after Joel "the firstborn" (Gk *prōtotokos*). At any rate, these leaders and their seven brethren are presented as sons of Abihail. The mss that give spelling variants for Shapham's name (Sabat and Saphan) probably attest scribal confusion of two Hebrew letters that were written similarly (*pe* with *bet*) and the name "Shapham" with the more common "Shaphan."

1 Chronicles 5 notes that Shapham and the other Gadites lived opposite the Reubenites in "Bashan as far as Salecah" (v 11) and "in Gilead, in Bashan … and in all the pasture lands of Sharon to their limits" (v 17). While Num 13:24–28 assigns Gilead to Gad, too, it does not mention Bashan and Sharon, probably because the former is too far N and the latter too far W. It may be that the reference in 1 Chronicles 5 to Bashan reflects confusion about the N boundary of the tribe or about the extent of Bashan (cf. Deut 3:10). The inclusion of Sharon within Gad's inheritance may be correct in light of reference in the Mesha inscription (line 13; *ANET*, 320) to an otherwise unknown city or region by that name in Transjordania.

While 1 Chr 5:17 notes that Shapham and the other sons of Abihail were enrolled "in the days of Jotham … and … Jeroboam," it is likely that several years separated their reigns (unless Jotham's co-regency with his father Azariah/Uzziah is counted).

Neither Shapham nor the others named in the Chronicler's genealogy for Gad (1 Chr 5:11–17) appear in other lists of Gadites (Gen 46:16; Num 26:15–18; 1 Chr 12:9–16—Eng 12:8–15).

M. PATRICK GRAHAM

SHAPHAN (PERSON) [Heb *šāpān* (שָׁפָן)]. **1.** A person bearing the title of "secretary" or "scribe" (Heb *hassōpēr*) who served under Josiah, king of Judah (2 Kgs 22:3, 8, 9, 10, 12 = 2 Chr 34:8, 15, 16, 18, 20; 2 Kgs 22:14). In his eighteenth year (621 B.C.), Josiah commissioned Shaphan to distribute temple funds to workers for the repairing of the temple in Jerusalem. While the temple was being repaired a document referred to as "the book of the law" was found and presented to Shaphan. Shaphan then read it to Josiah. Upon hearing the book, Josiah instituted reforms which cleared Judah of the elements of traditional Canaanite religion and which centered sacrifice to Yahweh in the Jerusalem temple.

2 Kgs 22:12 (= 2 Chr 34:20) refers to one Ahikam as a son of Shaphan (see also 2 Kgs 25:22; Jer 26:24; 39:14; 40:5, 9, 11; 41:2; 43:6). Whether or not this is Shaphan the scribe is a debated question. That Ahikam the son of Shaphan is mentioned in 2 Kgs 22:12 (= 2 Chr 34:20) before Shaphan the scribe seems to argue against a father-son relationship (Cogan and Tadmor *2 Kings* AB, 282).

Jer 29:3 mentions one Elasah the son of Shaphan by whom Jeremiah sent a letter—along with Gemariah the son of Hilkiah—to the Babylonian exiles of 597 B.C. In all likelihood, this is Shaphan the scribe of 2 Kings 22. This identification seems appropriate in light of the reference to Hilkiah in Jer 29:3. Hilkiah and Shaphan the scribe were closely associated in the Josianic reform movement. Shaphan the scribe is explicitly mentioned as the father of one Gemariah in Jer 36:10–12.

2. The father of Jaazaniah (Ezek 8:11). Jaazaniah is portrayed as participating in a cult conducted in a secret room with various kinds of animals engraved on the wall. The nature of this cult is not clear and several possibilities exist for its source (Greenberg *Ezekiel 1–20* AB, 168). Whatever the nature of the secret ritual, it clearly would not have involved Shaphan the scribe himself. If the former is Jaazaniah's father, Jaazaniah has departed from his father's perspective.

JAMES M. KENNEDY

SHAPHAT (PERSON) [Heb *šāpāṭ* (שָׁפָט)]. The name derives from the perfect form of the verb *šāpaṭ* ("to judge") and occurs both in the short form (Shaphat), as well as in theophoric forms (e.g., Elishaphat) (see *IPN*, 22, 187).

1. A Simeonite, the son of Hori, who was sent by Moses with eleven other tribal leaders to spy out the land of Canaan before Israel began her assault (Num 13:5). They entered Palestine from the wilderness of Paran in the S, passed through the Negeb, and traveled throughout the land. After 40 days, the spies returned, and ten of them, including Shaphat, reported that the land was bountiful but its inhabitants were giants, dwelling in strongly fortified cities. They recommended that Israel not attempt to assault the land (Num 13:3–29, 31–33). Only two spies, Caleb and Joshua, urged the people to attack the land (Num 13:30). The narrator calls the report of the ten spies "evil" and notes that they all died of plague before the Lord (Num 14:36–37).

2. The father of Elisha, who dwelt with his son in Abel-meholah (1 Kgs 19:16), a city which has been located by some on the E bank of the Jordan (Tell el-Maqlub, according to Cohen *IDB* 1:5), but by most on the W bank (e.g., Tell Abû Ṣûṣ, according to Aharoni *LBHG*, 313). Shaphat may have been a man of some means, since twelve yoke of oxen were used to plow his land. Gray, though, sees the plowing as a community effort and so does not attribute such prosperity to Shaphat (*1 and 2 Kings* OTL, 413). When Elijah called Elisha to leave the plowing and follow him, Elisha asked and received permission to kiss his parents first (1 Kgs 19:19). Shaphat is mentioned again only in the designation of his son "Elisha son of Shaphat" (2 Kgs 3:11; 6:31).

3. A descendant of Zerubbabel mentioned only in 1 Chr 3:22. The text of this section of Solomon's genealogy (1 Chr 3:10–24) is corrupt at several points. Apparently, "the sons of Shemaiah" arose through dittography and should be deleted (Rudolph *Chronikbücher* HAT, 31). This allows the number "six" at the end of v 22 to be correct (otherwise only five names precede it) and makes Shaphat the sixth son of Shecaniah, a descendant of Zerubbabel.

4. A Gadite mentioned only in 1 Chr 5:12. He was the son of Abihail and the fourth tribal leader named in the genealogy. It may be, however, that *šāpāṭ* should not be translated as a personal name but as the

noun "judge." In this case, Joel was the leader of the tribe, Shapham the second in authority, and Janai a judge in Bashan (Rudolph *Chronikbücher* HAT, 47). The Targum and LXX support this interpretation. An alternative is to vocalize *špṭ* as a verb *(šāpaṭ)* and translate "Janai judged in Bashan." (Braun *1 Chronicles* WBC, 69–71.)

According to 1 Chronicles 5, Shaphat and the other Gadites lived opposite the Reubenites in "Bashan as far as Salecah" (v 11) and "in Gilead, in Bashan … and in all the pasture lands of Sharon to their limits" (v 17). Although Num 13:24–28 assigns Gilead to Gad, neither Bashan, which is too far N, nor Sharon, which is too far W, is mentioned. It may be that the reference in 1 Chronicles 5 to Bashan reflects confusion about the N boundary of the tribe or about the extent of Bashan (cf. Deut 3:10). The inclusion of Sharon with Gad's allotment coincides with a reference in the Mesha Inscription (line 13; *ANET* 320) to an otherwise unknown city or region by that name in the Transjordan.

The claim (1 Chr 5:17) that Shaphat and the other sons of Abihail were enrolled "in the days of Jotham … and … Jeroboam" is problematic, since several years separated their reigns (unless Jotham's co-regency with his father Azariah/Uzziah is counted).

Neither Shaphat nor the others named in the Chronicler's genealogy for Gad (1 Chr 5:11–17) appear in other lists of Gadites (Gen 46:16; Num 26:15–18; 1 Chr 12:9–16—Eng 12:8–15).

5. An official who managed David's herds in the valleys. He was the son of Adlai and is named as the ninth of twelve officers over the king's possessions (1 Chr 27:29). The list is without parallel in 1–2 Samuel and may derive from a period after David's reign (Rudolph *Chronikbücher* HAT, 184).

6. One of the family heads listed as "the sons of Solomon's servants" (1 Esdr 5:34). The name is rendered as Shaphat by the RSV according to LXX A *(Saphat),* which is the usual representation of the Heb *šāpāṭ,* while Myers (*1 and 2 Esdras* AB, 61) renders it as Shaphag according to LXX B *(Saphag).* However, this individual does not occur in the parallel texts in Ezra 2:57 and Neh 7:59.

M. PATRICK GRAHAM

SHAPHIR (PLACE) [Heb *šāpîr* (שָׁפִיר)]. A village in the Shephelah, otherwise unknown (Mic 1:11).

Shaphir ("beautiful"), like Maroth, is mentioned by Micah in his paronomastic lament over Jerusalem's "daughters," towns in the Shephelah which were to have formed a bulwark for her defense. LXX A reads *Saphir* for Shamir (Heb *šāmîr*) which Josh 15:48 locates in the hill country of Judah (cf. Judg 10:1–2); and Eusebius' *Sapheir* between Eleutheropolis and Ashkelon (*Onomast.* 156) has been identified by some with modern es-Suwafir (SE of Ashdod) which would have been in ancient Philistia. Both are improbable locations within the context of Mic 1:10–16. More possible is Tell ʿEitun (M.R. 143099) and most likely of all is Khirbet el-Kôm (M.R. 146104) W of Hebron (Dever *EAEHL* 4:976–77). Micah's pun stems from his personification of Shaphir as a beautiful woman who, in the expected (or recent) military disaster, will be stripped/violated and led away into exile. Hence, v 11: "Move on, 'Lady Fairfax,' in shameful nakedness" (Luker 1985:89, 115). See also Hillers *Micah* Hermeneia, 26.

SHARAI (PERSON) [Heb *šārāy* (שָׁרָי)]. Presumably a descendant of Binnui and one of the returned exiles whom Ezra required to divorce his foreign wife (Ezra 10:40). Sharai's name does not occur in the parallel list of 1 Esdr 9:34. According to Noth, Sharai is a shortened form of *(šērēbyāh),* but the meaning of the first element *(šrb)* is unknown (*IPN,* 259–260). However, Noth also argues that the name Machnadebai, which occurs earlier in the verse, is a corruption of the phrase "from the sons of" (*IPN,* 249). If that is true, this would introduce the next family from which offenders come, and Binnui would not be the ancestor of Sharai. See also MACHNADEBAI. Assuming Binnui was Sharai's ancestor, Sharai

was a member of a family who returned from Babylon with Zerubbabel (Neh 7:15; note that Bani replaces Binnui in Ezra's list [2:10]). See also BEDEIAH.
JEFFREY A. FAGER

SHARAR (PERSON) [Heb *šārār* (שָׁרָר)]. Father of Ahiam, one of "The Thirty," an elite group of King David's warriors (2 Sam 23:33). See DAVID'S CHAMPIONS. In the parallel reference in 1 Chr 11:35 his name reads "Sachar" (Heb *śākār*). It is difficult to decide with certainty the original name. The LXX is not that helpful, essentially reflecting MT in each text (Luc reads *Sarachō* in 2 Samuel, possibly suggesting *śakar* through substitution of the *kap* for the *reš*). The list of David's warriors extant in 2 Samuel 23 is generally regarded as textually superior to the parallel list in 1 Chronicles 11, in which case Sharar would be preferable (Elliger 1966:72 n. 1). See SACHAR.

STEPHEN G. DEMPSTER

SHAREZER (PERSON) [Heb *śar-eṣer* (שַׂרְאֶצֶר)]. There is one undisputed occurrence of this name in the Hebrew Bible; another is open to question. The name seems to be a form of Akk *šarra uṣur* "may (the god X) protect the king!"

1. According to 2 Kgs 19:37 (= Isa 37:38), one of the sons of the Assyrian king Sennacherib who, along with his brother Adrammelech, assassinated their father. As yet no son of Sennacherib bearing this name has been attested in Assyrian sources.

2. One of two emissaries sent by the people of Bethel in 518 B.C.E. to inquire of the temple priests and prophets in Jerusalem concerning continuation of the practice of fasting in the fifth month (Zech 7:2). The Hebrew text is difficult, and susceptible to more than one analysis. Wellhausen was among the first to suggest that the word *byt ʾl* "Bethel" preceding the name might be its theophoric element, and that its proper form is Bethelsharezer "may (the deity) Bethel protect the king." This interpretation has been adopted in several modern English translations (NEB, NJPS, NAB). For discussion, see BETHEL (DEITY).

A. KIRK GRAYSON

SHARON (PLACE) [Heb *šārôn* (שָׁרוֹן)]. Name of two places in the Bible. The etymology of the name is unclear (cf. *GP* 1:414; *LBHG*, 22; Rudolph *Chronikbücher* HAT, 48).

1. A coastal plain, skirting the Mediterranean on the W and the central highlands on the E, which extends from the Yarkon River in the S to the Tanninim (Crocodiles) River in the N—about 32 miles in length with an average width of 11 miles. In the OT, the Sharon is a metaphor both for splendor and desolation (Cant 2:1; Isa 33:9; 35:2) as well as a place for pasture (1 Chr 27:29; Isa 65:10). In the NT, it is the location for the early ministry of the apostle Peter (Acts 9:35).

a. Geography. The Sharon has geographical features that have determined its socioeconomic and political history (Karmon 1961:43–46). The features consist of three distinct corridors that run parallel to each other from S to N. These three corridors are intersected by several rivers flowing E-W to the Mediterranean. The W corridor, extending E about 2.5 miles, is a series of three N-S sandstone ridges with two intervening lowland areas. The W lowlands are dry most of the year, but are filled with temporary lakes during the rainy season. The E lowlands have extensive swamps due to lower elevation. The central corridor consists of red sand hills with an average height of 160–190 feet. In the N part of this corridor, the rivers, hindered by the sandstone ridges, have created broad river valleys with frequent marshlands. The soil of the area is too poor for agriculture; therefore, in antiquity, extensive oak woodlands were formed (for ancient descriptions: Strabo 16.2.27; Pliny *HN* 4.18; cf. Josephus *JW* 1.13.2; *Ant* 14.13.3; for modern analysis: Liphschitz and Waisel 1985:139; Liphschitz, Lev-Yadun, and Gophna 1987). The E corridor is the only level area—one to four miles in width—of the Sharon Plain, consisting of well-drained alluvial soil suitable for agriculture. In the W along the sea, there is a beach of 65–100

feet abutting the W sandstone ridge, forming a coastal cliff of 130 feet in height. From the mouth of each river breaking through this cliff, sand dunes extend inland for several miles. In the E where the mountain slopes rise quickly above the plain, the S and central portions of those slopes consist of hard limestone allowing little access to the central highlands. However in the N, intermittent hard limestone and soft chalk permits access through valleys extending deep into the mountain slopes.

b. Settlement and Transportation. In antiquity, these geographical features determined both the settlement patterns and the transportation systems of the Sharon. Settlement of the area seemed to be determined by two factors: (1) access to agricultural resources and (2) strategic control of the transportation systems. In the S, the alluvial soil suitable for farming stops abruptly just N of the Yarkon River. Therefore the settlement patterns based on archaeological surveys show clusters of settlements around the Yarkon River and to the S. This same clustering is true also for the N, beyond the Hadera River, where well-drained alluvial soil permits farming in large areas of the hinterland (MB II: Broshi and Gophna 1986; earlier periods: Gophna and Portugali 1988; N Sharon in the Hellenistic period: Roller 1982). In all periods until the late 1st century B.C.E., the central Sharon from the Mediterranean to the edge of the central highlands was largely uninhabited because the land was unsuitable for agriculture.

However the second factor, transportation, also gave impetus to settlement in other areas of the Sharon. In order to understand this impetus, attention needs to be given to the influence of geography on the various trade routes. The Sharon in antiquity had a double orientation: first by land to the routes between Egypt and Syria, and second by sea toward Egypt, Cyprus, Lebanon, and, at various periods, the whole Mediterranean world. There were only two inland routes running N-S. One was along the coast using both the beach and the lowlands just E of the coastal cliffs. From the Yarkon River to the Hadera River, access from the coast to the E corridor was impossible. Therefore the armies and caravans of the ancient world only could have moved toward the Jezreel and the central highlands after they reached the Hadera River in the N (Roller 1982:43). However, this coastal route was impassable in the rainy season and was hindered by rivers and the coastal cliff in the dry season.

The second inland route through the Sharon was part of the *Via Maris* "The Way of the Sea," a route extending N out of Egypt. It was used by the Egyptians as they moved N to control the Levant and later by other countries as they moved S to gain access to Egypt. Due to the lack of E-W routes noted above, the *Via Maris* had to leave the sea, ascend the Yarkon River to Aphek at its headwaters, then go either directly into the central highlands or N along the level ground of the E corridor to one of the passes in N Sharon. The strategic importance of these geographical limitations was readily recognized in antiquity and gave impetus to settlement along this route. Archaeological surveys of the E corridor show that settlements were clustered at strategic points of access to the highlands and the Jezreel (in the N: Socho [M.R. 153194] and Tel Zeror [Migdol?, M.R. 147203]; in the S: Aphek [M.R. 143168]).

The possibility of commerce by sea also gave impetus to settlements along the coast. These, however, are mainly single sites (Tel Mevorakh [M.R. 143215], Hepher [M.R. 141197], Tel Poleg [M.R. 135185], Tel Qasila [M.R. 130167], and Tel Michal [on the coast, M.R. 131174]) located usually on the rivers beyond the sand dunes. These port cities used the rivers for protection since the coast afforded no safe harbors except at Dor (M.R. 142224) in the N and Joppa (M.R. 126162) in the S. These settlement patterns and transportation routes remained constant until the Roman period and the reign of Herod the Great.

Under Herod and the Romans, a major change occurred in the Sharon which was accomplished by a remarkable feat of engineering. In a span of just twelve years, Herod built the artificial port of Caesarea (M.R. 140212) on the Mediterranean. This necessitated a new network of roads running both N-S and E-W. The Roman technology of paved roads with causeways and bridges allowed commerce to travel through the formerly inaccessible central Sharon. This network of roads also made the Sharon—even in the central region—the most densely populated area of the coastal plain (Karmon 1961:53–57).

c. History. The issues of history for the Sharon that have been raised thus far have been those of the *longue durée*. These have been presented in order to raise the possibility of alternative interpretations that may be missed if one only deals with the political issues of the written sources. The synthesis needed to

correlate all the data is beyond the scope of this article. However, the analysis stated above provides insight into the importance of the Sharon as (1) a strategic point of control of overland commerce, (2) a reservoir of economic resources both for farming and herding (for an analysis of the food and animal economy at Tel Qasile see Kislev and Hopf 1985; Davis 1985), and (3) an access to the maritime commerce of the Mediterranean (Roller 1982:50; Hohlfelder 1983:67).

The history of the Sharon gleaned from written texts and other archaeological sources beginning with the 18th Dyn. of Egypt illuminates the interplay of the above three factors. The annals and especially the letters of Amarna show that even though the Egyptians sought to control the trade routes to Syria, still they left the settlements of the Sharon under the control of the local population. These settlements, located largely in the areas of agricultural resources, became the source of supplies for the "colonial administration and Egyptian military forces in Palestine" (Weinstein 1981:15). An illustration of this comes from the annals of Amenhotep II of the 18th Dyn. (*ANET*, 245–47). From the list of booty taken from the Sharon, including horses, large and small cattle, weapons, chariots, and prisoners, it would seem that Amenhotep was exploiting the rich agricultural region of N Sharon and not some semi-nomadic settlement as suggested by Aharoni (*LBHG*, 155) and Aḥituv (*CTAED*, 136). Also the names of the towns taken by Amenhotep such as Aphek, Socho, Yaham (M.R. 153197), and Eg *Migdalēn* (= Tel Zeror? [Aḥituv *CTAED*, 142)—each at a strategic point leading to the central highlands and the Jezreel—would indicate that Amenhotep had a vital interest in the trade routes leading to Syria. However, with the close of the LB age under the 19th Dyn. and the onset of Iron I with the 20th Dyn., the involvement of Egypt in S Palestine intensified politically, culturally, and militarily. Evidence of this intensification is seen in administrative centers such as the governor's residence at Aphek (Oren 1984:49–50, 52). It appears that at least the S portion of the Sharon was under the control of an Egyptian province whose center was at Gaza (M.R. 099101) (Oren 1984:54; cf. Singer 1988).

With the fall of the 20th Dyn. in the mid-12th century, our written sources become very meager. There is evidence of the presence of "Sea Peoples" at the two centers of agriculture: the Peleset/Philistines in the S at Tel Qasile on the Yarkon River, and the Tjeker at Dor in the N (Sandars 1985:164, 170, 174). The complexity of the issues on the status of the Sharon during the emergence of Israel up to the early monarchy has created much diversity in scholarly opinion. Did the Sharon continue its earlier Canaanite development; was it absorbed by the emerging Israelites; or were other forces at work? The diverse conclusions about the biblical evidence (Josh 12:1–24; 17:1–13; Judg 1:27–28) proposed by Alt, Albright, and others are summarized succinctly by Kallai (*HGB*, 3–15, 50–61; cf. Gottwald 1979:174–87, 484–85, 583–87 for a different approach).

The evidence for the history of Sharon until the Roman period consists mainly of the names of the administrative districts or provinces that controlled the area. Under the united monarchy, most of the Sharon seems to have been in Solomon's third district (1 Kgs 4:10). The fourth district (1 Kgs 4:11) according to Kallai (*HGB*, 60–61) was the region of Dor, the coastal plain S of Mt. Carmel and N of the Tanninim River. The exact extent of these districts is a matter of debate. After the divided monarchy, the Sharon fell under the jurisdiction of the N kingdom with only the port city of Joppa remaining under the control of Judah. Dor in the N then became the principle port for Israel (*LBHG*, 23). Under the Assyrians, administrative control of the Sharon was switched to the province of Dor (Akk *Dū-ru*), thus breaking the connection with the central highlands which existed during the monarchical period. The exact time of this change is open to discussion. Some suggest that it was established by Tiglath-pileser III as early as 734 B.C.E. so he could have direct access to Philistia (Donnor in *IJH*, 425). Another factor might have been the need for the agricultural resources of the N Sharon as well as direct access to the maritime commerce. This Assyrian administrative structure was maintained into the Hellenistic period. At that time the whole coast of the Levant became the district of Paralia (*GP* 2, map 8). Under Herod, the Sharon was divided into four districts: Antipatris, Apollonia, Caesarea, and Dora (*GP* 2, map 9).

d. Nature of Biblical Evidence. The biblical texts that do mention the Sharon convey little information. 1 Chr 27:29 is part of a list of royal officials that most scholars agree goes back to the time of David (Myers *I Chronicles* AB, 181; Rudolf *Chronikbücher* HAT, 184). In this list, Shitrai the Sharonite has

been appointed supervisor of the royal herds of large cattle (Heb *bāqār*) in the Sharon. Rudolph notes that the persons supervising the royal herds and flocks were experts in animal husbandry. Therefore the use of the gentilic "Sharonite" not only gives his place of origin, but also intimates that persons from this area were trained in the care of animals. The other OT passages are metaphorical and care must be exercised in extracting issues of realia. However they do give a picture both of the agricultural (Cant 2:1; Isa 33:9; 35:2) and pastoral (Isa 65:10) value of the Sharon. Even though these metaphors seem to reflect actual conditions of the Sharon, one can never be sure of the exact referent of the writer.

The situation of Acts 9:35 is quite different. In place of a rustic rural area suitable for grazing, the passage reflects an area of dense population. "All the residents of Lydda and the Sharon" accepted the Christian faith as proclaimed by the apostle Peter because of the healing of Aeneas, a paralytic for eight years. "All the residents" probably is reflective of the new settlement patterns and network of roads that were the result of the building of Caesarea.

The Sharon played a strategic role in the history of the Levant. Its geography made it an important link on the trade routes between Egypt and Syria. Its geography, however, also hindered its natural orientation toward the sea. It is an area that remained basically the same—rustic and rural—until the technology of an outside culture allowed it to expand by sea to the doorstep of Rome. See also Gophna in *EAEHL* 4:1071–74.

2. An unidentified site in the Transjordan region of Bashan (1 Chr 5:16). The context would identify this name with a place somewhere in Bashan rather than with the coastal plain of Sharon. Since the exact location is unknown, scholars have attempted to connect it with other texts that mention Sharon. Some have suggested a reference in the Mesha Stela (Myers *I Chronicles* AB, 34; cf. Rudolph *Chronikbücher* HAT, 48 who locates it further S). Another suggestion comes from the name of a place called *Sārūna* in an inscription of Amenhotep II (*CTAED*, 170; = Šarūna of EA 241:4). The context of the Amenhotep inscription is sufficiently unclear so that any identification remains uncertain.

SHARUHEN (PLACE) [Heb *šārûḥen* (שָׁרוּחֶן)]. A site in SW Palestine mentioned in Josh 19:6 in a list of cities belonging to Simeon (Josh 19:2–8). In pre-Israelite times, Sharuhen must have been a major town, since it is mentioned a few times in Egyptian texts (Aḥituv *CTAED*, 171). When Pharaoh Ahmose (ca. 1552–1527 B.C.) ended the more than a century-long domination of the foreign Hyksos by conquering their city of residence, Avaris (Tell ed-Dabʿa) in the E Nile Delta, he also acquired their S Palestinian

bastion, Sharuhen *(šrḥn).* In a burial inscription, a ship's captain with the name Ahmose records that the town was besieged for three (perhaps not uninterrupted) years (*ANET*, 233).

Having been influenced by the Hyksos, a time of Egyptian imperialism began with Ahmose and his successors, among them Thutmose III (ca. 1490–1436) who, in his first campaign (1468) into Palestine engaged a coalition of Canaanite and Syrian petty princes. His achievements are recorded in his annals in his temple at Karnak (*ANET*, 234–38). The beginning of the account records that the lands from Yurza (Eg *jrd̄* = Tell Jemmeh) and northward had rebelled; only Sharuhen *(šrḥn)* remained in Egyptian hands (Helck 1971:119). This strategically important site (seen from Egypt's point of view) is mentioned again in a list of places in the temple of Amon in Soleb which dates from the time of Amenhotep III (ca. 1402–1364), and also in a list in a temple in Amara West (Nubia), which Rameses II (ca. 1290–1224) had inscribed. Sharuhen is always mentioned with other sites which are situated along the coastal road (Giveon 1964:247–48; Kempinski 1974:149–50).

After Pharaoh Sheshonq I (ca. 950–929) campaigned in Palestine (mentioned in 2 Kgs 14:25–28), he inscribed the names of the sites he conquered in the temple of Amon in Karnak. Sharuhen is probably among the Negeb sites mentioned, if the text in question is to be read *šrḥn* (Ahituv *CTAED*, 171 n. 499), and not *šlḥm* (Mazar 1957:65, cf. *šilḥîm* Josh 15:32).

Here the vocalization in question is possible, since, in connection with foreign names, the vowelless Eg system of writing prefers a syllabic orthography. In the case of Sharuhen we should read either *s€ -r€ -h€ -n€* or *š€ -r€ -[ḥ€]-nw,* that is, Šaraḥna or Šaraḥanu (Aḥituv *CTAED*, 171). Albright (1924:134–35; 1934:53) read *Š€ -ra-ḫu-na,* thus connecting the word with Canaanite Šarḥôn, later Širḥôn. He regarded the Hebrew vocalization šārûḥen as erroneous. Noth (*Josua* HAT [2][1953], 88) agreed on this point and postulated the reading "Sirhon."

In the OT, Sharuhen is mentioned only once. The Vg reads Saroen, while LXX, which reads *hoi agroi autōn* must have read or understood Heb *śdyhn* or *śdwtyhn.* There are two lists which may be compared with Josh 19:2–8, namely Josh 15:21–62(63), a list of towns belonging to the tribe of Judah, and 1 Chr 4:28–32, which is, like Josh 19:2–8, a list of sites belonging to Simeon. The names correspond at least in part in both lists; for this reason the sites *šilḥîm* (Josh 15:32) and *ša ʿărāyim* (1 Chr 4:31) are usually taken to be variants of *šārûḥen.* However, this contradicts the principles "of scribal tradition regarding the patterns noticeable in the composition of the lists. Names peculiar to a given version are inserted in place of others that dropped out of a previously known list" (Kallai *HGB*, 353, n. 46).

A variety of name forms might reflect changing geographico-historical circumstances. Thus it has been suggested that the list in 1 Chronicles 4 (not yet containing Sharuhen), the oldest, and the list in Joshua 19 (containing Sharuhen) date from the time of David, whereas the one in Joshua 15 (no longer containing Sharuhen) is to be assigned to the time of Hezekiah or Josiah (Kallai *HGB*, 353–54).

To the extent that scholars have reckoned with a locality associated with the tribe of Simeon, they have sought to place it in S Palestine, though as far W as possible, to make the extension into Philistine territory appear plausible (Aharoni *LBHG*, 299). If, on the other hand, it has been assumed that the Simeonites were semi-nomadic until around the 8th century, then the list in 1 Chronicles 4 has been taken as the frame of reference of the migrations of the clan; in consequence of this, Sharuhen has been sought even further to the E (Kempinski 1974:150–52).

As a conceivable locality, the W Negeb has long been under consideration (Aharoni *LBHG*, 26–27). Albright's suggested identification (1929:7) of Sharuhen with Tell el-Farʿah ("the high ruin-mound," M.R. 100076) on the W bank of Wadi Ghazze, about 20 km SE of Gaza and about the same distance from the Mediterranean coast, was unchallenged for a long time. This tell, which covers approximately 15 acres and is about 15 m high, was the site at which Flinders Petrie thought to find Beth-pelet (Josh 15:27; Neh 11:26). It contains occupation remains dating from MB IIB until the Roman period (*EAEHL* 4:1074–82). Like other MB II sites (Aharoni *LBHG*, 148), the complex at Tell el-Farʿah was well protected by walls, a glacis, and trench-moats. The single feature found at the tell which best exemplifies MB IIB design is the three-piered gate flanked by two towers. In the LB II period a residence was constructed whose models date from the 19th Dyn. (*EAEHL* 4:1077; plans of both gate and residence). The small finds which were

discovered, particularly in the graves, reveal both Egyptian and Egyptianizing stylistic features (Keel and Küchler 1982:129–31). The Philistines settled at the site during the Iron Age; the lack of finds in the necropolis may indicate that the site was either uninhabited or only sparsely populated between the 9th and 7th centuries (Cohen 1977:170). It is first with the Persian and Roman periods (extending to the 1st century B.C.) that evidence of settlement again becomes clearer.

An objection against Albright's identification of Sharuhen with Tell el-Far‹ah is that the site is too modest to explain Ahmose's three-year siege (Rainey *ISBE* 4:454). Another objection is even more pertinent: the fact that a ship's captain was a participant in Ahmose's undertaking shows that Sharuhen must have been close to the coast (Kempinski 1974:149). The suggestion to identify Sharuhen with Tell Abū Hurēre (M.R. 112087; Rainey *ISBE* 4:454), is even further away from the coast than is Tell el-Far‹ah, rendering this identification improbable. Admittedly, the surface finds, which date from MB II and the LB period, do show that this site could have been important at the time in question.

To be preferred is another tell situated about 6 km SE of Gaza and near the coast: Tell el-‹Ajjûl (M.R. 093097), just N of the mouth of the Wadi Ghazze (Kempinski 1974:145–52; Stewart 1974:63). Measuring 300 m × 500 m, this tell, of which only a tiny fraction was excavated by Petrie, is one of the largest in S Palestine. Because of its name ("ruin-mound of the calf") the tell was previously identified with Beth-‹eglaim ("house of the two calves"; cf. Ezek 47:10), which is attested for the Byzantine period (Maisler 1933:186–88). This identification is, however, just as improbable as the attempt to locate MB Gaza there (Keel and Küchler 1982:97).

As at Tell Far‹ah, ‹Ajjul was both fortified and protected by a deep moat and flourished during the MB Age (Tufnell *EAEHL* 1:55–56). During the course of MB I (12th Dynasty) a town arose which was expanded in MB II and was supplied with a palace. Destroyed in the 17th century, the town was renovated during the Hyksos period. Evidence of this renascence is provided by the architecture, red and black pottery with depictions of birds, fish, and cattle, numerous gold ornaments containing the image of the Syrian goddess, and the largest collection of scarab seals with figural motifs yet discovered in Palestine (*EAEHL* 1:57–60; Stewart 1974). Of interest for historians of culture are the joint burials of men and horses (*EAEHL* 1:55, 57), which reflect the significance of the horse for the Hyksos, who had brought the horse to Palestine.

A feature which perhaps helps to date the destruction of the Middle Bronze Age town is the presence of scarabs bearing the name Apopi (Eg *ʿ wsr rʿ*), one of the last of the Hyksos rulers; these may be seen in relation to the destruction of Sharuhen by Ahmose (Kempinski 1974:147). The time of Thutmose III is also epigraphically attested on the tell: fragments of a storage jar display two cartouches bearing the names of Hatshepsut and Thutmose (Keel and Küchler 1982:99–100). See ‹AJJUL, TELL EL-.

After its destruction, the inhabitants of the town seem to have moved to Gaza, which probably became the new Egyptian administrative center for Palestine. The site of Tell el-‹Ajjul continued as a fortress with a harbor at the mouth of the Wadi Ghazze (Kempinski 1974:148). The tell was completely abandoned when the Philistines appeared on the scene. Only some individual finds form subsequent periods have been found (*EAEHL* 1:60).

SHASHAI (PERSON) [Heb *šāšay* (שָׁשַׁי)]. Presumably a descendant of Binnui and one of the returned exiles whom Ezra required to divorce his foreign wife (Ezra 10:40 and 1 Esdr 9:34). According to Noth, Shashai is a short "pet name" which originated in early childhood and completely replaced the full name (*IPN*, 40–41). However, Noth also argues that the name Machnadebai, which occurs before Shashai, is a corruption of the phrase "from the sons of" (*IPN*, 249). If that is true, this would introduce the next family from which offenders come. However, Shashai is not named as the head of a family in the lists of Ezra 2 or Nehemiah 7. This is further indicated by the parallel text of 1 Esdr 9:34 in which the phrase "of the sons of Ezora" replaces the name Machnadebai, perhaps preserving a name dropped from Ezra 10:40. This would mean that Binnui was not Shashai's ancestor. See also MACHNADEBAI. Assuming Binnui was Shashai's ancestor, Shashai was a member of a family who returned from Babylon with Zerubbabel (Neh 7:15; note that Bani replaces Binnui in Ezra's list [2:10]). See also BEDEIAH.
JEFFREY A. FAGER

SHASHAK (PERSON) [Heb *šāšāq* (שָׁשָׁק)]. A Benjaminite, the son of Elpaal (1 Chr 8:14, 25). The Chronicler makes no connection between Shashak, son of Elpaal in 1 Chr 8:14, and Shashak, head of a household in 8:25. The two could be different people but there is not enough evidence to determine this, even though Curtis and Madsen (*Chronicles* ICC, 160) believed Shashak was misplaced in 8:14. Noth (*IPN*, 64) believed Shashak was an Egyptian name from the post-exilic period. The last verse of this section (1 Chr 8:28) states that the preceding men, presumably including Shashak, lived in Jerusalem.
TOM WAYNE WILLETT

SHASU. A term appearing only in Egyptian that designates both a people encountered by the Egyptians in the period 1500–1100 B.C., and the territory which they inhabited. Since we see the Shasu only through Egyptian eyes, and this view is often obscure, modern interpretations vary as to their origin and identity. The derivation of the word is uncertain: it is related either to the Egyptian verb "to wander" or Semitic "to plunder" (Giveon 1971:261–63; Ward 1972:56–59; Weippert 1974:433). An Egyptian origin seems more likely. It is clear that the Shasu-people were not an ethnic group but rather a social class.

It has been proposed that "Shasu" appears both as a people and a land before the Egyptian Empire period, but this early material is not clear and is best left aside until more conclusive evidence is known (Helck 1971:17–18; Görg 1976:425–26). The first clear reference to the Shasu is found in the biography of an Egyptian army officer who records the taking of prisoners from "Shasu-land" in the reign of Thutmosis II (Giveon 1971:Doc. 1). References to the Shasu land or people which can be used as historical sources continue to appear until the 20th Dynasty.

Though most references to the Shasu are in lists of conquered towns or important enemies, there are enough specific statements to locate these people geographically. In his N campaign undertaken in his first year, Seti I went through Shasu territory before he reached S Palestine. The area concerned lies between the E border of the Egyptian Delta and the town of Gaza (Giveon 1971:Doc. 11; Weippert 1974:270; Spalinger 1979:30).

To the N, Egyptian texts place the Shasu in N Palestine and S Syria-Lebanon. "Two Shasu of the Shasu-tribes" brought false information to the Egyptian king Ramesses II during the Battle of Kadesh in 1300 B.C.; these tribes were allies of the Hittite ruler (Giveon 1971:Doc. 14). Certain of the topographical lists are important in this respect since "Shasu" is included among N districts, for example in a short list of Thutmosis IV (Giveson 1971:Doc. 4). This list has six names: Naharin (N Mesopotamia), Babylonia, Tunip, Shasu, Kadesh, and Takhsi, the latter in the Lebanese Beqaʿa Valley (Edel 1966:11). A similar list of King Amenhotep III places ʿAin-Shasu, "the well of the Shasu," among places in N Palestine such as Dothan and Shamkhuna (Giveon 1971:Doc. 5a). ʿAin-Shasu, the Enshasi of the Amarna Letters, is probably to be located in the Beqaʿa Valley (Helck 1971:261; Weippert 1974:273).

Another group of texts places the Shasu in S Transjordan. Short lists of place-names in Nubian temples of Amenhotep III and Ramesses II record six toponyms located in "the land of Shasu" (Giveon 1971:Docs. 6a, 16a). Those that can be identified are in the Negeb or Edom (Kitchen 1964:66–67; Weippert 1974:270–71). One of the six, Seir in Edom, is found elsewhere in connection with the Shasu. A monument of Ramesses II claims that he "has plundered the Shasu-land, captured the mountain of Seir;" a 19th Dynasty model letter mentions "the Shasu-tribes of Edom;" Ramesses III declares that he has "destroyed the Seirites among the tribes of the Shasu" (Giveon 1971:Docs. 25, 37, 38). From the Egyptian viewpoint, then, the Shasu were a prominent part of the Edomite population. These references indicate that there must have been Egyptian military activity in Transjordan, born out by the claim of Ramesses II that he plundered Dibon in Moab (Kitchen 1964:53; 1976:313–14) and possibly the enigmatic Balu'a Stele (Ward and Martin 1964). This stele portrays a local king receiving his kingship from a god with a goddess in attendance. All three figures are in Egyptian costume though the king is bearded and wears the bag-like head-cloth particularly associated with the Shasu. The panel is surmounted by a six line inscription which remains undecipherable. This stele may show Egyptian influence in Moab in the Empire period but its interpretation is extremely difficult. Only two Egyptian royal monuments of the period have been found locally, both of no value in assessing Egyptian relations with Transjordan since they were not found *in situ:* a stele fragment of Seti I from Tell el-Shihâb on the Yarmuk River (Giveon in *LÄ* 4:245) and a rock stele, the so-called "Job Stone," of Rameses II at Sheikh Sa'id in the Hauran (Schumacher 1891).

In another direction, an important geographical reference is found in a 20th Dynasty letter from the High Priest of Amon in Thebes to Nubian officials in the district of *'Ikt.* "The Shasu of the land of *mw-ḳd* who live in *ḳḥḳḥ* on the sea-coast" are mentioned three times as being hostile to Egyptian expeditions sent to mine gold in the area (Helck 1967:140; on the gold mines, Vercoutter 1959). While *ḳḥḳḥ* is unknown and there is still some controversy over the meaning of *mw-ḳd* in this context (see Kitchen in *LÄ* 4:1201, n. 32), the district of *'Ikt* is the area of the Wadi Allaqi E of Kubân (Zibelius 1971:95–96). There is thus no doubt that the Egyptians met people known to them as Shasu in Nubia though, as Giveon (1969–70) suggests, they may have moved in from Transjordan and were not native to the area. Other evidence for Shasu-people in Africa is ambiguous (Goedicke 1968; Ward 1972:38–40).

In general, the more specific geographical evidence from the texts suggests an origin for the Shasu in Transjordan though other proposals have been made (e.g., Lorton 1971–72:149; Görg 1976). The question is basically whether the term "Shasu" was originally geographic and was then applied to a people, or vice-versa. The latter seems most likely. The "land of the Shasu" from whence the Shasu came was in Transjordan, the term then being used to refer to any district further W where they were encountered.

Apart from the textual evidence, one must also consider the numerous pictoral representations in Egyptian reliefs said to portray the Shasu, though few of these figures are identified as such by accompanying texts. In general, the Shasu were bearded and wore either a short, often tassled, kilt or an ankle-length garment as well as a peculiar bag-like head-cloth. They fought with axe and spear, but not bow and arrow, and are sometimes shown with a round medallion suspended from the neck. However, all these elements of costume, with the possible exception of the head-cloth, are seen in representations of other foreigners as well. This is due to the somewhat casual conventions of Egyptian artists who carefully distinguished foreigners from general regions such as the Aegean, Syria, and Nubia, but were not so careful about more detailed ethnic definitions. Unidentified foreigners in the reliefs must therefore be interpreted with caution; some "Shasu" in the reliefs may not belong to that group at all (Ward 1972:46–47).

While there are few references to the nature of the Shasu-people, these seem clear enough. They were divided into tribes with tribal chieftains and are described as rebellious, quarrelsome, and unfriendly highwaymen who are "ignorant of the laws of the palace" (Giveon 1971:Docs. 11, 36). The latter expression can refer to Egyptian law or, more probably, to the legal institutions of the Asiatic city-states among which the Shasu lived. The Shasu appear as mercenaries in both Asiatic and Egyptian armies and,

following Egyptian practice, we find them resident in Egypt, undoubtedly as retired mercenaries allowed to settle there when their military service was over (Giveon 1971:Docs. 46, 50; Helck in *LÄ* 4:134–35).

But fighting and robbery were not the only aspect of Shasu life. In the reign of Merneptah we find them driving their herds across the frontier into the pasture-lands of the Delta, and the campaign of Ramesses III against the Shasu in Edom netted him animal-herds as well as property and prisoners (Giveon 1971:Docs. 37, 38). The latter reference also notes that the Shasu lived in tents and another text is generally taken to mean that some Shasu lived in towns (Giveon 1971:114–15, n. 5).

This description, sparse though it may be, indicates that the Shasu represent a social class, partially nomadic and partially sedentary, members of which regularly left the Transjordanian homeland to hire out as mercenaries or engage in free-booting. Since the texts speak of "tribes" of Shasu and there are differences in their costume (e.g., either long dress or short kilt), we can speak somewhat confidently of a social class made up of several tribal groups at least partially, perhaps only seasonly, uprooted from their tribal areas. An analogy to the well-known Hapiru-people is obvious, though the analogy is not a complete one.

The Egyptians themselves seem to have recognized that the Shasu and Hapiru had separate identities as shown by a stele of Amenhotep II which lists prisoners from both groups taken in his N campaign (Giveon 1971:Doc. 3). Two texts of Seti I suggest that the Egyptians believed the Shasu and Hapiru to be of the same social class. One speaks of Shasu in N Sinai, the other of Hapiru in the Beth-shan region (Giveon 1971:Doc. 1; Albright 1952; Helck 1968:475–78). The two groups are described in much the same terms as trouble-makers among the sedentary population of Palestine. See also ḪABIRU, ḪAPIRU.

Both groups are best understood in the framework of Rowton's studies on the dimorphic social and political structure of society, prevalent throughout W Asia in the 2d millennium B.C. This embraced both the sedentary and the nomadic (urban and tribal) so that there was continuous economic and political interaction between two groups of rather different social structure (Rowton 1973:202–4). The nomadic element in this dimorphic structure is termed "enclosed nomadism," a type of nomadism, which itself may be partially sedentary, in constant touch with urban life (Rowton 1974).

On the margin of urban and tribal society there was a third group: "a social element consisting of detribalized labor, mercenaries, predatory bands, and tribal splinter groups, all impelled from tribal society into urban society by lack of food, sometimes amounting to genuine famine, and also by intertribal warfare and disputes" (Rowton 1976:14). Such outcasts came also from urban society. This third social group injected a considerable element of unrest in the midst of city-states which had limited political and military control. Even under the Egyptian Empire, the Asiatic provinces were administered rather than ruled so that Egyptian provincial governors were not militarily strong.

If we view the Shasu from this standpoint, the Egyptian texts describe a social class quite similar to the Hapiru. It would appear that in their Transjordan homeland, the Shasu lived in an "enclosed nomadism" type of society, but wherever else they were found, they are very much like Rowton's third element of society—the uprooted, detribalized element which has taken to brigandage and fighting for pay. This seems to be a better definition than the more general terms "transmigrant" or "transhumance" previously used (Ward 1972:54; Weippert 1974:274). The Shasu thus fit into the general pattern of the dimorphic structure of society in W Asia which existed as long as the city-state system prevailed. It can be no coincidence that both "Hapiru" and "Shasu" ceased to have any historical meaning toward the turn of the 2d millennium B.C. when the appearance of nation-states brought stricter political control (Greenberg 1955:88; *LÄ* 5:534). The social class these terms designated had disappeared.

Several parallels have been noted between the Shasu and the biblical Hebrews, but these are of a general rather than a specific nature (Giveon 1971:chap. 5; Weippert 1974:279–80). Such parallels are to be expected if, as many claim, the patriarchal Hebrews belonged to the same wide-spread social class as the Shasu. If the early Hebrews are to be identified with any other known group, it would be with the Hapiru (Weippert 1967:101–3; Cazelles in *POTT*, 1–28; Rowton 1976:18–20).

SHAUL (PERSON) [Heb *šāʾūl* (שָׁאוּל)]. The name means "The One Asked-For." In addition to being the name of the very first king of Israel (see SAUL), it was also the name of various tribes and persons in the OT. Names with the same consonants (and related meanings) are attested in Iron Age Syrian epigraphy (*šʾl,* KAI 24,4), in Palmyrene *(*Šaʾīlā),* and in ancient North Arabian epigraphy (*sʾl,* possibly to be vocalized **Saʾāl*).

1. The seventh ruler mentioned in the Edomite King List (Gen 36:37; 1 Chr 1:48). Opinions vary concerning the date of this list. Suggestions range from the 11th century B.C. (Weippert 1982:155) through the 8th to 6th centuries B.C. (Bennett 1983:16) to the 6th/5th centuries B.C. (Knauf 1985). Scholars tend to agree, however, that the succession scheme of this list is artificial, and that, in all likelihood, the rulers listed in it were contemporaries (Bartlett 1972:27; Weippert 1982:155). According to Gen 36:37, this ruler originated from Rehoboth ha-Nahar (RSV translates "Rehoboth on the Euphrates"), which may be a place or a region. See REHOBOTH (PLACE).

2. A clan of Simeon (Gen 46:10; Exod 6:15; Num 26:13; 1 Chr 4:24). According to Genesis 34 and Genesis 49:5–7, Simeon (and Levi) were tribes of the central Palestinian hill country and were dispersed after a conflict with the city of Shechem. All other references to the tribe of Simeon are, therefore, highly doubtful.

3. A Levite (1 Chr 6:9).

ERNST AXEL KNAUF

SHAVEH, VALLEY OF (PLACE) [Heb *ʿēmeq* (עֵמֶק) *šāwēh* (שָׁוֵה)]. In Gen 14:17, the place in which the king of Sodom (and implicitly, Melchizedek in v 18) met Abram as he returned from his defeat of Chedorlaomer and his allies. The word *šāwēh,* which occurs as an adjective only here, and as a noun only in v 5 of the same chapter (see SHAVEH-KIRIATHAIM), is derived from the root *šāwah* "to level, make even, smooth." The author of Genesis 14, following his usage, explained "the Valley of Shaveh" by the current appellation "that is, the King's Valley" (Heb *ʿēmeq hammelek*). The latter is mentioned in 2 Sam 18:18 as the place where Absalom set up a pillar for himself. According to Jos. *Ant* 7.10.3 §243, that monument was two stadia (350 to 400 m) distant from Jerusalem (presumably, from its outer walls). This seems to point to the identity of the King's Valley with the Valley of Kidron E of old Jerusalem. Other ancient sources corroborate it. *Tg. Onq.* has here *mēšar měpannā hū› bêt rêsā dĕmalkā* "the leveled valley, that is the race course of the king." According to Jer 31:39—Eng 31:40, the Horse Gate was in the E wall of Jerusalem, adjacent to the Kidron (cf. also its context in Neh 3:28); *Tg. Jon.* translates it *tĕraʿ bêt rêsā* "the Race Course Gate." Neh 3:15 mentions "the King's Garden" in Jerusalem (which included the Pool of Shelah) in a location near the junction of the Tyropoeon with the Kidron (Allegro 1960:90–91; *IDB* 2:10–11; *IDB* 4:310); cf. *Tg. Neof.* of Gen 14:17: *bmyšr rdsy› h[w]› mšrh dmlk›* "in the valley of the gardens, that is the King's Valley." The Genesis Apocryphon (1QapGen 22:13–14) adds to *bʿmq šwh whw› ʿmq mlk* (equivalent to the definition in Gen 14:17) the further specification *›bqʿt byt krm›* "the valley of Bet-karma (or, of the house of the vineyard)." Aharoni (*IDBSup*, 97) saw in it the Aramaic form of Beth-haccherem, a Judean city which he identified with the excavated site of Ramat Raḥel, 3.4 km S of Jerusalem (Aharoni 1956:152). This identification may be correct, but it does not entail the transfer of the Valley of Shaveh to the area of Ramat Raḥel. In the Copper Treasure Scroll from Qumran (3Q15), a detailed list of the spots where hoards of silver, gold, and precious objects had been buried, *hšw›* (*haššāwē›* "the plain") is listed twice (Allegro 1960:47, items 37 and 38) immediately after the Kidron. Further in the Treasure Scroll, item 47, "the reservoir which is in *byt hkrm*" is listed after a certain "cistern which is fed from the Great Wadi *(mhnḥl hgdwl)*" (probably the Kidron, cf. *hannaḥal* in that meaning, 2 Chr 33:14), and before "the vat of the olive valley (?)" (or "olive press (?)," cf. Allegro 1960:99–101, who connects it with Gethsemane, directly E from the Kidron) and "Absalom's Pillar" which, as mentioned above, stood in the Kidron Valley. It appears thus that the *byt hkrm* in question is the same as *byt krm›* of 1QapGen and is, most likely, a synonym of the King's Garden (which possessed indeed a reservoir—the Pool of Shelah). The Valley of Shaveh can thus be definitely located as the little plain formed by the junction of the valleys of Hinnom, Tyropoeon, and Kidron (see Allegro 1960, fig. 9; *GP* 1:402–3; Milik 1961).

MICHAEL C. ASTOUR

SHAVEH-KIRIATHAIM (PLACE) [Heb *šāwēh* (שָׁוֵה) *qiryātāyîm* (קִרְיָתָיִם)]. The place in which Chedorlaomer and his allies defeated the Emim (Gen 14:5). *Šāwēh* (construct of **šāweh*") refers to the level terrain, or plain (see SHAVEH, VALLEY OF), near the city of KIRIATHAIM in Moab. According to Deut 2:10–11, the Emim were the aboriginal population of Moab. Strangely, 1QapGen, and *Tg. Neof.* did not recognize *qiryātāyîm* as a geographical name and translated it "city" or "cities." *Tg. Neof.*, moreover, did not understand *šāwēh* either and rendered the passage in question "and the Powerful Ones who dwelt inside the city," thus assigning the Emim (as well as the Zuzim) to the same city (Ashteroth-karnaim) as the Rephaim.

MICHAEL C. ASTOUR

SHAVSHA (PERSON) [Heb *šawšāʿ* (שַׁוְשָׁא)]. Var. SERAIAH; SHEVA; SHISHA. A scribe in the political administration of King David (1 Chr 18:16, 2 Sam 8:17, 20:25, 1 Kgs 4:3). The name is probably foreign in origin, perhaps Egyptian (de Vaux 1939; *AncIsr* 1:129–32) or Hurrian (Mazar 1946–47). A non-native Israelite would have been ideal for the profession of scribe, one in which foreign documents would have been handled. The foreign character of the name is the reason for its various spellings in the text: *šĕyāʿ* (2 Sam 20:25 Q: *šĕwāʿ*), *śĕrāyâ* (2 Sam 8:17), *šîšāʿ* (1 Kgs 4:3), *šawšāʿ* (1 Chr 18:16). The weight of the evidence, when the is also considered (see SHEVA), points to the originality of Shavsha, although certainty is not possible.

Shavsha's sons, Elihoreph and Ahijah, performed the same scribal function as their father in the political bureaucracy of Solomon (1 Kgs 4:3). The B text of the LXX in 1 Kings suggests that Shavsha did not retire from his position until after the beginning of Solomon's reign, since his name occurs but not those of his sons. It may be, however, that their names have been accidentally omitted. See *HDB* 4:478–79.

STEPHEN G. DEMPSTER

SHAVUOTH [Heb *šābûʿôt* (שָׁבוּעוֹת)]. See WEEKS, FESTIVAL OF.

SHEAL (PERSON) [Heb *šĕʾāl* (שְׁאָל)]. A descendant of Bani and one of the returned exiles who was required by Ezra to divorce his foreign wife (Ezra 10:29 = 1 Esdr 9:30). Noth believes this name should be read *yišʾāl* (with *kethib apud Orientales*), meaning "May he (God) make a request of him" or "May he (God) use him" (*IPN* 209, 257). Sheal was a member of a family that returned from Babylon with Zerubbabel (Ezra 2:10; note that Binnui replaces Bani in Nehemiah's list [7:15]). For further discussion, see BEDEIAH.

JEFFREY A. FAGER

SHEALTIEL (PERSON) [Heb *šĕʾaltîʾēl* (שְׁאַלְתִּיאֵל), *šaltîʾēl* (שַׁלְתִּיאֵל)]. Var. SALATHIEL.

The son of Jeconiah (= Jehoiachin), king of Judah (1 Chr 3:17; Matt 1:12). In the genealogy of Jesus found in the gospel of Luke 3:27 he is made the son of Neri. This differs markedly from the Matthean genealogy (Fitzmeyer *Luke* 488–505).

Shealtiel is listed as the father of Zerubbabel in all occurrences in the Hebrew Bible (Ezra 3:2, 8; 5:2; Neh 12:1; Hag 1:1, 12, 14; 2:2, 23; see also 1 Esdr 5:5, 48, 56; 6:2) except in the list of postexilic Davidic descendants in 1 Chr 3:17 where Zerubbabel is listed as the son of PEDAIAH. Compare that entry for a discussion of scholarly views on this matter.

In 2 Esdr 3:1 Shealtiel (RSV Salathiel) is equated with Ezra which is probably the result of an attempt by the author/editor to link the two figures in his/her sources (see discussion of "4 Ezra" in *APOT* 2:549–50; *OTP* 1:517–569).

RUSSELL FULLER

SHEAR-JASHUB (PERSON) [Heb *šĕʾār* (שְׁאָר) *yāšûb* (יָשׁוּב)]. A son of Isaiah named in Isa 7:3. (The phrase *šĕʾār yāšûb* occurs twice again in 10:21–22, though the authenticity of both verses is disputed.) The occasion of 7:3 is the Syro-Ephraimite invasion of Judah in 735 B.C.E. Isaiah is told to take the child with him while he tells Ahaz not to fear the attackers. The significance of the name, which means "a remnant will return," is ambivalent. If the emphasis is that *only* a remnant will return, a threat is implied; if the emphasis is on the certain return of some, it is a promise of sorts. The "return" intended is also disputed. The verb *(šûb)* can mean "return" in the physical sense, as survivors from battle or exile (as

in 10:22). But it can signify, as often in the prophets, conversion or repentance, and that sense is to be preferred here, as in 10:20–21. In 8:16–18 Isaiah refers to himself and his sons, which would include Shear-jashub, as "signs and portents in Israel." If his name speaks of the conversion of a remnant, which is the better interpretation, it finds its fulfillment already in Isaiah's little group of disciples (v 16) and sons, who have accepted Yahweh's message through Isaiah, clinging to it in faith and awaiting its fulfillment (v 17). On Isaiah's use of symbolic names, see also Immanuel in 7:14, Maher-shalal-hash-baz in 8:1–4, and names he bestows on the ideal king in 9:5.

JOSEPH JENSEN

SHEARIAH (PERSON) [Heb *šĕʿaryâ* (שְׁעַרְיָה)]. Son of Azel, one of the latest descendants of King Saul from the tribe of Benjamin listed in the genealogy in 1 Chr 8:38 and 9:44. The meaning of the element *šʿr* in the name is unclear. Some relate it to the noun *šaʿar,* "gate," and understand it as "YH (WH) has opened" (Bordreuil and Lemaire 1976:45), but *šʿr* is unknown as a verbal form in this sense. More likely, *šʿr* should be taken as "to reckon," and the name should be interpreted "YH (WH) has reckoned" (Fowler *TPNAH*, 90). The name is attested to twice on a Hebrew seal from the 8th or 7th century (Bordreuil and Lemaire 1976:45–46). The section of the Saul genealogy mentioning Sheariah was probably composed during the time of Azel (Demsky 1971:19), who according to the current structure of the genealogy lived eleven generations after King Saul. The genealogy is from the end of the First Temple period (Demsky 1971:20), and was preserved by Benjaminite families that survived the Babylonian exile (Williamson 1979:356). The existence and preservation of the Saulide genealogy probably reflects the continued prominence of Saul's family, and perhaps even their hope that they would return to power (Ackroyd *Chronicles, Ezra, Nehemiah* TBC, 42; Flanagan 1982:25). See MELECH. On the repetition of the genealogy in 1 Chronicles 8 and 9, and its structure within the genealogies in Chronicles, see AHAZ.

SHEARING. See ZOOLOGY.

SHEATH. See WEAPONS AND IMPLEMENTS OF WARFARE.

SHEBA (PERSON) [Heb *šĕbāʾ* (שְׁבָא); *šebaʿ* (שְׁבַע)]. SABEANS. 1. The descendant of Ham and Cush and the "son" (Heb *bēn*) of Raamah and brother of Dedan (Gen 10:7; 1 Chr 1:9). The name appears again in Gen 10:28 (1 Chr 1:22), where Sheba (Heb *šĕbāʾ*) is listed as a descendant of Shem and among the "sons" of Joktan. The name is also found in Gen 25:3 (1 Chr 1:32) as a descendant of Abraham and Keturah, the son of Jokshan, and the brother of Dedan. The similarity or identity of certain of the names in these genealogies has led some to conclude that the name Sheba refers to the same person or tribe, most probably related to the kingdom of Sheba in SW Arabia (referred to in native sources as Saba—Sabaean *sb'*) (Westermann 1984:511). See SHEBA, QUEEN OF. If the occurrence of the name Sheba in these instances does represent the same person or tribe, or closely related persons or tribes, it indicates that the Israelites viewed Sheba and his descendants as related both to themselves and to the peoples of Africa. However, such wideranging relationships are understandable, given the extensive trade links of the peoples of the S Arabian littoral (Simons 1954:159; *IDB* 4:511). Alternatively, this passage may be understood to mean that descendants of Ham as well as descendants of Shem lived in SW Arabia (Ross 1981:25–26, 29).

However, the name Seba (Heb *sĕbāʾ*) the son of Cush, also mentioned in Gen 10:7, is found in the topography of ancient E Africa and should be kept distinct from Sheba. See SEBA (PERSON). The "kings of Seba and Sheba" are found together in Ps 72:10, while in Isa 43:3 and 45:14 Seba is mentioned

together with Egypt and Cush. Josephus (*Ant* 2.249) identifies it with Meroē, a city (or country) between the White Nile and the Blue Nile, and calls it the capital city of the Ethiopians that Cambyses had named Meroē after he had captured the city. Strabo (*Geog.* 16.4.8, 10) also knows of the cities Saba and Sabai on the African coast (PW 2/1:1511–13, 1515–20; Winnett 1970:174; Westermann 1984:511).

STEPHEN D. RICKS

2. A Benjaminite, son of Bichri, from the hill country of Ephraim, who led a rebellion against David (2 Samuel 20). When David finally finished his mourning for Absalom and began his return to Jerusalem, components of the armed forces of Judah and Israel quarreled over who would accompany David. The forces of Judah gained the upper hand and Sheba (Heb *šeba*ʿ), who is termed a "troublemaker," initiated a rebellion of the forces of Israel. Sheba's words foreshadowed the eventual split of the kingdom: "We have no share in David and no estate in the son of Jesse" (2 Sam 20:1 and 1 Kgs 12:16). Absalom's rebellion had threatened the king personally, but Sheba's rebellion was a threat to the kingdom itself (2 Sam 20:6). Amasa, whom Absalom had made the leader of the army but whom David had later forgiven, was selected by David to muster the men of Judah in order to quell the rebellion. Amasa did not accomplish the task soon enough and David dispatched Abishai with personal forces, but Joab quickly assumed control. While they pursued Sheba, Amasa caught up with Joab at Gibeon only to be killed by him. Sheba passed through Israel but in the end seems to have gathered no more than his own clansmen to his cause (2 Sam 20:14). He took his stand in Abel of Bethmaacah, a fortified city. Joab began seige of the city, but, before he destroyed the fortifications, a woman intervened and agreed to trade Sheba for Joab's withdrawal. She persuaded the inhabitants who then decapitated Sheba and threw his head over to Joab (2 Sam 20:14–22). On the possibility that Saul's clan, the Matrites, and Sheba's, the Bichrites are the same, see Gottwald 1979:259–60.

3. A head of a family in the tribe of Gad. Sheba (Heb *šeba*ʿ) is the name of one of seven families listed for the tribe of Gad in 1 Chr 5:13. None of the seven family names are otherwise known, and their genealogical connection to those mentioned in subsequent verses is not clear (see Braun *1 Chronicles* WBC, 74). The genealogy containing his name is said to have been recorded during the reigns of Jotham and Jeroboam (1 Chr 5:17).

RICHARD W. NYSSE

SHEBA (PLACE) [Heb *šeba*ʿ (שֶׁבַע)]. A city in the territory allotted to Simeon (Josh 19:2). In Josh 19:6 the sum of the cities in Simeon's allotment is given as thirteen, yet fourteen names are listed. Several scholars, noting that the name Beer-sheba immediately precedes Sheba, assert that Sheba is the result of a scribal error known as dittography; that is, it is assumed that the second element in Beer-sheba was accidentally repeated (Soggin *Joshua* OTL, 187). Thus, there never was a place named Sheba, and the discrepancy in the city count is resolved. In a parallel passage (Josh 15:21–32), however, a list of Judahite cities includes nine of the fourteen cities mentioned in Josh 19:2–6, and the name Shema is found in the place of Sheba. In view of this fact, some scholars maintain that Sheba does represent an actual city, though its real name (Shema) has been corrupted in Josh 19:2 (Cooke 1918:173). Cohen (*IDB* 4:311) suggests a third position: Shema is a corruption of Sheba. According to Cohen, Sheba and Beer-sheba ("the well of Sheba") were two parts of the same city.

DAVID SALTER WILLIAMS

SHEBA, QUEEN OF (PERSON) [Heb *malkat-šĕbāʾ* (מַלְכַּת־שְׁבָא)]. An otherwise anonymous person who visited the courts of king Solomon (1 Kings 10; 2 Chronicles 9). According to these accounts, the queen of Sheba heard of Solomon's fame and came to test him with hard questions (1 Kgs 10:1; 2 Chr 9:1a). She came to Jerusalem with camels loaded with spices, gold, and precious stones (1 Kgs 10:2a; 2 Chr 9:1a). She quizzed Solomon, who was able to answer all of her questions (1 Kgs 10:2b–3; 2 Chr 9:1b–2). She was thoroughly impressed by the king's wisdom and the splendor of his court and temple (1 Kgs 10:4–5; 2 Chr 9:3–4), expressed to Solomon her amazement at his wisdom, achievements, and wealth (1 Kgs 10:6–8; 2 Chr 9:5–7), and praised Solomon's God for the king's happy state (1 Kgs 10:9; 2 Chr 9:8). Thereupon she gave the king an enormous amount of gold, spices, and precious stones (1 Kgs 10:10; 2 Chr 9:9. King Solomon gave her an even greater amount in return, whereupon she left with her retinue for her own country (1 Kgs 10:13; 2 Chr 9:12).

It is likely that another significant reason for the queen of Sheba's visit to Solomon was to strengthen trade relations. Solomon had just constructed a fleet at Ezion-geber at the head of the Gulf of Aqaba (1 Kgs 9:26–27; 2 Chr 8:17), and his ships were plying the length of the Red Sea, thereby affecting the profitability of the overland trade routes in which the rulers of Sheba had an interest as well as threatening Sheba's lucrative trade with East Africa. Further, Israel's wide control of land routes north of the Gulf of Aqaba posed a potential roadblock to caravans bound for either Gaza on the Mediterranean or Damascus (Gray *Kings* OTL, 241). On a visit such as the one described in 1 Kings 10 and 2 Chronicles 9, the queen of Sheba could have secured important trade concessions and prevented potential conflicts between the two powers.

The most plausible location for Sheba is in the SW corner of the Arabian peninsula. This area, known in the native sources as Saba, already had an advanced culture by the early 1st millennium B.C. (and perhaps earlier), with urban complexes equal in size to other parts of the Near East, a sophisticated irrigation system to support agriculture, and important trade links N and W toward the Mediterranean basin and Mesopotamia and E to India (van Beek 1974:40–63). The merchants of Sheba were renowned in Israel and elsewhere in the ANE as traders in gold (Ps 72:15; Isa 60:6; Ezek 27:22; cf. Ezek 38:13), gems (Ezek 27:22), and incense (Isa 60:6; Jer 6:20) and myrrh—products grown in various locations near the South Arabian littoral (Nielsen 1986:19–24).

The queen of Sheba is mentioned twice in the NT, and extensively in subsequent Jewish, Ethiopian, and Muslim traditions. In Matt 12:42, Jesus contrasts the energy of the "Queen of the South" in coming "from the ends of the earth to listen to Solomon's wisdom" with the relative complacency of his contemporary Jews, though "now one greater than Solomon is here" (cf. Luke 11:31). Josephus mentions the queen once, calling her the "Queen of Egypt and Ethiopia" (*Ant* 8.6.5–6). She is mentioned twice in the Talmud—both times in connection with Job 1:15—while the story of her visit to Solomon's court and especially the "hard questions" that she posed and Solomon answered formed a part of later traditions and embellishments (Silberman 1974:65–84).

According to the *Kebra Nagast,* the national saga of Ethiopia, the queen's visit resulted in her conversion to Solomon's religion. Solomon had a son by her, Menelik, who was born following the queen's return to Ethiopia. When Menelik had grown up, he went to Israel to visit his father. When he returned to Ethiopia, he took with him the Ark of the Covenant, thereby transferring God's presence from Israel to Ethiopia (Ullendorf 1974:109–12). In Quran 27:15–45, the queen of Sheba is described as a sun worshipper. She visited Solomon, who tested whether she was "rightly guided" and tricked her into baring her legs. Later, she and Solomon submitted to Allah. In Quranic commentaries and subsequent Muslim legends, the queen is identified as Bilqīs and is sometimes described as being endowed with supernatural powers (Watt 1974:85–103).

STEPHEN D. RICKS

SHEBANIAH (PERSON) [Heb *šĕbanyâ* (שְׁבַנְיָה)*; šĕbanyāhû*]. Four individuals in the Hebrew Bible bear this name.

1. One of the priests who played musical instruments before the ark during the time of David (1 Chr 15:24). Given his extreme interest in the installation of temple musicians (Braun *1 Chronicles* WBC, 186), the Chronicler informs us that Shebaniah's specific role was to blow the trumpet before the ark as it was brought into Jerusalem.

2. One of the Levites who led worship in the public ceremonies prior to the establishment of the new covenant under Ezra (Neh 9:4). According to Neh 9:5, Shebaniah and other selected Levites specifically called the assembly to join in a liturgical blessing of Yahweh before Ezra's prayer. This individual may possibly be identified with one of the two Levites mentioned in #4 below.

3. The head of a priestly family in the postexilic period (Neh 12:14) and one of the priests who "sealed" the new covenant of Ezra (Neh 10:5—Eng 10:4). By examining the related list in Nehemiah 12:3 as well as other manuscripts, Shebaniah in this case should probably be equated with the Shecaniah of 12:3 (Blenkinsopp *Ezra-Nehemiah* OTL, 334; Williamson *Ezra, Nehemiah* WBC, 362). Given the similarity between the Hebrew letters *bet* and *kap,* such a misreading is easily understandable.

4. Two Levites who joined in with other officials and laity in supporting and "sealing" the new covenant of Ezra (Neh 10:11, 13—Eng 10:10, 12). One of them may possibly be identified with the Levite discussed in #2 above.
TERRY L. BRENSINGER

SHEBARIM (PLACE) [Heb *haššĕbārîm* (הַשְּׁבָרִים)]. The place to which the routed Israelites were first pursued by the men of Ai (Josh 7:5).

In the MT of Josh 7:5 the world *haššĕbārîm* appears as a masc. pl. noun formed from *šeber* ("a break or fracture"). A number of the early versions depart from the Hebrew text by replacing the noun *haššĕbārîm* with a verb formed from *šbr* ("to break"). Targum Jonathan preserves the root *šbr* (Aram *ṯbr*) as an element in the verbal clause, "until they broke them," while the LXX similarly translates, *kai synetripsan autous,* "and they crushed them."

Several factors suggest that the reading of the MT is preferable to that of the Targum and the LXX. The context and structure of Josh 7:5 favors the presence of a noun over a verb; the phrase, *ʿad-haššĕbārîm,* "as far as the *šĕbārîm*" provides a suitable compliment to the preceding phrase, *lipnê hasûsûa>ar,* "from the gate." The presence in Josh 7:5 of a noun bearing the prefixed definite article is also consistent with the style of the chapter as a whole. Indeed, in Joshua 7–8 the preponderance of topographical nouns bearing the definite article (e.g., *hāʿay,* "the ruin," 7:2, 4, 5, 8:12, 14, 18, 19, 20, 23, 24, 29; *hāʿēmeq,* "the plain," 8:13; *bammôrād,* "the descent," 7:5; *hammidbār,* "the wilderness," 8:15, 20; *hāʿărābâ,* "the desert," 8:14) seems to represent the author's attempt to convey a vivid sense of the geography of the battle.

While a noun may best suit the context of Josh 7:5, a variety of opinions exist as to how this noun should be interpreted. Although most English translations (KJV; RSV; NASB; JPSV) have followed the Vulgate in simply transcribing *haššĕbārîm* as a proper noun "Shebarim" (Vg *Sabarim*), the presence of the definite article would suggest that such a rendering is not what the MT intends. Others (NIV; NEB; Keil 1857:183; Boling *Joshua* AB, 218) translate "the quarries," but the fact that *haššĕbārîm* occurs only here in the Hebrew Bible makes such a specific translation too interpretive. It seems best, therefore, to translate *haššĕbārîm* as simply as possible while paying close attention to its context within the story of the attack on Ai.

A few scholars have attempted to preserve the awkwardness of the MT by translating *haššĕbārîm* simply as "the Breaks" (Woudstra *Joshua* NICOT, 123) or "the Breaking Points" (Butler *Joshua* WBC, 77). Monson (1983:168, 169), in a discussion of the geography of Joshua 7–8, suggests that "the breakings" of 7:5 may well be identical with the deep fissures caused by the Wadi Makkuk as it carves its way toward the hill country E of Khirbet et-Tell (M.R. 174147). Just W of the cliffs caused by the Wadi Makkuk, the natural route between et-Tell and the Jordan Valley passes N of the Makkuk and continues eastward along the ridge which separates the Wadis Makkuk and ʿAuja. It may have been at the pass across the Wadi Makkuk (5 km E of et-Tell) that the men of Ai were able to overtake and slaughter the Israelites.

BRIAN P. IRWIN

SHEBAT [Heb *šĕbāṭ* (שְׁבָט)]. The eleventh month of the Hebrew calendar, roughly corresponding to January and February. See CALENDARS (ANCIENT ISRAELITE AND EARLY JEWISH).

SHEBER (PERSON) [Heb *šeber* (שֶׁבֶר)]. A son of Caleb and his concubine Maacah (1 Chr 2:48).

Sheber was a Judahite listed among genealogies containing ancestors and descendants of David. The extra Calebite material in vv 42–50a (alongside the other version of the family tree in vv 18–24, 50b–55) suggests either that the Chronicler had access to more information from the source which included the Calebite genealogy than from elsewhere or that a great many families of Judah in the Chronicler's day claimed descent from Caleb (Coggins *Chronicles* CBC, 22). Many of the names listed as those of individuals are really of cities—Hebron and Maon and Bethzur being several of the best known. "Sheber" could mean "breach" or the like, in some way maybe reflecting circumstances surrounding the child's birth. Noth (*IPN*, 230) opposed this idea and preferred to see an animal name, "lion" (Ar *sabr*). He did, however, entertain the notion that *šeber* might signify "young" or "child" (similar to *šabrāʾ*—in Syriac, "little boy"; in Aramaic, "naive").

EDWIN C. HOSTETTER

SHEBNA (PERSON) [Heb *šebnāʾ* (שֶׁבְנָא)*, šebnâ* (שֶׁבְנָה)]. An important civil servant during the reign of Hezekiah of Judah (715–687 B.C.E.). His original position was "royal steward" (Heb *ʾăšer ʿal habbāyīt*) (Isa 22:15), but he was eventually demoted and replaced by Eliakim ben Hilkiah (Isa 22:20), presumably because of some scandal. He accompanied Eliakim in the lesser role of scribe as part of the delegation which met with the Assyrian Rabshakeh at the conduit of the Upper Pool of Jerusalem during Sennacherib's siege of the city in 701 B.C.E. (2 Kgs 18:13–19:7).

Although the Hebrew title *(ʾăšer ʿal habbāyīt)* is regularly translated as "royal steward," there is no firm agreement on what the term exactly means. Mettinger (1971:71–110) compares the title to the Egyptian *mr-pr-wr,* who was an overseer of the royal estates, similar to the role of Joseph (Gen 41:40), and suggests that the Judaean and Israelite equivalent performed a similar function. On the other hand, Avigad (1988:9) regards the person holding this title as "… the top ranking senior officer in the official hierarchy of the monarchy, some kind of prime minister." In the biblical and non-biblical sources, the status of the office is assumed and never explained, although it is to be noted that in 1 Kgs 4:6 Ahishar is not listed first in the new monarchical bureaucracy. Known holders of the office were Ahishar, under Solomon (1 Kgs 4:6), Arza under Elah (1 Kgs 16:9), Obadiah under Ahab (1 Kgs 18:3), Jotham, under his father Uzziah (2 Kgs 15:3), Azrikam, under Ahaz (2 Chr 28:7), and Shebna and Eliakim. Non-biblical sources offer Gedalyahu whose name appears on the Lachish seal (*TSSI* 1:62–63), Adoniyahu and Natan, whose names appear on the Jerusalem bullae #1–2, 3 (Avigad 1986:21–23), and the unknown owner of the Silwan tomb (*TSSI* 1:24).

It is clear from Isa 22:15–25 that some time during the reign of Hezekiah, Shebna was publicly removed from office because of some scandal. He had become "the shame of his master's house," by some public misdeed, and had to suffer a public humiliation in return. This act of public humiliation is described in detail in the oracle. He will be stripped of all symbols of office and demoted. His replacement will receive these symbols, assume duties over the royal house and be called a "father" by the inhabitants of Jerusalem. Exactly what Shebna's sin was is not clear, although the impression is given in the oracle that he had dishonored his master by committing it. The maintenance of a proper balance in such patron-client relationships in the ANE, in which the patron is revered, is fundamental to social relationships of this kind, and at the basis of the understanding of covenant. As known covenant texts show, the breaking of that relationship carries with it severe penalties. Likewise, to bring dishonor to one's superior carries with it severe sanctions which often override long-standing relationships. A clear example of this is David's treatment of Joab, who, by killing in peace time to avenge a death in war, had brought shame to his master (1 Kgs 2:5–6).

Shebna had built a tomb near Jerusalem, "on the height" (Isa 22:16), and Isaiah's oracle against him indicates that he will not die in Jerusalem so that he may be buried in this tomb. Instead, he will be thrown like a slingstone, into a foreign land. How much of this is to be taken literally, and how much of it is to be taken as prophetic hyperbole is not clear. Such comments made by prophets to royal officials do have a similar, rather stereotyped ring to them, as is seen in Amos' comments to Amaziah (Amos 7:16–17) and Jeremiah's comments about Pashhur (Jer 20:1–6). Common to both is the threat of exile and foreign burial. If the language of the Isaiah oracle is formal, then it might well have played a part in the demotion ritual which Shebna underwent, and it can be treated as a standard denunciation of high officials. This formal nature of the language might also explain why Shebna reappears later as a scribe, accompanying his successor, Eliakim to meet the Assyrian delegation (2 Kgs 18:8–37). He still has an important role to play in the bureaucratic structure of Hezekiah's court, albeit a slightly diminished one.

There has been much speculation on whether the tomb discovered on the slopes of Silwan, and bearing part of a name and the title *ʾăšer ʿal habbāyīt*, is the tomb referred to in Isa 22:15–16. It is certainly regarded so by Avigad (1953; 1979), but the evidence is lacking. If it was Shebna's tomb, then it certainly takes the sting out of Isaiah's words, because it once contained the owner's bones and those of his maidservant (*TSSI* 1:24). All that is left of the owner's name is the theophoric ending "… *yhw*," an element which is never found on Shebna's name in the Bible. Of course, it is possible to add the element, and Aharoni has suggested (*AI*, 53) that the Arad inscription #27 be reconstructed as *"Ydnyhw bn Šbn[yhw] …,"* but this is speculative. The origin of the name is unknown, and no verbal root *šbn,* exists in biblical Hebrew.

T. R. HOBBS

SHEBUEL (PERSON) [Heb *šĕbûʾēl* (שְׁבוּאֵל)]. Var. SHUBAEL. **1.** One of the fourteen sons of Heman who were appointed to prophesy with musical instruments under the direction of their father and the king (1 Chr 25:4). When the lots are cast to determine priestly duties (1 Chr 25:9–31), the name Shubael (1 Chr 25:20) appears where the name Shebuel would be expected, suggesting that the two names are variants. Shubael receives the thirteenth lot cast. Petersen (1977:92) suggests that Shebuel in 25:4 is a misreading of Shubael in 25:20; he finds support in the reading in 25:4, *Soubaēl.* For further discussion of the relationship between the lists in 1 Chr 25:2–4 and 1 Chr 25:9–31, see ASHARELAH; IZRI.

2. The son of Gershom and the grandson of Moses (1 Chr 23:16, 26:24). In 23:16, Shebuel is identified as "the chief;" and the Levites in question are assigned "the service of the house of the Lord" (23:24). In 26:24, Shebuel's duties are more specific; he is identified as "chief officer in charge of the treasuries." In 1 Chr 24:20, a person called Shubael is apparently the same person as the Shebuel of 23:16 and 26:24. Shubael is identified as one of the "sons of Amram." According to 23:12, Amram should be Shubael's great-grandfather; however, "sons" in 24:20 may mean more loosely "descendants." The supports the reading Shubael in 23:16, 26:24 as well as 24:20, suggesting the possibility that Shebuel in 23:16, 26:24 is a misreading of an original Shubael; see above.

SHECANIAH (PERSON) [Heb *šĕkanyāhû* (שְׁכַנְיָהוּ)]. The name Shecaniah is held by eight persons in the Hebrew Bible, six of whom lived in the 6th–5th centuries B.C.E. All of our information about persons holding this name is taken from material redacted in the postexilic period.

Note that there is textual evidence which may indicate that Shebaniah (Heb *šĕbanyāhû*), a person mentioned in Neh 10:4 and 12:14, may be identical to the Shecaniah of #3 below. This apparent identity of the two is due to the confusion of the letters *bet* and *kap* which were very easily confused in the Aramaic scripts of the 5th century B.C.E.

It is also not surprising that the name Shecaniah should be so popular in the period after the return from the Babylonian Exile. The root, *škn,* is a favorite of the Priestly tradent who played an important role in shaping the Pentateuch; it is also used in Ezekiel to indicate the dwelling, actually "tenting," of Yahweh with the community. The names formed with this root, such as Shecaniah, are expressive of the desire and perhaps the conviction, that Yahweh again dwell among the people.

1. In 1 Chr 24:11 Shecaniah is the name of a priest in the time of David to whom fell the tenth lot for taking charge of the service of the sanctuary. On this list see Myers (*1 Chronicles* AB, 162–168) and Williamson (*1 and 2 Chronicles* NCBC, 162–164).

2. Shecaniah is the name of one of the assistants of Kore the son of Imnah the Levite who was in charge of apportioning the freewill offerings during the reign of Hezekiah, king of Judah. Shecaniah helped distribute the portions in the cities of the priests (2 Chr 31:15).

3. In Neh 12:3 Shecaniah is listed as a priest who returned to Jerusalem along with Zerubbabel and Jeshua (= Joshua). In v 7 the preceding names are labeled as those of the chiefs of the priests (cf. also Ezra 2). As noted above, this priest may be the same as Shebaniah in Neh 10:4 and 12:14.

4. Shecaniah is mentioned in 1 Chr 3:21, 22 as a descendant of Zerubbabel. The verse has some textual problems. Williamson (*1 and 2 Chronicles* NCBC, 58) delineates the major possibilities. If we follow the reading chosen by RSV and NEB then Shecaniah was the son of Obadiah in the 7th generation after Zerubbabel. He is also probably to be identified with the Shecaniah mentioned in Ezra 8:3 (and 1 Esdr 8:29), the father of Hattush (cf. 1 Chr 3:22) although the text of this passage also has textual difficulties (Myers *1 Chronicles* AB, 67n).

5. In Ezra 8:5 Shecaniah is listed as the son of Jahaziel of the sons of Zattu, if we include the reading in 1 Esdr 8:32. He was apparently a family leader (Ezra 8:1).

6. A layman mentioned in Ezra 10:2 (also 1 Esdr 8:92) who suggested that those in the postexilic community who had married foreign women send them and their children away. This led to the formation of a covenant among the men of Judah and Benjamin to do just that. This covenant is the topic of the entire last chapter of the book of Ezra.

7. The father of Shemiah, a priest who was the guardian of the East Gate and who helped repair the wall in the time of Nehemiah (Neh 3:29).

8. The son of Arah and the father-in-law of Tobiah the Ammonite (Neh 6:18). Tobiah was one of the ring leaders in opposition to Nehemiah's successful attempt to rebuild the walls of Jerusalem in the Persian period.

RUSSELL FULLER

SHECHEM (PERSON) [Heb *šĕkem* (שְׁכֶם)*; šekem* (שֶׁכֶם)]. SHECHEMITE. 1. Hamor's son, who raped Jacob's daughter Dinah (Gen 34:2). After the sexual encounter Shechem came to love Dinah and wanted to marry her (v 3). He proceeded to speak feelingly to the girl to persuade her to become his wife. Dinah seems to have remained in Shechem's house (v 26) while he and his father obtained from her family its consent to a marriage (vv 8–17). Hamor proposed that his people and Jacob's intermarry and offered to let the Israelites settle in his territory. The sons of Jacob countered by requiring that all of the city's males be circumcised. Davidson (*Genesis 12–50* CBC, 195) says circumcision for the Shechemites would have been a mark that they now belonged to Yahweh's chosen community. Von Rad (*Genesis* OTL, 333) however believes that only at a much later period did circumcision receive conscious theological significance and that the acceptance of faith in the God of Abraham was not suggested in the demand of Jacob's sons. See also CIRCUMCISION. In either case Shechem and his fellow citizens regarded circumcision as a trivial price to pay for an alliance which would have potentially increased their own power and wealth (v 23). But on the third day Simeon and Levi massacred the town's men, who lay incapacitated with fever, and fetched their sister (25–26). According to Von Rad (p. 335) the narrative depicts a prehistoric conflict of the tribes Simeon and Levi in the region around the town Shechem, which means "shoulder of mountain." The Shechemites appear anomalously in Jdt 5:16 in a list of peoples dispossessed from the Promised Land. This inclusion may represent the author's hostility to Samaritans and especially to Shechem, which Samaritan refugees rebuilt in the Hellenistic period and which John Hyrcanus I may have taken by the time the book was written (Moore *Judith* 160). Or the addition of Shechem could be in anticipation of Judith's denunciation (9:2) of him for raping Dinah and recollection (vv 3–4) of the subsequent taking over of his territory (Enslin 1972:90).

2. A son of Gilead, son of Machir, son of Manasseh (Num 26:31—26:35). Shechem's descendants formed the Shechemite clan within the tribe of Manasseh. Noth (*Numbers* OTL, 207) thinks that the reference to Shechem was to the well-known town of that name—an indication that it had been incorporated as a clan into the Manassite tribe. It should not be overlooked that contrary to Numbers 26, which calls Shechem the fourth of Gilead's six sons, Josh 17:2 considers Shechem to be one of Manasseh's sons, on a par with Machir. This latter arrangement might possibly have arisen to more neatly explain the division of Manasseh on the E and W sides of the Jordan River.

3. A son of Shemida, who was a descendant of Joseph's son Manasseh (1 Chr 7:19). If however this Shechem is the same as the preceding one, he is here listed incorrectly as Shemida's second-born son rather than his brother. Fellow siblings Likhi and Aniam may be equal to Helek of Num 26:30 and Noah of v 33, respectively (Braun *1 Chronicles* WBC, 111). The names of Shechem and Shemida as well as Noah and Helek appear along with relatives, Abiezer and Hoglah, as names of persons, tribes, or places in the Samaria ostraca (Myers *1 Chronicles* AB, 54–55).

_____

A. Modern and Ancient Name

About 65 km N of Jerusalem, in the territory occupied in biblical times by the tribes of Ephraim and Manasseh and known as Mt. Ephraim, is a low, flat-topped mound called Tell Balâṭah (M.R. 176179) with a surface area of about 2.4 hectares. It takes its name from the Arab village of Balâṭah, which covers most of the S half of the mound. The site stands at the end of a narrow pass between the two highest mountains in central Palestine, Mt. Gerizim (881 m) on the S and Mt. Ebal (940 m) on the N.

In 1903, Hermann Thiersh and a party of German scholars examined the mound and found along its NW face a wall of massive stone construction, 3 m in height, which they traced for over 37 m. It was obviously part of a powerful defensive wall appropriate to a major city. Prior to this discovery, there had been considerable controversy as to whether the site of ancient Shechem was identical with that of Neapolis (modern Nablus), or was situated some distance from it. Jerome's statement, "Shechem, which is now called Neapolis," apparently equated the two sites, but Eusebius stated that Shechem was "in the suburbs of Neapolis," and the Madaba mosaic map, which depends on Eusebius' *Onomasticon,* shows Shechem a short distance SE of Neapolis. Thiersh's discovery of a major ancient fortification system at Tell Balâṭah seemed to establish Tell Balâṭah, rather than Nablus, as the site of ancient Shechem, and the identification has not since been seriously questioned.

The Hebrew word *šĕkem* probably means "back" or shoulder," referring to the location of the ancient city on the col between Mt. Ebal and Mt. Gerizim. Fifty-four of the 67 occurrences of the word in the OT refer to the city or its surrounding district. The remaining thirteen are the personal name of a prince of that city, the son of Hamor, its reputed founder. See SHECHEM (PERSON). The Gk equivalent *(Sychem)* appears twice in the NT (Acts 7:16), both times in the speech of Stephen, where the martyr refers to the burial of Joseph's remains near the city. There are also a substantial number of references to Shechem and its inhabitants in the Apocrypha and Pseudepigrapha, as well as a smaller number in non-biblical sources. The biblical passages and the non-biblical material will be discussed in the context of the archaeological period which provides their background. Passages in which the word Shechem is the personal name of the son of Hamor will be mentioned only in passing.

B. Topography

Ancient peoples built their cities in militarily strategic locations where there was an abundant supply of water, sufficient agricultural land to meet the basic needs of the population, and access to roads or other channels of communication. These requirements are all met at the site of ancient Shechem.

Shechem had a guaranteed water supply. The water table is far beneath the surface, but can be reached by deep, hand-dug wells, such as Jacob's Well about 400 m SE of Shechem. In the village of Balâṭah, approximately where the S wall of the ancient city would have been, there is a copious spring. It is the best of many such springs in the plain of ʿAskar, and provides water not only for the village of Balâṭah but also for neighboring communities in times of drought when their own springs have dried up.

The Shechem area possesses agricultural potentialities favorable to the development of a major city. The underlying rock is limestone, formed about seventy million years ago when the region was at the bottom of the Tethys sea. Subsequent periods of folding and uplifting of the land produced the mountains and the network of flat-bottomed valleys which characterize the Shechem area today. Limestone weathers at the rate of about one centimeter in 1000 years to form a fertile red-brown soil, *terra rosa.* Erosion brought soil down from the hills and left a deep deposit of rich earth in the valleys. Vineyards and fig and olive orchards flourish on the slopes, especially when they are terraced. Grain and vegetables grow well in the valleys. The annual rainfall of about 50–60 cm is sufficient to sustain these crops.

At Shechem both valley-bottom land and hillsides were available for cultivation. See Fig. SHE.01. A broad fertile valley, the Plain of ʿAskar, runs E from Shechem toward the Jordan. It was probably on this plain that Abimelech ambushed the Shechemites who came out to do battle with him (Judg 9:42–44). The Plain of ʿAskar, together with the et-Tahtani and el-Gharbi Plains, provide the city with an area of valley-bottom land about ten km long and 2.4 km wide. The Plain of Mukhna, actually a long rift valley, enters the ʿAskar Plain from the S. Along it runs the road from Jerusalem.

The mountain slopes and valleys not only served the purposes of agriculture, they also provided grass for the pasturage of sheep and goats. Jacob sent his sons from Hebron to Shechem to pasture their flocks, but they preferred the still more luxuriant grassland near Dothan, about a day's journey N of Shechem (Gen 37:12–14).

A network of roads converges on and funnels through the pass between Ebal and Gerizim. See Fig. SHE.01. A N-S highway from Egypt through Beer-sheba and Hebron runs from Jerusalem along the watershed to Shechem. A N extension of this road passes through the Wadi el-Abrad to the Wadi Fariʿa where it connects with the main road to the Jordan Valley and so reaches the principal trans-Jordanian throughfares leading to Damascus and Phoenicia.

In Judg 21:19 the Jerusalem-Shechem section of the road provides a reference point for the location of Shiloh and in Jer 41:5, it is the route by which pilgrims from the N reached Jerusalem. Along its course the road runs through a number of dark, narrow defiles where robbers often lay in wait for unwary travelers (Hos 6:9).

The road which emerges from the W end of the Shechem pass divides and subdivides giving access to most of the main centers of population in the country and to the great coastal highway, the Way of the Sea *(Via Maris).*

The location of Shechem at the E entrance to the pass thus allows it to dominate and control all commercial and military traffic through the region.

C. Archaeological Excavations

1. German Expeditions. Just ten years after Thiersh's identification of the site, full-scale excavations began at Shechem. A German expedition under the direction of E. Sellin, who had previously excavated at the important sites of Taanach and Jericho, conducted its first season of excavation in 1913, followed by a second campaign the following year.

World War I brought this first phase of the excavations to an end, and the post-war economic conditions in Germany prevented resumption of the work until 1926. Between the spring of 1926 and the spring of 1928, Sellin directed five additional seasons of excavation at the site. During the spring season of 1926, G. Welter, an archaeologist with considerable experience in Greece, joined the expedition. His work in the summers of 1926 and 1927 drew praise from Sellin, but evidently tensions were building beneath the surface. Welter came to be regarded as the "archaeological expert" and Sellin as the "theological" director. Sellin's critics accused him of bad excavation techniques, inadequate recording, poor reporting, and dubious interpretation of the finds. In the summer of 1928, the German Archaeological Institute, which was responsible for the scientific integrity of the expedition, removed Sellin from the directorship and replaced him with Welter.

The move was a near disaster. Welter carried out two campaigns, each of about three months duration, in the summers of 1928 and 1931, but the pace of the work slowed dramatically. Welter's reports were brief and lacking in precision and detail, and his revisions of Sellin's conclusions were in most cases unfortunate. It is to Welter's credit, however, that he prepared excellent plans of the principal remains uncovered by the German expedition and drew the first sections produced at the site.

In 1933, Sellin was reinstated as director and given the assistance of an architect with Egyptian experience, Dr. Hans Steckeweh. What Sellin aptly called the expedition's "unlucky star" continued to shine. After a summer season in 1934, a shortage of funds and the troubled political scene in Palestine prevented resumption of the work until the Second World War made it completely impossible. Sellin had faithfully published informative, though brief, preliminary reports for each season, but the manuscript of

the final report together with the field records of the expedition were destroyed when Sellin's home in Berlin was demolished by a bomb in 1943.

Under Sellin's direction the German expedition employed three excavation methods; exploratory trenches, tracing of fortification walls, and area clearances.

Four huge trenches were dug into the tell. A N–S trench 52 m long by 5 m wide (1 on Fig. SHE.02) was cut into the mound near the center of its N side. In the search for the city wall this trench was extended and widened at its N end. Two N–S trenches were laid out to explore the area S of the wall observed by Thiersh. These were later swallowed up in the large area clearances around the NW gate and the Temple (IV, V and VI on Fig. SHE.02). A fourth trench (3 on Fig. SHE.02), later widened at its S end, ran from a building called "the house of Sheik Selim" NW at a width of 5 m for a distance of about 80 m. The fifth trench (4 on Fig. SHE.02), 5 m wide, ran from the slope of the mound on the NE side westward for about 60 m. These trenches were too narrow to reveal the full extent of any structures encountered, and were dug without cross balks along their lengths to provide stratigraphic control.

The tracing of the major defensive walls naturally began with the exposed portion of Thiersh's cyclopean wall. See Fig. SHE.02, wall A. This led to the discovery of the NW Gate, and what Sellin called the W and E "palaces," abutting the gate on either side. A later wall, with offsets and insets along its length (Wall B), appeared in Trench 4, and tracing it southward led to the discovery of the E Gate of the city.

The discovery of the NW gate with its associated structures led to a huge area clearance in that sector of the mound (A on Fig. SHE.02). A smaller area clearance at the E Gate uncovered the N two thirds of the structure (B on Fig. SHE.02).

Numerous other trenches and small area clearances yielded rich and important finds, but the reports of these are given only in very general terms.

2. American Excavations. In 1954, G. E. Wright and B. W. Anderson planned renewed excavation at Shechem. They believed that the important advances in the knowledge of Palestinian pottery chronology, in field method, and in recording and interpretative techniques which had taken place in the twenty years since the last German expedition would make possible the recovery of much of the lost information and would add new dimensions to the archaeological history of the site.

Under the direction of Wright the Drew-McCormick Archaeological Expedition (later called the Joint Expedition) went into the field in the summer of 1956, and continued with approximately six week seasons in the summers of 1957, 1960, 1962, 1964, 1966, and 1968. In 1968, R. Boling reexamined a large building on the N slope of Mt. Gerizim about 300 m from the tell which had been excavated by Welter in 1931. In the summer of 1969, J. D. Seger directed an investigation of the MB remains adjacent to the Temple area. Sellin's "palaces" were the focus of a summer campaign in 1972 conducted by W. G. Dever. Extensive cemeteries of the LB and the Roman-Byzantine Period were discovered on the S slopes of Mt. Gerizim by persons unconnected with the Joint Expedition.

The Joint Expedition planned its work with two aims in view; to reevaluate and supplement the results of the German expedition by excavation adjacent to or within areas already exposed, and to open new areas in order to fill in gaps in the data provided by the earlier expedition.

To accomplish the first of these aims seven fields were excavated during the life of the expedition. (In the terminology used by the expedition a "Field" is a system of interconnected 5 m by 5 m squares. The individual squares within a Field were called "Areas".) The Fields referred to below are indicated by Roman numerals on Fig. SHE.02.

Field I uncovered the portion of the E Gate not excavated by the German Expedition and examined the structures in front of, beside, and behind the gateway. Field II was sited on the SE edge of the huge German clearance on the sacred area. See A on Fig. SHE.02. Field III was a trench over the fortification system on the E side of the tell, just to the N of Trench 4 of the German Expedition. The exploration of the massive temple found by the Germans in Area A on the NW side of the tell constituted Field V.

Less extensive excavations designed to clarify the German results were Field IV in one of the rooms of Sellin's Eastern Palace, Field VI.2 on the NE side of German Area A, and Field VIII on the bottom and S side of German Trench 1.

Of the new excavations, Field VI penetrated below the levels reached in the German Area A to expose and elucidate the earlier structures in the citadel area. Field VII, near the center of the tell, explored the housing of the city from the latest remains to the MB III period. In an effort to determine the overall stratigraphy of the site an 11 × 11 m area (Field IX), located about 40 m S of the citadel area, was excavated from the preserved surface to bedrock. Field XIII, adjacent to the NE side of the citadel area, reached LB levels and exposed rich Canaanite remains. Field XV attempted (with ambiguous results) to locate the MB city walls on the S side of the city.

The expedition undertook some work in the environs of the tell. The most important projects were a survey of the Shechem region, conducted by E. F. Campbell, Jr., and the excavation of a Roman and Byzantine temple site on Tell er-Ras, a spur projecting from the N slopes of Mt. Gerizim (Field XII). Field X designated a largely futile search for tombs on the S slopes of Mt. Ebal. Field XI was a salvage operation to investigate a Byzantine building partially exposed when municipal workers dug a trench to lay a water pipe. Field XIV, an exploratory trench in the compound of the Tomb of Joseph, produced entirely negative results.

D. Archaeological History

Combining its own findings with those of the German excavators, the Drew-McCormick Expedition isolated 24 strata of occupation (from latest to earliest Strata I–XXIV). The accompanying table gives these results in a simplified form. The dates are, of course, approximate.

The Stratigraphy of Shechem
(dates approximate)

Period	Strata	Dates	Characteristics
Chalcolithic	XXXIV–XXIII	4500–3200	Village occupation
			[Gap in occupation during Early Bronze Age]
MB I	XXII–XI	1900–1750	Earliest urbanization
MB II	XX–XVII	1750–1650	Hyskos Period
MB III	XVI–XV	1650–1550	Prosperous urban center
			[Gap in occupation during LB IA]
LB IB	XIV	1450–1400	Complete rebuilding
LB IIA	XIII	1400–1310	Amarna Period
LB IIB	XII	1200–1125	Israelite dominance
Iron IA	XI	1200–1125	Israelite Dominance
			["Abimelech" destruction and gradual resettlement]
Iron IB–IIA	X–IX	975–810	Early monarchy
Iron IIB	VIII–VII	810–724	Divided monarchy
			[Destruction by Assyrian armies]
Iron IIC	VI	724–600	Assyrian domination
Persian	V	600–475	Cultural decline
			[Abandonment 475–331]
Hellenistic	IV–I	475–331	Samaritan sacred city

1. Earliest Settlement (Strata XXIV–XXIII). During the Chalcolithic Period (ca. 4500–3200 B.C.), settlers, attracted by the abundant water supply, moved into the area later occupied by the city, which was then virtually a level valley floor (Stratum XXIV). They built roughly circular huts with cobblestone

floors and superstructures probably of hides or compacted earth. Field IX contained the remains of three such huts in close proximity to one another. The compact nature of the occupation suggests an agricultural village of the type common in the Chalcolithic era. In Field VI a beaten earth surface, covered by occupational debris and fragments of pottery represents a second phase of occupation, still within the Chalcolithic Period.

2. Middle Bronze Age. a. MB I (Strata XXII–XXI). Urban occupation at Shechem began in Middle Bronze I (ca. 1900–1750 B.C.). Because of deep excavation for later construction the remains are disappointingly scanty, but are sufficient to show the presence of a large and well-organized community. The period began with a massive leveling and filling operation, designed to prepare the site for subsequent building operations. No fortification walls can be assigned to the period. In the interior of the city, there were two levels of housing (Strata XXII–XXI) with a period of temporary abandonment between. The buildings are substantial structures with mudbrick walls on stone foundations and typical furnishings and artifacts of domestic occupation.

The most imposing structure belonging to the period is an earthen platform held in place by a sloping stone wall. A scree of stones and pottery had fallen down the outer face of the platform, but whatever structure surmounted it had been removed by later construction. The W wall of the platform was traced for a distance of 10 m when it turned at right angles to the S. Excavation in 1964, which located the NE corner of the platform fill, discounted earlier suggestions that the structure was the corner tower of a city wall or an altar analogous to the large stone-supported structure at Megiddo. Probably the platform was a rectangular podium near the N limits of the city, topped by a large public building (sacred or secular).

Two Egyptian texts mention the city just described. An inscription on the stele of Khu-Sebek, a noble of the court of King Sesostris III (ca. 1880–1840 B.C.), describes how the king campaigned in a foreign country of which the name was Sekmem (Shechem), and how "Sekmem fell, together with the wretched Retenu (a general Egyptian term for the inhabitants of Syro-Palestine)." The Execration Texts were devices by which the Pharaohs of the 12th Dyn. (20th–19 centuries B.C.) guaranteed the overthrow of their enemies by placing their names and appropriate curses on potsherds or clay figurines which were then ceremonially broken. One of the texts gives the name of Ibish-hadad of Shechem. These texts indicate that by the mid–19th century Shechem was an important strategic and political center, a leader of resistance against Egyptian expansionist policies and probably the head of a city-state confederacy.

b. MB II (Strata XX–XVII). The second phase of the MB began in Stratum XX with the city enclosed within a simple, free-standing mudbrick wall 2.5 m wide, set on a stone foundation, a direct continuation of the defensive concepts of the 1st period of urbanization in Palestine (the EB Age, ca. 3300–2400 B.C.). A 43 m long segment of this wall was uncovered on the NW side of the city. See Wall D on Fig. SHE.03.

As the period developed (Stratum XIX), the fortifications underwent dramatic change, due partly to the introduction of the battering ram in seige warfare and partly to the appearance in the area of a new people, the HYKSOS. The city was surrounded by a huge mound of earth over 30 m wide at the base with a slope of between 30 and 40 degrees and surmounted by a defensive wall, the typical "Hyksos rampart."

In Stratum XX a large rectangular area on the inner (W) side of the defensive wall was isolated from the rest of the city. An especially massive wall formed the S side of the enclosure nearest the city. See Wall 900 on Fig. SHE.03. The walled-off area served a double purpose: it provided an enclosed space for public buildings, and a fortified last line of defense in case the outer walls were breached.

Along the inner face of Wall 900 ran a cobbled street with a drain along its edge. Beyond the street lay two groups of buildings, a S and a N block, separated at some stages by a heavy wall and at others by a paved corridor. The S block was dominated by several large courtyards with adjacent smaller rooms. The N block had for most of the period a residential and storage function. This general plan of the citadel area continued throughout the period, but the layout of the individual rooms and courtyards underwent four distinct phases of modification and rebuilding.

In the earliest of these phases (Stratum XX, Fig. SHE.03(A)) the N block, approached through a pillared entryway, contained two groups of small rooms, one for storage (Rooms 21–24) and one for domestic

purposes (Rooms 25–28). The principal features of the S block were two large courtyards (34 and 35) with a range of three smaller rooms (31, 32 and 33) on the N side.

In the 2d phase (Stratum XIX, Fig. SHE.03(B)), a corridor separated the two parts of the complex. A courtyard replaced the storage chambers of the previous phase. Three courtyards (Rooms 10/11, 12, 14) dominated the S block. Around these open spaces on the E and S sides lay a range of small rooms. Judging by the number of silos and ovens, most of these subsidiary rooms were cooking or grain storage areas. However, one of them (Room 16) had a low partition in its center and was provided with a drain. Copper slag on the floor of the room suggested the possibility that it was used for casting bronze objects.

Extensive modifications during the third phase of the citadel (Stratum XVIII, Fig. SHE.03(C)) resulted in the elimination of the small industrial rooms, and the production of four courtyards; a large L-shaped courtyard to the S and E (Room 5), a central court with a small, rectangular room provided with a drain in its SW corner (Room 6), a W court with a small room similarly located (Room 4), and a N court (Room 2).

The N court had a row of column bases stretching across its N end, and an isolated column base near its center. The colonnade probably supported the (wooden?) columns for a canopy. An isolated column base was found near the center of the court. If the complex was a palace, this room probably served as the audience hall, with the throne placed under the protection of the canopy. The W court would then have been the waiting room for those seeking an audience and their retainers. The central court may have been the palace shrine with the cult room tucked away in the corner.

The final phase of the citadel (Stratum XVII) is poorly delineated, because most of its structures and all of its floors were removed by the German excavators. It extended beyond the W limits of the earlier phases, over the stump of the disused Hyksos embankment.

Considerable debate has centered around the function of this important complex. Its isolation from the rest of the city, the size and solidity of its buildings, the numerous courtyards, and the frequent use of solidly-founded pillars demonstrate that the area served a public function. At first the expedition tentatively identified it as a palace (Toombs and Wright 1961:16, 22–28). In 1962, G. E. Wright suggested that the structures had a religious function, and called the complex the “Courtyard Temple” (Toombs and Wright 1963:11–18; G. E. Wright 1965:104–9). Paul Lapp argued that the identification of the complex as a temple was “dubious” (1963:129–30). The evidence and the arguments based on it were later summarized and evaluated by L. E. Toombs (1985:42–60). The most likely conclusion seems to be that the complex was a palace in all its phases, and that its central courtyard, located throughout the history of the structures almost directly beneath the later altar of the MB IIC period, may have been the palace shrine.

Special interest attaches to a series of burials within the complex. The earliest is the skeleton of a child, lying in a flexed position on the Stratum XX floor of Room 28 (Fig. SHE.03(A)), without burial jar or grave furnishings.

The best preserved of the series was found beneath the floor of the Stratum XIX pillared entryway (Fig. SHE.03(B)). The body of a six or seven year old child lay inside a large storage jar, placed on its side in a shallow trench, protected by flat stones. The skeleton, flexed on its right side, wore a necklace of crystal and agate beads. Pottery vessels, probably once containing grave offerings, and scattered bones of an indeterminate nature were found inside the jars and in the trench. A very similar jar burial, with the bones in disarray, was found under the floor of Room 9. Beneath the floor of the adjacent room (Room 8) was the deliberate burial of a sheep or goat on a bed of small stones. Under the W wall of the entryway (Fig. SHE.03(B)) a deposit consisting entirely of pottery, a storage jar with two smaller vessels inside, came to light.

A Stratum XVIII burial under the floor of the N courtyard was somewhat different. A jumble of bones, including fragments of at least four skulls, rested within an upright storage jar, protected by fragments of a second jar. The jar stood in a specially prepared shallow niche in the base of the wall. Two smaller vessels were associated with the burial.

The burials (human, animal, and ceramic) were made just prior to the laying of the floors or in conjunction with the construction of the walls with which they were associated. They seem clearly to have been foundation offerings, but the evidence is not sufficient to establish whether or not the human burials were child sacrifices.

c. MB III (Strata XVI and XV). Extensive building activity, high quality construction in both domestic and public architecture, and an abundance of luxury items among the artifacts show that Shechem reached a peak of prosperity in the last phase of the MB. But the presence of three major destruction levels, the last a veritable holocaust, indicates the troubled and dangerous nature of the times.

At the beginning of the period (ca. 1650 B.C.), the defensive system of the city was completely rebuilt on a new plan. The outer revetment wall of the Hyksos embankment was used as the base for a massive wall of huge boulders. See Wall A on Fig. SHE.02. Earth obtained in the main from cutting down the embankment was deposited behind the wall, so that it backed up against solid earth and was virtually impregnable to the battering ram. Eight m inside this outer wall ran a slighter circumvallation. The two walls were connected at intervals by cross walls to form a casemate system, the chambers of which were used for domestic and storage purposes.

On the NW side of the city a monumental gateway, 18 × 16 m, pierced the two walls. See Fig. SHE.02. Massive towers, projecting beyond the entryway both inside and outside the city, flanked the paved roadway through the gate. Three pairs of projections jutting out from the towers narrowed the roadway to only half its width and effectively divided it into two chambers. Each projection consisted of two huge flat stones (orthostats) set on the long edge 75 cm apart. Three gates, swung between the orthostate pairs, probably closed off the entry in time of war or disorder.

Enigmatic structures, which Sellin identified as the two wings of a palace (1926b: 304–7), stood between the outer and inner walls on either side of the gate. G. E. Wright (1965:61) identified the structures as storage rooms. Dever's reexcavation of the buildings (1974) raises the strong possibility that Sellin was correct. Immediately S of the gate, Dever identified a tripartite temple, probably the oldest example in Palestine. It consisted of an antechamber leading into a shrine room with a podium at the N end and through the shrine room to a small chamber abutting the gate. Access to the temple could only be had through a long, narrow room with a colonnade along its central axis. The layout suggests an audience hall and a palace shrine. A substantial building, consisting of a central court with a range of rooms at each end, situated N of the gateway, may have been, as Dever suggests, a barracks for troops. Alternatively, it may have constituted the living quarters of the palace.

The effect of this construction was to shift the palace to the space between the walls in order to leave room for a great public temple and its courtyard. Indeed, the public temple seems to have been built *before* the palace, since the E wall of the palace was inset to avoid the NW corner of the temple. The acropolis of the MB II city was filled over to a depth of almost 4 m to create a level platform. On this filling, a building with walls 5.1 m thick made of well-dressed masonry with a mudbrick superstructure and with its entrance flanked by two large towers was erected. See Fig. SHE.02, building V. The massive nature of the structure has earned it the name "fortress temple." The long axis of the building ran NW to SE, and the entrance, with a standing stone *(maṣṣēbāh)* on either side, was in the SE wall, where it would catch the rays of the rising sun.

The open area in front of the building was occupied by an altar and a huge limestone slab set in a stone socket, but sufficient space remained to accommodate a large gathering of worshippers.

The temple can hardly have been involved in the visits of Abraham (Gen 12:6) and Jacob (Gen 35:4) to the sacred place at or near the city, nor in Jacob's purchase of a piece of ground from the "sons of Hamor" on which to pitch his camp. The temple had a clear function in relation to the urban population, and the oak and altars referred to in the text, if they existed at all, must have stood outside the city. An intriguing possibility is that the compilers of Genesis were attempting to appropriate the site of the Canaanite shrine on Mt. Gerizim as an Israelite sacred place (see below).

The Wall A fortification system seems to have provided inadequate backup defenses behind the great outer wall, and survived for only about 25 years. The new fortifications used the lower courses of Wall A

as a stone scarp for the outer face of the mound, a precaution against sappers and the battering ram. On the relatively level area 11 m back of the scarp a powerful new wall of mudbrick on stone foundations 3.5 m wide was constructed with offsets and insets to permit enfilade fire along the wall. See Wall B on Fig. SHE.02. A new gateway (the East Gate, Fig. SHE.02) gave access to the fertile plain, the breadbasket of the city. It conformed to the plan of the Northwest Gate, but had only four pairs of orthostats, forming a single chamber within the gateway. From inside the city a flight of five steps led up to the roadway through the gate. In its initial phase the gate had a cobbled entranceway between the flanking towers. Toward the end of the city's life the surface of the roadway was raised and the orthostats were moved up to the new level and placed on rather flimsy foundations of smallish stones. The public temple and the Northwest Gate remained in use, but what happened to the "palaces" beside that gate is uncertain because most of the relevant evidence was removed during the German excavations.

If the identifications proposed above are correct, the MB city possessed at least two sacred structures, a public temple and a palace shrine. A third building, possibly also of a sacred nature, stood on the N slope of Mt. Gerizim about 300 m from the city. It was first excavated by Welter in 1931 and reexcavated by Boling in 1968. It is a square structure 18 × 18 m, consisting of an unroofed court 9 × 9 m surrounded on all four sides by smaller chambers, probably used for storage. The court had in its center a stone pedestal, which may have served as the base for a sacred pillar, and in its SE corner an altar-like platform of stone. Incense burners, a libation bowl, and a foundation deposit of bronze weapons were found near the "altar" and, in a side chamber, a stone phallus. Campbell and Wright (1969:111) suggested that the building was a shrine used by semi-nomadic clans in covenant unity with one another. However, the shrine could hardly have functioned in plain sight of the city without the approval and support of its governing authorities. If the building was indeed a tribal shrine, its presence indicates a cordial relationship between the urban and rural populations.

The nature of the domestic structures at Shechem is not well known. In Field XIII a large, multi-roomed building, probably the house of a nobleman or extremely wealthy citizen, yielded many luxury items including numerous fine scarabs and the ivory inlay for two boxes. Such houses as were excavated in Fields VII and IX were well constructed of mudbrick on stone foundations and the fine pottery and artifacts, including several scarabs, confirm the impression of a high level of prosperity.

The final destruction of MB III Shechem displays a calculated ferocity and an intent to cause complete destruction of the city. Everywhere there is evidence of intense fire. Half-destroyed buildings were looted and then deliberately pulled down and the bodies of their inhabitants thrown into the street. When the destruction was complete a layer of debris covered the city to a depth of up to 1.6 m. There is little doubt that the Egyptian armies of Ahmose I or Amenhotep I brought this disaster upon the city as they followed up the triumph of Egyptian arms over the Hyksos. Shechem lay in ruins for about a century until its rebuilding in LB IB as a Canaanite city under the domination of the Egyptian Empire.

3. Late Bronze Age. a. LB IB (Stratum XIV). The LB engineers who reconstructed Shechem seem to have done the entire rebuilding in a single, well-planned operation, using the surviving stumps of the walls of major structures as a guide for their work. The old Wall A still served as the facing of the slope of the mound. Behind it, the main defensive wall of mudbrick on a stone foundation followed the line of the Wall B system. A rebuilt Northwest Gate probably remained in use, although the evidence for this is not conclusive. The East Gate was reconstructed with a significant modification. A building, consisting of two chambers, the outer of which had a paved floor, was built on the S side of the gateway, probably to accommodate the guards on duty at the gate. The corresponding guardroom on the N side of the gate, if it existed, was removed by the German excavations.

Under the lowest floor of the outer guardroom the body of a quadruped, probably a donkey, had been buried. The head was missing. It had been severed from the body prior to the burial. Near the neck was a clump of bones from a smaller animal. The deposit appears to be a foundation sacrifice. It is particularly interesting since Gen 33:19 refers to the Shechemites as *bĕnē ḥămôr,* "sons of a donkey."

In the acropolis area (Fields V/VI) a shrine, of which only portions of the cella were preserved, stood on massive foundations of the MB III temple. Its walls were only about one third the width of those of its

predecessor. The cella was a room 16 × 12 m with the entrance on the long E side. The axis of the building was shifted five degrees to the S, possibly to bring it more accurately into line with the rising sun at the summer solstice. A cement covered podium, approached by a flight of steps, occupied part of the W wall of the cella opposite the entrance. It probably provided a base for the statues of the deities worshipped in the temple. A large altar stood in the broad forecourt. This temple, which continued in use throughout the LB and into Iron I, is a strong candidate for the Temple of *ēl-bĕrît* where the Shechemites made their last stand against Abimelech (Judg 9:46).

The broad room temple was not the only sacred structure in LB Shechem. In Field IX, part of a building with substantial walls, contained a brick platform (altar?) and a monolith, the base of which had been dressed to fit into a stone socket. This building went through several stages of reflooring during the LB Age. It may have been a satellite of the main temple or a private shrine associated with a large tripartite house adjacent to it.

An impressive LB structure filled the whole of Field XIII and extended beyond it in all directions. The W side of the complex consisted of two large courtyards. The E side was occupied by a range of three rooms used for cooking and storage, and E of these rooms the edge of what appeared to be a large courtyard disappeared tantalizingly out of the excavated area. The function of the complex is unknown. Its exceptional size and its location next to the temple area raise the possibility that it was a royal palace, but it may have been the residence of an exceptionally wealthy citizen.

The historical occasion for the LB rebuilding of Shechem was probably the establishment of the Egyptian Empire. The earliest 18th Dyn. Pharaohs would have had a vested interest in keeping the hill country depopulated and without fortified cities. The overwhelming interest of these Pharaohs would be to avoid recurrence of the Asiatic intrusions which had put the Hyksos in control of the Delta region and had cost the Pharaohs blood and treasure to repel. Fear of the Asiatics would urge the creation in the Palestine area of a defenseless buffer zone against the still powerful states to the N. However, to create such a zone would run counter to another vital Pharaonic interest, that of holding the coastal strip as an advance line into Asia and as an artery of trade. A workable compromise of these conflicting interests would be to hold the coastal road by means of a chain of fortified bases and, at the same time, to discourage the rebuilding of strong points in the hills, which would be potential threats to communication along the coast.

With the warrior king Thutmose III, Egyptian obsession with defense gave way to imperialist ambition, and an empire without cities is a contradiction in terms. When, after his victory at Megiddo, Thutmose felt that he was master of Asia he may have encouraged the rebuilding of the hill cities, Shechem among them, ruled, of course, by his puppets. A tentative date for the founding of LB Shechem is, therefore, shortly after the battle of Megiddo (i.e., about 1465 B.C.). It ended with the decline of Egyptian control in Palestine and the establishment of the mini-empire of Lab'ayu, king of Shechem (ca. 1400 B.C.).

b. LB IIA (Stratum XIII). This stratum is the high point of LB culture at Shechem. The rising level of prosperity is best seen at the East Gate, where the guardrooms were strengthened and paved with flagstones. Just S of the gateway an open area, also paved with flagstones, provided a place for the mustering of troops and for public meetings.

The building complex in Field XIII underwent alterations and improvements. The W courtyard was subdivided into four interconnecting chambers where domestic activities took place. The range of rooms to the E followed the lines laid down in the previous phase, but their functions became more clearly defined. The S chamber was a cooking area and contained an oven and a pantry equipped with storage pits. Under the central room was a sub-floor storage chamber 2 m deep and surrounded by heavy stone walls. Toward the end of the period, this chamber was filled in with material taken from a midden. The fill contained a great many restorable pottery vessels which constitutes a unique ceramic collection, datable to LB IIA. The N room housed a plaster lined silo. The houses in Field VII are of excellent construction.

The flourishing of LB IIA Shechem can be associated with the slackening of Egyptian control over its Asiatic empire in the latter years of Amenhotep III and during the reign of Amenhotep IV (Ikhnaton).

Taking advantage of the power vacuum, Lab'ayu, king of Shechem extended his control from the Valley of Jezreel to the environs of Jerusalem. The Amarna Letters show him as a shrewd, calculating ruler, skilled at setting his sails to the prevailing wind. He professed allegiance to the Pharaoh, but his neighbors refer to him as the ring-leader of opposition, the head of a coalition of rebels and a predator on his neighbors. Lab'ayu was captured by his enemies and killed, but for a time his two sons continued the policy of their father. The fruits of conquest and the profits from the caravan trade would account well for the prosperity of Shechem during the Amarna period.

In the end, the enemies of Lab'ayu's family, whether the Canaanite cities which he had threatened or despoiled, troops sent from Egypt, disgruntled allies or some combination of these, evidently had their way. Destruction by fire brought an end to the city of Lab'ayu. Its debris covers almost every quarter of the city.

c. LB IIB (Stratum XII). The city, quickly rebuilt, retained most of the features of its forerunner. The defensive system, the temple on the acropolis, the shrine in Field IX, and the housing in Field VII underwent little modification. The guardrooms at the East Gate remained, but the paved courtyard behind them went out of use and a narrow alley separated the guardrooms from the houses of the city. The principal feature of the period is a marked decline in the prosperity of the city. Walls founded in this period and rebuilds of surviving walls are of shoddy construction.

Two interesting finds are associated with this phase of the city's life. A figurine of the god Ba‹al in cast bronze overlaid with silver came from the floor of a house in Field VII. See Fig. SHE.04. The deity, wearing a conical crown, strides forward on his left foot and holds some object (now lost) in each hand. Figurines of the fertility goddess found in several of the houses show that the consort of the Ba‹al was an even more popular object of veneration than her male counterpart. The second object, recovered from the fill under an Iron I wall in Field XIII, is a fragment of a cuneiform tablet which contains part of the opening lines of an Amarna period letter.

If the story of the rape of Dinah and the subsequent plundering of Shechem by Simeon and Levi (Genesis 34) is not the vague memory of a tribal skirmish inflated and attached to the city of Shechem and the family of Jacob, there seem to be only two points at which it could conceivably fit into the archaeological history of Shechem. While the powerful walls of MB and LB Shechem stood, two semi-nomadic tribes would have been powerless to breach the defenses of the city. The period of abandonment after the destruction of the MB Age city, when the ruins may have housed a small village or have been the headquarters of a tribal group, or the period of decline at the end of the LB Age are the only likely contexts for the story.

A persistent tradition associated with Shechem is that Jacob bought a piece of land near the city from Hamor, the king of Shechem (Gen 33:19), and that in fulfillment of Joseph's death bed command (Gen 50:25, 26), the Hebrews on leaving Egypt carried with them the bones of Joseph (Exod 13:19) and buried them in this plot of ground (Josh 24:32). A garbled form of this tradition appears in Stephen's defense before the Sanhedrin (Acts 7:16). The martyr states that Abraham bought the land from Hamor, and that, not only Joseph, but all who had died in Egypt were brought to Shechem for burial. This is the only reference to Shechem in the NT.

4. Iron Age. a. Iron I (Stratum XI). No general destruction layer marks the end of the LB at Shechem. The temple on the acropolis, the defensive walls, and the East Gate with its guardrooms remained in use. This evidence indicates a relatively peaceful passage of the city into Israelite hands, and may account for its absence from the list of cities conquered by Joshua (Josh 12:7–23). Shechem is named as a "city of refuge" (Josh 20:7; 1 Chr 6:67) and as a lLevitical city in the "hill country of Ephraim" (Josh 21:21).

Shortly after the initial intrusion of the Israelites into the region, the city was the scene of a covenant-making ceremony, conducted by Joshua (Joshua 24). The ceremony took place in or near a shrine (v 26) where the representatives of the people "presented themselves before the Lord" (v 1). G. E. Wright has argued convincingly that the shrine was the temple on the acropolis, called in Judg 9:4 the "Temple of El-Berith," the God of the Covenant (1965:134–36).

During Iron I, a great deal of building activity of poor quality went on in the city. In Field XIII the LB complex was replaced by several less impressive buildings. Poorly-constructed houses crowded up against the guardrooms of the East Gate. Many of the buildings in Fields VII and IX show traces of destruction by fire. The impression of disorder and economic decline conveyed by the archaeological remains supports the picture of political unrest and turmoil provided by Judg 8:23–35.

The instability of the period culminated in the brief and abortive reign of Gideon's son, Abimelech (Judges 9). Boling (1969:103) makes the interesting suggestion that Jotham stood on the site of the ruined tribal shrine on Mt. Gerizim when he uttered the parable of the trees and cursed Abimelech (Judg 9:7–21). It would have been an appropriate place from which to protest in the name of the tribal tradition against the royal pretentions of Abimelech.

When the Shechemites rebelled against the upstart king, Abimelech's revenge was swift and complete. The topography of the region and the archaeological remains illuminate his four-stage campaign against the city. The following reconstruction assumes that the Beth-millo ("the building on the artificial fill," Judg 9:20) and the Tower of Shechem (Judg 9:47, 49) are one and the same and refer to the temple and its ancillary buildings on the acropolis. The rebel chief Gaal, deceived and taunted by Abimelech's agent Zebul, brought his troops out of the city into the Plain of ʿAskar. See Fig. SHE.01. Abimelech's forces, which had slipped down from Mt. el-ʻurmeh during the night, ambushed the rebels and drove them back into the city through the East Gate with heavy losses. Abimelech then feigned withdrawal, and the Shechemites, thinking themselves safe came out to work in the fields in the ʿAskar Plain. Abimelech's troops cut them off from the city and massacred them in the plain. Following up this success, they breached the East Gate and in a day of street fighting captured the lower city, burning and looting as they went. The surviving defenders made a last stand in the temple, but their defenses were burned to the ground and they themselves were slaughtered. The heaps of debris covering the Iron I city are silent witnesses to the completeness of Abimelech's vengeance.

The city recovered only slowly from the disaster. The beginning of the recovery was marked by the digging of unlined, bag-shaped pits through the acropolis and adjacent areas. Because of the absence of a lining the pits were unsuitable for storage. Their fill was rich in organic matter and destruction debris, containing pottery of the 12th century B.C. The pottery indicates that the pits were filled soon after the Abimelech destruction. Their most obvious use was to dispose of some of the masses of debris which covered the site. The organic matter may have come, as Campbell suggests (unpublished communication), from garments and utensils burned to prevent the spread of disease.

After the pitting phase, the most significant feature is a layering of black bands of very fine composition and rich in organic matter, found in Fields I, VII, and XIII. They were probably deposits from agricultural plots and threshing floors. Houses of poor quality stood among these plots, and in Field XIII, a roadway paved with small stones ran diagonally across the field. The once powerful city had reverted to the status of an agricultural village.

b. Iron IB–IIA (Strata X–IX). Political stability in the reigns of David and Solomon accelerated the pace of Shechem's recovery. By the time of division of the monarchy, the city had been reestablished. Drawn undoubtedly by Shechem's long tradition as the principal sacred place of the N tribes, Solomon's son Rehoboam went to Shechem to be crowned (1 Kgs 12:1). His brutal rejection of the demands of his prospective subjects led to the establishment of the independent N Kingdom under Jeroboam I. 1 Kgs 12:25 states that Jeroboam "built" Shechem and made it his capital, but whether this refers to the construction of the fortifications *de novo* or to a strengthening of existing structures is not clear.

Unfortunately, the archaeological evidence for the period is sparse and ambiguous. The fortifications were rebuilt along the lines of the LB defenses. The preserved fragments indicate that they were of casemate construction. Building activity went on also at the East Gate where the towers were reconstructed.

By Stratum IX a steep slope ran from the acropolis area downward toward the East Gate. This slope was terraced to facilitate the construction of houses. One of the terraces and fragments of two others ran across

Field VII. The remains of the housing constructed on these terraces show an improvement in the economic condition of the city.

Strata X and IX are separated from one another by a destruction level which has been attributed to the invasions of the Egyptian Pharaoh Shishak (ca. 918 B.C.). Stratum IX also ends in a destruction, possibly one of the unhappy events in the recurrent war between Israel and Damascus (e.g., 1 Kings 20).

c. Iron IIB (Strata VIII–VII). Shechem lost some of its status when Jeroboam moved his capital to Tirzah, but the city flourished as capital and tax collection center of the district of Mt. Ephraim. One of the Samaritan ostraca names Shechem as a source of taxes in wine. On the former acropolis area a rectangular building, approximately 18 m wide by 16 m deep, was built on the stumps of the old temple walls. Its lower walls were constructed of unhewn boulders. A corridor ran the width of the building at the front and gave access to three long, narrow storage rooms. The floor was a very thick layer of heavy plaster which lapped up over the base of the walls. The plan of the structure suggests a granary and the flooring may be an early example of rodent-proofing a building. The building probably housed grain collected as revenue from the district.

The terraces and the houses built on them were in use throughout the period with frequent rebuilding and repair. The middle terrace of Stratum VII supported a fine Israelite courtyard house, almost completely preserved. The open central court was a work area where domestic activities and home industry went on. In the center of the court was a cylindrical stone 90 cm in diameter. Its surface was covered with irregularly spaced, shallow grooves, leading to a deeper circular groove around the edge. A lip allowed liquid collected in the circular groove to run off into a storage jar, set into the ground beside the installation. Abutting it was a stone vat 55 cm deep. A number of large grinding stones were found in the courtyard. The installation was probably an olive press. Some of the supply of olives kept in the vat would be transferred to the flat stone and abraded against the grooves with a grinder. The oil expressed from the fruit would run off into the jar. In a later phase of the building an oval hearth 2 m long, the rim of which was coated with lime, replaced the press. The hearth was most likely a kiln for slaking lime used in the preparation of plaster, although its use as a pottery kiln cannot be ruled out. A saddle quern against the N wall of the court indicates that grain was ground there.

The N and S walls of the courtyard were flanked by two small rooms. Considerable water must have been used in the two S rooms, since they were drained by two stone-filled sumps. A long room with a silo ran the full length of its E side. It seems to have been the main living room of the house, and was connected by a corridor to the kitchen. In a later enlargement of the building, additional rooms were added on the N and S sides.

The destruction which ended Stratum VIII may be attributed to the campaign of Menahem after his successful seizure of the throne from Shallum (2 Kgs 15:13–16). The Assyrian invasion of 724 B.C. brought about the total destruction of Stratum VII. The city was reduced to a heap of ruins, completely covered by debris of fallen brickwork, burned beams and tumbled building stones. The Assyrian destruction of the N cities, of which Shechem is a typical example, made a profound and lasting impression on the people of Judah. Ps 60:6–8 (=Ps 108:7–9) is an obscure oracle of uncertain date which predicts the deliverance of the N regions. Shechem is the first place name mentioned.

d. Iron IIC (Stratum V). The impoverished reoccupation at the end of the Israelite period at Shechem shows a marked decline in every aspect of culture. The Iron II defense system and the East Gate underwent shoddy repairs. Flimsy houses covered the area once occupied by the LB guardrooms. In Fields VII and IX some advantage was taken of existing foundations, but mainly the houses were not much more than shanties. The presence of many imitations of Assyrian vessels in local clay indicates the dominance of the Assyrian overlords.

5. Persian and Hellenistic Periods (Strata V–I). Shechem remained in an impoverished state during the Neo-Babylonian and Persian Periods (Stratum V) and toward their end, had declined to such a degree that the site was abandoned for almost a century and a half. At the beginning of the period a delegation from Shechem and two other N towns came to Jerusalem to mourn the destruction of the Temple, only to be murdered by Ishmael, the assassin of Gedaliah (Jer 41:4–10).

Religious factors brought Shechem back into prominence about 330 B.C. Following their break with the Jewish community, the Samaritans built a temple of their own on Mt. Gerizim. At the foot of the mountain on the ruins of ancient Shechem they designed a city to rival the Holy City of Jerusalem. They constructed a defensive wall on the line of the MB fortifications and laid down a plastered glacis in front of it. The orthostats at the East Gate had long ago been buried in debris, but the Samaritan engineers cleared out the old roadway to form a sunken approach to the gate. A small building, erected over the remains of the LB and Israelite guardrooms housed a wine or olive press.

House construction of the period is of excellent quality. The foundations on which the mudbrick superstructures rested are made of an outer and inner face of dressed stone with a rubble core between. Broad streets separated the blocks of houses. A destruction ended this phase of the city's life.

In the succeeding phase (Stratum III) the concepts of defense and housing remained essentially unaltered. A particularly fine specimen of a Samaritan house came to light in Field II. Its door and window frames were of drafted masonry. The plastered walls were painted a different color in each room. The iron key to an interior room of the house and a clay seal from a papyrus document, showing a kneeling archer, were found in the remains of the building. Judging by the number of loom weights in the debris, a small-scale weaving industry went on in the building. From the remains of a house in Field VII came a small jar which contained a hoard of 35 silver tetradrachmas, minted by the Ptolemaic rulers of Egypt. It was probably left behind by a refugee fleeing the city at the time of the destruction of Stratum III. A possible historical context for this destruction is the wars between the Ptolemies of Egypt and the Seleucids of Damascus for the control of Palestine, which culminated in the victory of the Seleucid Antiochus III at Paneas in 198 B.C.

The development of increasingly efficient siege equipment rendered the defenses of Shechem obsolete. Ballisti could now hurl their missiles into the city from the slopes of Mt. Ebal or Mt. Gerizim. The fortification system was, accordingly abandoned and the walls robbed for building stone. At the foot of the slope below the East Gate a rectangular tower and a narrow screening wall provided a checkpoint at the entrance to the city.

Shechem was already in its final decline when in 107 B.C. Jewish forces, carrying out the expansionist policies of John Hyrcanus, destroyed Shechem completely. This time there was no recovery. In A.D. 72 the Emperor Vespasian built the city of Flavius Neapolis about 1.5 km W of ancient Shechem on the site now occupied by the Arab city of Nablus. Nablus became the urban center of the region, and Shechem remained in ruins, visited on occasion by pilgrims to the nearby traditional locations of Jacob's Well and the Tomb of Joseph.

LAWRENCE E. TOOMBS

SHECHEM, TOWER OF (PLACE) [Heb *migdal-šĕkem* (מִגְדַּל־שְׁכֶם)]. Apparently some sort of fortified place in the city of Shechem; together with its stronghold (Heb *ṣĕrîaḥ*) named "the house of El-berith" (Heb *bêt ʾēl bĕrît*), it was destroyed by Abimelek (Judg 9:46–49). The word "tower" (Heb *migdal*) has a wide range of meanings, the most common of which is a building fortified for military purposes (Gen 11:4–5; 2 Kgs 9:17; 17:9) and a part of a fortification system of a town (Jer 31:38). Mazar has shown that Migdal may have had a cultic meaning as well, taking into account the origin of the term from the Bronze Age traditions (*EncMiqr* 4:633–36, in Hebrew). This interpretation is based upon names composed with *migdal,* such as Migdal-El, Migdal-Gad, Migdal-Penuel, etc., places which bore cultic traditions prior to the Israelite period (cf. also names composed with *bêt*: Bethel, Beth-shemesh, Beth-shean, etc.).

During Sellin's 1913–14 and 1926–27 excavations at ancient Shechem (Tel Balatah), a series of four fortified temples were unearthed. These consisted of consecutive stages of buildings (Tower-Temple 1-a to 2-b), dated from "Temenos 6" phase (ca. 1650–1600 B.C.E.) to "Temenos 9" (ca. 1200–1100 B.C.E.). The tower-Temples of Shechem were located in the NW part of the city, approximately 40 m S of the N gate. It was a stone building whose external measurements were 26.3 × 21.2 m. It had very thick walls (5.2 m) and a narrow, straight single entrance with two flanking frontal towers. The single cella contained six column bases and a niche for the god's statue (which was not found). In the different phases an altar

and maṣṣebôt were put in the courtyard in front of the temple. This building, unquestionably a temple that was in continuous use for 400 years, has been identified with the Tower of Shechem ever since its discovery. The existence of similar tower-temples at Megiddo, also dating to the LB (strata VIII–VIIb, ca. 1479–1150 B.C.E.) and probably at Hazor (area A) strengthened the opinion that this was a common type of temple in LB Canaan. Taking into account the dating of Gideon's family in the 2d half of the 12th century B.C.E., it seems highly probable that the temple destroyed by Abimelech was Temple 2-b, the last in the series. The excavators dated this destruction to 1150–1100 B.C.E., which correlates well with Abimelech narrative.

But this raises questions about the meaning of the stronghold *(ṣĕrîaḥ)* of the house of El-Berith. The word *ṣĕrîah* can be interpreted as a natural cave rather than part of a fortification (1 Sam 13:6), a meaning also evident in three Nabatean inscriptions from Petra, as well as in Safaitic and modern Arabic. These considerations may associate the Bronze Age Tower-Temple structure excavated at Shechem with the "house of El-Berith," while the whole fortified acropolis of Tel Balatah would be associated with the "tower of Shechem." Nevertheless, this solution seems difficult, since it seems to refute the regular meaning of the term "tower," *(migdal).*

This led Milik (1959:560–62) and Na›aman (1986) to suggest that the Tower of Shechem was not located within the city. Milik supposed that the *ṣerîah* of El-Berith was a cultic cave on the neighboring Mt. Ebal. Na›aman suggested that the recently discovered Iron I cultic site on Mt. Ebal (Zertal 1986–87) should be identified as the Tower of Shechem, a suggestion based on the fact that the gathering in the Tower of Shechem (Judg 9:46) followed and came after the final destruction of the city by Abimelech (v 45), which might mean a separation between the two. The main obstacles with this hypothesis are that the architectural elements of the Mt. Ebal structure can hardly fit a temple, and the site had never been destroyed and/or burned, a crucial feature of the Abimelech narrative. On the contrary, the Mt. Ebal site was abandoned complete and was deliberately covered by a stone cover, presumably to protect it against secular use.

ADAM ZERTAL

SHEDEUR (PERSON) [*šĕdê›ûr* (שְׁדֵיאוּר)]. The father of the chief (*nāśî›*, Num 2:10) Elizur of the tribe of Reuben. Each of the five times that Shedeur is mentioned in the OT occurs in a tribal list where his mark of distinction is his status as the father of Elizur. Under the leadership of Shedeur's son Elizur, the tribe of Reuben participated in the census of Israelite fighting men carried out by Moses (Num 1:5, 20–21), presented its offerings on the fourth day of the twelve-day celebration of the dedication of the altar (Num 7:30, 35), took its proper place on the south side of the tabernacle in the Israelite camp (Num 2:10–11), and assumed its position in the order of march at the Israelites' departure from Mt. Sinai (Num 10:18).

The name "Shedeur" could mean either "Shaddai is fire" or "Shaddai is light." The Masoretic vocalization favors the former interpretation, where the deity bears the ambiguous character of either warming or destroying those who draw near (cf. Isa 47:14). However, Noth (*IPN*, 168) contends that the original form of the name meant "Shaddai is light," a characterization of the deity which is also found in Ps 27:1. Both interpretations should be maintained in view of Isa 10:17, where "the light of Israel will become a fire and his Holy One a flame."

DALE F. LAUNDERVILLE

SHEEP, SHEPHERD. Shepherding was one of man's earliest occupations. Flocks and herds, always a prominent feature in Palestine and other Near Eastern societies, consisted specifically of cows, sheep, and goats, but could also include horses, asses, and camels; the principal animal, however, owing to size, abundance, and usefulness, was the sheep.

Possession of these animals indicated power and wealth; Job had thousands of sheep, camels, oxen, and she-asses (42:12), and Abraham's flocks, herds, camels, and asses were counted among his blessings (Gen 24:35). At the dedication of the temple, Solomon sacrificed innumerable sheep and oxen (1 Kgs 8:5).

The owner himself was sometimes the shepherd of his flock. Abel was a "keeper of sheep" (Gen 4:2, 3) and Jacob cared for his own flocks (Gen 30:40). God is pictured as a shepherd who seeks out his own scattered sheep (Ezek 34:12). The work might be delegated to the owner's children; Rachel looked after Laban's sheep (Gen 29:6), and David, though the youngest of Jesse's sons, was given this responsibility (1 Sam 16:11; 17:15).

The principal duty of the shepherd was to see that the animals found enough food and water (cf. Psalm 23); and it was important that he guard the sheep, since they were easy prey for wild animals (1 Sam 17:34–35; Amos 3:12). There was also a danger that thieves might sneak among the sheep and carry them off (John 10:1).

The good shepherd was especially concerned for the condition of the flock, careful that the animals not be overdriven (cf. Gen 33:13–14); and would sometimes carry helpless lambs in his arms (cf. Isa 40:11), or on his shoulders (e.g., the Arcadian god Hermes Criophorus, shepherd and protector of livestock). At night, sheep were often kept in simple walled enclosures made from tangled bushes, providing a minimum of protection from weather and enemies (Num 32:16; Judg 5:16; 2 Chr 32:28; Ps 78:70; Zeph 2:6; John 10:1), or caves might have been used, affording the best protection (1 Sam 24:3). The work of the shepherd was essentially to keep the flock intact, counting each animal as it passed under his hand (Jer 33:12–13; Ezek 20:37; cf. Jer 31:10–11; Pss 49:15—Eng v 14; 77:21—Eng v 20).

From this routine of daily life an extensive and complex stock of shepherd and flock imagery developed throughout the ANE. It was one of man's earliest symbols, and is used repeatedly in the Bible to picture God, or national leaders ruling over their people. It was an ancient figure of speech common in Mesopotamia and Egypt, and the Greeks also used the image for several abstract concepts.

The early church saw Jesus as the great shepherd and the fulfillment of the good shepherd. Even in modern times the image continues in the pastorale, or the eclogue, as a recognized form of poetry, and the picturesque nature of the image has inspired some of the great composers to immortalize in music the idyllic shepherd life.

A. Mesopotamia

Throughout Mesopotamian history the shepherd image was commonly used to designate gods and kings; and as a title for kings this use is attested from practically every period.

The symbol suggests the concept of righteous government and often appears in contexts where the subject of justice is prominent. The king as a shepherd and as a representative of the gods was expected to rule with justice and to show kindness in counseling, protecting, and guiding the people through every difficulty.

The early 3d millennium epic hero Enmerkar, king of Uruk, is called a shepherd when he subjects the distant city of Aratta; and the people of Aratta "bend the knee" before him "like highland sheep." He is also called a "beloved provider" (Kramer 1959:26). The early king figures Dumuzi, ruler in Bad-tibira; Etana of Kish; and Lugalbanda of Uruk are all called shepherds. The famous Gilgamesh, acting tyrannically over Uruk, was challenged by the people: "Is this our shepherd, Bold, Stately, Wise?" (*ANET*, 73).

The *ensi* of Lagash, Gudea (ca. 2144–2124) was called a "shepherd" who "leads the people with a good religious hand" (Thureau-Dangin 1907:101); and it is significant that this king's reign is known for its peace, prosperity, and useful pursuits. Ur-Nammu (ca. 2111–2094), whose name is associated with the first known law code in history, was called the shepherd of his people. Lipit-Ishtar of Isin (ca. 1934–1924), known for his law code and his social reforms, is called "humble shepherd of Nippur, the right installed builder (cultivator) of Ur" (Thureau-Dangin 1907:205). Bur-Sin of Isin (ca. 1895–1874) is "the shepherd who has made the heart of the people happy, the mighty builder of Ur" (Thureau-Dangin 1907:205). Warad-Sin of Larsa (ca. 1834–1823) and his brother Rim-Sin, also of Larsa (ca. 1822–1763) were each called shepherd (ibid., 213, 215, 217), and the symbol is attested during the time of the Eshnunna kings (from ca. 1840) (Frankfort, Lloyd, and Jacobsen 1940:138). The great Hammurabi of Babylon is referred to as shepherd in several places in the prologue and epilogue of his law code; he says of himself, "Hammurabi, the shepherd, called by Enlil, am I; the one who makes affluence and plenty abound" (*ANET*, 164). A strong sense of royal responsibility is revealed in this law code, and the need of governing in justice is of paramount concern. The use of the symbol in early Mesopotamia appears to have been an epithet intended to dignify rulership as good, just, and beneficent for the people.

The image was especially significant as a royal name for the Assyrian kings. It appeared early, as a title for Shalmaneser I (ca. 1280), and later kings such as Tukulti-Ninuurta I, Tiglath-pileser I, Assurnasirpal, Shamshi-Adad V, Adad-nirari III, Sargon II, Sennacherib, Esarhaddon, and Assurbanipal were called shepherds (*LAR* 1:38, 56, 58, 73, 139, 140, 169, 187, 188, 254, 261; *LAR* 2:80, 258, 405; *LAS* 48, 55, 117).

Several Sumerian deities were known as shepherds. The high god Enlil was called the faithful shepherd (*ANET*, 337). The sun god Utu was regarded as a compassionate and kind shepherd (Kramer 1959:210–11). When ancient Ur was destroyed, a poet compared the city to an abandoned stable and sheepfold; and the goddess Ningal wailed that she herself was like an "unworthy shepherd." The destroyed city was also compared to "an innocent ewe," bereft of its "trustworthy shepherd" and its "shepherd boy" (*ANET*, 456, 457, 458, 459, 461; cf. this terminology to Zeph 1:4–17; Matt 26:15; 27:9, 10).

In the Babylonian creation epic, Marduk is celebrated as the fertility god of the land, and in this role is called faithful shepherd (*ANET*, 69, 71, 72). The epic is also political, elevating Marduk in the Semitic pantheon as shepherd of all the gods. The Semitic sun god Utu/Shamash, the universal judge and guardian of justice, acquired a great following of the Mesopotamian masses and was called the "Shepherd of the lower world, guardian of the upper" (*ANET*, 387–88), and it is from this god that Hammurabi is depicted receiving his law code.

B. Egypt

Here, as in Mesopotamia, the imagery was used to depict gods, kings, and various other figures, and the people were commonly thought of as a herd or flock. Though the imagery occurs early, and probably carried with it political implications of a centralized monarchy, the terminology is rare, but the concept and thought of the king as shepherd is extensive.

Evidence for the symbolic nature of the shepherd figure is found in the widespread use of the simple shepherd's crook as an insignia of kings, princes, and chieftains. The instrument symbolized the ruler's power and eminence, and especially the nature of his rule, the king's obligation to maintain order and justice *(maat)* in the land.

The appearance of the crook-staff in the Late Pre-dynastic period at first signified princely, and later royal, authority, and in historical times the heket-scepter symbolized rulership. The shepherd's crook as a symbol is traceable to the god Osiris, considered the dead ancestor of the kings of Menes' line. Osiris is always depicted with a royal crown, flail, and crook and is sometimes called shepherd. The crook is found on monuments, pillars, pylons, sarcophaguses, and on artifacts from practically every period. It is prominent on Tutankhamen's gold coffin, and a statue of Ramesses II depicts the king holding a crook in his right hand. Some scholars consider the crook, as a symbol of authority, to have originated with a primitive shepherding people who inhabited the E Delta, in the district of Busiris (House of Osiris). The god of this region in early times was Andjeti, who appears with a scepter in one hand.

In the grim years between the Old and Middle Kingdoms (2300–2050 B.C.), Ipuwer insists that the duty and responsibility of the king is to be the "herdsman of all men," and he challenges king Meri-ka-Re to act for the god, for men are "well directed," being the "cattle of the god" (*ANET*, 417). It is significant that during this period of internal crisis the cult of Osiris was revitalized to its highest level.

In the Karnak temple, Amenhotep III (1411–1374) is called "the good shepherd, vigilant for all people" (*ARE* 2:365–66). An inscription at Redesiyeh calls Seti I (1313–1292) "the good shepherd, who preserves his soldiers alive" (*ARE* 3:86). At Karnak, an inscription by Merneptah (1225–1215) says "I am the ruler who shepherds you" (*ARE* 3:243).

Throughout Shechem history, protection, kindness, and even intimate personal feeling by the ruler for his subjects are implied by the use of the image.

C. Greece

The appearance of the figure in the *Iliad* and *Odyssey* demonstrates that it had already acquired an accepted and customary meaning in very early times. The common phrase used in these works, "shepherd of the host," describes various individuals in both the Greek and Trojan military. The metaphor is used technically, and the compassionate features often implied in the Mesopotamian and Egyptian literature are conspicuously absent. The ancestral scepter of Agamemnon, and the scepters of other kings, shows the instrument to be a symbol of rank and authority; it significantly appears in context with the phrase "shepherd of the host" (*Iliad* 2. 75–109; *Odyssey* 3. 156).

Aeschylus calls a storm at sea an "evil shepherd" (*Agamemnon,* 657), and even captains are spoken of as "shepherds of ships" (*The Suppliant Maidens,* 767). Euripides speaks of the Athenian ruler Theseus as a "young and valiant shepherd" (*Suppliants,* 191; cf., *Helen,* 1479–1494), and in a description of a battle scene refers to "shepherds of chariots" (*Suppliants,* 674). In Plato's *Republic* the definitions of justice find analogy in shepherd and flock symbolism, and the inferences suggest that a ruler, who is a "shepherd," should be concerned only with what is good for his subjects (*Republic* 1. 342, 343, 345; cf. 3. 415D, E, 416A; 4. 440D). He uses the symbol in the *Statesman* to show that the work of a ruler was nothing less than royal art, or statecraft, since the best government must have a good and wise leader, who serves only for the interest of the people he governs (*Statesman,* 266–72b).

Greek pastoral literature shows man retreating to nature, resisting the allurements of the city. The heroes of the poetry are herdsmen and shepherds like Daphnis (see von Geisau PW 4:2141–46), an ancient and archetypal shepherd, and also Thyrsis, Corydon, Tityrus, Lycidas, and Amyntas (Theocritus *The Bucolic Poets, passim;* Virgil, *Eclogues, passim*). Behind the facade of these shepherds and the accompanying stories of summer days and pastoral delights were the poets' attempts to understand the profound issues of life.

D. The Old Testament

The Bible's extensive use of shepherd/flock imagery may be most attributable to Israel's earliest years of nomadic and seminomadic existence, and to some extent, ANE sources, but the shepherd life was so general it is difficult to trace common derivations for the use of the symbol.

1. God as Shepherd. The traditions of Israel's life in the desert seem to have given rise to the thought of God as their shepherd, for it is during the early period that he alone is viewed as shepherd and protector (Gen 48:15; 49:24; cf. Deut 26:5–8; Jer 13:17; Mic 7:14). Though God is seldom called a shepherd, the concept was common and remained a favorite idiom throughout Israelite history (cf. Pss 31:4—Eng v 3; 80:2—Eng v 1). God is pictured carrying in his bosom animals which cannot keep up, and mindful of the sheep which have young, he does not overdrive them (Isa 40:11; cf. Gen 33:13; Ps 28:9).

The symbol was a favorite for depicting the Exodus. In one of Israel's earliest traditions, the Song of Moses, the image of God as a shepherd leading the people to safe pastures is implied (Exod 15:13, 17), and later reflection upon this event shows God as a powerful leader driving out other nations and making room for his own flock (Ps 78:52–55, 70–72). A number of passages use the figure to compare the return from Babylonian exile with the Exodus (Jer 23:1–8; 31:8–14; Isa 40:11; 49:9–13). God's loyalty and devotion to an individual sheep is presented in the classic Shepherd Psalm (23); it is possible, however,

that this psalm alludes to the exiled community and is a symbolic expression of their return to Palestine (cf. Isa 49:9–13 and Psalm 121).

The picture of Israel as a flock given into the hands of butchers (the nations) in Ps 44:12–24—Eng vv 11–23 is a variation on the usual thought of God as Israel's shepherd, for here the psalmist views God as a sleeping shepherd, unmindful for the welfare of the flock (cf. Isa 56:10, 11); and in Ps 74:1, God is an angry shepherd, casting off his flock.

2. Human Leaders as Shepherds. As among other ANE peoples, Israel's leaders were often regarded as shepherds, and even though God was always their principal shepherd, responsible human agents were necessary so that Israel would not be as "sheep without a shepherd" (Num 27:16, 17); and significantly, a charismatic element is said to have rested on such leaders (Num 27:16–21; cf. Isa 11:1–9; 44:28–45:1). God is said to have led the flock Israel through the wilderness by the hand of Moses and Aaron (Ps 77:21—Eng v 20; Isa 63:11). Although no Israelite king is ever directly called by the title "shepherd," it is implied, since David as prince feeds, or shepherds, Israel (2 Sam 5:2), and when Micaiah predicted the death of Ahab and Israel's defeat, he said the scattered army would be "as sheep which have no shepherd" (1 Kgs 22:17; 2 Chr 18:16; cf. Num 27:16, 17).

In the book of Jeremiah the image includes both religious and political figures of varying rank and authority, showing that by the prophet's time it was a well-established and regular portrait for the ruling nobility (Jer 2:8; 3:15; 10:21; 25:34–38; cf. Ezekiel 34). Even the commanders of the enemy from the north are described as shepherds in a manner reminiscent of Homer's usage (Jer 6:3; 12:10; cf. 13:20).

The symbol receives its most extensive treatment in Ezekiel 34. Here the prophet uses the evil shepherd theme to illustrate selfish and irresponsible leadership (vv 2–3), and to rebuke kingship based on domination and crushing oppression: "With force and harshness you ruled them" (v 4), words which echo the cruel period of Egyptian bondage (cf. Exod 1:13–14; Lev 25:43).

The Persian king Cyrus is anointed as God's servant and chosen as his shepherd to rebuild Jerusalem and the temple (Isa 44:28; cf. Jer 23:1–8).

3. Other Uses of the Image. Even death is personified as a shepherd, from which only God can ransom the psalmist (Ps 49:15–16—Eng vv 14–15; cf. Hos 13:14). In an ironic application, the wind is called a shepherd which drives away Jerusalem's shepherds (Jer 22:22). The imagery is sometimes equated with an era of peace (cf. Mic 5:2–6; Isa 11:1–9; Ps 23:2); and it is often God himself who leads Israel to an idyllic place (Jer 31:8–10; Pss 1:3; 5:9—Eng v 8; 23:3, 4; 36:9–10—Eng vv 8–9; Isa 41:18–19; 43:19–20; 48:21).

The use of the sleeping shepherd motif implies irresponsible leadership (Isa 56:10–12; Nah 3:18); and such rulers are called "stupid," since they failed to "enquire of the Lord," and as a consequence "their flock is scattered" (Jer 10:21).

Because sheep are passive and defenseless, a prevailing picture associated with this imagery is that of Israel as straying sheep (Isa 53:6; Ps 119:176; cf. Isa 13:14).

The prophet Jeremiah refers to himself as a "lamb led to the slaughter" (11:19), and in vengeance prays that his enemies be taken as sheep for slaughter (12:2–3); but he weeps that "the Lord's flock has been taken captive" (13:17; cf. 13:20).

E. The Apocrypha and Pseudepigrapha

Here the image generally follows the patterns of the OT. God, as the universal shepherd, is a didactic leader who rebukes, trains, and teaches mankind (Sir 18:13, 14; cf. Eccl 12:11). The history of the world and Israel is given, using animal and shepherd metaphors (*1 Enoch* 85–90; cf. 89:13, 20, 36–39 with Ps 77:21—Eng v 20). The Babylonian Holofernes, as conqueror of Jerusalem, is compared to a leader of sheep that have no shepherd, since God had forsaken Israel (Jdt 11:19). A Davidic king will rise to shepherd God's scattered flock *Pss. Sol.* 17:23–46). A kind, spiritual leader shepherds and comforts his suffering and guilty congregation (*Fragments of a Zadokite Work* 16:1–3). See ZADOKITE FRAGMENTS. Shepherds are considered essential for the preservation of the Law, and the evils which fell on Israel were the result of their loss, an apparent reference to prophets and priests (*2 Bar.* 77:13, 15,

16). A future shepherd is presented who takes on messianic proportions (2 Esdr 2:34), and Esdras himself is regarded as a shepherd (2 Esdr 5:17).

F. The New Testament

The OT concepts about the shepherd as a responsible leader were continued by the disciples of Jesus, who used the motif to characterize his role and mission. The description of Jesus as the second David, and as Israel's shepherd, begins when shepherds in the fields near Bethlehem, the city of David, heard that his son was born, and angels announcing "peace" to mankind (Luke 2:8–20). The narrative is reminiscent of the OT declaration that the coming of David would result in a "covenant of peace" (Ezek 34:23–25; cf. also 1 Sam 16:1, 12, 13; Jer 23:1–8; Mic 5:2–4).

Jesus is presented as going to "sheep without a shepherd" (Mark 6:34; Matt 9:35–10:6; 15:24; cf. Luke 19:10). The terminology in Mark appears to be based on Num 27:16, 17, where Joshua is appointed Israel's leader, and also on Ezekiel 34, where the leaderless and scattered sheep await the new David (Ezek 34:1–10; 23–24).

The most developed shepherd and flock imagery of the NT appears in the gospel of John (10:1–18, 22–29), where Jesus' concern for Israel is contrasted with the feigned care of their present leadership. As a compassionate and trustworthy shepherd, his mission and quality of leadership are marked by a willingness to die for the sheep (v 11; cf. 1 Sam 17:34–35). The author has specifically identified the mission and death of Jesus with his role as a shepherd by using ideas which look back to the Davidic shepherd of Ezek 34:11–16, 23–24, and the smitten shepherd of Zech 13:7 was also in view (cf. Mark 14:27). Since Zechariah 9–14 was especially significant for the early disciples and for their interpretation and understanding of Jesus' eschatological program, the statement, "Strike the shepherd that the sheep may be scattered," and the entire dying shepherd passage (Zech 11:4–14; cf. Matt 27:9), formed a core around which their savior's life and death might be interpreted. The context in Zechariah had a pronounced emotional effect on the disciples when they saw their leader arrested and the apostles scattered like helpless sheep. Both Ezekiel 34 and Zechariah 9–13 were especially productive as the source for much reflection on the role of the shepherd in the gospels.

At the end time the nations are to be gathered before the Son of Man like a great flock of sheep and goats (Matt 25:31–33), and the book of Revelation suggests a military shepherd image (2:27; 19:15; cf. Ps 2:8, 9).

Based on the view that Jesus was the great Shepherd and Guardian of souls (1 Pet 2:25; 5:4), the early church used the symbol to describe the work of its leaders, who were expected to pattern their life and work after that of their chief Shepherd (1 Pet 5:1–4; Heb 13:17, 20–21).

Church leaders were instructed to "tend the flock of God" (1 Pet 5:2), and the titles which were applied to them, such as elder *(presbyteros)* and guardian, bishop, or overseer *(episkopos),* are directly linked to the work of shepherding (cf. Acts 11:30; 14:23; 15:2, 4, 6, 22, 23; 16:4; 20:17, 28–29; 1 Tim 3:2; 4:14; 5:17; Titus 1:5; 1 Pet 5:2–3; and the church was to be sustained by the responsible oversight of these leaders, who were the shepherds over God's flock.

JACK W. VANCIL

SHEERAH (PERSON) [Heb *še*ˊ*ĕrâ* (שְׁאֵרָה)]. A descendant of Ephraim (1 Chr 7:24). This passage is part of a fragment, vv 21b–24, that interrupts the Ephraimite (Joshua) genealogy, though the Chronicler's reasons for putting it here are unclear. The only other listing of the Ephraimite clan in the OT is Num 26:35–36 and it contains no mention of Sheerah.

Sheerah is Beriah's (v 23) daughter. She is said to be the founder of three cities, two named Beth-horon and one Uzzen-sheerah. The former are located in S Ephraim (Josh 18:13–14) and are traditionally linked

to Joshua (*1DB,* 394). Both were the scene of numerous military conflicts (Josh 10:10–11; 1 Sam 13:18). Uzzen-sheerah is not known elsewhere in the OT.
M. STEPHEN DAVIS

SHEHARIAH (PERSON) [Heb *šĕḥaryâ* (שְׁחַרְיָה)]. A Benjaminite, the son of Jeroham (1 Chr 8:26).

According to the Chronicler, Shehariah was a tribal chief residing in Jerusalem in the postexilic period. The name "Shehariah" occurs only once in the long list of Benjaminites in 1 Chr 8:1–40. The origin and provenance of the name is uncertain. Noth (*IPN*, 169) suggested Shehariah means "Yah is dawning," making reference to the similar idea in Isa 60:2. The almost identical name "Shaharaim," differing only in the vowel pointing and final consonant, occurs earlier in the list (1 Chr 8:8).
TOM WAYNE WILLETT

SHEIKH ABU ZARAD (PLACE). See TAPPUAH (PLACE); TEPHON (PLACE).

SHEKEL [Heb *šeqel* (שֶׁקֶל)]. "Shekel" is also the RSV rendering of the Gk *statēr.* See COINAGE; WEIGHTS AND MEASURES.

SHELAH (PERSON) [Heb *šelaḥ* (שֶׁלַח)*; šēlâ*]. SHELANITES. **1.** Son of Arpachshad and father of Eber (Gen 10:24; 11:12–15). Shelah lived to an age of 433 years. In Genesis 11, Shelah forms part of the line which culminates in Abram; in Luke 3:35, Shelah (Gk *sala*) forms part of the line which culminates in Jesus. The LXX inserts *kainan* in the genealogy of Genesis 5 between Arpachshad and Shelah, and this is reflected in the Lukan genealogy. The name itself is related to the West Semitic root, *šlḥ,* identified variously as a weapon, a canal, or even a divine name (Skinner *Genesis* ICC, 131–32, 232; Driver 1948:77, 81). A divine name based on *šlḥ* is plausible. Whether or not a Canaanite deity, *Šalaḥ,* was specifically god of the infernal river (Tsevat 1954; Loretz 1975), such a divine name may also have formed part of the personal name "Methuselah." However, this interpretation suffers from the fact that such a deity is unattested outside of personal names. The form *šlḥn* occurs as a personal name in Old South Arabic (RES 2687, 1; cf. Müller 1963:315).

2. Third son of Judah (*šēlâ;* Gen 38:5; 1 Chr 1:18; 4:21), and ancestor of the Shelanites (Gen 46:12; Num 26:20).

RICHARD S. HESS

SHELAH, POOL OF (PLACE) [Heb *bĕrēkat* (בְּרֵכַת) *haššelaḥ* (הַשֶּׁלַח)]. Name of a pool near the King's Garden in the area of the Fountain Gate, where Shallun under Nehemiah's governorship repaired the city wall of Jerusalem (Neh 3:15). The LXX reads *tōn kōdiōn* "of the sheepskins" for Shelah. However, Siniaticus and Theodotion read *tou Siloμam,* with the Vulgate and the Arabic versions. The pool of Shelah has been related to the Shiloah of Isa 8:4; both names share the same Heb consonants which mean "to send" (with the idea of supplying water; Simons 1952:109 n. 2, 190). It may be identified with modern Birket el-Hamra, S of the city and outside its wall (Wilkinson 1978:120–21; Williamson *Ezra-Nehemiah* WBC, 207). The "artificial pool" of Neh 3:16 may be identified with the King's Pool (Neh 2:14; Avi-Yonah 1954:246), the possible remains of which have been excavated on the W side of the Kidron Valley (Adan 1979). If so, then this "artificial pool" would be different from the Pool of Shelah. However, the King's Pool has also been identified with the Pool of Shelah (Ussishkin 1976:90).

RICHARD S. HESS

SHELEMIAH (PERSON) [Heb *šelemyâ* (שֶׁלֶמְיָה)*; šelemiyāhû* (שֶׁלֶמְיָהוּ)]. The personal name of some nine individuals, most of whom were in the late Judean or postexilic period.

1. A Judean to whom the cast of the lot fell for the office of high gatekeeper of the Solomonic temple's E gate (1 Chr 26:12–14a). His son Zechariah, a shrewd counselor, obtained the lot for the N gate. In the meagerness of detail one can only speculate that those gatekeepers listed in 1 Chr 26:1–11 were the ruling body of the concerns to the temple gates: the sacred, ethical, legal, and social judgments affecting the priest-laity relationship. The specific task of Shelemiah appears to have been the executive administrator of the dictates of the governing body. It seems that Shelemiah had six associates in the administration of his office (1 Chr 26:17). He may be identical to SHALLUM **#10.**

2. The grandfather of Jehudi and son of Cushi, a member of the nobility, a judgment deduced from the four generations recounted, and by the political strata in which Jehudi trafficked (Jer 36:14). That the princes chose to send a member of this family to encourage Baruch to appear before the princes of the realm and to read the provocative words of Jeremiah before them, that Baruch consented to accompany them to the court exhibits a confidence that Baruch must have felt in the delegation, and suggests that the family of Cushi were political moderates and sympathetic to the message of the prophetic party. On the other hand, it was Jehudi that read the scroll of Jeremiah to King Jehoiakim, a thankless and dangerous task which aroused the brazen king to such anger that he degraded the holy scroll by using it as fuel for his brazier (Jer 36:20). That Jehudi functioned in the immediate presence of the king indicates the nobility of his family stature.

3. The son of Abdeel, a noble of the court of Jehoiakim, an intimate and supportive adherent of the policies of the king (Jer 36:26). When Jehudi had finished reading the scroll and when Jehoiakim had burned the entire scroll in the brazier, the king set about to crush, no doubt once and for all, the antithetical proposals of the prophetic party, largely the followers of Jeremiah. He dispatched his own son, the prince Jerahmeel, together with Seraiah the son of Azriel and Shelemiah the son of Abdeel to apprehend Baruch and Jeremiah.

4. The father of Jehucal (Jer 37:3) or Jucal (Jer 38:1), who with the priest Zephaniah, the son of Maaseiah, was sent to implore Jeremiah to pray for the Judeans.

5. The father of Irijah, a Judean sentry stationed at the Benjamin Gate (Jer 37:13). When Jeremiah the prophet sought to finalize a property settlement in his family and to purchase land that appeared destined to fall into the hands of the Babylonians, he was seized by this officer as a deserter to the enemy. The plea of the prophet was preemptorily rejected; he was examined before the enraged militaristic princes, beaten, and imprisoned. That the family is traced to the third generation may suggest a military involvement of its members.

6. A son of Binnui who had contracted a marriage with a foreign wife in the postexilic period (Ezr 10:39; 1 Esdr 9:34). However, he banished his wife (and children?) in accordance with the judgment of Ezra and the majority voice of the Judean community to rid the new national structure of the taint of paganism (Ezra 8–10; 1 Esdr 8:68–9:36).

7. A second son of Binnui, according to the RSV, who had married a foreign wife and submitted to the edict of Ezra endorsed by the Judean community to dissolve the marriages in which a foreign woman and offspring were concerned and to banish them from the community (Ezra 10:41). See BANI.

8. The father of Hananiah, who restored a portion of the ruined wall of Jerusalem (Neh 3:30). The son Hananiah may possibly be the person called an apothecary (Neh 3:8), a member of a guild responsible for the production of incense, sacred ointments, and other apothecary products designed for sacred use (cf. Exod 30:22–38).

9. One of the four treasurers whom Nehemiah appointed to supervise the ministration of funds to the Levites. The choice of these officers was quite varied: Shelemiah was a priest, Zadok was a scribe, Pedaiah was of the Levites, and their assistant Hanan undesignated, were considered responsible personnel who would fulfill their duty to distribute the tithes equitably to the Levites, certainly to correct some of the flagrant abuses that prevailed at the time (Neh 13:10–13).
EDWARD R. DALGLISH

SHELEPH (PERSON) [Heb *šālep* (שָׁלֶף)]. A son of Joktan (Gen 10:26; 1 Chr 1:20) whose name appears in the so-called "Table of Nations" (Genesis 10) as a tribal rather than personal name (Westermann 1984:526–27). It may be identified as the name of a South Arabian tribe. Already in the 19th century, E. Osiander (1857:153–55) had pointed out that Arab geographers refer to a Yemenite tribe bearing the name *as-Salif* or *as-Sulaf.* Al-Hamdānī (1884:100.7) mentions *as-Salif* bin Zurʿa, which form a tribal branch of al-Kalāʿ and which resided in the *miḫlāf* as-Saḥūl in the region of present-day Ibb, where a place name *al-Aslāf* (pl. of *Salif*) bears evidence to them. This origin is adduced by the same author in his *Al-Iklīl* (1966:331–32) as Banū *s-Suluf* (another pl. of *Salif*) bin Zurʿa bin Sabaʾ. A genealogy which is taken over from the Table of Nations in Genesis 10 is to be found in *Al-Iklīl* (Al-Hamdānī 1954:52.1), where an *as-Sulaf* and a *Sālif* are listed as sons of Qaḥṭān (biblical Joktan). Together with the tribes of ʿAkk and al-Ašʿar in the Yemenite coastal plain, the *Sulaf* are said to have venerated the idol al-Munṭabiq (Ibn Ḥabīb 1942:318.4). Those *as-Salif* (or *as-Suluf* or *as-Sulaf* respectively) are most probably to be identified with the *slfn* mentioned in the Late Sabean inscription CIH 621.5, where they are listed among the tribal groups which participated in the construction of the stronghold Māwiyat, the present-day Ḥuṣn al-Ghurāb near the ancient harbor of Qanaʾ, where the inscription was found. This identification is supported by the fact that in line 2 of the same inscription the tribe *klʿn* (= *al-Kalāʿ*) is mentioned, a tribe to which the *Salif* belong according to the South Arabian tradition. One of the nine gates of the ancient Himyaritic capital Ẓafār bore the name *bāb al-Aslāf* (al-Hamdānī 1979) which likewise could have been named after the *Salif.*

It is uncertain whether the tribe Radmān *Ḏū-Salifān (rdmn ḏslfn)* in the Sabean inscription CIH 648, 2–3 belongs to the *slfn* in CIH 621; probably they are separate, and the first one might be associated to the land of *Salif* mentioned in al-Hamdānī (1884:76), which was situated in the region of the Sakāsik near al-Ǧanad, NE of present-day Taʿizz in the S part of Yemen. Other less likely possibilities of an identification of the biblical *šelep* and the Sabean *slfn* with the Yemenite place names *Salafa* or *as-Salf* respectively were considered by H. von Wissmann (1975:78, n. 1).

The *salapēnoi* in Ptol. *Geog.* 6.7.23, with which the *šelep* were occasionally joined, are to be separated from them; first, they are to be located much farther in the N of the Arabian Peninsula; and second, the correct reading of the name is most probably *alapēnoi.* Attempts to compare the biblical *šelep* with the Arabic nouns *salaf,* "ancestors," or *silf,* "brother-in-law," are certainly also to be rejected.

W. W. MÜLLER

SHELESH (PERSON) [Heb *šēleš* (שֵׁלֶשׁ)]. A descendant of Asher, named in the genealogical list of 1 Chr 7:35. In keeping with his name ("third"), Shelesh is listed as the third son of Helem, who perhaps is to be identified with Hotham (7:32). No other information is given about this figure, either in this genealogy or elsewhere in the Hebrew Bible. His name, however, is similar to that of Shilshah (1 Chr

7:37), and the two have been associated with the lands of Shalishah and Shaalim in Saulide narratives (see Edelman 1985:86).

JULIA M. O'BRIEN

SHELOMI (PERSON) [Heb *šĕlōmî* (שְׁלֹמִי)]. The father of Ahihud, a leader of the tribe of Asher who was appointed to oversee the distribution of the land to the children of Israel (Num 34:27).

Shelomi is a shortened form of the name "Shelemiah," a theophoric name consisting of the root *šlm,* "to make full," "to complete," and the divine element *yh.* The name "Shelemiah" occurs in texts from the end of the Judahite monarchy (Jer 36:14; 37:3; 38:1) and from the postexilic era (Ezra; Nehemiah; Chronicles). The name "Shelomi" may be translated "the Lord has made full" or "the Lord has made complete." In the LXX, it is rendered *Selemi,* and as *Salomi* in the Vulgate.

The name "Shelomi" has been found in extrabiblical writings from Palestine. On a stamp of unknown provenance, one finds the words *šlmy/ hʿd,* "Shelomay, the notary (witness)" (Naveh 1971:29). On an Aramaic ostracon from Arad, dated to the 4th century B.C., the name *šlmy* is found.

RAPHAEL I. PANITZ

SHELOMITH (PERSON) [Heb *šĕlōmît* (שְׁלֹמִית)]. Var. SHELOMOTH. The name "Shelomith" is held by five persons in the Hebrew Bible, who range by date from the 10th to the 6th century B.C.E. Shelomith is sometimes confused in the Hebrew text with the very similar name SHELOMOTH. It has been argued by Noth that, where the text refers to a man, the form "Shelomoth" is correct and Shelomith an error (cf. 1 Chr 23:18; 24:22; 1 Chr 26:25–28). Although this may be correct, it is to be noted that the source of confusion between the two names in the Hebrew text lies in the confusion of the similar letters *yod* and *waw.* Whether or not Noth is correct, the problem is compounded by this epigraphic fact.

1. The daughter of Dibri, from the tribe of Dan. During the wanderings in the wilderness (Lev 24:11), she married an Egyptian. Their son cursed the Name (of Yahweh) and was taken before Moses for judgment. He was then stoned to death as punishment.

2. The daughter of Zerubbabel (1 Chr 3:19). This verse lists the first group of Zerubbabel's children, who may have been born before the return to Jerusalem. She is the only woman named in this list of postexilic, Davidic descendants (vv 17–24).

3. A Levite (1 Chr 23:18). He is called the chief of the sons of Izhar. The same person appears in 1 Chr 24:22 as Shelomoth.

4. The child of Rehoboam, king of Judah (932–916 B.C.E.), and Maacah the daughter of Absalom (2 Chr 11:20). The child may have been either a daughter or a son, since the form "Shelomith" is used for either gender. Cf. SHELOMOTH #4.

5. Shelomith is the name given to the head of a father's house who returned to Jerusalem with Ezra (Ezra 8:10). If the reading of 1 Esdr 8:36 is followed, he is of the family of Bani (missing from Ezra 8:10) and the son of Josiphiah. Cf. SHELOMOTH #5.

RUSSELL FULLER

SHELOMOTH (PERSON) [Heb *šĕlōmôt* (שְׁלֹמוֹת)]. Var. SHELOMITH. **1.** Son of Shimei, who was of the levitical family of Gershon, son of Levi, or perhaps the son of Ladan, where *bĕnê šimʿî* (1 Chr 23:9a) has entered the text as an intrusion. Although there is no textual warrant for this reading, it is the most natural way to solve the difficulty of v 9b, which describes the sons of Shimei as "heads of the fathers for *laʿdān.*" Shelomoth is named as one of the family "heads" in v 9, whether the son of Shimei or Ladan. The Qere (*šĕlômît*) is given in the LXX, Targums, and Vulgate but the Ketib *(šĕlōmôt)* occurs in

the Syriac and Arabic versions. The most common form of the name seems to be "Shelomoth" (cf. SHELOMITH). By etymology, the name is related to the verb *šālam* ("to be complete").

2. Son of Izhar and head of the levitical family made up of Izhar's sons. As such, Shelomoth is mentioned in 1 Chr 23:18 and 24:22. The MT of 23:18 reads Shelomith rather than Shelomoth although the LXX reads Shelomoth (Gk *Salōmōth*). The MT of 24:22 reads Shelomoth. Each time the name "Shelomoth/Shelomith" is used in the Hebrew Bible, its alternate form occurs in the Ketib of the MT or in another important source. The only exception is 24:22, where the name occurs twice without alternate readings. Noth claimed that the form *šlmyt* was taken by later readers as a plural of the feminine *šlmy* and hence emended to read *šlmwt,* which was considered a more proper masculine form (*IPN,* 165). The same Hebrew root does in fact provide the basis for the name "Salome." The individual denoted in the preceding passages was also the father of Jahath.

3. The son of Zichri, who, with his brothers, was responsible for the treasury of dedicated things. He is mentioned in 1 Chr 26:25, 26, and 28. The forms "Shelomoth" and "Shelomith" both occur in this short span of verses. The treasuries he administered consisted of booty captured by Samuel, Saul, and Joab. 2 Sam 8:11 seems to corroborate this, but temple officials are not included in that passage. Elmslie entertained the possibility that 1 Chr 26:20–32 contained "scraps of ancient information" (*IB* 3:429). If this is true, its inclusion in this portion of Chronicles is intended to fill in details on the identity of the officials and their precise duties. This best accounts for the inclusion of this somewhat reduplicative section (compare chaps. 23 and 24). The treasuries were used for temple maintenance.

4. The son of Rehoboam and Maacah, according to 2 Chr 11:20. The man was otherwise undistinguished, since his name occurs only here. The Hebrew text actually has Shelomith, but in keeping with other texts, it is often emended to Shelomoth (cf. SHELOMITH #4). Maacah is not named among the children of Absalom in 2 Sam 14:27; therefore, Shelomoth should not be identified as his grandson. By what seems an odd coincidence, Absalom's mother was also named Maacah (1 Chr 3:2). The interpreter would expect that *bat* was a corruption of *ʾim* (wife), but even if Absalom's mother were not removed by two generations from the time of Rehoboam, there is no textual warrant for such a correction.

5. The son of Josiphiah and head of the house of Bani. Shelomoth was one of the family leaders, named in Ezra 8:10, who accompanied Ezra to Jerusalem. This identification is based on texts rather than the MT (cf. SHELOMITH #5). In the Hebrew Bible, Ezra 8:10 departs from the pattern which first lists family lines, then the returning member who represents the line. In this case, Shelomoth is mentioned as if he were the family namesake, but with no representative mentioned. Consequently, the name *bānî* has been added to match texts. Bani is thus indicated as the name of the lineage, and Shelomoth stands as its representative. The name "Shelomoth" also reflects a textual change: The Hebrew is *šelōmît.* Other occurrences of the name in the MT and LXX texts provide the basis for the change.

DONALD K. BERRY

SHELUMIEL (PERSON) [*šĕlumîʾēl* (שְׁלֻמִיאֵל)]. The son of Zurishaddai and the chief (*nāśîʾ*, Num 2:12) of the tribe of Simeon during the wilderness sojourn after the Exodus. He is mentioned only five times in the OT in four different tribal lists. As leader of the tribe of Simeon, he helped Moses conduct a census of the able-bodied fighting men of Israel prior to their departure from Mt. Sinai (Num 1:6), presented the offerings of the tribe of Judah on the fifth day of the twelve-day celebration of the dedication of the altar (Num 7:36, 41), and directed his tribe to its proper place on the south side of the tabernacle in the Israelite camp (Num 2:12) and to its position in the order of march as the Israelites prepared to depart from Mt. Sinai (Num 10:19).

Johnson (*IDB* 4:320) suggests that Shelumiel may be the same person as the one named SALAMIEL (Gk *Salamiēl*), son of Sarasadai, in the genealogy of Judith (Jdt 8:1; note the for Shelumiel is identical to Salamiel). The meaning of the name "Shelumiel" admits of at least three interpretations: (1) "God is peace" (*IPN,* 165), (2) "at peace with God," and (3) "God is friendly" (Gray *Numbers* ICC, 7).

DALE F. LAUNDERVILLE

SHEM (PERSON) [Heb *šēm* (שֵׁם)]. The name of the eldest son of Noah. It appears in the Hebrew Bible seventeen times (Gen 5:32; 6:10; 7:13; 9:18, 23, 26, 27; 10:1, 21, 22, 31; 11:10, 11; 1 Chr 1:4, 17, 24), once in the NT (Luke 3:36), and once in the Apocrypha (Sir 49:16).

A. The Name

The etymological origin and meaning of the name "Shem" is disputed. It has been suggested that Shem is an abbreviated or corrupted form of a theophoric name such as *Šĕmû›ēl, šem* meaning "son." In this regard, it is thought that the name refers to an ethnic deity, "heros eponymus," not an ethnic or geographic entity. The hypothesis that "Shem" is related to Akkadian *sumu,* "name" or "son," is more plausible. Names are regarded in Semitic culture to have very significant spiritual connotations. In view of this fact, it is conceivable that Shem means "The Name" derived appropriately from the common Semitic base *šVm-* "name." A case can also be made that Shem, as in the South Semitic languages Sabean and Ethiopic, means "appointed one," "honored one," "elevated one," or even "holy one."

B. Biblical Data

Shem is the eldest of Noah's three sons, the brother of Ham and Japhet (Gen 5:32; 6:10). All three sons and their wives joined Noah in the Ark and escaped the Flood (6:9; 7:13–15; 9:1–18). He also shares together with his brothers the divine blessing and covenant (9:1, 17). On Shem's role in the story of Noah's drunkenness (Gen 9:20–27), see HAM (PERSON).

Shem is the father of all Semites, particularly the Hebrews and the Arabs. He had five sons (Elam, Asshur, Arpachshad, Lud, and Aram) and twenty-five descendants (Gen 10:21–32; 1 Chr 1:17, 24). According to the biblical ethnographic conceptions, the descendants of Shem occupy chiefly the lands to the E of Israel (Arabia and Mesopotamia). Some of his descendants, however, may have controlled part of the Horn of Africa. Shem's descendants Asshur, Elam, and Sheba are identified with peoples known from ancient history. Hazarmaveth (Gen 10:26; 1 Chr 1:20) is generally identified with Hadramaut in South Arabia. Joktan is claimed by both Yemenis and Ethiopia to be their ancestor. Albright identifies "Havilah" with N Ethiopia. Others identify Ophir with the Afar in E Ethiopia.

Although Shem does not figure prominently in biblical literature, he is the lineal ancestor of the Jewish people; Abraham is his tenth-generation descendant (Gen 11:10–31). In the Table of Nations his genealogy is given after that of Ham and Japhet, probably to express continuity with the history of the family of Abraham and his descendants that follows.

C. Jewish Tradition

Very few references are made to Shem in the Pseudepigrapha, and hardly any in the published literature of Qumran (*Jub.* 2:64, 69, 72–77, 92, 93; *2 En.* 73:5; *Apoc. Adam* 4:1; *T. Sim.* 6:5; *T Isaac* 3:15; *Ps-Philo* 1:22; 4:1ff). The book of *Jubilees* deals with divine land distribution. See Fig. GEO.05. The *Sibylline Oracles* give the sons of Noah the names of Greek gods, Shem being identified with Cronos (3:110–15). The gnostic Sethian Tractate *Apoc. Adam* (V 5:72, 17; 73:14, 25; 74:11; 76:13, 4) deals with the division of the world and empires among the sons of Noah.

The Tannaitic and Amoraitic teachers considered Shem, or *šēm rabbā,* "Shem the Great" as he is called by some (*b. Sanh.* 108b), Noah's youngest son. They say that in the Bible he is mentioned first among the members of his family because he was the most righteous, wisest, and most important son, not because he was the oldest (*b. Sanh* 69b.; *Gen. Rab.* 26:3; 37:7.

Shem is extolled in various ways: he initiated the covering of his father with a garment and hence even more than his brother Japheth was blessed to have the fringed *tallit* for cover and the Shekinah to dwell in his tent (i.e., Jerusalem; *b. Yoma* 10a; *Gen. Rab.* 26:3; 36:6, 8); he was given the choice, middle part of the earth which included the land of Israel (*b. Sanh.* 91a; *Midr.* Haggadol Gen 9:27; *Gen. Rab.* 1:2; *Pirqe R. El.* 24); he is one of the eight righteous persons who lived in his time and who has a place in the world to come (*Midr.* Haggadol Gen 9:18; 11:10; *Tanhuma Yelammedenu,* Noah; *b. Sanh.* 69b); he was born circumcised (*Gen. Rab.* 26:3; *›Abot R. Nat* 2); he was a prophet for 400 years and priest *par excellence.* In fact, Adam's priestly garment was inherited by Shem from Noah. When they emerged out of the Ark,

Shem fulfilled this priestly obligation by offering the sacrifices on behalf of his father Noah (cf. Gen 8:20), who became unfit after he was mauled by a lion in the ark (*Gen. Rab.* 30:6).

Shem was identified in some traditions with Melchizedek, King of Salem, the "priest of the God Most High" who lived in Salem/Jerusalem and who met Abraham after his victory over the four kings (Gen 14:18–20). Abraham was afraid that Shem/Melchizedek might curse him for having killed his other descendants, the Elamites. So, to demonstrate to Abraham that he was not angry at him, Shem/Melchizedek came out to meet him (*Gen. Rab.* 44:8; *Tanḥuma* Lech Lecha 19). In some instances Abraham is elevated higher than Shem. Thus, according to some teachers, it was Shem/Melchizedek who gave tithes to Abraham, not Abraham to Shem. Furthermore, Jerusalem, the City of the Holy Temple, is so named by combining Salem, the name Shem gave it, with *yir*ʿ*eh* (Gen 22:14), the name Abraham gave it. Shem ultimately lost his priestly position because, in his meeting with Abraham, he put the blessing of Abraham ahead of the blessing of the divine name (*B. Ned.* 32b; *Pirqe R. el.* 27). According to another tradition, however, Shem himself, knowing that he had no other worthy descendants, asked divine favor to pass the priestly office to Abraham. At Abraham's funeral, Shem and his great-grandson Eber, walked before his bier and chose a suitable place for the burial (*Gen. Rab.* 62:6; cf. *Yal.* Gen 110).

To Shem is also attributed the founding of the first school (*b. Mak.* 23b; *Gen. Rab.* 36:8; *Tg. Ps.-J.* Gen 9:27; 25:22). Eber also shares this honor with him. Shem received the Hebrew script of the Torah at the time of divine land distribution. At that time, Shem not only received his share of 26 countries and 33 islands, but also 26 of the 72 world languages and 6 (Hebrew, Egyptian, Assyrian, Lybian, Chaldean, and Gutazaki [Sabean? Sanskrit?]) of the 16 international scripts (*Midr.* Haggadol Gen 10:32). The school was not only a place for the study of the Torah but also a law court in which the divine presence dwelt (*B. Mak.* 23b). Jacob was a student in the Shem-Eber school. His brother Esau did not kill him because of the fear of the judgment of that same court. Judah condemned Tamar to death for adultery, following one of the laws the court had promulgated (*b.* ʿ*Abod. Zar.* 36b; *Gen. Rab.* 63:7; 67:8). Inasmuch as the study of the Torah preceded the Sinai revelation and continues after the end of the world, Torah will be studied in heaven in the academy established by Shem and Eber (*Cant. Rab.* 6:2:6; *Qoh. Rab.* 5:11:5).

D. Christian Literature

In the NT Shem is mentioned once in the genealogy of Jesus (Luke 3:36). In the early Christian literature, particularly in Irenaeus of Lyon, Lactantius, Hyppolytus of Rome, Clement, Origen, Epiphanius, and Eusibius, the sons of Noah and their generations are often alluded to but without much elaboration.

EPHRAIM ISAAC

SHEM, PARAPHRASE OF (NHC VII,*1*). This enigmatic, gnostic tractate is one of the longest and best preserved in the Nag Hammadi codices. It occupies pp. 1,1–49,9 in Codex VII. Only parts of the bottom lines of a few pages are missing. There is no reason to doubt that *Paraph. Shem* was translated from the Greek. It is written in preclassical Sahidic Coptic. The title is found at the beginning and is supplemented by a subtitle: "The paraphrase which was about the unbegotten Spirit" (1,2–3). Aland understands the word "paraphrase" to refer to a literary genre which tries to achieve insight through a series of variations on a theme, in this case the imprisonment and liberation of the light (1978:81). To be sure, the work does not follow the expected chronological order of cosmogony and salvation history often found in mythological gnostic texts. Its use of repetitions, expansions, changes in terminology, and obscure symbolism leaves the reader more bewildered than enlightened. The word "paraphrase," however, is used in a stricter sense within the tractate itself (32,26) where it appears to refer to an explanation of the role of mythological beings who were listed earlier (31,4–32,5) and whose names are recited later by Shem on leaving the body for his final ascent (46,4–47,7). The race of Shem are to remember this "testimony" for their escape from the body.

The genre of *Paraph. Shem* is that of an apocalypse. Shem (consistently spelled Seem) is taken out of the body "to the top of the creation" (1,4–16) where Derdekeas, the son of the infinite Light, reveals to him matters pertaining to the three primeval powers—Light, Darkness, and Spirit between them. The

center of the myth is the capture of Spirit by Darkness and its rescue by the revealer-redeemer Derdekeas. The revelation ends in 41,20 after which Shem awakens "as from a long sleep." Then follows an eschatological discourse in which Shem describes his ascent at the end of his life (42,11–48,30). Finally, without a proper transition, there is a brief farewell address to Shem, apparently spoken again by Derdekeas (48,30–49,9).

Three issues have crystalized at this early point in the interpretation of *Paraph. Shem.* Still unresolved is its relationship to Hippolytus' account of the teaching of the Sethians based on a writing which he knows as "The Paraphrase of Seth" (*Elenchos* V.19–22). The striking agreement in content leaves no doubt that the two works are related, but the explanation that Hippolytus must have known a Christianized form of *Paraph. Shem* (Wisse 1970:138) is rejected by some in favor of a more distant relationship (Wisse and Roberge 1988:341).

Closely related is the question of the possible Christian influence on *Paraph. Shem.* In contrast to some clear allusions to the OT, i.e., the flood (25,11–15; 28,5–14), Sodom (28,34–29,33), and the tower of Babel (25,17–26; 28,9), there is no obvious Christian material. Faith appears to be personified, but its role is obscure. Parallels with the NT are distant. The striking polemic against baptism may include an allusion to the Baptism of Jesus by John the Baptist (30,21–32,17), but this reading is far from compelling. There are some interesting general parallels between the role of Derdekeas and Christ (Wisse 1970:135), but the differences make dependence of the one on the other unlikely. The question remains whether the enigmatic references in the tractate were intended to be decoded in a Christian way.

The eschatology of *Paraph. Shem* is less controversial but has important consequences for our understanding of Gnosticism. The theme of the ascent of the soul is as expected. The tractate's preoccupation with apocalyptic eschatology, however, was not thought to be characteristic of Gnosticism. The same emphasis is found also in other gnostic writing from Nag Hammadi, such as *On the Origin of the World* (NHC II,5) and *The Concept of our Great Power* (NHC VI,*4*). Evidently Gnosticism and Apocalypticism did not essentially differ in their understanding of eschatology.

If Hippolytus knew a Christianized version of *Paraph. Shem,* then its *terminus ad quem* is the first part of the 3d century. The Gk model of the Coptic version could then be dated back to the late 2d century. Nothing in the tractate betrays the identity and provenance of the author.

FREDERIK WISSE

SHEM, TREATISE OF. Preserved in only one 15th-century paper manuscript is a Syriac document attributed to Shem, the son of Noah. It is an astrological almanac *(Dodekaeteris Chaldaica),* whereby the characteristics of the coming year are predicted according to the stars. The original language seems to be Semitic; there are abundant Semitisms that are most likely original and names are identified according to the Semitic alphabet. The provenience is probably Egyptian (Charlesworth *OTP* 1:473–86; *HJP²* 3/1:369–72); the Nile is frequently mentioned, and the crops noted are characteristically Egyptian (wheat, barley, peas). Irrigation and illnesses due to the winds and desert sands also suggest Egypt. The references to the beneficial effects of the north wind, the numerous comments about the sea and fishing, and the mention of Alexandria may well indicate that the document was composed in Alexandria.

The date of composition is difficult to discern. Mingana (1917) suggested that the pseudepigraphon postdates the Jewish War of 130–135 C.E. Charlesworth is convinced that the document may well date from the latter part of the 1st century B.C.E. Astrological documents found at Qumran and the argument

against astrology in *Jubilees* 12 prove that Jewish interest in astrology is not late and medieval, as some scholars have erroneously claimed. The argument that the document must be Christian and late because Jews did not compose such almanacs is dismissed by the recognition that precisely this type of thought is represented in Fragment A from the Cairo Genizah. For example, as Vermes and his colleagues note (in *HJP²* 3/1:369–72), compare *Treat. Shem* 2:1 ("And if the year begins in Taurus: Everyone whose name contains a Beth, or Yudh, or Kaph will become ill …") with Cairo Genizah Fragment A (A/2, 9–12 [ed. Gruenwald] = "He who is born on the third day of the week in the constellation Scorpio of Leo … will at the age of nineteen marry a woman whose name begins with He, Yod."). The claim that this genre of astrological writing must be late is disproved by the recognition that Boll (1900:139–44) drew attention to a *Dodekaeteris Chaldaica* that was composed in Syria during the time of Octavian (who received the name "Augustus" by a decree of the Roman Senate in January, 27 B.C.E.). While it is impossible to be certain, it is conceivable that the *Treatise of Shem* was composed shortly after the famous nonbattle at Actium, in which Octavian "defeated" Anthony and Cleopatra, both of whom fled to Alexandria. Note these interesting excerpts: "And the king of the Romans will not remain in one place … a great war and misery (will occur) on all the earth, and especially in the land of Egypt" (1:5–9). "And the king (the Roman Emperor Octavian?) will strive with a king (Anthony?) and will slay him. And Alexandria will be lost … And many ships will be wrecked" (6:13–17). "And the king will stay in one place. And power will then leave the land" (7:16–17). Perhaps the author was an Alexandrian Jew, who—in reaction to the Roman propaganda over their "victory" at Actium—composed this astrological document to clarify the inexplicable: Anthony and Cleopatra's superior forces lost the so-called battle of Actium.

JAMES H. CHARLESWORTH

SHEMA (PERSON) [Heb *šĕmaʿ* (שְׁמַע)]. Four individuals in the Hebrew Bible bear this name.

1. One of the many descendants of Judah referred to in the Chronicler's genealogical lists (1 Chr 2:43–44). More precisely, Shema appears within the Calebite line as the son of Hebron and the father of Raham. However, the presence of place names within this section of 1 Chronicles has long been noted. Caleb is typically seen, therefore, as the father of a collection of cities rather than individuals. Similarly, Shema was possibly a settlement in the vicinity of Hebron (Braun *1 Chronicles* WBC, 41).

2. One of the descendants of Reuben according to the Chronicler's lists (1 Chr 5:8), he was the son of Joel and the father of Azaz. In 1 Chr 5:4, Joel's descendants include a certain Shemaiah and Shimei. Shema can possibly be equated with one of them.

3. One of the descendants of Benjamin referred to in the Chronicler's lists (1 Chr 8:13), he was the head of a father's house of Aijalon. In 1 Chr 8:21, Shema appears as Shimei.

4. One of the men who stood on Ezra's right hand during the great public reading of the Law (Neh 8:4; 1 Esdr 9:43). Not designated as a Levite, Shema's position at this event suggests that he was an influential or representative member of the Israelite laity.

TERRY L. BRENSINGER

SHEMA (PLACE) [Heb *šĕmaʿ* (שְׁמַע)]. One of the cities of Judah "in the extreme South, toward the boundary of Edom" (Josh 15:21,26). A place with this name is only explicitly mentioned in this biblical reference. In the list of Simeonite cities (Josh 19:2 ff) however, there is a town named Sheba. Since the two lists in large parts run parallel, it is a quite common suggestion that the name Shema has arisen as a scribal error from Sheba (Cohen *IDB* 4:311). However, it is obvious that the Simeonite list in Joshua 19 is not merely an excerpt from the Judahite list in Joshua 15 (Axelsson 1987:73–79). The two lists deal with roughly (but not exactly) the same area, but some names occurring in chap. 15 are absent in chap. 19, probably because they never were Simeonite settlements. Thus it is perfectly possible that once a town named Shema existed in S Judah, inhabited not by Simeonites but by some of the groups that joined or constituted the tribe of Judah. This leads us to turn our attention to some Chronistic genealogical passages. There is a Calebite clan (or place?) named Shema (1 Chr 2:43), and we also read of a group of Kenites called Shimeathites (1 Chr 2:55). It is conceivable to see a connection between one or the other of these names and the place named Shema. We probably cannot get much further in our knowledge. The name "Shema" may be just an erroneous variant of Sheba. But it is just as possible that a settlement with the name "Shema" really existed in S Judah. If that is the case, we naturally do not know anything more about its exact location.

SHEMAʿ, KHIRBET (M.R. 191264). Literally "the ruin of Shammai," possibly to be identified with Galilean Tekoa, is situated just S of ancient Meiron on one of the foothills of Mt. Meiron at a level of 760 m above sea level. Venerated since medieval times by Jewish pilgrims as the holy burial site of Shammai and other Jewish priests and sages, the site is distinguished by the presence of a large mausoleum at the SW extent of the settlement and by a large megalith to the W known by locals as "Elijah's chair." Although known to the explorers of the 19th century, the first excavations were undertaken between 1970–72 by a team headed by E. M. Meyers.

Although excavations focused on a rather large public building that turned out to be a synagogue complex, numerous soundings were also conducted in the village itself and in the necropolis which surrounded the site, primarily on the E and S. The following chronological chart summarizes the main cultural phases of occupation that had clear architectural remains associated with them (table 1):

Stratum	Date	Period
I	ca. 103–37 B.C.E.	Late Hellenistic
Unstratified remains	ca. 37 B.C.E.–180 C.E.	Early-Middle Roman
II	ca. 180–284 C.E.	Middle Roman
III	ca. 284–306 C.E.	Late Roman
IV	ca. 306–419 C.E.	Byzantine 1
V	ca. 419–640 C.E.	Byzantine 2
VI	ca. 640–850 C.E.	Early Arab
(gap)	ca. 850–1150 C.E.	
VII	ca. 1150–1277 C.E.	Medieval

Excavation in the village revealed agriculture to be the main source of livelihood. Several olive presses were uncovered and flotation analysis was conducted on the associated soils, which made it possible to ascertain the high quality of oil from Tekoa and Upper Galilee that is so noted in the Talmud. Several cisterns were revealed and a unique ritual bath that has its own pre-wash facility associated with it was also recovered.

The excavated tombs indicate that secondary burial or ossilegium was a normal manner of inhumation, apparently often without ossuaries since only few fragments of stone ossuaries were found. Similar evidence was found in nearby MEIRON. See BURIALS (ANCIENT JEWISH). The main discovery of the expedition was the broadhouse synagogue that was built over several pre-synagogue installations from Stratum I or II, including a very elaborate ritual bath. The synagogue is the first broadhouse ever excavated in the Galilee and the first one to be found with internal columnation. A broadhouse is a rectangular hall which focuses attention or worship upon a long wall as opposed to a short wall as is the case in a basilica. See SYNAGOGUE. In a synagogue in the Galilee the wall of orientation would be the S wall that faces toward Jerusalem.

The Khirbet Shemaʿ broadhouse synagogue is founded in Stratum III, measures 18 m by 9 m, and is erected on a basilica-like plan with two rows of four columns oriented on an E-W axis. The principal entrance is on the N, opposite a Stratum IV *bema* or raised platform, used for the reading of Scripture which is attached to the long S wall. The handsome N entryway was crowned with a large lintel piece with a *menorah* carved into its external face. During Stratum III a Torah Shrine or *aedicula* apparently stood on the S wall where a *bema* was constructed in Stratum IV. Another entrance with an eagle incised into a doorjamb is located on top of a monumental stairway on the W. It is necessary to descend several stairs after entering from either direction, a most unusual feature for a house of worship but one which suits the unusual mountain topography of the site. A gallery for additional seating is situated on the W short wall, partially founded on bedrock, and lies above a frescoed room, which might have been used as a storage area for scrolls not in use, or possibly as a scriptorium. A *genizah*, or storage area for scrolls, no longer in use lies under the W stairwell and opens into the frescoed room. Remnants of benches are to be found on all four walls and it may be conjectured that most worshipers either stood, leaned on poles, or simply sat on the floor. Because of the broadhouse plan, however, the view toward the *bema* from many places in the hall was obscured by the columns.

The earthquake of 306 C.E. did great damage at the site in general and destroyed the synagogue almost entirely. It was nonetheless rebuilt soon after in the same broadhouse form in which it was originally erected. Instead of a Torah Shrine on the long S wall, however, a *bema* was constructed, and perhaps in stratum IV the frescoed room came to serve a more integral part in the storage of scrolls for ritual use. Some architectural pieces were reused if they were not too severely damaged, and many of them were simply used as building stones in the E stylolate wall; this wall was built to shore up the E end of the building where bedrock severely dips and where a ritual bath complex had functioned in an earlier period. The second synagogue thus was even more eclectic than the first, with each column capital being different from the other.

Another building to the N was identified by the excavators as a House of Study, or *bĕt-midraš.* It could be entered by a stairway off the main N entrance path to the synagogue from this building. Benches line one sector of the large room where it is possible to imagine a group of students studying with their master. The rest of the space might have been utilized as a guest room. Both study and hospitality were important functions of the ancient synagogue and provide much insight into its multipurpose use in antiquity.

The significance of the discoveries at Khirbet Shemaʿ are twofold. First, they conclusively demonstrate that no rigid typological scheme dictated the norms of synagogue building in the Galilee. This most unusual broadhouse synagogue reveals an eclectic architectual style whose floor plan hearkens back to an old Palestinian temple type. Second, the remoteness of the Upper Galilean mountain hinterland underscores the high level of the achievement of the inhabitants in religious affairs, trade, and other aspects of communal life. A similar, high level of material culture in metal, glass, ceramics, and architecture also indicates how much a part of their contemporary world the inhabitants were, no matter what the extent of their geographical isolation.

ERIC M. MEYERS

SHEMAAH (PERSON) [Heb *šĕmaʿâ* (שְׁמַעָה)]. Father of Ahiezer and Joash, two of the Benjaminite warriors who defected from tribal loyalty to Saul in order to join David at Ziklag (1 Chr 12:3). Some Hebrew mss and LXX mss read "son of" instead of "sons of," so that Shemaah would in this case be the father only of Joash. The Chronicler has doubled the list of warriors who supported David (1 Chr 11:41b–12:40) beyond what was contained in the parallel narrative (2 Sam 23:8–39 [= 1 Chr 11:10–41a]). The source for these additional lists can only be a matter of conjecture, though Williamson has provided a convincing argument for the structure of 1 Chronicles 11–12. The long list reflects the Chronicler's concern to show "all Israel" united in support for David, a characteristic theme of the history. Ambidexterity or lefthandedness among Benjaminites is also noted in Judg 3:15; 20:16.

SHEMAIAH (PERSON) [Heb *šĕmaʿyâ* (שְׁמַעְיָה)*; šĕmaʿyāhû* (שְׁמַעְיָהוּ)]. Shemaiah is a theophoric personal name commonly rendered "Yahweh has heard" (*TPNAH,* 90; *IPN* 184–86). Dahood (1978:92) translates, "Hear, O Ya," comparing the Ugaritic personal name *šmʿy* ("Hear, O Ya," *UT,* no. 1128:33) and the Eblaite personal name *sí-mi-na-ià* ("Hear, I pray, O Ya," TM 75.G.336 IV 16; see Pettinato and Matthiae 1976:4). The name appears in nonbiblical ancient Hebrew in a preexilic papyrus found in a cave in the Wadi Murabbat (Mur. B 4, *TSSI* 1:32), in the Lachish ostraca (4:6, *TSSI* 1:41; 19:4, *TSSI* 1:49), and in a seal (no. 6, *TSSI* 1:61; see also *TPNAH,* 363).

1. A chief of the tribe of Simeon (1 Chr 4:37).

2. Son of Joel and a chief of the tribe of Reuben (1 Chr 5:4).

3. A chief of the sons of Elizaphan and head of a family of Levites with 200 "brothers" or members of the clan (1 Chr 15:8, 11). David summoned him and other levitical chiefs to transfer the ark of the covenant from the house of Obed-edom (13:14) to the tent in Jerusalem (16:1).

4. Son of Nethanel; the levitical scribe who registered the appointment by lot of the priestly divisions in the presence of the king, the principal officials, Zadok the priest, Ahimelech the son of Abiathar, and the heads of the priestly and levitical families. There were twenty-four divisions, with sixteen being allocated to the sons of Eleazar and eight to the less numerous sons of Ithamar (1 Chr 24:6; cf. Williamson 1979:257–59).

5. Firstborn son of Obed-edom, eponym of a levitical family responsible for service in the temple. When the Levites were being organized they were allocated by lot responsibility for the S gate of the temple and the storehouses. Shemaiah was the father of several outstanding sons who exercised leadership in the family (1 Chr 26:4, 6–7).

6. A man of God or prophet in the reign of Rehoboam who forbade the king from fighting in order to suppress the revolt of the ten tribes from the house of David after the death of Solomon. All were to return to their homes because the division of the kingdom came from Yahweh. And this the people did (1 Kgs 12:22–24; 2 Chr 11:2–4). Some scholars (e.g., Jones *1 and 2 Kings* NCBC, 255) believe that this tradition is a late creation, for "there was war between Rehoboam and Jeroboam continually" (1 Kgs 14:30). Jones (ibid., 279) argues that the Deuteronomistic editor simply prefers not to elaborate his brief statement in v 30, although he "probably" found details of military engagements in his sources. But this is quite speculative. Gray (*1 and 2 Kings* OTL, 349) points out that the existence of a state of war between the two kings does not necessarily imply actual campaigns. It may have been more an armed truce with both sides fortifying frontier fortresses. Furthermore, prophets frequently functioned in times of war, so that the tradition of Shemaiah's oracle may well be historical (ibid., 309). In any case, Yahweh expressly confirms what has already been announced to Solomon (11:11–13) and Jeroboam (vv 30–39). The LXX has a long

insertion after 1 Kgs 12:24, including a brief version of the story of Ahijah the prophet and Jeroboam (11:29–39). In it Samaias (= Shemaiah, see LXX 12:22) the son of Enlami is told by the Lord to take a new garment, not yet washed, and tear it into twelve pieces. He gives ten to Jeroboam and explains, "Thus speaks the Lord about the ten tribes of Israel," i.e., God gives them to Jeroboam. The incident takes place at Shechem, apparently in the presence of Rehoboam (contrast 11:29–31 where Ahijah meets Jeroboam before his flight to Egypt while he is still an official of Solomon). Shemaiah is "indicating that it was the will of Yahweh to condone the disruption," disapproving of Rehoboam rather than approving of Jeroboam (ibid., 311). The historical value of the insertion is doubtful (Gordon 1975:393).

The name also occurs in 2 Chr 12:5, 7 in a narrative (vv 1–12) which depends, at least in part, on 1 Kgs 14:25–28 (Williamson *1 and 2 Chronicles* NCBC, 245–48). The prophet delivers an oracle to Rehoboam and the principal men of Judah who had assembled in Jerusalem when Shishak king of Egypt invaded the land: "You abandoned me, so I have abandoned you to the power of Shishak" (v 5), the reference being probably to the worship of foreign gods (ibid., 246). King and officials now "humble themselves" and say, "Yahweh is righteous" (v 6), that is, they repent (ibid., 247–48, 225–26). Yahweh then speaks again through Shemaiah: He will quickly deliver them and Jerusalem will be spared, but they will become subject to Shishak (vv 7–8). In the event, Shishak required a heavy indemnity (v 9, cf. 1 Kgs 14:26). The absence of Jerusalem from Shishak's list of conquests suggests that the city was indeed spared (*ANET*, 242). The Chronicler finally mentions a book of events of Rehoboam's reign attributed to Shemaiah the prophet (2 Chr 12:15).

7. One of the nine Levites (2 Chr 17:8) whom King Jehoshaphat in the third year of his reign (ca. 870 B.C.) sent to teach in the cities of Judah (vv 7–9). The Levites, together with two priests, accompanied five lay officials who headed the mission, and they taught from the book of the law, probably a royal law code (Myers *2 Chronicles* AB, 99–100).

8. Son of Jeduthun; a member of one of the three families of levitical singers, and one of the fourteen Levites who are listed as responding with enthusiasm to the command of King Hezekiah to cleanse the temple (2 Chr 29:14).

9. One of the six Levites who, at the command of King Hezekiah and under the directions of Kore, distributed the general priestly and levitical portions of first fruits, tithes, and offerings to those resident in the cities of the priests (2 Chr 31:15).

10. Probably a son of Shecaniah in a list of the descendants of David (1 Chr 3:22) and more specifically of Jehoiachin (Jeconiah) and Zerubbabel (vv 17, 19) but the text is difficult. Myers (*1 Chronicles* AB, 21) dates his birth ca. 495 B.C. He is given five named sons.

11. From Kiriath-jearim, father of Uriah the prophet who was a contemporary of the prophet Jeremiah (Jer 26:20).

12. The Nehelamite, a false prophet in Babylon and contemporary of Jeremiah (Jer 29:24, 31–32). Shemaiah wrote to "all the people," to Zephaniah the son of Maaseiah the priest who was overseer of the temple, and to "all the priests" (v 25). There is no precise date, but the time is after 597 B.C., perhaps in 595/94 B.C. when there was unrest in Babylon (Wiseman 1956:36, 73) in which deported Jews seem to have been involved (cf. vv 20–23). A summary of this letter is given (vv 26–29), or vv 25b–28 may be a quotation from Shemaiah's letter, vv 24–32 representing "an almost unchanged copy of a letter to Shemaiah written by Jeremiah's secretary" (Dijkstra 1983:319). Shemaiah blames Zephaniah for not disciplining "Jeremiah of Anathoth" who has foretold a long exile and advised the deported Jews to settle down (cf. vv 1–15). Zephaniah reads this letter in the hearing of Jeremiah, who then delivers an oracle against Shemaiah which is to be sent to the exiles: Yahweh has not sent Shemaiah and yet he has prophesied and led the people to trust in a falsehood. He and his descendants will therefore be punished. None will live to enjoy the prosperity Yahweh is going to bestow on his people. Shemaiah's chief offense was that he had preached rebellion against Yahweh (vv 31–32), which meant rebellion against the king of Babylon. Jeremiah wrote in terms similar to those in which he had addressed Hananiah (cf. 28:15–16). The rejection of Yahweh's word spoken by one of his "servants the prophets" leads to judgment.

13. Father of Delaiah, who was one of the officials who heard Baruch read Jeremiah's oracles from the scroll (Jer 36:12).

14. Son of Hasshub, descendant of Merari (1 Chr 9:14), and one of the seven levitical heads of families who lived in or around Jerusalem in the time of Nehemiah. Shemaiah's family is also listed in Neh 11:15 where, however, "Bunni" replaces "Merari." According to v 16, he was one of those in charge of "the work outside the house of God," which would indicate noncultic duties such as maintenance and the gathering and storing of provisions for the temple (Myers *Ezra, Nehemiah* AB, 187).

15. Descended from Jeduthun, son of Galal and father of Obadiah (1 Chr 9:16), who was the head of a levitical family, living at Netophah near Jerusalem in the time of Nehemiah. Perhaps Shemaiah is identical with Shammua the father of Abda in Neh 11:17, the difference in names being due to abbreviation: "Shammua" for "Shemaiah," "Abda" for "Obadiah."

16. One of the chiefs of the Levites, who gave generously to the Levites for the celebration of the Passover held by King Josiah (2 Chr 35:9).

17. A son of Adonikam and head of a family; one of those who accompanied Ezra from exile in Babylon to Jerusalem (Ezra 8:13; 1 Esdr 8:39).

18. A leading man, one of a delegation sent by Ezra to Iddo at Casiphia to obtain Levites when Ezra discovered on the way that they were absent from the group returning from Babylon (Ezra 8:16; 1 Esdr 8:44).

19. A son of Harim and priest in the list of those who put away their foreign wives and children according to Ezra's reform banning marriage with foreigners (Ezra 10:21, note vv 3–5; 1 Esdr 9:21).

20. A son of Harim and layman in the list of those who put away their foreign wives and children during Ezra's reform (Ezra 10:31; cf. variant SABBAIAS in 1 Esdr 9:32).

21. One of the sons of Ezora listed among the laymen who agreed to put away their foreign wives and children in accordance with the law of the postexilic community (1 Esdr 9:34; Gk *Samatus*).

22. Son of Shecaniah and keeper of the East Gate (of the temple); he led one of eight groups repairing the NE wall of Jerusalem between the Water Gate and the Sheep Gate in the time of Nehemiah (Neh 3:29; cf. Myers *Ezra, Nehemiah* AB, 115).

23. Son of Delaiah and descendant of Mehetabel (Neh 6:10). The context is one of plots against Nehemiah. Sanballat and other Persian officials were opposed to Nehemiah's work of reconstruction, and with the wall now repaired, were making a last desperate effort to stop the work being completed. Nehemiah came to the house of Shemaiah who was "shut up" *(ʿāṣûr)*, perhaps physically (LXX *synechomenos*, "confined;" see Myers *Ezra, Nehemiah* AB, 138–39), but certainly in view of what follows, morally (*LHA*, 621b):vv 12–13 show that he had been bribed to prophesy. The expression "shut up" would then be an instance of "delayed identification" (on this literary device, see Watson 1984:336–38). Shemaiah prophesies to Nehemiah that his enemies are planning to kill him and that he should take refuge in the temple (v 10). This was an attempt to involve Nehemiah in violating religious taboo. It was forbidden for a layman to enter the temple, though he could seek asylum at the altar (Exod 21:13–14; 1 Kgs 1:50–53; 2:28–34) outside the temple proper. Furthermore, Nehemiah was a eunuch so that it would have been doubly offensive for him to enter the temple (Lev 21:17–23; Deut 23:1; cf. Myers *Ezra, Nehemiah* AB, 138–39). He was a courageous man and refused to jeopardize himself and his work by following the counsel of Shemaiah, who was merely a hired prophet (v 12) and who spoke in order to terrorize him (v 13).

24. A priest who set his seal on Nehemiah's covenant (Neh 10:9—Eng v 8), the head of a priestly family who returned from Babylon with Zerubbabel (12:6), and the head of a priestly family in the time of the high priest Joiakim (12:18). The name seems to be that of an old priestly family.

25. A priest (Neh 12:34) in the procession led by Ezra the scribe, which "went to the right," or counterclockwise, toward the Dung Gate (v 31) during the ceremony dedicating the walls of Jerusalem after the repairs were completed.

26. A descendant of Asaph and ancestor of Zechariah (Neh 12:35). Zechariah was one of the priests with trumpets who, during the dedication of the walls of Jerusalem under Nehemiah, went in the counterclockwise procession led by Ezra the scribe.

27. One of the Levite musicians who accompanied the procession led by Ezra the scribe going toward the right in the ceremony dedicating the walls of Jerusalem (Neh 12:36).

28. One of the Levites who accompanied the procession led by Nehemiah going toward the left in the ceremony dedicating the walls of Jerusalem (Neh 12:42).

29. Referred to as "the great Shemaiah" (LXX *Semeios,* Sinaiticus reads *Semelios*), he is the father of Ananias and Jathan, relatives of Tobias (Tob 5:14—Eng v 13).

SHEMARIAH (PERSON)

[Heb *šĕmaryāhû* (שְׁמַרְיָהוּ)*; šĕmaryāh*]. **1.** A Benjaminite who defected to David while he was at Ziklag (1 Chr 12:5). The name listed here is the longer form *(šĕmaryāhû),* which means "Yahweh has preserved." Shemariah, along with his companions, is considered an excellent warrior possessing the very desirable quality of being ambidextrous. Because Shemariah and the Benjaminites are "compatriots of Saul" *(ʾaḥê šāʾûl),* their defection to David is very significant; therefore, they are listed first among those who came to Ziklag. The Chronicler uses this as clear evidence of the growing popular preference for David over Saul. The list in which Shemariah's name appears, although put in place by the Chronicler, is probably much older, possibly going back to the Davidic era itself (Williamson *Chronicles* NCBC, 106; cf. Myers *1 Chronicles* AB, 95). Williamson notes that Bealiah (the name preceding Shemariah in the list) contains the element "Baal," indicating a date before strict Yahwism would have excluded such (106). Thus, Shemariah's defection to David may be considered authentic.

2. A son of Rehoboam by his first wife, Mahalath (2 Chr 11:19). The name listed here is the shorter form *šĕmaryāh* (as are the names in #3 and #4 below). Because of certain tensions with other passages from the Chronicler, Williamson believes the list of Rehoboam's children is adopted from an older source (*Chronicles* NCBC, 244). Shemariah's mother was a great-granddaughter of Jesse through both parents and a second cousin of the king. However, Rehoboam favored his second wife, Maacah, and made her first son, Abijah, his royal heir. The king did place his other sons, presumably including Shemariah, in "strategic centers to maintain his position and to guard against disloyalty" (Myers *2 Chronicles* AB, 71).

3. A descendant of Harim and one of the returned exiles who married a foreign woman during the era of Ezra's mission (Ezra 10:32). Shemariah does not appear in the parallel text of 1 Esdr 9:29. Shemariah seems to be a member of a family from which groups of exiles returned with Zerubbabel (Ezra 2:32; Neh 7:35). The three-month investigation (Ezra 10:16–17) culminating in the list in which Shemariah's name appears produced a relatively small number of names, leading some to believe that the list only includes prominant members of the community. Shemariah's position in the community, however, remains a mystery. While it seems probable that Shemariah divorced his foreign wife (note the prior oath taken by the people [Ezra 10:3–5] and the possibly generalizable v 19), that is not certain. The RSV follows 1 Esdr 9:36 in clearly stating that all on the list did indeed divorce their foreign wives and put away their

children, but the Hebrew text of Ezra 4b is so corrupt that a definite translation is impossible, leaving the final outcome of the investigation in doubt.

4. Presumably a descendant of Binnui and one of the returned exiles who married a foreign woman during the era of Ezra's mission (Ezra 10:41). The name "Shemiah" appears in the parallel text of 1 Esdr 9:34. However, Noth argues that the name "Machnadebai," which occurs before Shemariah, is a corruption of the phrase "from the sons of" (*IPN,* 249). If that is true, then Shemariah would be a descendant of Shashai. In the parallel text of 1 Esdr 9:34, the phrase "from the sons of" does replace the name "Machnadebai." Assuming Binnui was Shashai's ancestor, Shashai was a member of a family who returned from Babylon with Zerubbabel. (See Neh 7:15; note that Bani replaces Binnui in Ezra 2:10.) For further discussion, see #3 above.

JEFFREY A. FAGER

SHEMEBER (PERSON) [Heb *šem·ēber* (שְׁמְאֵבֶר)]. King of Zeboiim (Gen 14:2); appears simply as the "king of Zeboiim" in v 8. The form of the name ending in *dalet,* as in Sam. Pent. and 1QapGen, is preferable because it means "the name is lost" and belongs to the same type of pejorative names as those of the other kings who rebelled against Chedorlaomer. See also CHEDORLAOMER.

MICHAEL C. ASTOUR

SHEMED (PERSON) [Heb *šemed* (שְׁמֶד)]. A Benjaminite, one of the sons of Elpaal who along with Eber and Misham built Ono and Lod (1 Chr 8:12). Many Hebrew mss as well as the LXX, Syriac, and Targums read Shemer for Shemed. The similarity of the Heb *dalet* and *reš* make this a likely option; however, most translators and commentators read Shemed as the most difficult reading. Curtis and Madsen (*Chronicles* ICC, 160) suggested that v 12a, which lists the sons of Elpaal, is a transcriber's blunder since Elpaal's sons are also listed in vv 17–18. If the sons of Elpaal—Eber, Misham, and Shemed—were deleted from 12a, this would make Elpaal the *one* who built the towns of Ono and Lod. Shemed would then be identified with Ishmerai (v 18).

TOM WAYNE WILLETT

SHEMER (PERSON) [Heb *šemer* (שֶׁמֶר)]. Var. SHOMER. **1.** The original owner of the hill upon which Samaria was built and after which the city was named (1 Kgs 16:24). Gray (*1 and 2 Kings* OTL, 367) suggested that Shemer was the name of a tribe or clan since the hill was quite large and fertile and the name is of a segholate form. The OT, however, does not elsewhere mention a tribe by the name of Shemer, and Noth (*Könige* BKAT, 353) regarded the connection of Samaria to Shemer as a secondary explanatory gloss, *šōmĕrôn* being the original name of the hill. The name "Samaria" comes from the LXX.

2. A Levite of the clan of Merari (1 Chr 6:31—Eng 6:46). The name "Shemer" (in the pausal form *šāmer*) is found in a genealogical list tracing the ancestry of Ethan, a singer in the Jerusalem temple at the time of David (1 Chr 6:16–33—Eng 6:31–48).

3. A descendant of Asher (1 Chr 7:34). In 1 Chr 7:32 the name appears as Shomer *(šômēr);* it is generally agreed, however, that it should be read as "Shemer" as in 7:34. The LXX tradition is mixed. Codex Vaticanus reads Shemer in both 7:32 and 7:34. Codex Alexandrinus, however, reads Shomer in both places. See also SHOMER.

TOM WAYNE WILLETT

SHEMIDA (PERSON) [Heb *šĕmîdā·* (שְׁמִידָע)]. SHEMIDAITE. Shemida's name occurs in three kinds of biblical texts that deal with the tribe of Manasseh: a military census [Num 26:32], a tribal allotment [Josh 17:2], and a genealogy [1 Chr 7:19]), as well as in the Samaria Ostraca. The name appears

to derive from the Hebrew words "name" *(šēm)* and "know" *(yāda‘)* and so may have meant "the Name (= God) knows," although alternative derivations have been proposed (Noth *IPN,* 28, 123; *IDB* 4:323).

Shemida's name first appears in the Bible in Num 26:32, which lists him as the fifth of Gilead's six sons and designates his descendants "Shemidaites." This verse is part of the Manassite section (26:28–34) of a military census. The text exhibits no interest in Shemida's descendants, but directs attention to those of Shemida's brother, Hepher, whose son, Zelophehad, had five daughters. This passage is often accepted as establishing the correct relationship of Shemida to the rest of the tribe of Manasseh (Rudolph *Chronikbücher* HAT, 69–70).

Joshua 17 deals with the allotment of tribal lands to the tribe of Manasseh. The passage notes that Machir was Manasseh's firstborn, that Gilead was the son of Machir, and that the regions of Gilead and Bashan were given to Gilead. Then, however, the passage reports that allotments were given to the rest of the tribe of Manasseh according to their families. The six families or clans (called "sons of Manasseh") that are named are: Abiezer, Helek, Asriel, Shechem, Hepher, and Shemida. It seems likely, therefore, that the writer believed that Manasseh had seven sons, of whom the first was Machir and the seventh Shemida. In addition, Joshua reverses the sequence of the names in Num 26:32 to "Hepher, Shemida." As was the case in Numbers 26, the interest in Joshua 17 is not with Shemida's descendants but with those of Hepher: Zelophehad and his five daughters (17:3–6).

Finally, Shemida is mentioned in 1 Chr 7:19, a genealogical fragment, whose relationship to the rest of the Manassite genealogy (7:14–18) is unclear. The verse records the names of Shemida and his four sons: Ahian, Shechem (the name of Shemida's brother in Num 26:31 and Josh 17:2), Likhi, and Aniam. The verse does not, however, link Shemida and his sons to the Manassites, who appear earlier in 1 Chronicles 7. Consequently, a variety of proposals have arisen in order to fit the verse (7:19) more coherently into its context (7:10–18). Curtis and Madsen (*Chronicles* ICC, 152), for example, have suggested that Shemida was the fourth son of Hammolecheth (7:18). Others, however, regard Shemida as the son of Gilead (cf. Num 26:30–32; Josh 17:1–3), and along the lines of this interpretation, Rudolph (HAT, 69–71) has undertaken a comprehensive emendation of the Manassite genealogy in 1 Chronicles 7 on the basis of Num 26:28-34.

The names of Shemida and other descendants of Manasseh occur in the Samaria Ostraca as clans or territories from which shipments of agricultural produce originated. These documents suggest that in the 8th century B.C.E. the names of Manassite clans (including Abiezer, Helek, Asriel, Shechem, Shemida, and Hepher), were still significant as designations of clan territories (Aharoni *LBHG,* 366–67) or administrative districts in Israel (Albright 1931:249–51). While the biblical text does not specify the location of Shemida, Cross (1961:12–14) has proposed that it was situated W of Samaria and N of the Wadi et-Tin.

SHEMIRAMOTH (PERSON) [Heb *šĕmîrāmôt* (שְׁמִירָמוֹת)]. The name of two different persons mentioned in the OT.

1. One of the Levites of second rank appointed to provide music during David's second effort to move the ark to Jerusalem (1 Chr 15:18, 16:5). For further discussion, see ELIPHELEHU.

2. One of the Levites appointed by Jehoshaphat to teach the law in the cities of Judah (2 Chr 17:8). For teaching as a function of cultic personnel, see Lev 10:11; Deut 33:10; Jer 18:18; Mal 2:7; Hos 4:6; 2 Chr 15:3.

RAYMOND B. DILLARD

SHEMUEL (PERSON) [Heb *šĕmû›ēl* (שְׁמוּאֵל)]. Two individuals mentioned in the Hebrew Bible bear this name.

Shemuel is a theophoric name, composed of the term *šm* and the divine element *›ēl*. In the birth narrative of the prophet Samuel (although the Hebrew spelling of the prophet's name is identical to that of the individuals being discussed here, they should not be confused), Samuel is explained, in the Bible, as "requested from the Lord," or "dedicated to the Lord" (1 Sam 1:20, 27, 28). Many have noted that we should expect the name *šā›ûl* instead of Samuel, if the explanation in the Bible is to be followed, and have suggested that the authors have confused Samuel's birth narrative with that of Saul. The medieval Hebrew grammarian David Kimchi regarded Shemuel as a contraction of *šā›ûl mē›ēl,* "requested of God." Other possible explanations of Shemuel include "the *šēm* is *›ēl*," and "the son of El." Note that Shemuel is rendered as *samouēl* in the LXX.

Shemuel has cognates in other Semitic languages. In the Amorite personal names found in the Mari texts, one finds *sumu-la-ilu* and *sumu-li-ili* (*APNM,* 248–49), a Phoenician text has *lsml›l,* and combinations of *śm* with theophoric elements appear in texts from Amarna and Alalakh, and in Ugaritic.

1. The son of Ammihud, leader of the tribe of Simon who was appointed to oversee the distribution of the land to the children of Israel (Num 34:20).

2. A leader of the clan of Tola of the tribe of Issachar (1 Chr 7:2).

RAPHAEL I. PANITZ

SHENAZZAR (PERSON) [Heb *šen›aṣṣar* (שְׁנְאַצַּר)]. The name "Shenazzar" is held by only one person in the Hebrew Bible. In 1 Chr 3:18 Shenazzar is the name of the fourth son of Jehoiachin (= Jeconiah) who was exiled to Babylon by Nebuchadnezzar in 597 B.C. Albright argued that the name "Shenazzar" was one of two Hebrew variants of the Akkadian form *Sin-apla-uṣur* (May Sin protect the son). The other Hebrew variant, he argued, was Sheshbazzar (Ezra 1:8, 11; 5:14, 16). This led to the possibility that the two people who held these names were actually one and the same and that the first return from the Babylonian Exile was led by a descendant of David, Sheshbazzar, the "prince" of Judah.

It has recently been argued (Berger 1971:98ff.), however, on the basis of an examination of the onomastic evidence, that the name "Sheshbazzar" can in no way be linked with the same Akkadian form which the name "Shenazzar" reflects, but must instead be the Hebrew form of the Akkadian name *shamash-ab (a)-uṣur* although spelled *shash (sh)u-ab-uṣur.* This means that the two names, and the people who held them, are no longer to be considered identical.

SHEOL [Heb *šĕ›ôl* (שְׁאוֹל)]. See DEAD, ABODE OF THE.

SHEPHAM (PLACE) [Heb *šĕpām* (שְׁפָם)]. A place located near Riblah on the Upper Orontes, on the NE border of Canaan (Num 34:10–11). The site is completely unknown. Aharoni (*LBHG,* 67) suggests that it was on the SE edge of the Sea of Galilee; however, this would seem to be too far to the S for the description given in the book of Numbers.

SIDNIE ANN WHITE

SHEPHATIAH (PERSON) [Heb *šĕpaṭyâ* (שְׁפַטְיָה)*, šĕpaṭyāhû* (שְׁפַטְיָהוּ)]. **1.** The fifth son born to King David at Hebron, by Abital (2 Sam 3:4; 1 Chr 3:3).

2. A Haruphite and one of the twenty-three Benjaminite warriors who joined David at Ziklag (1 Chr 12:6—Eng 12:5).

3. Son of Maacah and, according to 1 Chr 27:16, leader of the tribe of Simeon during the reign of King David.

4. A son of King Jehoshaphat (2 Chr 21:2). Together with five of his brothers, he inherited silver, gold, possessions, and fortified cities upon the death of his father, while the throne went to Jehoshaphat's eldest son, Jehoram. The Chronicler reports that after ascending the throne, Jehoram had his brothers executed (21:3–4).

5. Son of Mattan (Jer 38:1) and one of King Zedekiah's (597–586 B.C.E.) court officials (he was a *śar* [Jer 38:4], a term translated as "prince" in the RSV). During the Babylonian siege of Jerusalem, Shephathiah was one of four (three in the LXX) officials who, representing the pro-Egyptian faction in Judah, demanded that Zedekiah put the prophet Jeremiah to death because of the treasonable nature of his preaching. Jeremiah's message, which centered on the certain fall of Jerusalem and the necessity of submitting to the Babylonians, was demoralizing the Judean troops (lit. "weakening the hands" of those defending the city of Jerusalem; cf. the use of this expression in one of the ostraca [Ostracon 6] found at Lachish [see *ANET,* 322]). Zedekiah is portrayed as being powerless to resist his court official, and Jeremiah is cast into an empty cistern to die (38:2–6). He is later rescued when Ebed-melech acts on his behalf (38:7–13).

6. Founder of one of the lay families which returned with Zerubbabel from exile in Babylonia (Ezra 2:4; Neh 7:9; 1 Esdr 5:9). 372 (472 in 1 Esdr 5:9) members of this family are said to have returned at this time. A further 81 (71 in 1 Esdr 8:34) male members of the family accompanied Ezra (Ezra 8:8).

7. Ancestor of one of the families of "the sons of Solomon's servants" which returned from exile with Zerubbabel (Ezra 2:57; Neh 7:59). These families, the origin of which is uncertain (cf. however 1 Kgs 9:20–21; 2 Chr 8:7–8), are closely linked with the families of temple servitors in Ezra 2:58 and Neh 7:60, where the total number of temple servants and sons of Solomon's servants is reported to have been 392.

8. Father of Meshullam, head of one of the Benjaminites lay families which settled in Jerusalem following the exile (1 Chr 9:8). The Meshullam branch of the Benjaminite line is not mentioned in the similar list contained in Nehemiah 11.

9. Son of Mahalalel and ancestor of Athaiah, head of one of the Judahite lay families which resided in Jerusalem at the time of Nehemiah (Neh 11:4). The family belonged to the Perez line, of which 468 male descendants were reported to have been living in Jerusalem (11:6). The name of Shephatiah does not occur in the genealogy of the Perez line in 1 Chr 9:4.

JOHN M. BERRIDGE

SHEPHELAH (PLACE) [Heb *šĕpēlâ* (שְׁפֵלָה)]. This regional name is mentioned 20 times in the Hebrew Bible (arguably 21 times if one includes Isa 32:19) where the vowels are slightly different. In all but two cases a region adjacent to the highlands of Judah is intended. It is difficult to translate this regional designation into a generic physiographic term, and it probably would be wise to leave it in a transliterated form, possibly with a qualifier (Judah or Israel) if that distinction is helpful to a reader. The Heb meaning conveys a meaning of lowness, and consequently some translators have referred to the Shephelah region as "lowlands." This "lowness" may, however, represent an ancient bias on the part of Judahites up on the plateau looking down on their own brethren. The area is certainly "lower" (with hills only ranging from 300 to 1300 feet in elevation) whereas the highlands of the plateau have elevations that can reach about 3300 feet. But a more precise physiographic term may be "foothills" or "piedmont." However, even these terms fail to convey the significance of the morphology of this region because the hilly parts of the Shephelah were largely unimportant, except as supply of wood ("as plentiful as the sycomore of the Shephelah" 1 Kgs 10:27). What did matter most about the Shephelah was a N-S valley separating it from the Judean highlands to the E. This valley was a natural moat that acted to isolate and defend the ramparts of Judah. What also mattered about the Shephelah were the E-W trending valleys that

transected the foothills and led up to the Judean Plateau. These valleys were natural locations for walled cities because they were at the cross roads of easy transportation routes that led from the coastal plains to the highlands. In these valleys were located Gezer at the entrance to the Aijalon Valley, Beth-shemesh by the Sorek Valley, Azekah and Socoh at the Elah Valley, and Maresha and Lachish farther S in the wadis that led up to Hebron. Control of these routes and the cities that guarded them were critical to the defense of Judah, and equally vital to any nation that wanted dominance over the adjacent coastal plains and its coastal highway. Throughout biblical history (and even into modern times), the Shephelah has been of strategic military significance. An authoritative and comprehensive study of the history of this region during biblical times can be found in a paper by Rainey (1983). An interpretative geographic study of this region can be found in a paper written by Brodsky (1987).

The Shephelah of Judah appears as one of four administrative subdivisions of the territory of Judah (Deut 1:7–8; Josh 10:40; 11:16a; 12:8; Judg 1:9). The identification of the settlements listed in Josh 15:33–34 aid in the exact delineation of the boundaries of the Shephelah. The boundary with the Negeb in the S may perhaps be located in a narrow pass N of Tel Halif. The N boundary was around Gezer and Gimzo. In all, the Shephelah of Judah is no more than about 10 miles wide and about 50 miles long along the NE-SW axis of the Judean plateau. Consequently, the importance of the Shephelah throughout history is largely as a transition zone between the coastal plain to the W, and to the Judean highlands to the E.

In two biblical passages the term "Shephelah" refers to the "Shephelah of Israel":Joshua 11:1–3, and in the second use of the Hebrew word in Joshua 11:16.

Some scholars have placed the N "Shephelah of Israel" in the hilly region between the mountains of Samaria and the coastal plain of the Sharon. But this region is not at all physiographically similar to the Shephelah of Judah. A widely accepted location of the Shephelah of Israel, suggested originally by G. A. Smith, is the low hills that lie between the Samarian hill country and the Carmel range, known today as Ramot Manasseh. However, this location is sandwiched between two mountain ridges whereas the Judean Shephelah lies between the mountains and the coastal plains. Finkelstein (1981) offers another possibility: the N-S foothills of W Galilee extending up to the coastal plain of Tyre in S Lebanon. See GALILEE (PREHELLENISTIC). Here a Shephelah-like physiography lies between mountains and coastal plain. Finkelstein further suggests that this region was well recognized throughout history as distinctive, and consequently was used extensively for administrative purposes, especially during the 19th century, and during Crusader times. He also finds evidence that during talmudic times the "Shephelah of Galilee" was differentiated as a "Land of Gentiles," while the mountains to the E were included in the "Land of Israel." Still earlier in history, the border between the tribes of Asher and Naphtali (Josh 19:24–40) may have corresponded to this morphological division: Asher in the Shephelah and coastal plains, and Naphtali in the mountains. Apparently only in modern times has this physiographic region failed to serve as a basis for a political-administrative subdivision.

SHEPHER, MOUNT (PLACE) [Heb *har-šeper* (הַר־שָׁפֶר)]. One of the camping sites of the Israelites as they journeyed through the wilderness (Num 33:23, 24). Its exact location is unknown, as are the locations of most of these sites. Noth (*Numbers* OTL) suggests that it is part of a "document" of the wilderness camping sites used by the Priestly writer.

SIDNIE ANN WHITE

SHEPHERD. See SHEEP, SHEPHERD.

SHEPHERD OF HERMAS. See HERMAS' THE SHEPHERD …

SHEPHO (PERSON) [Heb *šĕpô* (שְׁפוֹ)]. Var. SHEPHI. A clan name in the genealogy of Seir the Horite in Gen 36:23. Shepho is listed as the fourth of five sons of the clan chief Shobal, and is thus a grandson of Seir. The name also appears in the parallel genealogy in 1 Chr 1:40. However, it is written Shephi (Heb *šĕpî*). As Horwitz (1973:70) notes, this may be due to a confusion between the letters *waw* and *yod.* These Horite clans are not to be confused with the Hurrians of Mesopotamia. They were the original inhabitants of the region of Edom (perhaps as cave dwellers), but they eventually lost control of the area to the encroaching "sons of Esau" (Deut 2:12–22). This conquest of the Horites is paired in the text with the conquest of Canaan by the tribes of Israel.

VICTOR H. MATTHEWS

SHEPHUPHAM (PERSON) [Heb *šĕpûpām* (שְׁפוּפָם)]. Var. SHEPHUPHAN. SHUPHAMITES. The fourth of Benjamin's five sons (Num 26:38–40). Although the name "Shephupham" occurs in only one of the Benjaminite genealogies (Num 26:39), what may be corrupt forms of the name are also present in the other genealogies for the tribe (Muppim, Gen 46:21; Shuppim, 1 Chr 7:12, 15; Shephuphan, 1 Chr 8:5). In addition, the name "Shephupham" and its variants usually occur in the company of similar names, which may be variants of a single name, as well: Huppim (Gen 46:21; 1 Chr 7:12, 15), Hupham (Num 26:39), and Huram (1 Chr 8:5). There are numerous differences, however, among these Benjaminite genealogies, and there is no consensus among scholars about which should be used to correct the others. Among the reconstructions that have been proposed, however, Rudolph's preference for that in Numbers 26 (*Chronikbücher* 70–71) has won much, though not universal, support.

Gen 46:8–27 lists the descendants of Jacob who entered Egypt. In v 21, the MT gives Benjamin ten sons, one of whom was Muppim. The LXX, however, gives Benjamin only three sons, but adds six grandsons, one of whom was Mamphin, and one great-grandson. It may be that Muppim/Mamphin is a corrupted form of Shephupham (Westermann 1986:153). Commentators usually note that according to Genesis, Benjamin was only about 25 years old at the time that he and his family entered Egypt (cf. Gen 35:16–19; 41:46, 53; 45:6)—rather young to have had ten sons (or the great-grandson that one finds in the LXX; Westermann 1986:160). In addition, the MT of Gen 46:21 is incongruent with the list of Benjamin's descendants in Num 26:38–40; the MT of Numbers 26 assigns him five sons (Bela, Ashbel, Ahiram, Shephupham, and Hupham) and two grandsons (Ard and Naaman) through Bela. The LXX of Numbers 26:42–44 omits Hupham from the list and gives variant spellings for each of the other names.

1 Chr 7:6–12 provides a third list of Benjamin's descendants and lists Bela, Becher, and Jediael as the patriarch's three sons. The firstborn (Bela) had five sons (v 7):Ezbon, Uzzi, Uzziel, Jerimoth, and Iri (or Ir, v 12). Iri, in turn, had two sons, Shuppim and Huppim. It may be that the text or tradition of this Benjaminite genealogy is corrupt and this Shuppim was the same person as the Shephupham of Num 26:39. Curtis and Madsen (*Chronicles* ICC, 145–49) proposed that since 1 Chr 7:6–11 is so strikingly different from the Benjaminite genealogy in Numbers 26, it was originally a genealogy for the tribe of Zebulun, and v 12 was a genealogy for Dan. In addition, there is already a genealogy for Benjamin in 1 Chronicles 8 but none in 1 Chronicles 1–9 for Zebulun. However, this suggestion has won little support, since most scholars find it easier to attribute the differences between the two (Benjaminite) genealogies to textual corruption or to intentional changes by those who transmitted the genealogical material (Braun *1 Chronicles* WBC, 106–9).

In 1 Chr 7:15, it is reported that Manasseh's son Machir "took a wife for Huppim and Shuppim." The identity of Shuppim, however, is unclear. Was he a Benjaminite, perhaps the same Shuppim that was met in 1 Chr 7:12, or perhaps his name is a corrupted form of Shephupham (Num 26:39)? Or was he a Manassite, possibly the son of Machir? The LXX, at any rate, gives his name as Mamphin, the same form that occurs in Gen 46:21, where the MT reads Muppim. The genealogy for Manasseh in 1 Chr 7:14–19 presents a number of complex problems which have not been resolved to the satisfaction of most scholars,

and so it appears that the identity of Shuppim will remain unknown. The same name occurs in 1 Chr 26:16, where it is reported that when lots were cast to assign the various gatekeepers their posts in Jerusalem, two of the Levites, Shuppim and Hosah, were given charge of Shallecheth, a gate on the W.

Another genealogy for the tribe of Benjamin occurs in 1 Chronicles 8. Among the names there is Shephuphan (v 5), one of the nine sons of Bela the son of Benjamin. This may also be a corrupted form for Shephupham, as the Targum and some Hebrew mss indicate by reading Shephupham.

Therefore, two points remain uncertain: (1) the relationship among the names "Shephupham," "Muppim," "Shuppim," and "Shephuphan" and (2) their relationship(s) to the patriarch Benjamin.

SHERD. See POTTERY.

SHEREBIAH (PERSON) [Heb *šērēbyâ* (שֵׁרֵבְיָה)]. The name of several individuals, in which the theophoric element *yāh* is added to a form of *šrb.* Several explanations or derivations of the name have been proposed. Noth (*IPN,* 259) believes it to be a *Pi῾el* perfect of a verb *šrb* whose meaning is unknown. A verb stem meaning "parch" is, according to BDB, 1055 and KB, 1010, attested in post-biblical Hebrew, Aramaic, and Syriac. A Heb noun, *šārāb,* is found in Isa 35:7 and 49:10 (where Caspari 1931:81 believes it refers to a demon) and conveys the sense of "heat." Zadok (*EncMiqr* 8:259) suggests a West Semitic root *šrb* meaning, perhaps, "to go before," and in Piel "to send." The Ar *sariba* carries similar meanings—"flow, run" and "send in groups." (Zadok's bibliography suggests several derivation possibilities.) Combinations of the above have suggested to many "Yahweh has sent burning heat" as a translation of the name. Robinson (1868:42) points to the Ar *serāb* as denoting a "mirage." Clay (1904:53) notices the name's similarity to a personal name *Ish-ri-bi-Ia-a-ma* found on a 5th century B.C. cuneiform text from Nippur. The use of the name to refer to family and to individual persons makes it difficult to determine from its eight occurrences in the Hebrew Bible the number of people who bear it. Opperwall (*ISBE* 4:474) is correct in observing the name may be of one, two, or three individuals.

1. One of those (Ezra 8:18) who, with his sons and brothers, was sent by Iddo to Ezra in response to a request for "ministers *(měšartîm)* for the house of our God" (v 17) to return from Babylon (v 1) to Jerusalem (v 31) with him. The LXX omits his name reading instead *kai archēn* (a corruption, suggests Bewer [1922:76], of *kai Sarcheia* = Heb *wšrkyh*) *ēlthosan.* If the *waw* preceding his name in the MT is an explicative (Rudolph *Esra und Nehemia* HAT, 81; Clines *Ezra Nehemiah, and Esther* NCBC, 110; Williamson *Ezra, Nehemiah* WBC, 113) and is to be rendered "namely," or if, as in 1 Esdr 8:46—Eng 8:47 (where the name is *Asebēbian*), the copula is to be dropped (Bertholet *Esra und Nehemia* HKAT, 36; Bewer 1922:72), then this Sherebiah is the one "from the sons of Mahli, son of Levi, son of Israel (instead of *bn-yšr῾l* Batten *Ezra and Nehemiah* ICC, reads *br῾šwn* "at the head")—"the man of discretion *(῾îš śekel).*" If the *waw* preceding the name is a simple conjunction ("and"), the "man of discretion" remains unnamed or is itself the proper name of the Levite (Bertholet, 36; cf. Gunneweg *Esra* KAT, 148).

According to Ezra 8:24, a Sherebiah is one of those among the priests and Levites (v 30) charged by Ezra with conveying "the offering *(tĕrûmāh)* of the house of our God" (v 25) from Babylon to Jerusalem (v 30). The MT places *lĕ* before his name either as a sign of the dative (LXX *tǭ Saraia*) (cf. Bertheau *Esra, Nechemia und Ester* EHAT, 106)—thus Ezra separated twelve leading priests and assigned them to Sherebiah—or as "an error but not accidental" to avoid stating that Sherebiah and Hashabiah were priests (Batten, 328). It is easier to read, with 1 Esdr 8:54 *(kai Eserebian),* the conjunction *we* ("and," "in addition to") before his name (Myers *Ezra-Nehemiah* AB, 65; Williamson, 114; Blenkinsopp *Ezra-Nehemiah* OTL, 168). This would allow for a team of twelve priests and twelve Levites (Bertholet, 37; Blenkinsopp, 169) to perform the assigned task.

It is reasonable to conclude that this Sherebiah who, along with Hashabiah, is charged with bringing the offering to Jerusalem is the same Sherebiah (v 18) who, along with Hashabiah, returns to Jerusalem with Ezra. That he was a Levite is most certain.

2. The third listed of thirteen (Neh 8:7) who "read from the book, from the Torah of God" (v 8). In the LXX only the first three of these names—Jeshua, Bani, and Sherebiah *(Sarabia)*—are recorded and there is no mention of Levites who, in the MT, are represented as "and the Levites *(wĕhalwiyyîm).*" Perhaps the *waw* was affixed by a scribe who took *hlwym* to be the last proper name in the list (Williamson, 278) or by the Chronicler whose partiality for the Levites caused him to add the word (Bertholet, 69) or the entire verse (Rudolph, 147). In 1 Esdr 9:48 (where the name is *Sarabias*), this conjunction is missing. Holmgren (1987:124) believes the Levites' participation combined the functions of interpretation and translation. Their activity during this liturgical event has been variously explained depending on the interpretation given the verbs in v 8b (see Clines, 184–85 and Blenkinsopp, 288).

According to Neh 9:4, Sherebiah (LXX Codex Vaticanus *Sarabia,* Sinaiticus *Saradia,* Alexandrinus *Sachania* [= Heb *šĕkanyāh*]) was the sixth listed of eight who "stood on the platform of the Levites" and "cried (*wayyiz ʿăqû*) to the Lord their God." The verb *zʿq,* suggests Williamson (p. 311), refers to a public expression of grief.

In Neh 9:5, Sherebiah (absent from LXX) is the fifth listed of eight Levites who invite the assembly to "stand up, bless the Lord your God," and then intone the prayer psalm (Myers, 166–70). Blenkinsopp (p. 296) and Clines (p. 191) believe the groups in v 4 and v 5 are identical, the differences in lists being attributable to text transmission. Brockington (*Ezra, Nehemia and Esther* Century Bible, 171) disagrees, holding that if they were the same, there would be no need of both.

In Neh 10:13—Eng 10:12, Sherebiah (LXX Codex Vaticanus *Zarabia,* Alexandrinus and the corrector of Sinaiticus *Sarabia,* Sinaiticus *Zatharia*) is listed thirteenth of seventeen (or fifteen if the repetition of Shebaniah and Hodiah are due to scribal error [Blenkinsopp, 313]) levitical signatories of the "firm covenant *(ʾămānā)* made by the community (10:1—Eng 9:38). Brockington (p. 101) suggests Sherebiah is here a family name while Blenkinsopp (p. 313) believes only the first three names are patronymics, the rest appearing to be personal names.

Blenkinsopp's (p. 313) observation that seven, including Sherebiah, of the thirteen in Neh 8:7 and seven or eight, including Sherebiah, of the sixteen in Neh 9:4–5 are listed in Neh 10:10–14—Eng 9–13 lead to the conclusion that the same Sherebiah is meant in all four occurrences. The mention of Hashabiah in 10:12—Eng 10:11 suggests an identity with #1 above (Clines, 203).

3. The fourth listed (Neh 12:8) of eight Levites who returned from exile with Zerubbabel and Jeshua (v 1). Clines (p. 224) discounts the belief that Sherebiah (LXX *Sarabia*) and Judah are here family heads and suggests that Sherebiah was "erroneously introduced into that period from the time of Ezra (Neh 8:7; 9:4f) and Nehemiah (10:12; 12:24)." Myers (p. 196) and Brockington (p. 101) believe this name is a family name while Blenkinsopp (p. 335) believes these names are all patronymics serving here as personal names.

In Neh 12:24 Sherebiah (LXX *Sarabia*) is the second listed of three (or five depending on the reading of the Heb *Vorlage* behind the LXX "and the sons of Kadmiel" as "Binnui/Bani, Kadmiel"—a proposal made by Rudolph, 194; Williamson, 357–358) "heads of the Levites." The list (see Williamson, 361 for an explanation of the literary development of vv 1–26 of which vv 23a, 24–25 is a "list of Levitical heads of families from the time of Johanan") intends to represent the circumstances during the time of Joiakim, Nehemiah, and Ezra (v 26), an improbable combination, suggests Myers (p. 199), since Eliashib was high priest in Nehemiah's time and, suggests Blenkinsopp (p. 335), since Joiakim antedated Ezra (and therefore Sherebiah and Hashabiah).

It is possible, although not clear, that this Sherebiah, a Levite associated with Hashabiah, was identical with #1 above (Williamson, 359).

RODNEY H. SHEARER

SHERESH (PERSON) [Heb *šereš* (שֶׁרֶשׁ) or *šāreš* (שָׁרֶשׁ)]. The Manassite son of Machir and his wife Maacah (1 Chr 7:16), whose name probably meant "clever" or "cunning" (Noth *IPN,* 228). The genealogy of Manasseh in 1 Chr 7:14–19 indicates that his brothers were Peresh and Gilead, and perhaps Huppim and Shuppim as well. In addition, Sheresh had two sons, Ulam and Rakem, although the LXX omits the name of the second (1 Chr 7:16–17). No other biblical text mentions Sheresh.

There are two problems in 1 Chr 7:14–19 that affect the identification of Sheresh. First, Maacah, the mother of Sheresh, is called the wife of Machir in v 16, but his sister in v 15. Moreover, v 14 indicates that Gilead was the brother of Sheresh, but v 17 includes him among the "sons of Gilead." Curtis and Madsen (*Chronicles* ICC, 151–52) attempted to resolve these difficulties by emending "Machir" to "Gilead" (v 16). This made Maacah the sister of Machir and the wife of Gilead (as well as his aunt), and consequently, Sheresh's father was Gilead, rather than Machir. Furthermore, they proposed that the names of Shuppim and Huppim (v 15) were glosses from v 12 (the genealogy of Naphtali) and so could not have been the brothers of Sheresh.

Rudolph (*Chronikbücher* HAT, 68–71), however, has attempted to resolve the difficulties in 1 Chr 7:14–19 by emending the text on the basis of Num 26:29–34. His reconstruction makes Maacah the daughter of Gilead and the mother of Sheresh. The name of Maacah's husband is missing, since it was elided in the course of transmission. Rudolph's suggestions have won more support than those of Curtis and Madsen, but neither has been found completely convincing by interpreters.

M. PATRICK GRAHAM

SHESHAI (PERSON) [Heb *šēšay* (שֵׁשַׁי)]. One of three Anakite clans inhabiting Hebron visited by the twelve Israelite spies (Num 13:22), later driven out of their city by Caleb (Josh 15:14; Judg 1:10). The name is patronymic, i.e., it probably refers to the founder of the tribe rather than to a chieftain of the clan or an individual person living at the time. Although the name has been derived from Hurrian (Blenkinsopp 1972:18, 113), or as a reduplicated *šin* representing a more complete name (Noth *IPN,* 41), it occurs in Egypt as the name of a Hyksos ruler (Albright *YGC,* 153). Boling and Wright (*Joshua* AB, 374) suggest they were a "pre-Philistine" Sea People who were driven out of the S hill country by the Israelites (Josh 11:21–22).

KIRK E. LOWERY

SHESHAN (PERSON) [Heb *šēšān* (שֵׁשָׁן)]. A descendant of Judah through Jerahmeel; he is the son of Ishi and father of Ahlai (1 Chr 2:31). However, while v 31 indicates that the son of Sheshan was Ahlai, v 34 states that Sheshan had no sons, only daughters, and gave his daughter to an Egyptian slave Jarha. The identity of Sheshan's issue is a complex and unsolved problem. Several suggestions are possible: (1) v 31 should be read Attai as in v 36; (2) Ahlai (if modified to mean "a brother to me") was a name given to Jarha at the time of his adoption into the family of Sheshan; (3) Ahlai was a son of Sheshan but one born after the marriage of his daughter (however, note v 34); or (4) different sources are reflected in this genealogy. See Williamson (1979:352) for a recent discussion of sources in this genealogy and the conclusion that 2:25–33 and 42–50a stand as a related unit but that v 34 reflects a different source. See also Curtis and Madsen (*Chronicles* ICC, 83) for an analysis of older, but still debated, theories of genealogical sources. The wording of v 35 "So Sheshan gave his daughter in marriage to Jarha his slave …" is considered by some commentators as equivalent to making his servant his heir (Elmslie *Chronicles* CBC, 19), similar to Eliezer's relationship to Abraham (Gen 15:2–3). See also ADOPTION. Some scholars regarded Jarha as an eponymn of Jerahmeel and proceeded to identify Sheshan with Sheshai of Hebron concluding that the genealogy presents a northward movement of this tribe to the area around Hebron.

Locating Sheshan chronologically is difficult. This tenth generation from Judah is often placed shortly before the Exodus (Keil 1872:67), or in the days of Eli, or nearer the Chronicler's own time (see Braun *1 Chronicles* WBC, 46). Lacking sufficient evidence the question must remain open.

Variant spellings of Sheshan are found in the LXX (A reads *Sōsan,* Lucian reads *Sisan*, and B reads *Sōsam* in v 34). Many scholars consider those genealogies in the LXX corrupt (especially codex Vaticanus), however the genealogies of Jerahmeel in the MT are viewed by most contemporary scholars as being in good order.

The meaning of the name "Sheshan" is obscure although many, such as Mauch (*IDB* 4:326), follow suggestions of Noth and others that Sheshan is a duplication of an abbreviation expressing endearment (*IPN*, 40–41).

W. P. STEEGER

SHESHBAZZAR (PERSON) [Heb *šešbaṣṣar* (שֶׁשְׁבַּצַּר)]. A leading Babylonian Jew, "a prince of Judah" (Ezra 1:8), who was commissioned by Cyrus to return the temple vessels to Jerusalem in 538 B.C.E. (Ezra 1:8–11) and a governor responsible for laying the temple foundations (Ezra 5:14–17). As the first Judean governor after the Babylonian exile, Sheshbazzar ushers in a new mode of leadership in an age without monarchy and self-determination. Yet nothing more is known about him. This ephemeral Sheshbazzar, who appears in only these two places, has been the subject of much controversy. His name, identity, role, and activities have all been debated. The ancient sources reflect some confusion concerning Sheshbazzar. 1 Esdras refers to him as Sanabassar, whereas the LXX retains Sasabasar. Josephus equates Sheshbazzar with Shethar-bozenai of Ezra 5:6, and hence considers him a Persian official of foreign origin (*Ant* 11.4 §6). The rabbinic sages equate him with Daniel.

Modern scholars have often identified Sheshbazzar, on the one hand, with Shenazzar of 1 Chr 3:18 and, on the other, with Zerubbabel. Both identifications, however, have recently lost their force. The equation with Shenazzar, son of Jeconiah, grew out of the similarity of the names and Sheshbazzar's titles. The designations "prince of Judah" and "governor" indicate an important personage who would most likely be a Davidic heir; Shenazzar was a Davidic descendant. To some extent, this identification, harks back to an era when continuity between Ezra-Nehemiah and Chronicles was presumed. It may also reflect scholarly discomfort with the fact that the literature is largely silent about so important a figure as the first Judean governor. Although more common a generation ago, this identification has been recently discredited on linguistic grounds (Berger 1971) and proved less compelling with the discovery of several other postexilic Judean governors, some with no clear Davidic ancestry.

The identification of Sheshbazzar with Zerubbabel grew out of a discrepancy among the accounts of temple founding and represents scholars' attempts to reconcile these accounts. Haggai and Zechariah emphatically assert that Zerubbabel was a governor and credit him with laying the temple's foundations in 520 B.C.E. They present this founding as a new and unprecedented act. Ezra-Nehemiah is inconsistent. The narrative first attributes the laying of the foundations to the community as a whole, led by Zerubbabel and Jeshua (Ezra 3:8–13). The later report to the Persian officials at the time of Darius, however (Ezra 5:14–17), claims that Sheshbazzar, whom Cyrus appointed governor, had earlier laid the foundations. The report asserts that the present builders (who, according to Ezra 5:1–2, have been exhorted to build by Haggai and Zechariah) merely continue what had already begun by Sheshbazzar. If Zerubbabel and Sheshbazzar were the same person, some of the contradictions could be eliminated and the mystery of Sheshbazzar's ancestry would be resolved. It has therefore been proposed that Zerubbabel and Sheshbazzar are two different names for the same person, as often happens in the postexilic era (note Daniel's second name). Zerubbabel is thus the governor to whom Cyrus delivers the vessels; he is also, according to this view, the prince of Judah, who laid the foundations according to both Haggai and Zechariah and Ezra-Nehemiah. As a Davidic descendant, he is eminently suitable for such a role.

This view has been discredited as well (Ben Yashar 1981). Scholars now recognize that biblical sources only partially reflect the rich complexities of the postexilic era. Sheshbazzar is no longer the only postexilic governor whose memory has not been adequately preserved. Archeology has identified several such governors (see below). Moreover, equating Sheshbazzar and Zerubbabel does not wholly eliminate the discrepancies: Ezra-Nehemiah still describes two stages that do not directly conform to Haggai and Zechariah. Ezra-Nehemiah maintains that Haggai and Zechariah appear at a later stage of the building process (Ezra 5:1), after the foundations have been set (Ezra 3:8–13). Haggai and Zechariah imply that the events of 520 were brand new, that Haggai has stirred up Zerubbabel, who then proceeded to found the temple. As to the names, although double names are common in the postexilic era, they typically include one Hebrew name and one foreign. Sheshbazzar and Zerubbabel, however, are both Babylonian names. See also Japhet 1982.

The reconstruction of the history of Sheshbazzar, his role in the postexilic era, and his relation to Zerubbabel are best understood as follows: Sheshbazzar has been appointed governor by Cyrus and sent to Jerusalem with the temple vessels. The precise authority of such an appointment and the nature of the Judean province at the time are not clear. Eber Nahara, the Persian name for the larger province of which Judah would have been a part, had undergone administrative reorganization between the time of Cyrus and the stabilization under Darius. Although Sheshbazzar could have been from the house of David, he need not have been. Ezra-Nehemiah's silence about Sheshbazzar's patronym could be either a deliberate attempt to supress Davidic origins (in light of Ezra-Nehemiah's general tendency to defuse the role of the house of David) or a sign that Sheshbazzar's ancestry had been forgotten by the time when Ezra-Nehemiah was written. The title "prince of Judah" obviously indicates a leader but need not designate royalty. Blenkinsopp (*Ezra-Nehemiah* OTL) observes that "prince" is used in Chronicles for a tribal head (e.g. 1 Chr 2:10) or the head of an ancestral house (e.g., 2 Chr 1:2). Williamson (*Ezra, Nehemiah* WBC) links it with other pentateuchal occurrences (e.g., Num 2:3–31) which could echo the exodus motif. In either case, the term does not possess the royal connotations that it has in Ezekiel 40–48 and hence removes the need to assign Davidic origin to Sheshbazzar.

As to the question "Who, then, laid the temple foundations?," the answer is that both Sheshbazzar and Zerubbabel did so at different times and probably to a different extent. Sheshbazzar, as the first governor, began the process. Leading the first return, he must have encountered many obstacles: financial problems because the Persian empire had not yet been well organized fiscally (Meyers *Haggai, Zechariah* AB, xxxiv), harassment by neighbors depicted in Ezra 4, and apathy of the returnees themselves, alluded to in Haggai, all very likely played a role; they contributed to the cessation of building efforts. Such efforts were renewed with the second wave of return during Darius's reign (520), led by Zerubabbel and Jeshua, as reported in Ezra 3. At such time Haggai prompts Zerubbabel to being once more what proves to be the successful founding and completion of the temple.

Ezra-Nehemiah, for its own purpose of emphasizing continuity, combines the first and second return, implying that the journey of Sheshbazzar (Ezra 1:11) is identical with the one in Ezra 2. Indeed, it may be for this reason that Ezra 2:1 names only eleven men at the head of the caravan; Sheshbazzar completes the twelve that symbolically represent the reconstituted Israel.

It should not be surprising that Ezra-Nehemiah, Haggai, and Zechariah perceive the founding of the temple differently and offer contradictory accounts. Each text presents a distinctive ideology, not simply all the facts that are in its disposal. Ezra-Nehemiah, especially in the report to the Persians who inquire about authority for such building, seeks to emphasize continuity. Practical considerations support its theological stance that all the stages of the building were in essence a single unified response to Cyrus' edict. Haggai and Zechariah, however, prefer to emphasize the newness of the venture, a perspective that is understandable if earlier building efforts were skimpy. As for the ephemeral identity of the governor Sheshbazzar, it has become apparent that other Judean governors have been even more ephemeral since biblical literature does not even mention them. Archeologists have helped reconstruct a plausible list of governors, even as they recognize that the scope of authority granted such persons in the Persian province of Judah is unclear. Sheshbazzar is the first of several governors of Judah, only three of whom

(Sheshbazzar, Zerubbabel, and Nehemiah) appear in the Bible. At present a cachet of jar handles and seals have helped construct the following list of governors from Sheshbazzar to Nehemiah: Sheshbazzar (538); Zerubbabel (520–510?); Elnathan (510–490?); Yehoezer (490–470?); Ahzai (470–); Nehemiah (445–433) (see Meyers, 14). Later governors have been preserved in documents such as the Aramaic Papyri from Elephantine. See also Cline *Ezra, Nehemiah, Esther* NCBC.

The silence surrounding the activities and fate of such an important leader as the first Judean governor points to the complexity of the era for which the biblical sources constitute but the tip of the iceberg.

TAMARA C. ESKENAZI

SHETH (PERSON) [Heb *šēt* (שֵׁת)]. The more phonologically correct name for Seth, the son of Adam.

See also SETH. The name is rendered "Sheth" by the KJV at 1 Chr 1:1 and by both the KJV and RSV at Num 24:17. According to Num 24:17, Sheth is the eponymous ancestor of the Moabites against whose descendants Balaam issues his final curse:

star shall come forth out of Jacob,
and a scepter shall rise out of Israel.
It shall crush the forehead of Moab
and break down [*qarqar*] all the sons of Sheth.

This text, however, presents several problems, the first of which is textual. A similar ancient ballad is recorded in Num 21:28:

For fire went forth from Heshbon,
flame from the city of Sihon.
It devoured Ar of Moab,
the lords of the heights of the Arnon.

Owing to their similarity, these two songs were conflated by the oracle against Moab in Jer 48:45, which coupled the first bicolon of Num 21:28 with the second bicolon of Num 24:17, yielding the following mixed reading:

For a fire has gone forth from Heshbon,
a flame from the house of Sihon.
It has destroyed the forehead of Moab,
the crown [*qodqod*] of the sons of tumult [*šāôn*].

The similarities between 24:17bß and Jer 48:45bß have led many scholars (e.g., Budd *Numbers* WBC, 253) to reconstruct the former text along the lines of the latter. As such, Sheth is read as the noun *šā›ôn,* "strife." Others suggest reading it alternatively as *šē›t* ("devastation") as at Lam 3:47.

The second question relates to whether or not Israelite tradition understood Adam's son Sheth to be the eponymous ancestor of the nation of Moab. The major tradition, to the contrary, states that the Moabites owe their name to Lot's son Moab, whom Lot fathered by his elder daughter (Gen 19:30–38). The LXX of Gen 19:37 stresses the etymological nature of the story by adding to the phrase "and called his name Moab" the note *legousa ek tou patros mou* ("saying, 'from my father' "). In so doing the LXX clearly understood the etymology of "Moab" to be from Heb *mē›ābi.* This patronymic connection of Moab with Lot is further attested by the note in Deut 2:9 that Ar (i.e., Moab; cf. Num 21:28) had been given to the sons of Lot for a possession.

Third, there is the problem of the suitability of the figure of Sheth to serve as an eponymous ancestor at all. Since every one of the postdeluvial nations was traced back to Sheth (Gen 5:1–32; 10:2–32), it is highly unlikely that Israelite tradition would have made him the eponym of any single nation, such as of Moab. Because of the unsuitability of using Seth as an eponym for any nation, and because that function

was fulfilled by Lot and his son, it seems best, therefore, to emend the reading of *šēt* in Num 24:17 to conform more closely to the later tradition in Jer 48:45 or Lam 3:47 as proposed by critical scholarship.
ROD R. HUTTON

SHETHAR (PERSON) [Heb *šētār* (שֵׁתָר)]. One of the seven princes of Persia and Media who were the advisers of King Ahaseuros (Esth 1:14). These men were the most prominent at the court (lit. "sat first in the kingdom") and had the privilege of personal audience with the king (lit. "saw the king's face"). That such a council of seven prominent nobles customarily advised the Persian monarch is well known from extrabiblical sources (for references see Paton *Esther* ICC, 153 and esp. Hayden in *ISBE* 3:971). Although the presumption that the names of these counselors are Persian is reasonable (see the arguments of Millard 1977, who counters the excessive caution of Moore *Esther* AB, XLI–XLIV regarding the reliability of the MT spellings), no name equivalent to this has thus far been found in the extant extrabiblical literature. Recently, however, on the basis of the Aramaic transcription of Old Persian vocables at Persepolis (see Bowman 1970:64–65), Millard has plausibly suggested an etymology from Old Persian *cica* "bright" (1977:485). See also Paton *Esther* ICC, 68 and Gehman 1924:324.

FREDERIC W. BUSH

SHETHAR-BOZENAI (PERSON) [Aram *šĕtar bôzĕnay* (שְׁתַר בּוֹזְנַי)]. Var. SATHRABUZANES. Persian official named in conjunction with Tattenai as co-senders of correspondence to Darius I (ruled 521–486 B.C.E.) informing the king of building activity in Jerusalem (Ezra 5:3, 6; 6:6, 13 = 1 Esdr 6:3, 7, 27; 7:1). 1 Esdras renders the name Sathrabuzanes (Gk *Sathrabouzanēs*). The texts are unclear as to the position Shethar-bozenai holds, unlike the mention of Shimshai in the correspondence to Artaxerxes in Ezra 4:8–23, where Shimshai is named second after Rehum the commander, and identified always as "the scribe." Shethar-bozenai is named second after Tattenai in all four instances suggesting that Shethar-bozenai may also be a scribe. The meaning of the name is uncertain. *CAP* 5:16 (p. 11) has a related form *štrzn.* Cheyne (*EncBib* 4:4462) presents some interesting possibilities, one being that Shethar-bozenai is a Persian official title (e.g., "chief clerk of the chancery"). In this case, one might regard it as a title of Tattenai denoting his role as investigator, rather than the proper name of another person. The context of the Aramaic section of Ezra 4:8–6:18, deals with opposition to the rebuilding of the temple. However, the letter Tattenai sent to Darius does not have the hostile tone apparent in the Aramaic letter to Artaxerxes in Ezra 4:11–16. Darius in turn replies in positive tones and instructs that the Jews are to be assisted in the building.

DAVID E. SUITER

SHEVA (PERSON) [Heb K *šyʾ* (שִׁיא); Q *šĕwāʾ* (שְׁוָא)]. **1.** According to 2 Sam 20:25, Sheva was David's secretary. In 2 Sam 8:17, his secretary is called Seraiah, while in the parallel to this at 1 Chr 16:18, his name is given as Shavsha. In 1 Kgs 4:3 a certain Shisha is mentioned as the father of Solomon's secretaries Elihoreph and Ahijah. Most commentators agree that all these forms of the name refer to the same person. If this is correct, however, it is difficult, if not impossible, to determine what the original form of the name was. The various forms found in the LXX may be of some help. For 2 Sam 20:25 the OG has *Sousa* (*Iēsous* in B and *Isous* in A may be explained by the presence of an initial *waw* in the context). Similar variations (*Sousa* [OG] and *Iēsous* [B]) are found at 1 Chr 18:16. For 2 Sam 8:17 OG *Saraias* here agrees with MT while *Asa* in B and *Sasa* in MN reflect the variant *(š)šʾ*. These variations

suggest *šš*› or *šawšā*› as the original Hebrew form. Driver (*NHT,* 283) preferred the former while McCarter (*2 Samuel* AB, 433) opts for the latter.

Marquart (1896:22) put forth the opinion that Shisha represents a Babylonian name, *Šamšu,* although this has not received recent following. More commonly accepted is de Vaux's suggestion (1939:397–400) that the name is of Egyptian origin, a possibility that is strengthened by the name "Elihoreph" as one of Shisha's sons (1 Kgs 4:3). That it was in any case a foreign name seems likely from the fact that this person is the only one of David's officers for whom the father's name is not given. Cody (1965:381–93) suggested that Seraiah was the actual name of David's secretary and *šyš*› or something similar was a corrupt form of the Egyptian title *šš š*‹*.t* for a scribe. This suggestion, however, has not been widely accepted.

2. According to 1 Chr 2:49, Sheva was one of the sons of Caleb by his concubine Maacah. Sheva was the father of Machbenah and Gibea.

STEPHEN PISANO

SHIBAH (PLACE) [Heb *šib*‹*â* (שִׁבְעָה)]. The name of a well dug by Isaac's servants (Gen 26:33).

News of the well's completion reached Isaac just as he was concluding a treaty by making an oath *(šb*‹*)* with Abimelech, the Philistine king from Gerar (Genesis 26). According to the biblical account, the name "Shibah" ("oath") was given in honor of this occasion. The Genesis author identifies the town subsequently built on the site as Beer-sheba, "well of the oath" (v 33). This incident either is a reopening of a well previously named by Abraham (Gen 21:25–31), or an alternative tradition regarding the nomenclature.

Tell Beer-sheba (Tell es-Saba; M.R. 134072) lies 2 miles E of the modern town of Beer-sheba (Bir es-Saba; M.R. 130072). The former only shows occupation during the Israelite period (Aharoni *EAEHL* 1:160–68). The latter site shows a much longer period of settlement, ranging from the 4th millennium B.C. through the Iron Age and later. Gophna has proposed that the older settlement remained occupied on the traditional site of the wells, while an administrative center was later built at a little distance on the tell (*EAEHL* 1:159). The site in Genesis would then more likely be identified with Bir es-Saba rather than Tell es-Saba. See BEER-SHEBA.

DAVID W. BAKER

SHIBBOLETH [Heb *šibbōlet* (שִׁבֹּלֶת)]. Word which occurs 20 times in the Bible, most often meaning "ear of grain," but in several instances also "flowing stream." In one of these occurrences, Judg 12:6, the dialectal form *sibbōlet* appears. This verse, which has come to be known as the shibboleth incident, has been the subject of much debate. Regardless of how one interprets it, however, scholars agree that the passage indicates a certain difference in the pronunciation of Hebrew between Ephraimites and Gileadites. Accordingly, it is an important piece of evidence for establishing the fact that regional dialects of Hebrew, at least in regard to phonology, existed in ancient Israel.

The story of Judg 12:1–6 describes a battle between the tribe of Ephraim and the people of Gilead in Transjordan. The Gileadites were in control of the fords of the Jordan River. When an Ephraimite tried to cross the river to retreat homeward to Cisjordan, the men of Gilead asked him to pronounce the word *šibbōlet.* Typically he was unable to do so and instead said *sibbōlet,* thus revealing his Ephraimite identity.

The simple approach, taking the story at face value, is to assume that at least in some instances the Ephraimites pronounced *š* as [s] (e.g., GKC 17). But few scholars today would hold to this opinion. Instead, numerous theories have been devised with alternative interpretations.

Marquart (1888) believed that the Ephraimite dialect retained the phoneme /ṯ/, but that when the Gileadites heard this it sounded like [s]. Speiser (1942) reversed this hypothesis by suggesting that it was the Gileadite dialect which retained the phoneme /ṯ/, but that the Ephraimites were unable to render it correctly and thus said [s] Speiser pointed to the existence of an Aramaic word *tūblā*ʾ "ear of grain" to posit a proto-Semitic root *ṯbl* for *šibbōlet.*

Subsequently, Marcus (1942) and Kutscher (1967:173–74), based on the earlier work of Fraenkel (1905), noted that *tūblā*ʾ was actually a ghost word, a doctored form attested only once in the vast Aramaic literary corpus, thus greatly weakening Speiser's theory. Kutscher's (1982:15) final words on the subject represented the common view of about two decades ago: "The riddle remains, therefore, unresolved."

A spate of recent articles has renewed the debate concerning the shibboleth incident. The first two articles concentrated mainly on the problem of the Hebrew *śin,* but also commented on the shibboleth incident. Diem (1974:242–43) accepted Speiser's interpretation, in spite of Marcus' and Kutscher's objections. Blau (1971:109) opted to return to the simple interpretation mentioned above. A novel analysis was attempted by Beeston (1979), who proposed that the proto-Semitic root of our word is *sblt,* which the Ephraimites preserved, but that in non-Ephraimite Hebrew the pronunciation shifted to *šblt.*

Swiggers (1981) also accepted Speiser's theory that the Gileadites retained the phoneme /ṯ/, but he alleviated the objection raised by Marcus and Kutscher by proposing to distinguish two roots: *šbl* for "ear of grain" and *ṯbl* for "flowing stream." The former is based on the cognate Ugaritic, Akkadian, Arabic, and South Arabian evidence. The latter, unfortunately, has no Semitic etyma to substantiate it. Moreover, Swiggers noted that in the context of Judg 12:6 only the meaning "flowing stream" pertains. Parallel folk stories show that the password used in such incidents always is related to the context. Since the Ephraimites are crossing the Jordan at this point only "flowing stream" and not "ear of grain" is germane. On the question of how the Ephraimites pronounced the word, Swiggers claimed that they said [*šibbōlet*] as in standard Hebrew, though for graphemic reasons the text of Judg 12:6 uses *sblt.*

Emerton (1985) dismissed the theories which posit a proto-Semitic /ṯ/ as the first root letter based on the failure to find a relevant cognate. Instead, he advanced the working hypothesis that Ephraimites and Gileadites simply articulated the phoneme /š/ slightly differently from one another. The realization of individual phonemes is often subject to minor local variation. Thus, in the Ephraimite dialect, the /š/ sound may have been realized as something closer to [s] than to [š], or in the very least the Gileadites may have heard the Ephraimite /š/ as closer to [s] than to [š].

Lemaire (1985), on the other hand, lent support to the possibility that a root with /ṯ/ is involved. He noted that the Aramaic version of the Tell Fakhariyeh bilingual inscription also represents proto-Semitic /ṯ/ with *s*. According to Lemaire, this situation may not only serve as a parallel to the shibboleth incident, but it even may be related historically since a segment of the Israelites undoubtedly hailed from the general region of Tell Fakhariyeh in Aram Naharayim.

Finally, Rendsburg (1988a; 1988b) demonstrated that Ammonite preserved the phoneme /ṯ/, but that when a Cisjordanian speaker tried to articulate this sound he said [s] The evidence is the Ammonite royal name *bʿlyšʿ* (the root of the second element in this anthroponym is *yṯʿ*), found on a seal at Tell el-ʿUmeiri, which appears in Jer 40:14 as *bʿlys.* Thus, we have another, and in fact much closer, parallel to the situation Lemaire described. Accordingly, Speiser and Swiggers are correct concerning the Gileadite retention of the phoneme /ṯ/, and we can posit an important phonological feature shared by two neighboring dialects in Transjordan. Swiggers is correct that the Ephraimites generally said [šibbōlet] as in standard Hebrew, but Speiser is correct concerning Judg 12:6 specifically. When asked to pronounce /ṯ/ the Ephraimites were unable to do so and instead articulated an [s] Swiggers is also justified in differentiating two roots, although it is still true that no cognate to Hebrew *šibbōlet* "flowing stream" (derived from proto-Semitic *ṯbl*) has been found.

Lastly, it should be noted that based on the story in Judges 12, "shibboleth" passed into the English language as a word meaning "password."

SHIHOR (PLACE) [Heb *šîḥôr* (שִׁיחוֹר); *šīḥôr* (שִׁחוֹר); *šīḥōr* (שִׁחֹר)]. A river or body of water in the NE Nile delta region mentioned four times in the Bible (Josh 13:3; Isa 23:3; Jer 2:18; 1 Chr 13:5), the precise identification of which is still uncertain. Shihor was understood by biblical writers as being part of the Nile, if not the Nile itself. If one follows the MT of Isa 23:3, Shihor is in parallelism with the Nile (Heb *yĕ›ôr*). In Jer 2:18, Egypt and Shihor (RSV "Nile") are counterpart to Assyria and the Euphrates. Josh 13:3 uses Shihor with the definite article (Heb *haššîḥôr*) and refers to the ideal or actual southernmost boundary between Egypt and the land of Israel, described as opposite or facing Egypt (Heb *pĕnê miṣrayim*]. David assembled all of Israel from Shihor of Egypt to the entrance of Hamath to bring up the ark of God (1 Chr 13:5).

The name "Shihor" seems to reflect the Eg p€ *š-ḥr* "The waters of Horus" (see Gardiner 1918:251; 1947:201; Köhler 1936:289–90; Bietak in *LÄ* 5:623–26). The Hebrew name "Shihor" caused difficulties for the LXX translators. For example, in Josh 13:5, LXX reads *aoikētou* "uninhabited;" Jer 2:18, *gēōn* (see also Gen 2:13 and GIHON); and 1 Chr 13:5, *horiōn* "boundaries." The Greek translation of Isa 23:3 is also problematic (see Wildberger *Jesaja* BKAT, 856 for discussion of MT).

There has been a great deal of discussion among scholars concerning the identification of Shihor. In the light of papyrological and biblical evidence, it has been concluded that Shihor refers to running water, is drinkable, is associated with the city of Pi Rameses (see RAMESES), and empties into the sea at the N coastal town of Pelusium (Gardiner 1918:251; cf. Bietak 1975:129–30). It must therefore be identified as part of the Nile (e.g., Gardiner 1918:250–52; see also 1947:172, 202). Others (e.g., *GTTOT,* 27, 104; Wilson in *DB* 4:498–99) have claimed that Shihor refers to the Brook of Egypt (Heb *naḥal miṣrayim*) identified with Wadi el-Arish. Supporting this identification is a parallel between the markings of the N and S boundaries of Israel in the time of David in 1 Chr 13:5 and 1 Kgs 8:65. Where 1 Chr 13:5 reads Shihor, 1 Kgs 8:65 reads *naḥal miṣrayim* (Brook of Egypt). Shihor must therefore be a reference to the river of Egypt. However, some scholars have turned away from identifying Shihor with Wadi el-Arish. Bar-Deroma (1960) equates Shihor with the Brook of Egypt but identifies it with the easternmost (Pelusaic) arm of the Nile (note also Kitchen 1982:2–3 and *NBD,* 310–12, who identifies the Brook of Egypt with Wadi el-Arish and Shihor with the northernmost portion of the Pelusian branch of the Nile before it enters the sea; cf. also Montet 1968:49–51).

More recent scholars (e.g., Bietak 1975) have been wrestling with the problem of how Shihor can refer to flowing water and standing water at the same time, as suggested by the ancient Egyptian papyri. Another problem concerns the relationship between Shihor and the "Way of Horus," a road that was used for travel between Egypt and Palestine. It has been suggested that Shihor flows through the NE part of the Nile delta parallel with the Way of Horus. Before Shihor empties into the Mediterranean Sea, it runs into

a drainage reservoir also known as the Waters of Horus. Traveling S into Egypt from Palestine on the Way of Horus, it is the first body of water that one encounters (for discussion see Bietak 1975; cf. Na›aman 1979; 1980).

ARNOLD BETZ

SHIHOR-LIBNATH (PLACE) [Heb *šîḥôr* (שִׁיחוֹר) *libnāt* (לִבְנָת)]. A place mentioned in the description of the S border of the territory of the tribe of Asher (Josh 19:26). According to this passage, the S border "on the west touches Carmel and Shihor-libnath." Shihor is derived from the Egyptian *si-hor* (lake/river of the god Horus) (e.g. *ANET,* 471). In the Bible the term *šîḥôr* either refers to the E arm of the Nile/Delta as the S border of the Holy Land (Josh 13:3; 1 Chr 13:5) or it is used as a synonym for the Nile (Isa 23:3; Jer 2:18). See SHIHOR.

Shihor-libnath must then be a river in the vicinity of the Carmel. Its identification depends, however, on whether or not Mt. Carmel was part of the territory of Asher. Scholars who include the Carmel within Asher's territory identify Shihor-libnath with Naḥal Dāyah or with Haḥal Tanninim to the S of the Carmel. They see a possible connection between the name of the latter ("Crocodile river") and of the town that was located near its estuary, Crocodilopolis (Strabo *Geog.* 16.2.27; Pliny *HN* 5.17.75) and its Egyptian name "Shihor" (*GP* I: 270–71).

However, the Heb term *āga* ("and touched on") that is used in the border descriptions in Joshua apparently relates to places *outside* the tribal territories themselves, in which case Mt. Carmel is outside the territory of Asher and Shihor-libnath is to be identified with the lower reaches of the Kishon river to the N of the Carmel (Maisler 1942:Map 5; *HGB,* 205). Libnath, the town that gave its name to the river, has been identified with Tell Abu Huwam (M.R. 152245) at the estuary of this river in modern Haifa (*LBHG,* 238).

RAFAEL FRANKEL

SHIKKERON (PLACE) [Heb *šikkĕrôn* (שִׁכְּרוֹן)]. A station on the N border of the tribal allotment of Judah (Josh 15:11), between the better known towns of Ekron (probably Tel Miqne) and Jabneel (probably modern Yavne). Alt (*KlSchr* 1:193–202) has persuasively argued that the border list of Joshua 15 is derived from an ancient legal document delineating the territorial claims of the tribes during the period of the Judges. It is clear that the boundary in this region generally follows the Sorek Valley, running from the edge of the hill country at Beth-shemesh to the Mediterranean shore near modern Palmahim. A thorough examination of this region led Aharoni (*LBHG,* 384) to propose that Shikkeron be identified with Tell el-Ful (M.R. 132136), a small mound on the N edge of the Sorek Valley approximately 6 km N and slightly W of Tel Miqne, and 8 km SE of Yavne. Although this identification is not certain, the general location is no doubt correct.

WADE R. KOTTER

SHILHI (PERSON) [Heb *šilḥî* (שִׁלְחִי)]. The father of Azubah, who was wife of Asa and mother of Jehoshaphat, kings of Judah (1 Kgs 22:42). The queen mother (Heb *gĕbîrâ*) was an influential figure in the Judean court, and regnal formulas opening the account of a Judean king's reign almost always mention her name along with that of her father, her provenance, or in late reigns, both. The personal name "Shilhi" is otherwise unknown. Šanda (*1 Kings* EHAT, 502) conjectures that *šlḥy* may not be the name of Azubah's father, but a corruption of the phrase *mn-šlḥym* ("from Shilhim"; see Josh 15:32); the same result can be achieved without emendation by reading *šlḥy* as a gentilic: " (daughter of) a Shilhite."
JEROME T. WALSH

SHILHIM (PLACE) [Heb *šilḥîm* (שִׁלְחִים)]. An unidentified town in the Judean Negeb (Josh 15:32). In the lists of Simeonite towns incorporated into Judah, its place is taken by Sharuhen (Josh 19:6) and Shaaraim (1 Chr 4:31). Owing to these putative parallels, most scholars view the three towns as one (e.g., Boling and Wright *Joshua* AB, 384). Since Shaaraim is generally dismissed as a late corruption of Sharuhen, the discussion has centered on the respective claims of the names "Shilhim" and "Sharuhen." Albright (1924:134–35 n. 6) felt that Sharuhen and Shilhim were alternate names for the same place, the former form reflecting Egyptian influence and the latter Canaanite. He further conjectured that the original form of the name was *Šir/lhōn.* Noth (*Josua* HAT, 88) advocated the primacy of Sharuhen in the context of the biblical text. Recently Naʾaman (1980:147–48) has called into question the identification of Egyptian and biblical Sharuhen with each other, thus arguing for an original Shilhim in the Hebrew Bible (possibly also mentioned in Shishak's list). Aḥituv (*CTAED,* 173), on the other hand, has argued that there is no reason to assume that Shilhim, Sharuhen, and Shaaraim refer to the same place, since there are many differences in the three lists that cannot be dismissed as scribal variants. He regards the three lists as representing three different stages in the history of Simeon's inheritance.

CARL S. EHRLICH

SHILLEM (PERSON) [Heb *šillēm* (שִׁלֵּם)]. SHILLEMITES. The youngest of the four sons of Naphtali (Gen 46:24). Shillem was a grandson of Jacob and Bilhah, the maid whom Laban gave to his daughter Rachel on the occasion of Rachel's marriage to Jacob (Gen 29:29). Shillem was one of the 70 people listed in the genealogical list of Jacob who descended to Egypt with Jacob's family at the time of a severe famine in the land of Canaan (Gen 46:8–27). Little is known about Shillem. According to the genealogical list of Naphtali found in the second census taken by Moses (Numbers 26), Shillem became the father of the Shillemites, one of the clans of Naphtali (Num 26:49). In the Chronicler's enumeration of Naphtali's genealogy (1 Chr 7:13) his name appears as Shallum [Heb *šallûm*]. See SHALLUM #8.
CLAUDE F. MARIOTTINI

SHILOAH, WATERS OF (PLACE) [Heb *šīlōaḥ* (שִׁלֹחַ)]. See SILOAM, POOL OF (PLACE).

SHILOH (PLACE) [Heb *šīlōh* (שִׁלֹה)]. A place N of Bethel inside the land of Canaan where the Israelites convened sacred assemblies in the days before Solomon established the Jerusalem temple as the major center of Yahwistic worship (Joshua 19:51; Judg 18:31; 21:12–21). The priests who presided at this shrine appear to have been from the lineage of Eli (1 Samuel 1–4; 14:3; 1 Kgs 2:27). At some early time the shrine was apparently abandoned (Jer 7:12–14; 26:6–9; cf. Ps 78:60).

A. The Site

Located in the heart of the Ephraimite hills, Shiloh (Khirbet Seilun, M.R. 177162) occupied a midpoint between the important centers of Bethel and Shechem. See SEILUN, KHIRBET . The book of Joshua makes Shiloh the first permanent home for the ark after the conquest of Canaan. There, Joshua parceled

out land to most of the tribes (Josh 18:1–10; 19:51; 21:2; also 22:9). These traditions are late—Josh 21:2 cites Num 35:1–8, a text from the Priestly source in the Pentateuch (Friedman 1981:116–18), which was produced sometime in the 7th–6th centuries B.C.E. by a clergy that claimed descent from Aaron. Shiloh's role in the book of Joshua is thus part of a historian's reconstruction. The historian writing in Joshua (presumably the Deuteronomist [DH]) knew of three key premonarchic sanctuaries (Gilgal, Shiloh, Shechem); he therefore traced Israel's use of them to the earliest possible era. The view of Shiloh in this historian's sources, this review will show, was somewhat different.

Two sets of data underlie the historian's deduction: first, tradition located a sanctuary associated with the ark in Shiloh during Eli's time (including Judg 18:31); second, both Ps 78:60 (for the date of which, see Clifford 1981) and Jer 7:12; 26:6–9 reflect a 7th-century conviction, probably widespread and based on the traditions about the Elides (Eissfeldt 1957), that Jerusalem had succeeded Shiloh as YHWH's unique "chosen place."

Possibly, 2 Sam 7:6–7 reflects an earlier Jerusalemite posture. It affirms that YHWH had always "roved in a tent and a tabernacle … among all the children of Israel," denying that YHWH had any permanent dwelling before he elected Zion (cf. Psalm 132). But the Deuteronomistic Historian (DH), writing from Josiah's court (Cross, *CMHE,* 278–85), embraces the idea of an election of Shiloh (with Jer 7:12). To avoid contradiction, he therefore interprets 2 Sam 7:6–7 (from a source) to distinguish between a site elected for YHWH's residence and a site elected to house a temple. His formulation, "I never elected a city from among all the tribes of Israel to build a temple for my name to be there" (1 Kgs 8:16), echoes Deut 12:5, which speaks of "the place that YHWH your god will elect from among all your tribes to put his name there, for it to dwell." But it carefully states that no town was elected before Zion *for a temple*—the qualification leaves open the possibility that other towns, such as Shiloh, but not their temples, were previously "chosen places." Again, this is the posture of the Deuteronomistic movement in the late 7th century—the posture reflected in Joshua.

Little can be said with certainty concerning the cultic establishment at Shiloh. Judg 21:18–23 (with a possible oral variant preserved in 21:5–14) implies the existence of a local virginal rite.

Shiloh's eminence is best attested in the era just before the onset of the monarchy. Whether Shiloh had a temple (Eissfeldt 1957:146) is disputed (Cross 1981:173–74; Haran 1985:1998–204). The textual evidence is ambiguous. On the one hand, 1 Sam 1:9 and other nearby texts speak of the establishment in Shiloh as one with regular architectural features: a "nave," a "doorjamb," "doors" (3:15); there are also references to a "house," though whether this always implies an enclosed temple is unsure. On the other hand, as noted above, 2 Sam 7:6–7 denies that YHWH had had a "house of cedar" prior to Solomon's building; he had "roved about in a tent and in a tabernacle" (the parallel in 1 Chr 17:5 is corrupt). Ps 78:60–61 seem to concur: these verses make no mention of a temple. Which is it? Was the Shilonite shrine a temple or an open-air sanctuary?

The passages that imply the presence of a temple in Shiloh certainly stem from the sources used by DH, for as we have seen, he took the opposite view. In this connection, it is noteworthy that neither Ps 78:60 nor Jer 7:12 speaks of a temple at Shiloh, although both affirm that Shiloh was the "chosen place" before Jerusalem. Their concurrence with Dtr suggests a broad consensus among the reform movements of the 7th century: despite Shiloh's election, YHWH commissioned no temple before Solomon's—in accordance with 2 Sam 7:6 and with the Deuteronomistic fixation on "high places." Traditions of a temple in premonarchic Shiloh are probably the older, not the late traditions.

The Deuteronomistic Historian, then, presumably took the references to the Shiloh temple to describe a sanctuary the construction of which had not been divinely ordained—and indeed, no account of its construction is furnished. Too, that the sources of DH placed a temple at Shiloh does not guarantee that a temple was in fact there.

However, one further element favors the sources' view. Recent excavations have disclosed that the Shilonite cult had extensive architectural fixtures (Finkelstein 1985:169–70). The floruit of the site and of its cultic component can be placed in the first half of the 11th century (Finkelstein 1985:170; S. Bunimovitz *apud* Finkelstein 1985:131–38), on the eve of Israel's monarchic revolution, just when the

book of Samuel depicts it. See SEILUN, KHIRBET. And all scholars agree, the ark stood at Shiloh—whether in a tent or a temple—until it was captured by Philistines (1 Samuel 4). Indeed, Shiloh sustained a destruction in the mid–11th century, which scholars reasonably and unanimously ascribe to the aftermath of the Philistine victory in 1 Sam 4:10 (see Finkelstein 1985:173–74). The traditions in Samuel appear reliable, including traditions of a temple.

Texts and archaeology indicate that Shiloh was occupied throughout the Iron Age, and into the exile (1 Kgs 11:29; Jer 7:12–15; 41:5; Finkelstein 1985), though Jer 7:12–15 indicates that the temenos, at least (and thus probably a building), was in ruins in the late 7th century. The Iron I, or more probably, the early Iron II city apparently had a gate complex, with an extended arm, like the gates at Iron II Megiddo and Tel Batashi: from the arm, Eli is said to have awaited news of the battle of Ebenezer; he died by falling backward into the area between the arm and the inner gate passage itself (1 Sam 4:18). Shiloh's continuous occupation had to do primarily with its location, commanding a fertile valley. The sacral tradition, nevertheless, continued. The activity of a Shilonite prophet in the late 10th century (1 Kgs 11:29; 14) suggests that a priestly school remained active on the site.

B. The Priesthood

The priesthood of Shiloh in the premonarchic age had, according to one tradition, charge of YHWH's ark (1 Sam 3:3; 4:3). This icon eventually found its way into Solomon's temple, however, and into the care of its Aaronide priests. The transfer was fully effected with Solomon's ejection of Abiathar, the scion of the Elide line, from the high priesthood (1 Kgs 2:26–27, 35).

Aaronide tradition had it that from the Mosaic era forward, only Aaronides could minister at the ark (Exod 28:1). Further, two Aaronide lineages had disqualified themselves by a ritual violation (Lev 10:1–2), and the line of Eleazar—the Jerusalemite Aaronide line—had secured a promise of the priesthood by the signal loyalty of Eleazar's son (Num 25:10–13). As a result, late priestly writing associates the Elides with Aaron's son, Ithamar (1 Chr 24:3). When the ark was forfeit for Elide wickedness, thus, the definitive transfer of the priesthood to the line of Eleazar occurred (1 Sam 2:12–36). It is not clear, however, that this was the position adopted by the Shilonites themselves, who continued to minister at the ark until forcibly removed from it (1 Kgs 2:26.35).

Wellhausen argued (*WPHI*, 142–43) that the complaint to Eli in 1 Sam 2:27 presupposed descent from Moses. Through a prophet, YHWH queries, "Did I not reveal myself to the house of your father when they were in Egypt?" The verb used in this passage, "reveal," generally denotes direct discourse with some party (almost always so in older sources). Wellhausen therefore deduced that Moses was the ancestor of Eli's line (and others). There is a problem with this logic, however: Moses was not a "house." The reference could well be to Israel generally, or to the tribe of Levi, or to some other group.

Wellhausen bolstered his analysis with the contention that several old texts represent Levitic orders as descendants of or members of a guild founded by Moses. Judg 18:30 speaks of Jonathan son of Gershom son of Moses (MT, Manasseh), whose descendants presided at the shrine of Dan. And Deut 33:8–11, among other texts depicting Moses in a priestly role, alludes to Moses as the archetypical Levite.

Wellhausen's case was refined and sophisticated by F. M. Cross, who identified pieces of partisan priestly polemic in the Pentateuchal sources. There are pericopes in P (the Jerusalemite Aaronide source in the Pentateuch) whose sole purpose and point is to defame the Levitical orders (as P in Numbers 16, the Korah revolt; Num 25:6: 15, perhaps directed also against the cult in Reuben [Cross, *CMHE,* 201–205]). Conversely, E (the Elohistic source in the Pentateuch) and Deuteronomy retail accounts that indict Aaron, and defend Moses' authority. Thus, Numbers 12 underscores the unique character of Moses' relationship with YHWH. More to the point, Exodus 32 damns Aaron as the maker of the golden calf, and the Levites earn priestly status by rising to YHWH's support. This tale probably stems from Shilonite circles (*CMHE,* 198–206; Halpern 1976:39–42; Friedman 1987:70–74). Its hero is Moses, and it rejects both Aaron and the golden calf of Jeroboam I at Bethel and Dan (1 Kgs 12:26–33). There are indications of Shilonite assaults on Jeroboam's icon (1 Kings 14), despite the fact that other Mosaic priests serviced the calf at Dan (Judg 18:30). The implication is that Jeroboam refused the Shilonites an exclusive franchise in his royal sanctuaries.

Shilonites are twice depicted as adopting an anti-Solomonic stance: Abiathar supports a rival pretender (1 Kgs 1:7); and Ahijah of Shiloh instigates Jeroboam's coup and the Solomonic schism (1 Kgs 11:26–40). This is one of several indications that the Deuteronomic program was rooted in the Shilonite line. DH charges Solomon with apostasy (1 Kgs 11:1–3), and Josiah acts against his "high places" (2 Kgs 23:13–14). Deuteronomy also recapitulates the charges of Exodus 32 against Aaron, if in a more palatable form (Deut 9:12–21 with 10:1–6). And of course, Deuteronomy makes Moses the font of all authority in Israel. One interesting clue may be present in the Aaronide polemic of 1 Sam 2:27–36: Eli's descendants, says the text, will come begging to the "faithful priest"—the Eleazarites—for an adjunct priesthood. This is just what Deut 18:1–8 enjoins concerning priests from outside Jerusalem: they must be accommodated at the central shrine (= 2 Kgs 23:8–9).

There is one last link between the Deuteronomic program and Shiloh. Jeremiah is the only prophet to mention Shiloh (7:12, 14; 26:6, 9). An avid supporter of Deuteronomic doctrine, Jeremiah had priestly origins, in Anathoth (Jer 1:1), a Levitical city assigned to Aaron. Nevertheless, Jeremiah, who was declared a persona non grata by the Aaronides of the Jerusalem temple, suffered a contretemps with the people of his hometown (Jer 11:21). Some scholars have concluded that Jeremiah was in fact a descendant of Abiathar, banished by Solomon to Anathoth (1 Kgs 2:36). This is at least a strong possibility. Thus, the priesthood of the Shilonite line seems to have shaped much of the literature of the Hebrew Bible, directly or indirectly. Even if Jeremiah was not himself an Elide, his testimony links Shiloh and Deuteronomy.

BARUCH HALPERN

SHILONITE [Heb *šîlōnî* (שִׁילֹנִי)]. **1.** A description of the prophet Ahijah as somehow associated with the amphictyonic shrine at Shiloh (1 Kgs 11:29). Some scholars argue that the reference to Ahijah as a "Shilonite" suggests that a guild of prophets survived the destruction of both the shrine and the cult at Shiloh (Gray *Kings* OTL, 294).

2. A description given to some of those Judeans who returned to Palestine after the exile (1 Chr 9:5; Neh 11:5). Shiloh, however, is in Ephraim and so most scholars now agree that the text should be vocalized to read "Shelanite," meaning descendant of Shelah, another of the sons of Judah, mentioned in Num 26:20 (Reed in *IDB* 4:330; Myers *1 Chronicles* AB; Williamson *Ezra, Nehemiah* WBC, 343).

FREDERICK W. SCHMIDT

SHILSHAH (PERSON) [Heb *šilšâ* (שִׁלְשָׁה)]. The ninth son of Zophah, named in the genealogy of Asher in 1 Chr 7:37. While this figure is unknown elsewhere in the Hebrew Bible, his name is similar to that of Shelesh in 7:35, and scholars have associated these figures with the lands of Shalishah and Shaalim in the Saul narratives (Edelman 1985:86). Such an identification is in keeping with Gray's thesis that most names in the Ahserite genealogy are tribal or geographical rather than personal (Gray 1896:239).

JULIA M. O'BRIEN

SHIMEA (PERSON) [Heb *šim‹ā›* (שִׁמְעָא)]. Var. SHIMEAH. **1.** Older brother of David, third son of Jesse (1 Chr 2:13). He is called SHAMMAH in 1 Sam 16:9, where he was rejected (along with his other brothers) as God's choice for Israel's king in favor of David, and 1 Sam 17:13, where he was present at the confrontation between David and Goliath. He was the father of Jonadab, who gave devious counsel to Amnon (2 Sam 13:3, 32, where he is called Shimeah [Heb *šim‹â*]), and the father of Jonathan, who killed a Philistine giant (21:20–21 where he is called SHIMEI; 1 Chr 20:6–8). See SHAMMAH #2.

2. A son of David born in Jerusalem (1 Chr 3:5). His mother was Bathsheba (Bathshua) and he had three full brothers: Shobab, Nathan, and Solomon. He is called SHAMMUA in 2 Sam 5:14 and 1 Chr 14:4. In addition, his father had six sons born in Hebron to six different wives, and nine born in Jerusalem to unnamed wives, as well as many sons born to his concubines in Jerusalem (1 Chr 3:9). See also DAVID, SONS OF.

3. A descendant of Merari, son of Levi (1 Chr 6:15—Eng 6:30), named in the independent levitical genealogy of 6:1–15—Eng 6:16–30

4. A descendant of Gershom, son of Levi (1 Chr 6:24—Eng 6:39), named in a list of levitical singers appointed by David (6:16–33—Eng 6:31–48).

DAVID M. HOWARD, JR.

SHIMEAH (PERSON) [Heb *šim‹â* (שִׁמְעָה)*; šim›â* (שִׁמְאָה)]. Var. SHIMEAM; SHIMEEAH. **1.** Older brother of David (*šim‹â;* 2 Sam 13:3, 32). An alternate form of SHIMEA #1.

2. A Benjaminite, son of Mikloth, part of the family of Saul (*šim›â;* 1 Chr 8:32). He was descended from Jeiel, founder of Gibeon. It is not clear whether he lived in Gibeon or Jerusalem, although most of those listed in vv 29–40 were Gibeonites (Williamson *1 and 2 Chronicles* NCBC, 85–86). He is called Shimeam (Heb *šim›ām*) in 1 Chr 9:38. In 1 Chr 8:31 the RSV transcribes the name of the son of Mikloth as "Shimeeah."

DAVID M. HOWARD, JR.

SHIMEATH (PERSON) [Heb *šim‹āt* (שִׁמְעָת)]. Parent of Jozabad (MT), one of two assassins of Joash, king of Judah (2 Kgs 12:22—Eng 12:21). See SHIMRITH. 2 Chr 24:26 explicitly labels her an Ammonitess, making her Jozabad's mother. Note that the RSV reads "Jozacar" accepting a minority reading in order to resolve the problem that the co-conspirators' names are variants of each other. The final *taw* of Shimeath is a marker of a feminine noun, although it is not required to understand a name of a woman, but simply a feminine gender for a masculine name (cf. Gray *Kings* OTL, 591). It would be unusual for a man to be identified by the name of his mother rather than his father, especially as it implies that the father is unknown. 2 Chr 24:26 also has a different variant for the man, "Zabad." Some LXX manuscripts read "Jozacar," making a plausible mistake, interchanging the similar looking *beth* with the *zayin* and the *dalet* with the *reš.*

KIRK E. LOWERY

SHIMEATHITES [Heb *šim‹ātîm* (שִׁמְעָתִים)]. Part of the Calebite family as well as one of three groups or families of scribes who lived at Jabez (1 Chr 2:55). The verse in which the word "Shimeathites" occurs is not clearly comprehensible (Myers *1 Chronicles* AB, 16). Apart from the fact that Jabez cannot be located, whether the three scribal names designate families or functions is difficult to determine (Curtis and Madsen *Chronicles* ICC, 98). The Vulgate treats the word Shimeathites as *resonantes,* "melody makers," and attributes this activity to the scribes living in Jabez. The Targum of 1 Chronicles interprets the term Shimeathites as disciples of Torah whose task is to proclaim the tradition. From designating a government bureaucrat in the preexilic period, the function of the scribe evolved in postexilic times to indicate someone trained in Mosaic Torah. This postexilic perspective on the scribe's task might be the

informing background for why the Targum of 1 Chronicles and the Vulgate interpret the scribal Shimeathites in terms of proclamation and public worship.

Whatever or whoever the Shimeathites were, the Chronicler viewed them as related to the Kenites, who are associated likewise with the Rechabites in v 55. That the latter two were related is not improbable (Curtis and Madsen *Chronicles* ICC, 98) but the exact contours of their relationship cannot be traced.
JAMES M. KENNEDY

SHIMEEAH (PERSON) [Heb *šīmĕʿâ* (שִׁמְאָה)]. See SHIMEAH (PERSON).

SHIMEI (PERSON) [Heb *šimʿî* (שִׁמְעִי)]. Sixteen men or clans bear this name in the OT. The name is short for such names as Shemaiah and Elishama, "Yah (weh)/God has heard." A seal from the period of the Restoration bears the name Baruch the son of Shimei (Avigad 1976:pls. 8–9).

It should be noted that the consonantal writing *šmʿy,* i.e., Shimei, in 2 Sam 21:21 is an error for *šmʿ,* Shimea (cf. 2 Sam 13:3, 32; 1 Chr 2:13; 20:7); 1 Sam 16:9 and 17:13 read Shammah. See SHIMEA #1 and SHAMMAH #2.

1. The second son of Gershon the son of Levi, i.e., a subclan of Levites (Exod 6:17; Num 3:18, 21; 1 Chr 6:2—Eng 6:17; 23:7, 10; Zech 12:13). His brother clan is Libni/Ladan. 1 Chr 23:10–11 refers to four families of Shimeites—Jahath, Zina/Zizah, Jeush and Beriah—noting that only the first two were of significance. In 1 Chr 23:9 Shimei is probably an error for one of the sons of Ladan. Curiously, Shimei is called the grandson of Gershon and the son of Jahath in 1 Chr 6:27–28—Eng 6:42–43) and the son of Libni the son of Mahli the son of Merari in 1 Chr 6:14—Eng 6:29).

2. A clan or individual of Simeon (1 Chr 4:27), supposedly the son of Mishma.

3. A clan or individual of Reuben (1 Chr 5:4), supposedly the son of Gog.

4. A clan or individual of Benjamin (1 Chr 8:21), probably an error for Shema (1 Chr 8:13; see SHEMA #3).

5. A cult musician under David (1 Chr 25:17; also v 3 in Greek Version), of the clan of Jeduthun.

6. A man from Ramah, overseer of David's vineyards (1 Chr 27:27).

7. The son of Gera, a Benjaminite kinsman of Saul from Bahurim, who held David responsible for the deaths of the Saulides (2 Sam 16:7–8), as indeed he may have been. David was a vassal of the Philistines when they conquered Saul (1 Samuel 27, 29):An Amalekite anticipated reward for bringing David news of the deaths of Saul and Jonathan (2 Sam 1:1–16) and the head of Saul's son Ishbaal/Ishbosheth was therefore carried to David for an expected bounty (2 Sam 4:8):David allowed the Gibeonites to kill seven sons of Saul (2 Sam 21:1–14), though he spared the crippled Meribbaal/Mephibosheth (2 Sam 21:1–14) who was kept under close supervision in Jerusalem (2 Samuel 9). David thus was and is naturally suspect of harboring malice toward the house of his former liege.

When David is fleeing Jerusalem, which is temporarily under Absalom's control, Shimei casts curses, stones, and dirt at the king and his cohort (2 Sam 16:5–13). Abishai proposes to execute him, but David orders him to be spared, later renewing his amnesty when he returns triumphant to Jerusalem and receives Shimei's submission (2 Sam 19:17–24—Eng 6:16–23). In his deathbed testament to Solomon, however, David revokes his pardon and charges his son to punish Shimei (1 Kgs 2:8–9).

Scholarly supporters of David suppose, not implausibly, that in fact Solomon fabricated these final instructions. Since, however, throughout his reign David's actions toward the Saulides are suspect, despite his protestations of innocence, we perhaps discern David's true colors in his public pardon and secret vengeance. At any rate, Solomon confines Shimei to Jerusalem, presumably to keep an eye on him, and later executes him when he violates the terms of his parole (1 Kgs 2:36–46).

8. A leader who does not support Adonijah's usurpation (1 Kgs 1:8); he may be the same as #9.

9. The son of Ela, Solomon's administrator over Benjamin (1 Kgs 4:18).

10. A Levite of the house of Heman during the reign of Hezekiah (2 Chr 29:14). He may be the same as #11.

11. The assistant overseer of donations and tithes under Hezekiah (2 Chr 31:12–13).

12. The brother of Zerubbabel, the son of Pedaiah (1 Chr 3:19).

13. A Levite who divorces his foreign wife when compelled by Ezra (Ezra 10:23; 1 Esdr 9:23).

14. A member of the family of Hashum forced by Ezra to divorce his foreign wife (Ezra 10:33; 1 Esdr 9:33).

15. A member of the family of either Bani, or, if we emend in Ezra 10:38 (cf. 1 Esdr 9:34) *ûbānî ûbinnûy* to *ûběnê binnûy,* Binnui. He divorces his foreign wife at Ezra's behest.

16. An individual through whom Mordechai descends from Kish the Benjaminite (Esth 2:5). He could be the same as #7.

WILLIAM H. PROPP

SHIMEON (PERSON) [Heb *šim‹ôn* (שִׁמְעוֹן)]. A descendant of Harim and one of the returned exiles who married a foreign woman during the era of Ezra's mission (Ezra 10:31; cf. 1 Esdr 9:32, where the much longer name "Simon Chosomaeus" appears). The Hebrew spelling of the name is the same as that for the patriarch Simeon and means "God has heard" (*IPN,* 38, 60 n. 2, 185). Shimeon seems to be a member of a family from which groups of exiles returned with Zerubbabel (Ezra 2:32; Neh 7:35). The three-month investigation (Ezra 10:16–17) culminating in the list in which Shimeon's name appears produced a relatively small number of names, leading some to believe that the list only includes prominent members of the community. Shimeon's position in the community, however, remains a mystery. While it seems probable that Shimeon divorced his foreign wife (note the prior oath taken by the people [Ezra 10:3–5] and the possibly generalizable v 19), that is not certain. The RSV follows 1 Esdr 9:36 in clearly stating that all on the list did indeed divorce their foreign wives and put away their children, but the Hebrew text of Ezra 44b is so corrupt that a definite translation is impossible, leaving the final outcome of the investigation in doubt.

JEFFREY A. FAGER

SHIMON (PERSON) [Heb *šîmôn* (שִׁימוֹן)]. An individual of the tribe of Judah (1 Chr 4:20).

SHIMRATH (PERSON) [Heb *šimrāt* (שִׁמְרָת)]. A Benjaminite, a son of Shimei (1 Chr 8:21).

According to 1 Chr 8:28, Shimrath was one of the Benjaminites who dwelt in Jerusalem. Noth (*IPN,* 177) suggested that the name is a long form of Shemer, with the *-at* ending being either Arabic or Akkadian.

TOM WAYNE WILLETT

SHIMRI (PERSON) [Heb *šimrî* (שִׁמְרִי)]. **1.** A Simeonite, the son of Shemaiah (1 Chr 4:37). His name occurs in one of the most extensive and most recent lists (1 Chr 4:24–43) dealing with the tribe of Simeon (cf. also Josh 19:1–9; 15:26, 28–32, 42), in the third subsection of this list, the portion dealing with thirteen tribal princes and their conquests (1 Chr 4:34–43). For the other two subsections, see 1 Chr 4:24–27 (Simeonite genealogy) and 4:28–33 (Simeonite cities and villages). Because of overpopulation and the need for pasture land, the tribe of Simeon is reported to have conquered and settled toward "Gedor," or as often amended on the basis of the LXX, in a more southwesterly direction, toward "Gerar," in the days of King Hezekiah (1 Chr 4:38–41), as well as in the opposite, southeasterly direction toward Amalek in the region of Mt. Seir (1 Chr 4:42–43). Shimri is mentioned as an ancestor of Ziza, one of the 13 Simeonite princes involved in the initial W expansion. The inclusion of Simeon, a tribe in the Chronicler's day, which had long ceased to be a geographical or political entity, was part of the Chronicler's agenda to present and promote the theme of a unified Israel.

2. The father of Jediael and Joha, two of David's mighty men (1 Chr 11:45). The name occurs in the unparalleled supplement (1 Chr 11:41b–47) to the larger synoptic listing (2 Sam 23:8–39 = 1 Chr 11:10–41a) of key personnel in David's military contingent. These men are representative, for the Chronicler, of

the suggestion that all Israel was behind David's rise to kingship (1 Chr 11:10), including individuals from Transjordan, as the only identifiable places in this supplement are locatable there.

3. A Levite, the son of Hosah, descended from Merari (1 Chr 26:10). Although not the firstborn, this Shimri (spelled Simri in the KJV) was designated the foremost of the four Hosah subgroupings, involving a total of 13 men out of a grand total of 93 (1 Chr 26:5, 8, 10–11). As the Chronicler also ascribes to King David the sanctioning of 4000 gatekeepers in all (1 Chr 23:5), these 93 must be intended as leaders. Beside the Merari line of levitical gatekeepers, to which Shimri belonged, the gatekeepers were divided among two other main families: the Kohathite family of Meshelemiah (= Shelemiah? 1 Chr 26:1–3, 14) and the family of Obed-edom (1 Chr 26:4–8), who, with no stated levitical ties given in the text, if not a Kohathite in view of 1 Chr 26:19, could have been the person from Gath at whose house David deposited the ark for safekeeping for three months after the death of Uzzah (2 Sam 6:10–12; 1 Chr 26:5b; 1 Chr 13:13–14; 15:24–25; 16:38). See OBED-EDOM. Shimri and the other Hosah subgroupings were assigned responsibility for the W gate of the temple, together with the Shallecheth Gate (1 Chr 26:16) on the causeway which probably ascended from the Tyropeon Valley to the W side of the temple (Curtis and Madsen *Chronicles* ICC, 285). By virtue of their location they supplied 6 gatekeepers of the 24 in toto required daily for the temple complex (1 Chr 26:17–18). Such details must have been important to the Chronicler for the temple of his day.

4. A Kohathite Levite, the son of Elizaphan (alternately Elzaphan in Exod 6:22; Lev 10:4) the son of Uzziel, and brother of Jeuel (MT K = RSV) or Jeiel (MT Q = NEB; 2 Chr 29:13; Num 3:30). According to the Chronicler, he was one of 14 representative Levites who answered the call of King Hezekiah at the beginning of his reign to clean and restore the temple for service (2 Chr 29:3–5, 11–19, 35b). As this event is unparalleled in 2 Kings, it is part of the Chronicler's effort to heighten the conscientious role of the Levites in the past as a justification for their continued importance for the postexilic community of his day, as an example for all in ongoing zeal for Yahweh's house and its cultic purity.

ROGER W. UITTI

SHIMRITH (PERSON) [Heb *šimrît* (שִׁמְרִית)]. Var. SHOMER. Parent of Jehozabad, one of two assassins (see SHIMEATH) of Joash, king of Judah (2 Kgs 12:22—Eng 12:21). The form of the name, which is masculine in 2 Kings 12 (Heb *šōmēr*), changes to a feminine form in 2 Chr 24:26 (Heb *šimrît*), and is identified as Jehozadab's mother, a Moabitess. The change is usually attributed to an alteration of the gender of the name paralleling what was misunderstood by an editor to be a feminine name. However, it is unclear whether the problem is one of textual transmission or one of different sources used by the Chronicler (cf. Gray *Kings* OTL, 591). The name means "guardian" or "steward." See SHOMER.

KIRK E. LOWERY

SHIMRON (PERSON) [Heb *šimrôn* (שִׁמְרוֹן)]. SHIMRONITES. The fourth and youngest son of Issachar (Gen 46:13; 1 Chr 7:1) and the grandson of Jacob and Leah. Shimron is listed with other descendants of Jacob who migrated to Egypt with their families at the time of a great famine in Canaan (Gen 46:8–22). Nothing is known about Shimron. According to the second census list of the tribes of Israel mentioned in the book of Numbers, Shimron became the eponymous ancestor of the Shimronites, one of the clans of Issachar (Num 26:24). The name "Shimron" may be related to Shamir (*LBHG,* 244), a village in the tribe of Issachar, located in the hill country of Ephraim and home of Tola, one of the minor judges of Israel (Judg 10:1–2).

CLAUDE F. MARIOTTINI

SHIMRON (PLACE) [Heb *šimrôn* (שִׁמְרוֹן)]. A Canaanite royal town (Josh 11:1). Its antiquity is known by the references to it in the Egyptian Execration Texts. It is also mentioned by Thutmose III in his list of Palestinian towns. El Amarna Letters relate how its prince joined the king of Acco to plot and plunder a Babylonian caravan at Hannathon. "Shimron" is written in a variety of ways ranging from

Simeon to Samaria, Shim‹on being a well-attested form. In Josh 12:20 the MT reads "Shimron-meron" whereas the LXX reads them separately, which seems to be accurate. The Mishnah and Talmud identify it with Simonia, while Josephus identifies it with Khirbet Sammuniyeh (Tell Shimron; M.R. 170234). The latter is located in the N portion of Esdraelon, N of Megiddo. It is about 5 miles W of Nazareth. According to the book of Joshua, the king of Shimron was defeated by Israel. The Deuteronomistic History mentions it to show that the Lord would unfailingly give powerful royal cities into the hands of Israel if it remained obedient to his commands. Shimron was later allotted to Zebulun (Josh 19:15).
PAUL BENJAMIN

SHIMRON-MERON (PLACE) [Heb *šimrôn měr›ôn* (שִׁמְרוֹן מְרֵאוֹן)]. One of the towns whose king and people were defeated by the Israelites under the leadership of Joshua (Josh 12:20). The name SHIMRON occurs two other times in Joshua (11:1; 19:15). Because Meron appears only in Josh 12:20, modifying Shimron, its occurrence is problematic. However, a comparison of Josh 11:1 and 12:19–20 reveals several possible explanations for the addition of Meron in Josh 12:20. In 11:1, four cities are mentioned: Hazor, Madon, Shimron, and Achshaph. In 12:19–20, the towns are given in the order: Madon (MT, absent in LXX), Hazor, Shimron-meron, and Achshaph. One explanation for the appearance of Meron, on the basis of the order of names in both passages, i.e., Shimron (-meron) and Achshaph, is that Shimron-meron may simply be the full name of Shimron, and hence the names represent identical sites (Boling and Wright *Joshua* AB, 328). Still other explanations may be discernible in the LXX. The LXX renders Madon in Josh 11:1 as *Marrōn.* However, it omits Madon in Josh 12:19, but renders Meron (v 20) as *Marrōn.* In addition, the LXX in Josh 12:20 separates the MT.'s "Shimron-meron" into "the king of Shimron, the king of Meron." On the one hand, this may represent a tradition that Shimron and Meron were two distinct towns. On the other hand, it is possible that the LXX, confronted with the addition of Meron in Joshua 12 (MT), concluded that Madon and Meron were identical, and hence rendered *Marrōn* for both of them (perhaps compounded by the confusion of the *dalet* in *mdwn* with the *reš* in *mr›wn*). It might be concluded, however, that the LXX was confused by the situation of Shimron in 11:1 and Shimron-meron in 12:20, trying unsuccessfully to resolve the difference (indeed, note that the LXX also renders Merom in 11:5, 7 with *Marrōn,* thereby increasing the confusion). It therefore seems that the best explanation is to conclude that Shimron and Shimron-meron designate relatively interchangeable referents.
JOHN KUTSKO

While the tradition of a Canaanite king in Shimron is legendary, the existence of an Israelite city during the monarchy is documented. The original name was *šim‹ôn* which is still preserved as *Symoōn* in the LXX; this reading is also supported by the Egyptian sources which read *š-mw-‹-nw* (Execration Text E 55) or *š-m-‹-n* (List of Thutmose III, no. 35), respectively, and by the reading *šamḫuna* of the Amarna Letters. These references show that Shimron must have been an important city during the MB and LB ages. The Masoretic form *šimrôn* still lacks sufficient explanation; the Rabbinic literature (*y. Meg.* 70a) identifies the name with *simônîyāh* which is most probably identical with *Simōnias* mentioned by Josephus (*Life* 24.115). Shimron can be located at Khirbet Sammuniyeh (Tell Shimron, M.R. 170234) close to the NW boundary of the Jezreel Valley; according to surface research this site was occupied from the EB age to the Hellenistic and Roman times.

SHIMSHAI (PERSON) [Aram *šimšay* (שִׁמְשַׁי)]. A Persian official identified as "the scribe," who in conjunction with Rehum the commander, wrote to Artaxerxes I (ruled from 465–423 B.C.E.) accusing the Jews in Jerusalem of rebellion (Ezra 4:8, 9, 17, 23 = 1 Esdr 2:16, 17, 25, 30). Shimshai's position as scribe (Aram *sāpar*) in this context properly means secretary or recorder. The correspondence is

preserved in the Aramaic section of Ezra (Ezra 4:8 to 6:18) which Hensley (1977) considers an authentic official Persian document. The letter is conspicuously hostile in tone, informing Artaxerxes specifically that Jerusalem's walls are being built for the purpose of usurping Persian power in the region. Artaxerxes' rescript (Ezra 4:17–22) ordered a halt to the work; Rehum and Shimshai forcibly executed the king's command (Ezra 4:23). At what time in the reign of Artaxerxes this correspondence was exchanged is not known; the chronological relationship of this episode to the missions of Ezra and Nehemiah varies widely among the reconstructions of the restoration period.

SHIN [Heb *šin* (שִׁן)]. The twenty-first letter of the Hebrew alphabet.

SHINAB (PERSON) [Heb *šin*›*āb* (שִׁנְאָב)]. King of Admah (Gen 14:2); appears simply as "king of Admah" in the same chapter, v 8. The name has been often explained as a genuine theophoric name: "Sin (the Babylonian Moon-god) is the father" (e.g., Dhorme 1931:260). Akkadian personal names of this type (with *Sin* spelled *šn*) occur indeed in Aramaic inscriptions and papyri of late neo-Assyrian, neo-Babylonian, and Persian periods (Lidzbarski 1915:117, 128; *KAI* no. 225:1); cf. also *šen*›*aṣṣar* (Shenazzar, a son of Jeconiah) in 1 Chr 3:18. However, in view of the intentionally pejorative meanings of the names of the other kings of this group (e.g., Bera, Birsha, Shemeber, and Zoar), it is more plausible to attribute the name *šin*›*āb* to the same category, to read its sibilant as *śin,* and to interpret it as "hater of the father," as this was adumbrated in *Tg. Ps.-J.* and guessed by Rashi (*śône*› ›abīw šebaššāmayîm "who hated his father in heaven"). In a fragment of an Assyrian tablet relating a legend about a tyrant who cruelly oppressed the Babylonians by corvée labor (King 1902:1:220; 2 pl. 73), it is said that he *abi kala ilāni iziru* "hated the father of all gods." Since that text is thematically related to the "Chedorlaomer texts" (see CHEDORLAOMER), it is possible that the compiler of Genesis 14 was inspired by the quoted epithet in choosing the name for the king of Admah (Astour 1966:75).

MICHAEL C. ASTOUR

SHINAR (PLACE) [Heb *šin*›*ār* (שִׁנְעָר)]. A name for the region of Babylonia (Gen 10:10). It can be called either the "land of Shinar" or simply "Shinar." The first mention of the "land of Shinar" (Gen 10:10, in the fragment of the Yahwistic Table of Nations) calls it the mainstay or beginning of the kingdom of Nimrod. In it were found the cities Babel (Babylon), Accad (Agade), Erech (Uruk), and possibly Calneh. According to Gen 11:2 the early human race settled in a valley in the "land of Shinar" and began to build the abortive Tower of Babel. Abraham had a hostile encounter with a coalition of four kings, one of whom was "Amraphel king of Shinar" (Gen 14:1, 9). When the Israelites were thwarted in their conquest of Ai because Achan had stolen some of the "devoted things," one of the items he stole was a (presumably valuable) "cloak of Shinar" (Josh 7:21). An oracle in the book of Isaiah promises that a remnant of Yahweh's people will be returned from many places, including "Shinar" (Isa 11:11). After the Exile the prophet Zechariah saw a vision in which the sin of the people, personified as a woman, is transported to the "land of Shinar" in an ephah (a large container) and set up in a temple there (Zech 5:11). The book of Daniel relates that Nebuchadnezzar, king of Babylon, removed some of the vessels from the temple of God in Jerusalem and took them to the "land of Shinar," where he placed them in the temple treasury of his own god (Dan 1:2).

The meaning of Shinar is clear from the biblical references. It is the area known to the Mesopotamians as "the land of Sumer and Akkad," corresponding to the portion of modern Iraq S of Baghdad. This meaning is confirmed by the LXX, *Targum Onqelos,* and the *Genesis Apocryphon.* All three sometimes translate "Shinar" as Babylon (ia).

The question of the origin of the name "Shinar" is more difficult. It first appears in Egypt in the 15th century B.C.E. as *Sngr.* In cuneiform texts of roughly the same period it is *Šanḫaru.* One suggestion is that Shinar is derived from "Sumer." This identification, however, is phonologically impossible, since it cannot explain the origin of the third consonant (*ʿayin,* original *ǵayin*), which never appears in any form of "Sumer." A more plausible etymology has recently been proposed by Ran Zadok (1984). He believes that Shinar derives from cuneiform *Samḫarû,* apparently the name of a Kassite tribe. The Kassites were rulers of Babylon during the period when the term "Shinar" was used in Egyptian and cuneiform sources. There is no strong phonological objection to this etymology, and it may be that peoples W of the Euphrates generalized the name of a familiar Kassite tribe until it became a term for the whole region of Babylonia. Such generalizations are common. For example, the Greeks called themselves "Hellenes," but the Roman word for them was "Greeks," *Graeci, Graii,* after a Hellene tribal name or geographical location.

JAMES R. DAVILA

SHION (PLACE) [Heb *šîʾôn* (שִׁיאוֹן)]. A town given by Joshua to Issachar in the allocation of the land following the conquest (Josh 19:19). It has been suggested (Smith 1966:map 2; *GTTOT,* 184; cf. *RAB,* 129) that the town be identified with Ayun es-Shain, 3 miles E of Nazareth. A proposal has been made to read the name as Sirion, reading *reš* for *ʾalep,* an error made by LXX B in the very next verse (v 20) where Abez is read "Rabez," a minor difference between the two letters in the early Hebrew script (*HGB,* 424). This would not then be the same Sirion as Mt. Hermon, since the latter is in Transjordan and far removed from Issachar's holdings. An identification with Sirin, some 10 miles SE at Mt. Tabor has also been suggested (*IDB* 4:333; *HGB,* 424). This latter location places Shion/Sirion firmly in Issachar's territory, while the former proposal places it on Issachar's border with Zebulun. Either location is thus geographically possible, although rereading the text as Sirion is less preferable since there is no evidence for such a reading in any of the ancient textual witnesses.

DAVID W. BAKER

SHIPHI (PERSON) [Heb *šipʿî* (שִׁפְעִי)]. Son of Allon, a descendant of Simeon (1 Chr 4:37), described as one of the "princes in their families" (1 Chr. 4:38). The name probably means "Yahweh is fulness." In the LXX the name appears as *Sephei.* The name "Shiphi," along with the names of the other Simeonite princes, is not found in any of the genealogies assigned to this patriarch. (Compare the Peshitta where 1 Chr 4:34–41 contains no personal names.) Nevertheless, in view of 1 Chr 4:42, Shiphi and the others were probably part of the tribe of Simeon (Williamson *Chronicles* NCBC, 62).

CRAIG A. EVANS

SHIPHMITE [Heb *šipmî* (שִׁפְמִי)]. The gentilic identification of Zabdi, one of twelve stewards of royal property appointed by David (1 Chr 27:27). His specific charge was oversight of the produce of the vineyards. The term is not used elsewhere.

RICHARD W. NYSSE

SHIPHRAH (PERSON) [Heb *šiprâ* (שִׁפְרָה)]. One of the midwives of the Hebrews in Egypt (Exod 1:15). She and her partner Puah were ordered by the Pharaoh to kill all Israelite boys as soon as they were

born. Though no reason is given to justify the king's expecting the midwives to do so, perhaps the summons by such a powerful figure was calculated to frighten them (Durham *Exodus* WBC, 11). The midwives, however, feared God and through acts of civil disobedience helped to pave the way for an exodus from Egypt. The prominent role assigned in chaps. 1–2 to these and other women—a group often powerless in ancient societies—makes the eventual victory of the Hebrews all the more striking from the traditional patriarchal point of view (Fox 1986:14). Most later Jewish legends identify Shiphrah with Jochebed, but at least one declares the midwives to have been proselytes (Ginzberg 1909–38:2.251; 5.393 n. 17). "Shiphrah" is a good Semitic name of an early type. Albright (1954:229) found *špr (3)* as the hypocoristic name of a female Asiatic on an Egyptian list of slaves from Dynasty XIII (18th century B.C.) and related it to the Hebrew and Aramaic stem *špr,* "to be fair," and the Ar *sfr,* "to shine." From the same Semitic root comes the Hebrew feminine name *špyrh* in the caves of Murabba῾ât (Stamm 1967:323)—Aram form *špyr῾* (cf. Sapphira in Acts 5:1).

EDWIN C. HOSTETTER

SHIPHTAN (PERSON) [Heb *šipṭān* (שִׁפְטָן)]. The father of Kemuel, leader of the tribe of Ephraim who was responsible for overseeing the distribution of the land of Canaan to the Israelites (Num 34:24). The name is based on the root *špṭ,* "to judge," "to lead," "to rule," and is similar in form to other biblical names such as Azzan and Zethan. The name is usually defined as "judgment" or "the deity has judged." The name was rendered *Sabatha (n)* in LXX (A) and *Sabathe* in LXX (B). In the Vulgate, *Sephtan* appears.

RAPHAEL I. PANITZ

SHISHA (PERSON) [Heb *šîšā῾* (שִׁישָׁא)]. Secretary in King David's administration and father of Elihoreph and Ahijah, secretaries of Solomon's administration. See also SERAIAH #1; SHAVSHA; SHEVA.

SHISHAK (PERSON) [Heb K *šwšq* (שׁוּשַׁק); Q *šîšaq* (שִׁישַׁק)]. An Egyptian pharaoh who harbored Jeroboam (1 Kgs 11:40) and advanced against Jerusalem during the reign of Rehoboam (1 Kgs 14:25). The form of the name in MT indicates that its proper pronunciation was uncertain in later biblical tradition. The name derives from Libyan *ššnḳ* and appears in Akkadian as *Susinku* and in Greek as *Sesonchis;* the conventional English spelling is Sheshonk. Shishak (Sheshonk) was the founder of the Egyptian 22d Dynasty, and the first of perhaps five kings to bear the name Sheshonk.

A scion of the seventh generation of a line of chieftains of the Libyan tribe of the Meshwesh, who had settled in Egypt at the end of the New Kingdom, Shishak first came to prominence during the reign of the last king of the 21st Dyn., Psusennes II (ca. 965–931 B.C.), as the commander-in-chief of the Egyptian army. He first appears on a stela from Abydos, dated sometime after Psusennes' 5th year, in which he sets up a mortuary endowment for his father, the great chief Namlot. By the close of the reign he was a mature man with grown children and well connected by marriage. An uncle was high priest of Memphis, a daughter was married to a general, a son was married into an important priestly family of Thebes, and another son, Osorkon, was married to a daughter of Psusennes II himself. Presumably upon the latter's dying without male issue, Shishak took the throne and inaugurated two and a half centuries of Libyan rule.

Shishak's 21-year reign (ca. 931–910 B.C.) represents a brief resurgence of the political and military élan of Egypt in the Near East moving from the erstwhile patrimony of his ancestral house in the city of Herakleopolis, which he left in the charge of his son the general Namlot (II), Shishak took up residence in "Pi-ese-the Great-*Ku*-of-Re-harakhty," probably a faubourg of the (now abandoned) Per-Ramesses in the E Delta. From here he inaugurated a major building program in the Delta (Tell Tebillah, Tanis, Bubastis), the Memphite region (his own mortuary Temple), Herakleoṕolis (the Temple of Arsaphes) and Teudjoy, the headquarters of the governor of Upper Egypt. Thebes had refused to acknowledge his accession to the throne; and perhaps in consequence he terminated the high-priestly family and appointed his son Yewepet to the high priesthood. A monumental gate was erected on the S side of the East-West axis of the Amun Temple at Karnak, and late in his reign Shishak authorized the construction of a large festival court in front of the great Temple. There were disturbances also in the W oases, apparently against Libyan rule; but Shishak was able early to quell this opposition.

Shishak also revived Egypt's active involvement in the political affairs of West Asia. His statue at Byblos seems to indicate suzerainty over this part of the Phoenician coast, and his court became a refuge for dissidents fleeing the regime of his earlier contemporary Solomon (Hadad of Edom: 1 Kings 11:19; Jeroboam: 1 Kings 11:40). Upon Solomon's death and perhaps spurred on by Israelite expansion into the Negeb and increased trade through Ezion Geber, Shishak construed some minor incident on the frontier—a fragmentary stela localizes it on the Red Sea coast—as a *casus belli,* and marched into Palestine. Whether or not he came as the ostensible champion of his erstwhile protégé Jereboam, both Judah and Israel suffered from the destructive march of the Egyptian army which left numerous levels of destruction in settlements all over the country. The commemorative relief and text of Shishak at Karnak reflects this campaign: the text is banal and devoid of historical content, but lists 154 towns claimed to have been destroyed. A careful study of the list and identification of the toponyms has made possible the reconstruction of the routes of march of the Egyptian forces. These involve the Negeb, the coastal plain and northern hill country, and some names even mark the devastation of a flying column across the Jordan to destroy the foundries and smithies around Mahanain in Transjordan. According to 1 Kgs 14:26, Jerusalem escaped the fate of other cities—and it does not indeed appear in the list—thanks to Rehoboam's pragmatic decision to pay Shishak a substantial indemnity which included the golden shields his father Solomon had made for the guard. Nonetheless, this very act, together with Shishak's setting up a triumphal stela at Megiddo, show that the Egyptian monarch construed his victory as tantamount to the reestablishment of an imperial hegemony over Palestine, a hegemony which his son Osorkon's epithets show continuing in the Egyptian view to the end of the 10th century.

The account of Shishak's incursion into Judea is greatly expanded by the Chronicler (2 Chr 12:2–12), providing a theological rationale for the campaign (v 2), a description of Shishak's forces (v 3), a summary of his conquests (v 4), an account of the role of Shemaiah the prophet in Jerusalem (v 5), the reaction of the Jerusalem nobility (v 6), and a word of deliverance that followed the people's repentance (vv 7–8). (The rest of the account, vv 9–11, follows 1 Kgs 14:25–28, with a summary statement in v 12.)

Shishak died ca. 910–909 B.C. perhaps after a brief coregency with his son and successor, Osorkon I. Recently the latter's excessive donations of gold and silver to the temples, on record in an inscription from Bubastis, have been understood as reflecting Shishak's booty from the Palestine campaign.

DONALD B. REDFORD

SHITRAI (PERSON) [Heb *šiṭray* (שִׁטְרַי)]. A state official; a Sharonite. One of twelve stewards of royal property appointed by David, his specific charge was oversight of the herds which pastured in Sharon (1 Chr 27:29). Of the twelve, he is one of seven identified with a gentilic rather than by paternity, indicating perhaps that he was from outside the tribal structure.

RICHARD W. NYSSE

SHITTAH TREE. See FLORA.

SHITTIM (PLACE) [Heb *šiṭṭîm* (שִׁטִּים)]. The encampment site of Israel in the plains of Moab NE of the Dead Sea. Since Shittim was the final encampment of the Israelites before they crossed Jordan, it is notable in the history of Israel. At Shittim, the Israelites fell into the idolatrous and immoral practices of Baal-peor. The men of Israel who had taken Moabite and Midianite wives were smitten with a plague, killing 24,000, because they had engaged in the Baal-peor cult (Num 25:1–9). Final preparation was made at Shittim to enter Canaan: (1) A census was taken of all men (20 years and up) in view of military need and eventual settlement allotments (Num 26); (2) Joshua was publicly announced as Moses' successor (Num 27:12–23); (3) Reuben, Gad, and part of the tribe of Manasseh received their land allotment E of the Jordan after promising to fight with their brethren (Num 32); (4) Moses delivered his final address to the people (Deut 31 ff.); and (5) Joshua sent out spies to Jericho. In addition, the Israelites defeated the Midianites from the base camp of Shittim.

Shittim is probably the same as Abel-shittim of Numbers 33:49, with the abbreviated version being the more popular. According to the biblical text, the location of Abel-shittim was immediately E of the Jordan and N of the Dead Sea. Two sites have been proposed. Originally, Tell el-Kefrein (M.R. 210139), located on a hill overlooking the Plains of Moab, was proposed as the site of Shittim. The location is 6 miles N of the Dead Sea and E of the Jordan, and notable evidence of habitation in OT times contributed to its selection. Potsherds from Iron Ages I and II (12th to 6th centuries B.C.) were recovered from the site. Nelson Glueck, however, proposes the larger site of Tell el-Hamman (M.R. 214138) for Abel-shittim. This tell is located 2 miles farther E on the Wadi el-Kefrein. Here, remains of Iron Age I and II fortresses with 1.2 m thick outer walls have been discovered. The foundations of massive towers at each end and a strong glacis possibly surrounding the wall indicate that Tell el-Hamman held a strategic position in ancient times. The confusion over the identification of the site exists because the biblical name, Abel-shittim, and its Roman name, Abila, no longer exist in the area. While other familiar names survived, Abel-shittim was forgotten. The names "Shittim," meaning "achaias," and Abel-shittim, "stream of the achaias," indicate that the place was in the once-forested hills of Moab.

JOEL C. SLAYTON

SHIZA (PERSON) [Heb *sîzā*ʾ (סִיזָא)]. The father of Adina who was the leader of a band of Reubenites associated with King David's chief military men (1 Chr 11:42). Adina son of Shiza is the first of a list of sixteen men from the Transjordan in the Chronicler's expansion (1 Chr 11:41b–47) of the parallel lists of David's military elite (1 Chr 11:10–41a = 2 Sam 23:8–39). Linked with the name "Shiza" in v 42 is the ambiguous Heb expression *ʿālāyw šĕlôšîm* (RSV "with him thirty"), which may indicate that Shiza (or Adina?) either was the leader of a unit of thirty warriors or was accompanied by thirty other Reubenites who joined David (cf. the similar expression in 1 Chr 12:4). There is general agreement that these expanded verses were not part of the original list, and Williamson (*1 & 2 Chronicles* NCBC, 104) and others (Mazar 1986:101–2; Rudolph *Chronikbücher* HAT 1st series, 101) have argued convincingly that the Chronicler or a later redactor did not fabricate these names.

RUSSELL FULLER

SHOA (PERSON) [Heb *šôaʿ* (שׁוֹעַ)]. A people mentioned in a military setting in Ezek 23:23. The context is a prediction of punishment (vv 22–27) in a judgment oracle against Judah, which is described in allegorical terms as the grossly wayward wife of Yahweh ("Oholibah," vv 4, 11, 22). Babylon, the scorned political lover (v 17), was to retaliate, using against Judah the military machismo once so attractive (v 15). The national contingents of its army include Shoa. The preceding name, Pekod, refers to the Aramean tribe of Puqudu located east of the Tigris. Accordingly one expects Shoa to refer to a historical people within the same general area of Babylonian hegemony.

Zadok (1978:178–79) has compared the listing of ethnic groups in v 23 with that of an inscription of Nebuchadnezzar: the trio of Pekod, Shoa, and Koa correspond to a list of four or six Aramean and other West-Semitic tribes, including the Pukudu, although none of the other names match. The present name is not found elsewhere, and any suggested identification runs into the difficulty of explaining why its form is unique. Thus Zadok declined to equate them with the Sutu, with which generally Shoa is tentatively identified, because of lack of phonetic correspondence. He did note that the grouping of Shoa and Koa sounded onomatopoeic. Oppenheim (*IDB* 3:48) has compared pairs of names like the Cherethites and the Pelethites. Indeed, one may note the allegorical names of the S and N kingdoms in this chapter, Oholibah and Oholah, which sound like Tweedledum and Tweedledee. Accordingly, there seems to be some focus on this pair of names. Zimmerli (1979:488) found assonance in the triple grouping, Pekod, Shoa and Koa, in terms of their common "ô" vowel. Eichrodt (*Ezekiel* OTL, 328) has helpfully found wordplay in the three names, Pekod referring to punishment (Heb *pqd;* cf; the wordplay in Jer 50:21) and Shoa to a cry for help (Heb *šwʿ*). See KOA. Then the fate in store for Judah is expressed in a rhetorically forceful fashion. By means of this explanation it is possible to return to the common identification with more confidence, as a deliberate distortion.

The Sutu or Sutians were seminomads who for centuries engaged in raids on Assyrian and Babylonian territory (Brinkman 1968:285–87). At the end of the 8th century B.C. they supported the Babylonian rebel Merodach-baladan against the Assyrian king Sargon. Here they may feature as mercenaries, if not vassals.

SHOBAB (PERSON) [Heb *šôbāb* (שׁוֹבָב)]. **1.** A son of David born in Jerusalem to Bathsheba (Bathshua; 2 Sam 5:14; 1 Chr 3:5; 14:4). Three full brothers of Shobab's are listed: Shammua (Shimea), Nathan, and Solomon. In addition, David had six sons born in Hebron to six different wives, and nine born in Jerusalem to unnamed wives, as well as many sons born to his concubines in Jerusalem (1 Chr 3:9). See also DAVID, SONS OF.

2. One of three sons of Caleb's daughter Jerioth (1 Chr 2:18). He was a Judahite. His grandfather Caleb (also known as Chelubai; 1 Chr 2:9) was not the famous spy of Joshua's day (Numbers 13). Rather, he lived earlier, and was the great-grandfather of Bezalel (1 Chr 2:19–20), the great Tabernacle craftsman (Exod 31:1; 35:30; etc.).

The text of 1 Chr 2:18 is difficult, and some versions (e.g., RSV, NIV) see Jerioth to be a second wife to Caleb (and not a daughter), since they are both introduced by *ʾet*, the common sign of the direct object. All solutions have some difficulties, however. The present one sees the first *ʾet* as the preposition "with" and the second one as the direct object marker, and reads *ʾištô* ("his wife") for *ʾiššâ w-* ("a wife and …")

between the two names (or else understands the *waw* as an emphatic). See also Braun *1 Chronicles* WBC, 37.
DAVID M. HOWARD, JR.

SHOBACH (PERSON) [Heb *šōbak* (שׁוֹבַךְ)]. Var. SHOPHACH. Aramean army general leading the forces of Hadadezer (2 Sam 10:16 and 18). According to the "Ammonite War Narratives" of 2 Samuel 10 (= 1 Chronicles 19), once Joab defeated the Ammonite-Aramean coalition (2 Sam 10:13–14), Hadadezer mustered his forces from "beyond the river" to fight Israel. Shobach, whom the Chronicler calls Shophach (1 Chr 19:16), was the general in charge of the army for this war, which reportedly took place at Helam, located in the Transjordan. In this battle Shobach suffered a major defeat at the hands of David.

There is much question as to whether the battle described in 2 Sam 10:16–19 is the same as the battle reported in 2 Sam 8:3–8, in which Hadadezer also is defeated and the Arameans are again completely subjugated by David (cf. McCarter *2 Samuel*). In that passage, however, Hadadezer is mentioned as being the king and commander of the army and there is no mention of Shobach. Given the different literary emphases of both passages, such as giving the credit for the victory of Yahweh in 2 Sam 8:6, as opposed to giving the credit to David for almost singlehandedly defeating this army (cf. the use of all 3d mas. sing. verbs in 2 Sam 10:18), it is most probable to cite different authors for both passages and to see them as relating to the same battle. See also HADADEZER).

In this case the function of Shobach being mentioned in 2 Sam 10:16 and 18 as both general of the army and as one whom David himself wounded and killed is to demonstrate the military prowess of David. Since the tradition did not record the death of Hadadezer in an Israelite-Aramean war, the introduction of the name of the general into the second narrative suits the purpose of building the status of the Israelite king by having him get close enough to the leader to inflict upon him a mortal wound (Bailey 1989).

RANDALL C. BAILEY

SHOBAI (PERSON) [Heb *šōbāy* (שׁוֹבָי)]. The name of a levitical family of temple gatekeepers who returned to Palestine with Zerubbabel shortly after 538 B.C.E., the end of the Babylonian exile. The name appears in Ezra 2:42 in the phrase "the sons of Shobai" (Gk *sabaou/sōbai*), where the Levites are distinguished from the people of Israel, the priests, and the temple servants. The parallel verse Neh 7:45 lists "the sons of Shobai" (Gk *sabi/sabei/sabai/sōbai*) under the Levites, as does the later parallel 1 Esdr 5:28. The different versions of the Apocrypha use three transliterations of this word: *sobai, sabei,* and *tobeis.* These differences do not appear, however, in the Eng versions.
STEVEN R. SWANSON

SHOBAL (PERSON) [Heb *šôbāl* (שׁוֹבָל)]. **1.** The son of Seir, the Horite (Gen 36:20; 1 Chr 1:38) and the father of Manahath (among other "sons"; Gen 36:23; 1 Chr 1:40).

2. A son of Hur, son of Caleb (1 Chr 2:50) and father of Haroe, "half of the Manahathites" (1 Chr 2:52).

3. A son of Judah, brother of Hur, and father of Reaiah (1 Chr 4:1–2).

According to Gen 36:29, Shobal was a Horite tribe with its own chief. The three "persons" named Shobal listed above are actually personifications of this tribe in various historical circumstances. Shobal #1 represents the tribe as part of the Horite population within the Edomite state in the 7th century B.C. Shobal #2 and #3 presuppose the immigration of Edomite/Idumean tribes and clans into S Judah during the exilic and postexilic period. Those who compiled the statistics of the Judean population in the form of genealogies, which we now read in 1 Chronicles 2 and 4, first linked the immigrants with the Calebites—Shobal (2)—and later directly to Judah—Shobal (3). Here is a primary example for how tribal genealogies, being political in nature, shift with changes in administration and politics. See HORITES; HUR; MANAHATHITES.

As a personal name, *sbl* occurs several times in Safaitic (Harding 1971:309). It seems, however, that the Edomite/Horite name "Shobal" was primarily a geographical designation which is still preserved: Jebel Sôbala S of Wādī al-Ḥasâ (Musil 1907–08, 1:2, 313), and the name of a ruin, Kh. Sôbal, on its top (Musil 1907–8, 2:242). Tribal names, especially the names of sedentary tribes, are frequently derived from geographical names (cf. "Judah" and "Ephraim"). Etymologically, one could perhaps connect "Shobal" with Akkadian *šubultu,* Ugaritic *šblt,* Sabaic s_1*blt*, Ethiopic *säbl,* Heb *šibbôlet,* etc., "ear of grain;" the etymology would also point to a geographical name, which referred to the fertility of that particular part of Edom.

ERNST AXEL KNAUF

SHOBEK (PERSON) [Heb *šôbēq* (שׁוֹבֵק)]. A leader of the people and a signatory to the covenant established by Ezra (Neh 10:24). The name means "victor," but nothing else is known about him.

FREDERICK W. SCHMIDT

SHOBI (PERSON) [Heb *šōbî* (שׁוֹבִי)]. Son of Nahash, a ruler of the Ammonites (2 Sam 17:27). Shobi helped David during the revolt of Absalom. When David was on the E side of the Jordan in Mahanaim, preparing for a major battle with Absalom's forces, Shobi, accompanied by Machir and Barzillai, brought supplies to the king's tired and famished troops.

Older scholarship tended to doubt this account of events, feeling that Shobi never existed since his name is not mentioned elsewhere. Shobi's kindness was also difficult to reconcile with David's earlier subjugation of Ammon (2 Samuel 10–12). Consequently, the expression "Shobi son of" was emended from the text in 2 Sam 17:27 and the Ammonite conquest was viewed as occurring later than the revolt of Absalom (Cook 1899–1900:156–60, cf. McCarter *II Samuel* AB, 274, 394).

Such measures are unnecessary. Shobi's older brother was Hanun, who had succeeded his father, Nahash, to the throne. He had fought unsuccessfully with David (2 Samuel 10–12), and David probably replaced him with his younger brother as the king of the Ammonites. This was a common practice in the ANE.

STEPHEN G. DEMPSTER

SHOHAM (PERSON) [Heb *šōham* (שׁוֹהָם)]. Son of Jaaziah (1 Chr 24:27). Several names appear in 24:20–31 which are lacking in 23:6–24. None of the sons of Jaaziah are included in the previous list of sons of Merari. Apparently, the names were added to the earlier list in order to attest to the authority of Jaaziah's family for levitical service. The passage begins with the introduction, "of the remaining sons of Levi …," which implies an intent to fill out the previous list.

DONALD K. BERRY

SHOMER (PERSON) [Heb *šômēr* (שׁוֹמֵר)]. The son of Heber, listed in the Asherite genealogy in 1 Chr 7:32. This figure receives no further mention by the Chronicler, but a related name—Shemer (pausal form *šāmer*)—appears in 1 Chr 7:34. Because Shemer's father is not mentioned and because his descendants are listed after those of Japhlet, Shomer's brother, scholars have suggested that these two figures are identical.

The genealogy of Heber (1 Chr 7:32–35) is confusing on several points. Not only does Shomer seem equated with Shemer, but also Helem (v 35) appears identified with Hotham (v 32). The names of Shemer's descendants also are unclear: two of the three have been vocalized differently than their consonantal form, by means of a common scribal technique known as *qere/kethib.*

The name "Shomer/Shemer" also appears in 1 Kgs 16:24, 1 Chr 6:31, 2 Kgs 12:21, with no apparent relation to the figure mentioned here. A possible connection, however, has been drawn between Shomer and a descendant of Benjamin in 1 Chr 8:12. Although the MT refers to this latter figure as Shemed, various mss read the name as Shomer/Shemer. Based on the presence of such other Asherite names as Beriah, Serah, Heber in the Benjaminite genealogies, Edelman suggests that the "Ashurites" of 2 Sam 2:9 refer to an Asherite enclave living on the frontiers of Benjamin and Ephraim (Edelman 1985:85–86).

JULIA M. O'BRIEN

SHOPHACH (PERSON) [Heb *šôpak* (שׁוֹפַךְ)]. See SHOBACH (PERSON).

SHOVEL [Heb *yāʿ* (יָעֹ)]. A cultic utensil mentioned in several lists of objects used in the tabernacle (Exod 27:3; 28:3; Num 4:14) and the temple (1 Kgs 7:40, 45; 2 Kgs 25:14; 2 Chr 4:11, 16; Jer 52:18). The shovels were made of bronze, as was the courtyard altar they serviced; they were used to carry away the ashes of the burnt offerings. So apparently were the temple shovels, which are included in the list of utensils (1 Kgs 7:40) even though, in the 1 Kings temple account, the altar itself is not mentioned. The altar probably did exist, having been erected by David, not Solomon; the presence of "shovels" in the Kings text is indirect evidence of the altar's presence.

Incense shovels are frequently depicted in artistic presentations of the temple or its features in Jewish art of the postbiblical period, as in the mosaic floors of Palestinian synagogues. Such shovels are rectangular in shape, with handles projecting from the narrow side. Ceramic incense shovels, both rectangular and oval in shape, have been recovered from Roman period sites.

Another word for "shovel," *raḥat,* refers to a winnowing tool and is found only in Isa 30:24.

CAROL MEYERS

SHUA (PERSON) [Heb *šûʿāʾ* (שׁוּעָא)]. A descendant of Asher in the segmented tribal genealogy in 1 Chr 7:30–40. The name appears in v 32 as a third-generation female descendant of the eponymous tribal ancestor Asher, the daughter of Heber and sister of Japhlet, Shomer, and Hotham. The form of the name found in the MT and presupposed by Lucianic LXX derives from the root *šwʿ* meaning "cry for help." The final *ʾalep* has been explained as an ending with a vocative force that was added to indicate that the name is a shortened form (Noth *IPN,* 38, 154). The LXX has the variant reading Sola, which would reflect an underlying Hebrew consonantal text *šwlh,* in which the *ʿayin* either was mistaken for a *lamed* or was omitted from transliteration as a silent letter. In the latter case, an original Hebrew text could be restored as *šwʿlh,* Shualah, a feminine form of the name "Shual."

In light of the intergenerational repetition of other names in the Asherite genealogy, including Zophah, Beriah/Beri, Shelesh/Shilshah and Imnah/Imna/Imrah, it is possible to suggest that Shua is a corrupted reading of Shual in v 36 (Edelman 1988:21, n. 3). The LXX reading Sola preserves a possible stage of textual transmission that presents the name in v 32 as a feminine form of Shual. Such an alteration between masculine and feminine forms occurs elsewhere in the genealogy with Shelesh/Shilshah. If the Greek evidence is excluded from consideration, the MT form *šwʿʾ* could have resulted from a copyist's error in which the final *lamed* of a square script was mistakenly read as a final *ʾalep.* Alternately, since the following word begins with *ʾalep,* a scribal eye could have jumped over the *lamed,* writing *ʾalep* instead and then, when appraising the sense of the consonants, reduplicating the *ʾalep* to begin the word *ʾăḥôtām,* "their sister."

DIANA V. EDELMAN

SHUAH (PERSON) [Heb *šûaḥ* (שׁוּחַ)]. SHUHITE. A son of Abraham and Keturah (Gen 25:2; 1 Chr 1:32). Like all the sons of Abraham and Keturah, Shuah represents an Arabian or Syrian landscape associated with the incense trade around the middle of the 1st millennium B.C. See KETURAH. Shuah is identical with Akkadian *Sūḫu*, a country (and Assyrian province) on the middle Euphrates. In its strategic position vis-à-vis the main trade routes through the Syrian desert, Sūḫu was preceded by the kingdom of Mari, and followed by Dura Europos. As a country, *Sūḫu* is already mentioned in the Mari archives (Háclár 1983), and in Egyptian topographical lists from the LB Age. The hieroglyphic rendering of the name suggests that the Egyptians learned from the Canaanites (Görg 1989). In this case, it can also be explained why Akkadian *s* became *š* in Hebrew (cf. Knauf 1988:74; 105). As early as the time of Sargon II, *Sūḫu* was the summer pasture of Arab bedouin tribes (*ABL* 547 = Parpola 1987:82.13–18). A caravan of Sabeans and people from Tema was intercepted by the governor of *Sūḫu* shortly before the reign of Tiglath-pileser III (see J. Black in Northedge et al. 1988).

The only person from Shuah mentioned in the OT is Job's friend Bildad (Job 2:11). Job's friends seem to come from the extremities of the Arabian peninsula: Eliphaz the Temanite from NW Arabia, Bildad the Shuhite from NE Arabia, and Zophar the Naamathite from S Arabia. See also BILDAD; NAAMATHITE; TEMANITE; UZ.

ERNST AXEL KNAUF

SHUAL (PERSON) [Heb *šûʿāl* (שׁוּעָל)]. A descendant of Asher in the segmented tribal genealogy in 1 Chr 7:30–40. The name appears in v 36 as the son of Zophah, as a fifth-generation descendant of the eponymous tribal ancestor Asher. It derives from the root *šʿl* and means "fox, jackal."

In the context of the genealogy, Shual appears to be a personal name, but is more likely a clan designation or geographical term. The summary in v 40 would seem to indicate that the information presented in genealogical form derives from administrative lists used for army conscription and possibly also taxation. Recruitment could be done by village, region, or clan rather than by individual name (Mendenhall 1958:60–65). In addition, Shual appears as the name of a region in S Mt. Ephraim in 1 Sam 13:17 (see SHUAL [PLACE]), which is consistent with the secondary use of a clan name to designate the region belonging to the clan or of a regional name being applied to those who live within its confines, but not with the designation of open country *(ʾereṣ)* by the name of an individual owner. When the reference to the Asherite clan/region is set beside the one in 1 Sam 13:17 and is further combined with similar geographically specific names in the genealogy such as Birzvaith, Shelesh/Shilshah, Zophah, Imnah/Imna, Japhlet, Beriah, Shemer, and Serah/Sheerah, the association of the entire Asherite genealogy in 1 Chr 7:30–40 with the Asherite enclave located in S Mt. Ephraim rather than the Galilean territory of Asher becomes clear (Yeivin 1971:228; *LBHG,* 244; Edelman 1985:86; 1989:48–58). The cumulative evidence favors an equation of the Asherite descendant Shual with the land of Shual in the vicinity of Ophrah.

An equation of Shual with Shua in v 32 of the genealogy has been proposed (Edelman 1988:21, n. 3). On the understanding that the repetition of the names Zophah, Shelesh/Shishah, Beriah/Beri, and Imna/Imrah within the genealogy is evidence for its composite nature and creation through the combination of three administrative lists detailing the constituents of the enclave at three separate points in time (Edelman 1988:15–16), Shua becomes an additional possible example of name overlap within the underlying administrative sources that has been obscured through textual corruption.

DIANA V. EDELMAN

SHUAL (PLACE) [Heb *šû‹āl* (שׁוּעָל)]. A region located within the confines of S Mt. Ephraim (1 Sam 13:17). The name derives the root *š‹l* and means "fox, jackal."

A Philistine raiding party is reported to have been sent out from the Michmash garrison to the land of Shual via the road to Ophrah in the wake of Jonathan's defeat of the Philistine garrison across the Wadi Suweinit at Gibeah (1 Sam 13:3). Ophrah is commonly identified with modern day eṭ-Ṭaiyibe (M.R. 178151) NW of Bethel (i.e. Aharoni *LBHG,* 440). Ophrah would accordingly be the name of the main settlement within the territory of the clan of Shual, in the easternmost portion of the Bethel plateau. The adjoining village at Rammun (M.R. 178148) was probably also part of the Shual region in the Saulide era (Edelman 1989:53).

Since Shual appears to have been a clan name that was secondarily applied to the region inhabited by that clan, or a regional label that was used to designate villagers living within its borders, one is justified in equating the place name in 1 Sam 13:17 with the Asherite clan/region of Shual listed in 1 Chr 7:36. See SHUAL (PERSON). A careful study of the genealogy reveals that it enumerates clans and villages of the Asherite enclave located in S Mt. Ephraim rather than in the traditional Asherite tribal territory in W Galilee (Edelman 1988). See ASHER; ASHURITES. The genealogical context thus accords well with the geographical indications of 1 Sam 13:17.

It is likely that the land of Shaalim mentioned in 1 Sam 9:4 is to be identified with the land of Shual in 1 Sam 13:17 (Kirkpatrick 1880:63 n. 2; Smith, *Samuel* ICC, 60; Albright 1922:116–17; Kallai 1971:193; McCarter, *1 Samuel* AB, 174–75, n. 9; Edelman 1989:53). The singular form *šā‹āl* or *š‹l* would represent an earlier, variant spelling of *š‹āl* or *šw‹l,* before *waw* became a standard *mater lectionis* for *o*- and *u*-class vowels. The geographical progression of Saul's trek through the four subregions of Mt. Ephraim—the lands of Shalishah, Shaalim, Yimni, and Zuph—is consistent with both the location of the land of Shual around Ophrah and with the appearance of all four regions as clans within the Asherite enclave of S Mt. Ephraim in the genealogy of Asher in 1 Chr 7:30–40 (Edelman 1989:50–58).

SHUBAEL (PERSON) [Heb *šûbā›ēl* (שׁוּבָאֵל)]. See SHEBUEL.

SHUHAH (PERSON) [Heb *šûḥâ* (שׁוּחָה)]. The brother of a certain Chelub listed in the genealogy of Judah in the book of Chronicles (1 Chr 4:11).
H. C. LO

SHUHAM (PERSON) [Heb *šûhām* (שׁוּהָם)]. Var. HUSHIM. SHUHAMITES. The only son of Dan according to the second census taken by Moses in the wilderness. He is listed in Num 26:42 as the ancestor of the tribe of the Shuhamites. The (Num 26:46) contains an alternate rendition of this name: *sami.* The parallel genealogy in Genesis 46 also lists only one son for Dan, but gives him the name Hushim (Gen 46:23). It is interesting to note that although Shuham is the only son of Dan, the

phraseology of the verse is in the plural. He is introduced by the clause, "These are the sons of Dan." This is due to the desire to keep the form of the genealogy consistent, and should not be taken to suggest that some entries have been lost.

CHRISTINA DE GROOT VAN HOUTEN

SHUHITE. See SHUAH.

SHULAMMITE [Heb *šûlammît* (שׁוּלַמִּית)]. A reference to the woman in Cant 7:1—Eng 6:13. Four interpretations occur individually and in combination. The first interprets it as the feminine form of Solomon, which is used to refer to the man in Cant 1:5; 3:7, 11; 8:11, 12 (in addition to the superscription in 1:1). However, the expected feminine form of Solomon is *šĕlōmît* (which occurs in Lev 24:11 and 1 Chr 3:19); in addition, unlike proper names, "Shulammite" is used with the article.

The second regards it as a designation for an inhabitant of the town of SHUNEM (identified with modern Solem). Alteration of liquid sounds is not uncommon, and did occur later with Shunem, as its modern equivalent indicates. However, substitution of *l* for *n* in this name is unattested in biblical times, and the woman of Cant is elsewhere associated with Jerusalem rather than Shunem. In addition, given the strong alliteration of the verse as a whole, it would be surprising for a less alliterative option to be used (*nun* also occurs in *wĕneḥĕzeh* and *hammaḥănāyim; lamed* does not occur elsewhere in the verse). Some proponents of this theory identify the woman of Cant with Abishag, for which there is no clear evidence.

The third interpretation sees Shulammite as a reference to a goddess (Šala or Šulmânîtu), equivalent of Ishtar. This explanation is popular with proponents of the sacred marriage interpretation of Cant.

The fourth interprets it as a noun from the root *šlm,* with meaning "the perfect one." Although there are morphological difficulties, Fox (1985:157–58) explains the word as a *nisbe* form of the otherwise unknown *šūlam,* perhaps pointed incorrectly.

The first and fourth options are reflected in rabbinic references to the term; LXX B has *hē Soumaneitis,* which probably reflects the second option.

Since none of these explanations has won majority approval, many interpreters choose to transliterate the name rather than attempting to translate. This seems the best option. It is possible that no single explanation is adequate (and in fact a number of commentators combine elements of two theories):the form may well be related to *šlm,* and influenced by the name of Solomon. The *u*-vowel may be affected by the long *u* of *šûbî* to increase the assonance of the verse. Recent thorough discussions may be found in Fox (1985:157–58) and Pope (*Song of Songs* AB, 600).

ELIZABETH F. HUWILER

SHUMATHITE [Heb *šūmātî* (שֻׁמָתִי)]. One of the four families that resided in Kiriath-jearim (1 Chr 2:53). They were Judahites if not also Calebites. Shobal, a son of Hur, was the father of Kiriath-jearim—but whether this means he was the founder of the city or the ancestor of its inhabitants is not certain. Williamson (*1–2 Chronicles* NCBC, 55) considers vv 53–55 to be an obscure fragment, attached before the Chronicler's time on account of the link through Kiriath-jearim. The name "Shumathite," which came probably from a proper name **šūmâ,* is of an adjective type designating clans, tribes, or nations. Both of these names could be shortened forms based upon either the word *šmʿ,* "to hear," or the term *šmr,* "to keep." In any case, *šūmātî* is used with the article as a collective noun.

EDWIN C. HOSTETTER

SHUNA (NORTH), TELL ESH- (M.R. 207224). A Neolithic–EB I site located on the NE edge of the Jordan Valley along the Wadi al-Arab. When first identified during the 1953 Point IV Archaeological Survey, the size of the site was recorded at ca. 1 km in length with a maximum height of 10 m. Since the early 1950s, the villages of Kh. esh-Shuna and Kh. esh-Sheikh Hussein, situated on and around the ancient mound, have grown at the expense of the archaeological material beneath. Today, though the

sherd scatter extends throughout the modern town of Tell esh-Shuna Shamaliyeh, only small fragments of the original tell are preserved and/or are accessible for excavation. The best-preserved fragment of the mound is located in the middle of the bus stop. Even this area, measuring only × m with a maximum preserved height of 6 m, was only available for excavation owing to the destruction of the overlying houses in 1967. The accompanying destruction debris and garbage accumulation alone account for up to 1.5 m of the mound's preserved height.

During the 1953 survey, several small probe trenches were excavated by Hasan Abu Awad and J. Mellaart, yielding an occupational sequence dating from the "middle Chalcolithic" through to the EB III (de Contenson 1960a; 1960b; 1961; Mellaart 1962). Tell esh-Shuna North was revisited during the 1975 East Jordan Valley Survey (Ibrahim, Sauer, and Yassine 1976), after which salvage excavations were conducted in 1984 and 1985 (Gustavson-Gaube 1985; 1986; Baird 1987). Based on a 75 m^2 exposure with a maximum 4.3 m depth of occupation, 109 strata were identified which outlined the local development from the "Pottery Neolithic B–related" /late Chalcolithic to the EB I.

Since the basic chronological framework for the N Jordan Valley during 4th millennium remains controversial at best, the emphasis of the 1984 and 1985 excavations was to trace and reconstruct the chronological sequence. Based on the preliminary analysis, Tell esh-Shuna North has yielded three basic artifact assemblages, distinguished primarily by ceramic criteria. Many of the craft traditions characteristic of the early assemblage(s) endured, and the local traditions, though undergoing continual modification, did not yield to abrupt change.

The provisional "early phase" (strata 114–61/55) is characterized by overlapping series of pits and postholes dug into the natural alluvium, rectilinear dwellings with associated courtyards (one dwelling with sunken flooring), and a series of outdoor graveled, cobbled, and clay pavements with a variety of associated pits and burning installations. The ceramic repertoire is predominantly coarse plain ware (ca. 60%). Decorated wares include a simple red-painted coarse ware with clear Pottery Neolithic B affinities and a coarse red-slipped ware (both representing ca. 20% of the sherd total). The three coarse ware series had rare examples of horizontal bands of thumb impressed, pinched, and incised decoration. Nonlocally produced ceramics include a rare simple geometric painted ware and a dark-face slipped and burnished ware, clearly of the N Syrian tradition. Individual parallels to the late Ghassulian traditions point to contemporaniety; however, too many elements of the classical Ghassulian forms, decorations, and manufacturing techniques are absent to posit the Tell esh-Shuna North as an "early phase" within the late Chalcolithic Ghassulian.

The "middle phase" (strata 60/54–23) is characterized by a series of rectilinear and curvilinear dwellings with associated courtyards, large pits and ash lenses, cobbled pavements, and a series of fragmentary wall foundations. Many of the former craft traditions continue into the "middle phase," notably the coarse plain and red-slipped ceramic traditions (representing ca. 60% and 40% respectively). Most of the simple red-painted wares fall out of use although their production is marginally continued and the more regularized multiple parallel band motif appears. The application of impressed or incised horizontal bands to a vessel surface increases. The distinguishing factor of this phase, however, is the inclusion of the black and gray polished "Esdraelon" wares (though representing less than 1% of the sherd total) and the innovations in local ceramic production that the appearance of these wares seems to have provoked.

The latest preserved phase at Tell esh-Shuna North (strata 22–7) yielded a substantial multiphase building complex and a large basalt wall (preserved width ca. 2 m, but with the W face destroyed. With this wall was a chipped stone surface spanning the "late phase" sequence with an intervening series of poorly preserved wall foundations and pits. Small fragments of eroded copper and slag were found in pit debris, implying the presence of local craftsmen working in small-scale metallurgy. The basic ceramic repertoire of the preceding phase continues with slight modifications in the form repertoire. The gray and black polished "Esdraelon" wares end with the introduction of the "grain wash" wares, clearly placing the Tell esh-Shuna "late phase" within the general development of the EB I.

SHUNEM (PLACE) [Heb *šûnēm* (שׁוּנֵם)]. SHUNAMMITE. A town in the hill territory of Issachar (Josh 19:18), at the foot of the hill of Moreh, identified with modern Solem (M.R. 181223). Surface surveys have yielded remains from the MB age to the Islamic period; most historical information is from the LB and Early Iron ages.

Shunem was the site of a Philistine encampment during an Israelite-Philistine battle under Saul (1 Sam 28:4). Abishag, the woman who warmed the aging King David and who was sought in marriage by David's son Adonijah, was a Shunammite (Heb *šûnammî;* 1 Kings 1–2). Elisha visited the town; a Shunammite woman fed and housed him, and he later revived her dead son (2 Kgs 4:8–27).

A Canaanite city-state before the Israelite period, Shunem (*š-n-m* or *š-n-m-i* in the Egyptian orthography) is mentioned in the conquest list of Pharaoh Thutmose III (15th century B.C.E.; *ANET,* 243; Simon 1937:214; *CTAED,* 176). It is also referred to (as Shunama) in the 14th-century Amarna Letters (*ANET,* 485). Having been attacked and destroyed by Lab›ayu, it was the site of forced labor under the king of Megiddo, who described its inhabitants as recalcitrant. It is also listed in the conquest list of Pharaoh Sheshonk I (Shishak in biblical accounts) in the early days of the divided kingdom (*ANET,* 243; *CTAED,* 176), although the biblical account of his campaign does not mention an invasion of cities in the N kingdom. Some connect Shunem (and at times Abishag) with the SHULAMMITE of the Song of Songs (7:1—Eng 6:13).

SHUNI (PERSON) [Heb *šûnî* (שׁוּנִי)]. SHUNITES. The third of the seven sons of Gad mentioned in the genealogical list of the sons of Jacob (Gen 46:16). Shuni was the grandson of Jacob and Zilpah, the maid whom Laban gave to his daughter Leah on the occasion of her marriage to Jacob (Gen 29:24). His name appears among the seventy people who migrated with Jacob to Egypt at the time of a great famine in the land of Canaan (Gen 46:8–27). Nothing is known about Shuni. According to the second census of Israel mentioned in the book of Numbers, Shuni became the eponymous ancestor of the Shunites, one of the clans of Gad (Num 26:15).

None of the sons of Gad mentioned in the genealogical lists in Genesis and Numbers appear in the enumeration of the other clans of Gad in 1 Chr 5:11–17. Several proposals have been advanced to explain this omission. Some scholars had said that when the Chronicler listed the clans of Gad, he departed from his usual source of information. Others have said that the clans of Gad are implicitly mentioned in 1 Chr 5:11. Curtis and Madsen (*Chronicles* ICC, 122), however, identified Shuni with Guni (1 Chr 5:15). According to the Chronicler, seven of the eleven (or twelve, according to the enumeration of the LXX) clans of Gad traced their genealogical line to Guni. For this reason, some commentators believe that Shuni is a corrupted spelling of Guni.
CLAUDE F. MARIOTTINI

SHUPHAMITES [Heb *šûpāmîm* (שׁוּפָמִים)]. See SHEPHUPHAM.

SHUPPIM (PERSON) [Heb *šuppīm* (שֻׁפִּם)]. This name occurs three times in the OT.

1. One of the sons of Ir named in 1 Chr 7:12 in a "fragmentary addition" (Williamson *Chronicles* NCBC, 78) to a Benjaminite genealogy (1 Chr 7:6–12). Although it has been proposed that the larger list was originally Zebulunite (Brunet 1953:485–86), the correspondence of Shuppim and Huppim in v 12 with Shephupham and Hupham in Num 26:38–41 may testify to an original Benjaminite association of 1 Chr 7:12a, at least (Rudolph *Chronikbücher* HAT, 65). If in fact *ʿîr* (Shuppim's "father") is to be read as a personal name, then it might be associated with Iri son of Bela in v 7 (Williamson *Chronicles* NCBC, 78). Others, however, see no patronym for Shuppim here but read *dān* ("Dan") in place of *ʿîr* (Rudolph *Chronikbücher* HAT, 64–66). Verse 12b then represents the vestige of a Danite genealogy rather than a continuation of a Benjaminite fragment.

2. Shuppim occurs again in 1 Chr 7:15 (again with Huppim) where there are considerable textual difficulties. Rudolph (Ibid., 68–71), among many others, considers these names to be corruptions of Shechem and Hepher, sons of Gilead (cf. Num 26:29–34).

3. Shuppim also occurs in 1 Chr 26:16, where it is usually considered a dittograph (Rudolph Ibid., 172). Williamson (*Chronicles* NCBC, 171), however, proposes it might be a copyist's note for erasure indicating damage to the exemplar.

SHUQBA CAVE (M.R. 154154). Shuqba cave lies on the right bank of Wadi el-Natuf (from which the Natufian culture derives its name), which is a tributary of the Yarkon River, and descends from the Judean Hills into the coastal plain. The cave is a large chamber with a chimney at the rear part and three small side chambers. The excavations in 1928 by D. Garrod exposed a sequence of Mousterian layers overlaid by a Natufian layer covered by a more recent deposit composed of EB through modern debris.

The Mousterian layers were of two kinds. The lower one (D) was a soft red cave earth, which accumulated to a depth of about 2 m with remains of gray ashes. It contained artifacts and bones. Some of this layer had become consolidated into *breccia.* The overlying layer (C) was a red clay sediment which contained abraded Mousterian artifacts. This accumulation is explained as the results of water activity, such as caused by the presence of a spring inside the cave. The abraded artifacts were extracted from layer (D) and after being washed and worn by the water were redeposited inside the cave and one of the side chambers.

The contents of the *in situ* material of layer D included among others a lithic industry mostly made by Levallois technique with numerous side scrapers, some points, a few disks, and a few bifaces and burins. Among the faunal remains were hippopotamus and rhinoceros. The Mousterian remains appear to correlate with those of the Mt. Carmel sites.

The cave is better known for its Natufian remains, which included typical cultural attributes of this culture, namely, burials and a microlithic stone industry with numerous lunates as well as sickle blades. Among the heavy-duty tools were mortars and pestles. The Natufian lithic assemblage from Shuqba is Late Natufian and the microliths were often shaped without the exploitation of the microburin technique. It therefore resembles some other Late Natufian sites such as Salibiya I in the Lower Jordan Valley. The collection of bone tools consists mainly of points and awls, a few needles, and an engraved rib.

The fauna of the Natufian layer is chiefly represented by abundant gazelle remains, some cattle, deer, and wild cat.

The lack of Upper Paleolithic sediments in Shuqba is hard to explain unless the spring activity lasted, even intermittently, for a very long time. The Natufians settled on an uneven surface, and after abandoning the cave, a rockfall at the entrance and a subsidence in the area of the sinkhole distorted the lower and upper boundaries of this layer.

OFER BAR-YOSEF

SHUR, WILDERNESS OF (PLACE) [Heb *midbar šûr* (מִדְבַּר שׁוּר)]. A desert region and perhaps a place located in the N Sinai between the S border of Canaan and the NE border of Egypt (Gen

16:7; 20:1; 25:18; Exodus 15:22; 1 Sam 15:7; 27:8). The designation "Wilderness of Shur" *(midbar šûr)* occurs only once in the Bible, where it refers to one of the seven wildernesses (Shur, Etham, Sin, Sinai, Paran, Zin, and Kadesh) traversed by Moses and the children of Israel in the Exodus. In the Exodus accounts this area is located between the Red Sea and Marah and is the place where Israel murmured for water: "Then Moses led Israel onward from the Red Sea, and they went into the wilderness of Shur; they went three days in the wilderness and found no water" (Exod 15:22). The lack of water was remedied through the miraculous sweetening of the bitter water at Marah and Israel's eventual arrival at the twelve springs of Elim (Exod 15:23–27). In the parallel account in Num 33:8 this same area is designated as the Wilderness of Etham rather than Shur. See ETHAM.

While the general location of this area in the NW part of the Sinai peninsula between borders of Egypt and Palestine is assured, the precise boundaries of this wilderness depend on where the crossing of the Red Sea and the subsequent stopping place at Marah are to be located. There is no scholarly agreement regarding the location of either of these places. See RED SEA. Those who argue the S route to Sinai would place it E of the Red Sea (i.e., E of the Gulf of Suez) while those who argue for the northern route would place it farther N closer to the Mediterranean.

In the patriarchal narratives, Abraham is said to have "dwelt between Kadesh and Shur" before moving to Gerar (Gen 20:1), and it is noted that the descendants of Ishmael lived in an area "from Havilah to Shur, which is opposite Egypt in the direction of Assyria" (Gen 25:18; see also 1 Sam 15:7). Hagar fled to a well between Kadesh "on the way to Shur" (Gen 16:7). Some have suggested the "way of Shur" is a reference to an ancient caravan route Darb el-Shur used by the patriarchs in their journeys to Egypt running along the line Hebron-Beersheba-Khalasa-Quseima-Ismailia (Woolley and Lawrence 1914–15:39–44; Lipschitz 1978:51–52). In addition, twice the Amalekites are pursued "as far as Shur, to the land of Egypt" in the wars waged by Saul (1 Sam 15:7) and David (1 Sam 27:8). Several of these references suggest that in addition to the wilderness of Shur, there may be a specific place in this area by the same name (Na›aman 1980:100–5).

The word *šûr,* meaning "wall," occurs in the Bible in Hebrew (Gen 49:22; 2 Sam 22:30 = Ps 18:30) as well as in Aramaic (Ezra 4:12–13, 16). Because of this, many have supposed that the designation "Shur" originally referred to a line of individual Egyptian fortresses strategically placed on the E border, approximately along the line of the present-day Suez Canal, forming a "wall" to repel invaders as the "Wall-of-the-Ruler" in the story of Sinuhe (*GP* I: 434; *GTTOT,* 217, 251, 317–18; Lipschitz 1978:27, 51–52). For arguments against this view, see Mazar 1957:64. Others maintain that "Shur" was a reference to the range of cliffs E of the Gulf of Suez, extending along the western side of the et-Tih plateau from Wadi Gharandal in the S toward the Mediterranean in the N, which viewed from the W resemble a wall (Palmer 1872:38–39). There is no consensus as to the meaning or the reference of the designation "Shur."

DAVID R. SEELY

SHUTHELAH (PERSON) [Heb *šûtelaḥ* (שׁוּתֶלַח)]. SHUTHELAHITES. **1.** Shuthelah is the first son of Ephraim according to 1 Chr 7:20. This genealogy of Ephraim lists many descendants including Shuthelah's son Bered, two Tahaths, Zabad, another Shuthelah (v 21), and others. The significance of the 1 Chronicles 7 passage is to point toward Joshua (v 27), an Ephraimite, the hero of the conquest. Braun (*1 Chronicles* WBC, 114) speculates that this genealogy is a combination of two earlier lists owing to the repetition of various names (Shuthelah, Tahath), similarity of others (Bered, v 20, and Zabad, v 21; Eleadah, v 20, and Ladan, v 26; Tahath, v 20, and Tahan, v 25) and length of the genealogy. Hogg (1900–

1:147–49) argues that the 1 Chronicles 7 text is corrupt and suggests that Ephraim's descendants should be reduced to Shuthelah, Tahath (or equivalents), and Eleadah (or equivalents).

Numbers 26:35–36 is the only other OT listing of the Ephraimite clan (except Genesis 46 in the LXX). Based on the Numbers passage, Ephraim had three sons: Shuthelah, Becher, and Tahan. They are described as the heads of clans—the Shuthelahites, the Becherites, and the Tahanites (26:35). Also mentioned in Numbers 26 is an Eran who is a descendant of Shuthelah.

2. Shuthelah is a descendant of Ephraim (1 Chr 7:21). See #1 above. Because the text is confusing, this Shuthelah may simply be a repetition of the earlier name (v 20).

M. STEPHEN DAVIS

SIA (PERSON) [Heb *sî‹ā›* (סִיעָא)]. Var. SIAHA. Head of a family of Nethinim (Temple servants) who returned from the Babylonian exile to Jerusalem with Zerubbabel and Jeshua, between 538 and 520 B.C.E. (Ezra 2:44; Neh 7:47; 1 Esdr 5:29 [Gk *Soua*]). The form of the name "Siaha" in Ezra, in contrast to Sia in Nehemiah, suggests a compilation of Hebrew (ending with an *h*) and Aramaic (ending with an *a*) versions of the name and supports a later date for Ezra's list. Neither version, however, sheds light on the name's origin and meaning. As members of the guild of Nethinim (Levine 1963), the family of Sia would have had a special role in the temple cult, perhaps assisting the Levites. The Nethinim have been construed as a guild of temple functionaries, originally of foreign descent. During the postexilic period they were considered neither foreigners nor slaves. Rather, like the Levites, they had been devoted to cultic service, the precise nature of which can no longer be identified. Like the Levites, the Nethinim as a group had signed the communal pledge (Neh 10:29). The size of Sia's family is not known. The family is reckoned together with 34 other families of Nethinim and 10 of Solomon's servants, constituting a contingent of 392 members (Ezra 2:58; Neh 7:60) or 372 (1 Esdr 5:35).

TAMARA C. ESKENAZI

SIBBECAI (PERSON) [Heb *sibbĕkay* (סִבְּכַי)]. One of David's champions, a select class of warriors directly attached to the king for special assignments, named in the list of 1 Chr 11:10–47 (v 29). Although of high repute, he is distinguished from the more elite warriors (vv 11–25) listed before his grouping. He is noted for having killed Saph, one of the "sons" of Rapha (see McCarter *2 Samuel* AB, 449–50), who were known for their stature and military prowess, during a battle with the Philistines (2 Sam 21:18; 1 Chr 20:4). Sibbecai, designated a Hushite, hailed from the village of Hushah in the Judean hills a few miles SW of Bethlehem.

In 2 Sam 23:8–39, a list of the champions which parallels that of 1 Chr 11:10–47, one finds "MEBUNNAI (Heb *mbny*) the Hushite" (v 27) instead of Sibbecai *(sbky).* The form in 2 Samuel seems to have resulted from two errors in transmission: a confusion of *k* for *n* (the Lucianic Greek text reads the equivalent of *sbny*), followed by a confusion of *m* for *s* (McCarter *2 Samuel* 492).

The same Sibbecai appears to be mentioned in a list of commanders found in 1 Chr 27:1–15 (v 11), since this list mentions 11 other mighty men found in 1 Chr 11:10–47. Here Sibbecai the Hushite is further designated as "a Zerahite," a member of the family of Zerah in the tribe of Judah (Num 26:20; Josh 7:17). These commanders were each in charge of a monthly course of 24,000 men, or possibly 24 "units" rather than "thousands" (Myers *I Chronicles* 183, 53, 98), in the armed service of the king; Sibbecai being in charge of the eighth month. This list of commanders and their functions is possibly a construct of its composer, since (1) no such monthly, conscripted, civilian army is mentioned elsewhere during David's reign; (2) the large number of 288,000 men, if the term is understood correctly, is improbable; and (3) one of the commanders, Asahel (v 7), was dead before David had rule over all Israel (Williamson *Chronicles* NCBC, 174–75). However, the author/redactor's thesis, that David made preparations for the proper ongoing cultic and national life of Israel, as illustrated throughout chap. 23–27, draws on the fact that David took a census (cf. vv 23–24; chap. 21) which could have been utilized for designing a monthly plan of conscription, a plan which would have been analogous to Solomon's monthly courses for his provision (1 Kgs 4:7–19).

RODNEY K. DUKE

SIBBOLETH [Heb *sibbōlet* (סִבֹּלֶת)]. See SHIBBOLETH.

SIBMAH (PLACE) [Heb *śibmâ* (שִׂבְמָה)]. Var. SEBAM. A Moabite town in the region dominated by Heshbon and given by Moses to the tribe of Reuben on the E side of the Jordan River (Josh 13:19). The name is incorrectly spelled Sebam (Heb *śĕbām*) by the Masoretes in Num 32:3 (cf. *Sebama*), though the

spelling is corrected in Num 32:38 (also *Sebama*) when the city is reportedly rebuilt by the tribe of Reuben. Based on references in the prophetic books (see below), it seems unlikely that Reubenites controlled the town over time.

Sibmah may have produced well-known fertile grape vineyards, since Isaiah prophesies against Sibmah's vines in an oracle against Moab (Isa 16:8–13). From Isaiah, Jeremiah borrows the same taunt against Sibmah in 48:32–33.

Wüst (1975:160) and Kallai (*HGB,* 441) doubt the usual location of Sibmah at Khirbet Qarn el Qibsh because there are no Iron Age ruins yet uncovered there. To fit a more linear course, Wüst would look for the site farther S on the plain of Medeba near Beth Baal Meon.

PAUL NIMRAH FRANKLYN

SIBRAIM (PLACE) [Heb *sibrayim* (סִבְרַיִם)]. One of the towns which forms the N border of the ideal vision of Israel in Ezek 47:16. Although the passage in Ezekiel suggests a general location between Damascus and Hamath, the precise location is still disputed. Citing the geographical notes of Honigmann (1923:184–85), Zimmerli (*Ezekiel 2* Hermeneia, 529) suggests that it may have been on the site of ancient Euaroia (modern Hauwarin), a Roman town situated in Syria about 62 miles NE of Damascus. However, Honigmann does not mention such an equation, nor does Zimmerli produce any solid evidence for this identification. W. F. Albright (*ARI,* 220) and other scholars (cf. *LBHG,* 67 n. 33) have suggested that Sibraim is a variant spelling of Sepharvaim. Zadok (1976:116) and other scholars, however, argue that Sibraim and Sepharvaim are two distinct towns. More data is needed to provide a definite location for Sibraim and Sepharvaim.

D. Significance of the Sibyls

———

A. The Sibyl

The sibyl was known in Greek legend as an ecstatic woman who uttered prophecies of a predominantly gloomy nature. The earliest reference, in the philosopher Heraclitus (ca. 500 B.C.E.) says that she reaches through thousands of years by the power of the god (Plut. *De Pyth. Or.* 6). She was apparently already a figure of hoary antiquity at that time. According to the Latin poet Ovid (who flourished at the turn of the era), the sibyl was granted by Apollo that she might live as many years as there were grains of sand on the

seashore, but she neglected to ask for the gift of youth. So she remained for thousands of years a shriveled, shrunken old woman.

At first the sibyl was conceived as a single individual, and her association with different places was explained by the legend of her wandering. In the Hellenistic period, however, the word became generic and we hear of several different sibyls. Varro, a Roman writer of the 1st century B.C.E. listed ten sibyls: Persian, Libyan, Delphic, Cimmerian (in Italy), Erythrean, Samian, Cumean, Hellespontic (from Marpessus, near Troy), Phrygian, and Tiburtine (Varro, *Res Divinae,* preserved by Lactantius *Div. Inst.* 1.6.8–12). Other lists varied. The Hebrew sibyl was sometimes added as an eleventh, and sometimes identified with the Persian. The best-known sibyls were those of Marpessus and Erythraea in Asia Minor, and of Cumae in Italy. Both the Cumean and the Erythrean sibyls were associated with caverns. The Cumean sibyl was immortalized by Virgil, who describes her ecstasy in the *Aeneid* 6.77–102 and also refers to her in the *Fourth Eclogue.*

From early times, *Sibylline Oracles* were written down in Greek hexameters. The use of acrostics was thought to be a mark of authenticity. The most famous collection in antiquity was the official one at Rome. According to legend (recounted in the anonymous preface to the standard collection), the Cumean sibyl brought nine books of her own prophecies to Tarquinius Priscus, when he was ruler of Rome (ca. 600 B.C.E.). When he would not pay her price, she burned three of them. She then offered the remaining six for the same price. He refused again, so she burned three more. Finally he purchased the remaining three, and entrusted them to special keepers (first two men, then ten, finally fifteen) to be consulted only in time of crisis, by decree of the Senate. When the temple of Jupiter was burned down in 83 B.C.E., the Sibylline books were destroyed. When it was rebuilt in 76 B.C.E., oracles were collected from various places, especially Erythraea. These oracles were apparently preoccupied with prodigies and portents (Tibullus 2.5.66–78). One surviving example deals with the birth of an androgyne, while another prescribes rituals for the founding of the *Ludi Saeculares.* The last-known consultation of the books was in 363 C.E.

B. The Standard Collection

The standard collection of *Sibylline Oracles* is made up of two distinct manuscript collections. The first consists of two manuscript groups, which are usually referred to as *phi* and *psi,* and contain Books 1–8. Group *phi* also contains the anonymous preface. The second collection consists of a group of manuscripts known as *omega,* which contains Books 9–14. Books 9 and 10 merely repeat material from the first collection—Book 9 contains Book 6 and part of Book 8, and Book 10 is identical with Book 4. These books are consequently omitted in the editions, but the numbering of Books 1–8 and 11–14 is retained.

The first edition, by Sixtus Birken in Basel, 1545, contained only Books 1–8. Books 11–14 were first published at the beginning of the 19th century. The first complete edition was by C. Alexandre (Paris, 1841, 1853). The major editions were done by A. Rzach (1891) and J. Geffcken (1902a).

1. The Earliest Jewish Oracles: *Sibylline Oracles* 3. The genre of *Sibylline Oracles* was first adapted by Jews for their own propagandistic purposes in the 2d century B.C.E., in Egypt. The oldest Jewish oracles are preserved in Book 3 of the standard collection, in vv 97–349 and 489–829 of that book. Within this corpus five oracles may be distinguished: (1) 97–161; (2) 162–95; (3) 196–294; (4) 545–656; and (5) 657–808. The first of these contains a euhemeristic account of history—i.e. it explains the pagan gods as famous men and women of ancient times. Even earth and heaven were "the first of articulate men." The oracle begins with the story of the tower of Babel, but most of it deals with Greek mythology—notably the birth of Zeus. The best parallel to this review is the *Theogony* of Hesiod. The oracle concludes by listing eight kingdoms, from Egypt to Rome. If we add the initial kingdom of Cronos (father of Zeus) and infer a final eschatological kingdom, we arrive at the usual Sibylline figure of ten. The second oracle also contains a rapid review of history beginning with "the house of Solomon." Most of the oracle, however, is concerned with "another kingdom, white and many-headed from the western sea"—i.e. Rome. The sibyl denounces Rome for injustice and homosexuality. It will endure until "the seventh reign when a king of Egypt, who will be of the Greeks by race, will rule" (192–93). Then "the people of the great God will again be strong."

The reference to the seventh king of Egypt is repeated in two other passages (vv 318, 608) and is the key to the provenance of these oracles. The king in question is either Ptolemy VI Philometor (who ruled 180–164, 164–145 B.C.E.) or his anticipated successor, Neos Philopator. In fact, Philometor's benevolence to the Jews was well known; Josephus (*AgAp* 2.49) claimed that Philometor entrusted his whole kingdom to the Jews. While this claim is exaggerated, it had some basis in the fact that two Jews, Onias and Dositheus, became generals in his army. Onias, legitimate heir to the high priesthood in Jerusalem, was then permitted to build a temple at Leontopolis. It is possible that the earliest Jewish *Sibylline Oracles* were written by a supporter of this Onias. (See Collins 1974:28–32. Nikiprowetzky 1970:215–16 identifies the seventh monarch as Cleopatra VII, the last queen of Egypt.)

The enthusiasm of the Sibyl for the Ptolemaic line found even stronger expression in vv 652–56. There we read that "God will send a king from the sun who will stop the entire earth from evil war." Egyptian kings were associated with the sun from the time of the Pharaohs, and the Ptolemies had appropriated the association (e.g. on the Rosetta Stone). The expression "king from the sun" was used in the *Potter's Oracle,* an Egyptian nationalistic composition from the Hellenistic age, to express the hope for the restoration of Egyptian kingship. In the Sibylline Oracle, the king from the sun must be identified with the seventh king of the other passages—i.e., Philometor or his heir. This passage makes clear that the Sibyl looked to the Ptolemaic house for deliverance, just as Second Isaiah had looked on Cyrus of Persia as a messiah. This political stance is understandable in the case of Jews like Onias and his followers, who found protection and patronage in Egypt when Judea was in turmoil in the Maccabean era. (For a contrary view, which identifies the "king from the sun" as a Jewish messiah, see Momigliano 1975:1077–84.)

The opposition of the Sibyl to Rome is unusual in a Jewish work of this early period. The Maccabees formed an alliance with Rome, and looked on it as a potential ally against the Syrians. In Egyptian affairs, however, Rome supported the rival of Philometor, Euergetes II (Physcon) and the attitude of the Sibyl was formed in the Egyptian milieu. The Sibyl never refers to the Maccabean revolt. It has been suggested that vv 194–95 ("the people of the great God will again be strong") is such a reference (Momigliano 1975:1081) but the suggestion is not warranted by the context.

In addition to the political endorsement of the Ptolemaic house, the earliest Jewish Sibyl had a religious message. This is expounded in the third oracle (vv 196–294) in a eulogy of the Jewish people and their law. Again, the fourth oracle (vv 545–656) exhorts the Greeks to turn from idolatry and offer holocausts "at the temple of the great God," and praises the Jews for avoiding idolatry and homosexuality. The final oracle (vv 657–808) speaks of an eschatological assault on the temple by the kings of the earth, which will be repulsed by divine judgment, with fiery swords from heaven. Then "the sons of the great God will live peacefully around the temple" (702–3) and God "will raise up a kingdom for all ages among men" (767–68).

The earliest Jewish *Sibylline Oracles* are eschatological prophecies. They look for the restoration of a Jewish kingdom around the Jerusalem temple. They evidently did not recognize the Maccabean restoration. The centrality of the temple supports the hypothesis that the oracles were written by a supporter of Onias the ousted high priest. The Ptolemaic king is expected to play a crucial role in bringing about this final state, but the judgment is expected to vindicate Jewish ethics, especially the avoidance of idolatry and homosexuality. While the oracles are eschatological, however, they are markedly different from the apocalyptic visions which were composed in Judea about the same time (e.g. Daniel) although they share some features (e.g. prophecy after the fact, periodization). The oracles make no mention of angels, which play a dominant role in the apocalypses, and do not envisage the resurrection of the dead. Instead their eschatology is closer to the traditional Jewish hope which we find, e.g., in Isaiah 2 and 11—the restoration of a kingdom around the Jerusalem temple. At the same time, the oracles are remarkably "progressive" in their attempt to relate to the gentile world. The choice of the Sibyl as a pseudonym and the mastery of epic hexameters show that the authors of these oracles saw no conflict between fidelity to Jewish religion and acceptance of Hellenistic culture.

2. Additions to *Sibylline Oracles*3. The oracles from the time of Philometor were supplemented with various other oracles to make up the third book of the present collection. Some of these, vv 401–88, may

well have been taken from the pagan Erythrean sibyl, for they speak of Homer and the Trojan war—allegedly themes of that sibyl (Lactantius *Div. Inst.* 1.6). An important oracle in vv 350–80 prophesies the vengeance of Asia on Rome. It is most plausibly associated with the campaign of Cleopatra in the 1st century B.C.E. (The campaign of Mithridates earlier in that century has also been suggested—see Kippenberg 1983:45). These oracles lack the ethical concerns of the earlier oracles and were presumably included because of their general political interest.

Sib. Or. 3:1–96 was most probably the conclusion of a different book. (Most manuscripts have the title "from the second book, about God.") Verses 1–45 are quite different from the rest of the book and are mainly concerned with monotheism and idolatry. The oracles in 46–62 and 75–92 were written after the battle of Actium and reflect the disillusionment of Egyptian Jews with Cleopatra. Verses 63–74 are later still, and refer to the coming of "Beliar from the line of the Augusti." The reference is most probably to Nero, who takes on demonic proportions in the later *Sibylline Oracles.*

3. The Continuing Jewish Tradition: *Sibylline Oracles* 5. The fifth Sibylline Oracle continues the Sibylline tradition of Egyptian Judaism. Like *Sibylline Oracles* 3, the book is made up of several oracles. The first, vv 1–51 is a summary of rulers from Alexander to Marcus Aurelius (the reference to the latter may have been added as a secondary update). The next four oracles, 52–110, 111–78, 179–285, 286–434, show a common pattern: (1) oracles against various nations; (2) the return of Nero as an eschatological adversary; (3) the coming of a savior figure; and (4) destruction, usually by fire. These oracles were probably written at the beginning of the 2d century C.E. on the eve of the great Diaspora revolt of 115–18. The final oracle of the book, 435–530, describes an elaborate battle of the stars which concludes bleakly with a starless sky.

While the earliest strand of the Jewish Sibyllines was already hostile to Rome, this hostility is greatly intensified in *Sibylline Oracles* 5. The most passionate denunciation of Rome is found in vv 162–78. The charge against Rome is partly moral—adultery and homosexuality—but more fundamentally that Rome destroyed the Jerusalem temple and set itself up as a god (cf. v 173). Rome is represented in *Sibylline Oracles* 5 by Nero. The Sibyl adapts the popular legend that Nero had survived and fled to the Parthians and prophesies his return from the ends of the earth. Like Rome, he is denounced as morally evil (a matricide), blamed for the destruction of Jerusalem (v 150) and accused of setting himself up as a god. The intensity of the oracles reflects the deterioration of relations between Rome and the Jews after the war of 66–70 C.E.

Unlike *Sibylline Oracles* 3, however, *Sibylline Oracles* 5 held no hope of aid from Egypt. The oracles show antipathy to Egypt throughout. The savior figure is no longer a human figure but a man from heaven (256, 414), a "king sent from God" (108). In vv 256–57 an original Jewish passage is modified by a reference to the crucifixion, so as to identify this figure with Christ, but this is the only trace of Christian redaction in the book. The hope for a heavenly savior figure brings *Sibylline Oracles* 5 closer to the thought-world of the apocalyptic writings, but belief in resurrection is still notably absent.

Like *Sibylline Oracles* 3, *Sibylline Oracles* 5 also has an ethical message, which consists of polemic against idolatry and sexual offenses, the standard themes of Jewish apologetic literature. The most striking aspect of the piety of these oracles, however, is their devotion to the temple, even though the actual temple had been destroyed for several years. Verses 492–501 prophesy the erection of a temple to the true God in Egypt, and this is viewed entirely positively, although it will again be destroyed. We may detect here an echo of the tradition of the temple of Leontopolis, which had itself been closed down by the Romans. The final state for which this Sibyl hoped was the earthly restoration of Jerusalem (249–55 and 420–27), with a wall extending to Joppa, while the shrines of Isis and Sarapis would lie in ruins. These aspirations may have been shared by the Jews who launched the Diaspora revolt in 115 C.E.

4. *Sibylline Oracles* 4. In sharp contrast to the prominence of the temple in *Sibylline Oracles* 3 and 5, *Sibylline Oracles* 4 declares at the outset that God does not have a house of stone but an invisible temple and declares those happy who "reject all temples … defiled with blood of animate creatures and sacrifices of four-footed animals" (27–29). This oracle must have come from a different source than *Sibylline Oracles* 5. *Sibylline Oracles* 4 is the most tightly structured of the Jewish Sibyllines. It gives an overview

of history in four kingdoms and ten generations: Assyria (6 generations), Media (2), Persia (1), and Macedonia. After Macedonia, Rome is inserted out of numerical sequence. This suggests that an older anti-Macedonian oracle was updated in the Roman era. The Sibyl notes the destruction of Jerusalem and the eruption of Vesuvius (79 C.E.), and prophesies the return of Nero (138). The historical prediction concludes with the threat that "God will destroy the race of men at once by a great conflagration" (160–61). This threat, however, is conditional. The Sibyl appeals to "wretched mortals" to "wash your whole bodies in perennial rivers" (165) and repent. If not, God will destroy everything by fire, but there will be a resurrection and judgment. *Sibylline Oracles* 4 then comes closer to the typical eschatology of the apocalypses than do the other Jewish oracles.

The appeal for baptism as a way of forestalling eschatological destruction throws interesting light on the activity of John the Baptist and other baptist groups in the 1st century. The oracle is usually thought to have been composed in the Jordan valley not long after 79 C.E., which is the latest historical reference.

5. *Sibylline Oracles* 11. One other book of the Sibylline Oracles was probably a product of 1st century Judaism. *Sibylline Oracles* 11 is a review of history from the Flood to the death of Cleopatra. *Sib. Or.* 5:1–11 is a summary of *Sibylline Oracles* 11 (the summary is repeated at the beginning of *Sibylline Oracles* 12). It seems more probable that *Sibylline Oracles* 11 preceded *Sibylline Oracles* 5 than that the summary statement came first and that *Sibylline Oracles* 11 was expanded from it. Since *Sib. Or.* 11:232–35 contains a eulogy of Alexandria, we may presume that the book was written in that city. It lacks both the ethical concerns and eschatological perspective of Books 3 and 5. The oracle is negative in Cleopatra, but contains no criticism of Rome. Egypt will finally be destroyed because of its oppression of the Hebrews (308). *Sibylline Oracles* 11 then fits the general attitude of Alexandrian Judaism which was conciliatory to the overlords and hostile to the native Egyptians, but stands apart from the tradition of *Sibylline Oracles* 3 and 5.

6. Christian Adaptations of Jewish Oracles. In two cases Jewish Sibylline oracles were adapted and incorporated in Christian books. These were Books 1–2 and Book 8.

The first two books of the standard collection are not separated in the manuscripts and should be read as a single book. The familiar Sibylline division of history into ten generations runs throughout. The first seven generations are preserved in 1:1–323. At this point a Christian passage on the life of Christ is inserted (1:324–400). The original sequence is resumed in 2:6–33), but there is no reference to the eighth or ninth generation. The tenth is introduced at 2:15. The remainder of *Sibylline Oracles* 2 describes eschatological crises and the last judgment. Several passages are clearly Christian, but 2:154–76 is surely Jewish since it refers to the universal rule of the Hebrews. *Sibylline Oracles* 2 contains a lengthy excerpt from the sayings of Pseudo-Phocylides (56–148), which is used to illustrate the criteria for the final judgment.

In view of the complicated redaction of the book, little can be said with confidence about the Jewish stage. The only reference to the destruction of Jerusalem is in 1:393–96 and it involves no recrimination against Rome. It is usually regarded as a Christian insertion, designed to bring the book up to date. If this is so, the Jewish oracle was written before 70 C.E. The only indication of provenance is that Phrygia is said to be the first land which emerged after the flood. *Sibylline Oracles* 1–2, then, may be a rare literary relic of the Judaism of Asia Minor, but its value is greatly reduced by the uncertainty of its original contents. The Christian redaction of the book, which may have been completed in the 2d century, is primarily concerned with the judgment. Martyrs and virgins are singled out for special honor (2:46–48). There is a catalogue of sins for which people are condemned (2:255–83) and the sufferings of the damned are described in lurid detail (285–310).

Sibylline Oracles 8 falls into two quite different sections. Verses 1–216 are made up of political prophecies, mainly directed against Rome. Verses 217–500, by contrast, are concerned with Christology, incarnation, and the praise of God. The authorship of vv 1–216 is disputed, and not necessarily uniform. The concluding description of the eschatological reign of a woman (194–216) appears to presuppose the book of Revelation and is therefore Christian. Verses 131–38, which are favorable to Hadrian, contrast sharply with other passages in the book and may be the work of a pagan sibyllist. Jewish authorship of the

remainder of these oracles is supported by the animosity to Hadrian in vv 50–59, and the fact that Nero is said to destroy "the nation of the Hebrews" (141), but there is no conclusive evidence. Verses 65–74 envisage the return of Nero during the reign of Marcus Aurelius and must have been written before the death of that emperor in 180 C.E. There is nothing to indicate the place of origin. The importance of these oracles lies in their powerful indictment of Rome for greed and injustice, which is a valuable indication of Near Eastern sentiment in the 2d century C.E.

The Christian redaction was known to Lactantius in the late 3d century. Its most noteworthy feature is that it includes the only acrostic in the Jewish and Christian corpus (217–50), although acrostics were considered criteria for the authenticity of pagan Sibyllines.

7. The Christian Compositions: *Sibylline Oracles* 6 and 7. Only two books in the standard collection were clearly original Christian compositions. Book 6 consists of only 28 verses and is a hymn to Christ. It was known to Lactantius about 300 C.E. The hymn mentions the baptism of Christ in the Jordan, a theme also taken up in book 7, but there is no real evidence of its provenance.

Sibylline Oracles 7 is badly preserved and loosely structured. A passage on the Flood (7–15) is dependent on *Sibylline Oracles* 1. Much of the book is taken up with oracles against different nations and places, in no discernible order (1–6, 16–23, 40–63, 96–117). There is an eschatological passage in 24–39 which includes a conflagration and a messianic oracle. Another eschatological tableau predicts a conflagration, eternal punishment of sinners, and the restoration of the earth (118–51). The most distinctive doctrines of the book are found in 64–95. After a denunciation of Coele-Syria for failing to recognize the divinity of Christ at his baptism, the Sibyl prescribes that sacrifice be replaced with a ritual that recalls that baptism, in which a dove is released to heaven. The passage also prescribes a prayer to be recited over beggars.

Sibylline Oracles 7 then exhibits a somewhat unusual kind of Christianity. It has been labeled "Gnostic" and "Jewish Christian," but the few quasi-Gnostic references (e.g., to the Ogdoad in v 140) are isolated, without any Gnostic context, and the Jewish elements consist of associating Christ with the house of David (31) and a condemnation of those who claim to be Hebrews and are not (135, cf. Rev 2:9; 3:9). The prominence of the baptism has been taken to suggest an origin in Syria or the Jordan valley, but none of these suggestions is more than a possibility. The only evidence on the date is that the book was known to Lactantius.

8. The Later *Sibyllines.* The Sibylline collection concludes with three books which continue the political review of book 11. *Sibylline Oracles* 12 covers the period from Augustus to Alexander Severus (235 C.E.). It is noteworthy mainly for its summary appraisal of Roman emperors. Caligula and Nero are portrayed negatively but Augustus, Domitian, Hadrian, and Marcus Aurelius are praised. There are only two clear Christian passages, 30–34 and 232, and these may be insertions, but the positive treatment of Hadrian (164–75) would be remarkable in a Jewish work.

Sibylline Oracles 13 continues the review to about 265 C.E. The hero of the book is Odenath of Palmyra, who fought for the Romans against the Parthians. In a phrase reminiscent of *Sibylline Oracles* 3 he is called *hēliopemptos*, "sent from the sun" (151, 164). Again, it is uncertain whether this book is Jewish or Christian. Book 14 continues the review down to the Arab conquest of Egypt in the 7th century, but few of the references can be recognized and much of the book seems incoherent.

C. Other *Sibylline Oracles*

Two other Sibylline books enjoyed popularity in the Middle Ages: the Tiburtine and Erythrean Sibyls. Both were pseudo-prophecies of world history. The Tiburtine Sibyl was composed in the 4th century in Greek and speculates on the merits of various emperors before the coming of the antichrist. The Latin version contains an important account of the Last Emperor. The Erythrean Sibyl survives in a 13th-century text, but the core of the work may be much older. It concludes with the combat with the antichrist and the end of the world (see McGinn 1979; Alexander 1967).

D. Significance of the Sibyls

The Sibyls exercised profound influence on millennarian thought in the Middle Ages, notably on Joachim of Fiore. The main reason why they were preserved in early Christianity, however, was that they

were thought to give pagan testimony to the true religion and to Christ. In the words of Lactantius: "Therefore since all these things are true and certain, foretold by the harmonious prediction of all the prophets, since Trismegistus, Hystaspes and the Sibyl all uttered the same things, it is impossible to doubt that hope of all life and salvation resides in the one religion of God" (*Epitome Institutionum* 68 [73]). See further in *NTApocr* 2:703–45; *HJP²* 3:618–54.

JOHN J. COLLINS

SICKNESS AND DISEASE. Disease and illness are part of the fabric of human life and, as such, they play their part in the biblical literature. It should, therefore, not be a matter for surprise that it includes a vast amount of material of medical interest. This has long been recognized and has given rise to an extensive secondary literature. Much of it has been concerned with the apparently simple problem of establishing a diagnosis from the descriptions and circumstances of the text, but little of this literature deals with methodology. The best example of the problems that have repeatedly been dealt with in the secondary literature is the so-called biblical leprosy (which will be considered in some detail below). By far the greatest part of the medical interest in the Bible is contained in the OT and is usually presented in a historical context, while the NT descriptions are relatively few and presented in the context of miraculous cures.

A. Introduction

The purpose of this account will be to outline some methodological principles on the basis of which the extensive secondary literature can be assessed, and to examine some specific examples from the biblical and apocryphal texts. It is, of course, impossible to do justice to an examination of even a significant part of the medical references in the biblical literature, nor is it possible to provide, in the space available, an exhaustive critique of the secondary literature. The medical aspects of the biblical literature have been exhaustively analyzed by Preuss (1978), and there are also numerous brief reviews (Hemer 1986; Sussman 1967; Wiseman 1986). This account will, therefore, in the main, be limited to (1) a consideration of the technical terms used to describe disease or its signs, (2) descriptions of disease, and (3) case histories in the literature under consideration. In each case the choice is made to indicate general principles that may find wider application. [General descriptions of specific diseases and disorders can be obtained from the standard encyclopedias (e.g., *EncBrit*). For more technical presentations of the epidemiology, pathogenesis, and clinical patterns of a particular disease/disorder, consult any of the standard textbooks of medicine (e.g., *Cecil Textbook of Medicine,* 18th ed., ed. by J. Wyngaarden and L. Smith, 1988 [hereafter abbreviated *Cecil*]).—Editor.]

The classical Jewish biblical commentaries should also properly be regarded as important sources of information. Though they frequently rely on the postbiblical Midrashic and Talmudic primary sources, they often provide insights that have a long history in oral tradition. In particular, these commentaries may contain material of historical, lexical, and etymological importance.

In addition to the biblical and related literature, there is the very extensive Talmudic literature. This is, in a sense, an extension of the biblical literature because it sees itself as such. It was, however, written much later and in an entirely different historical and cultural environment, and its interpretations may, therefore, be less than reliable because of their exegetical intentions. Nevertheless, its insights cannot be entirely ignored. The Talmudic literature will, therefore, at times be referred to when a useful insight into the biblical literature is to be found there. Any detailed examination of the medical contents of the Talmud is, however, beyond the scope of this article. The medical aspects of the Talmudic literature have been considered methodically and in detail by Preuss (1978), and there is a brief general review of the subject by Sussman (1967).

1. Methodological Principles. Since the whole of the biblical literature is prescientific, the nature of disease and illness as described in it presents immense problems of interpretation. In each case there are large preliminary questions before interpretation can begin. Is the description an objective historical account or is it a nonobjective or tendentious account? The problem is not simplified by the fact that even some clearly tendentious references to disease (e.g., Lev 26:16) rely, at least to some extent, on empirical reality, as is clear from the expressions that are used (see B.1 below).

The approach here will be to attempt to interpret biblical descriptions and references to diseases and their symptoms in terms of modern medicine. The simplest interpretation and explanation, requiring the minimum of assumptions, will be regarded as leading to the best diagnosis ("Occam's razor"). Such an approach may provide a framework that can be applied to examples that cannot be dealt with here. It may also be a foundation on which the interpretation of new problems can be based and a yardstick against

which the extensive secondary literature, often replete with speculation and of highly variable quality, can be assessed.

Throughout, the reader, as indeed the author, must remain acutely aware of the possibility and occasionally even the certainty of error. It is at times tempting to construct attractive explanations and diagnoses based on scanty textual information. In this connection it is well to remember that temptations to read a text too literally may lead to conclusions far from the ancient reality or, indeed, the author's intentions. Thus, references to the "hardening" of Pharaoh's heart (Exod 4:21; 7:3) have been taken literally as representing coronary arteriosclerosis (Cameron 1970). This must be an error resulting from the use of translations rather than the Hebrew text, where (Exod 4:21) *ʾaḥazeq* (from *ḥazaq* "to grow firm, strong") is used, suggesting that the reference is to Pharaoh's resolve rather than to heart disease. Confirmation for this conclusion may be found in Exod 7:3, where *ʾaqašeh* (derived from *qšh* "be hard or severe") is used to represent determination. An important methodological principle is, therefore, the careful analysis of the meaning of the crucial descriptive words used in the text. The use of these words in cognate languages and their use in connection with observable or well-known phenomena can also be helpful.

Thus, general methodological principles can be proposed in order to arrive at plausible diagnoses of biblical disease. These principles are only as good as they are for the interpretation of historical texts generally. It is first necessary to determine whether a given text contains a general reference or description of a disease *("formal description")* or whether it is a case-historical description of disease *("biographical description"),* i.e., where the fate of a named or intended individual is described.

Where *formal* references or descriptions of disease are concerned, an almost scientific approach becomes possible, depending on the extent, quality, and reliability of the text. In the first place, the likelihood of a given diagnosis can be measured against the well-known medical dictum, "Common things are common and rare things are rare." It is unlikely that rare diseases are justifiably identified when common symptoms and signs of disease are described. This is irrespective of the fact that rare diseases must then have existed, as they do now. Secondly, when assessing what might have been common in a particular setting, account must be taken of social, economic, cultural, and other factors that may influence the prevalence or the incidence of particular diseases, though usually the necessary specific information is lacking. A simple example is the likely association between gastrointestinal infections and the long-term storage of water, which can easily become polluted with sewage, particularly in settlements of high population density. In this connection, it is interesting to note that dysentery was regarded as endemic among the priests in Jerusalem (*j. Šeqal.* 5.2). Profound diarrhea is suggested in 2 Chr 21:15, and dysentery is referred to in Acts 28:8. Similarly, a knowledge of the season and hence the climate could make one or another diagnosis more or less likely.

When texts describe phenomena the significance of which were not at the time understood, but which accurately describe subsequently recognized syndromes, confidence in a diagnosis may be considerable, as in the case of Ps 137:5–6 (see D.1 below).

The findings of paleopathology may also be helpful. Thus, the pathological examination of finds at archaeological sites, including skeletal remains and artifacts, can yield direct evidence about the nature and distribution of disease. Brothwell and Sandison (1967) have provided an outstanding, authoritative source covering the whole subject of paleopathology that will provide the reader with detailed background information in relation to much of our subject. There is also an extensive literature on special aspects of paleopathology, such as diseases found in mummies (Cockburn and Cockburn 1980) and medicine in the Roman world (Jackson 1988). It should be remembered, however, that there are diseases, such as tuberculosis, which clearly existed in the ancient world (Morse et. al. 1964; Morse 1967) but of which there is no reliable trace in the biblical literature. Generally speaking, the critical application of modern medical knowledge together with the principles of epidemiology will often lead to a possible diagnosis or a number of possible diagnoses, with an assessable probability of their being correct.

Where *biographical* descriptions of disease are concerned, the situation is much more complex. Thus, individuals may be described as suffering from a disease which, on the face of it, is uncommon or even

rare, and the probability of a diagnosis being correct will be impossible to define. Furthermore, the description may be tendentious and embellished by wishful thinking about a fitting fate for unpopular persons. This element of the description can often be balanced against the possibility that a real case history has come down to us.

Finally, it is necessary to make the general point that an author or editor may have been describing not actual events but rather an interpretation of history in the light of his own experience.

2. The Medical Historical Background. The texts with which we are concerned span so long a period and so large a geographical area that a variety of medical traditions will have influenced the writers and editors. Some of the earliest relevant influences in the OT are likely to have been Egyptian (cf. Dawson 1967) and Mesopotamian (cf. Wilson 1967), while the later influences in the NT are Greco-Roman medicine (cf. Patrick 1967). Unfortunately, there has been no systematic or critical comparison or analysis to define precisely the nature or extent of these influences on the biblical texts. The interested reader is referred, in the first place, to general histories of medicine which include brief details of various aspects of the history of medicine in the ancient world (e.g., Garrison 1929; Mann 1984; Medvei 1982; Osler 1921). A much more extensive and epoch-making treatment of medicine in the ancient world has been provided by Siegrist (1951). It is a matter of continuing regret that Siegrist was not spared to discuss ancient Hebrew medicine as he had planned. In addition to histories based mainly on literary sources, there has been a great deal of work on paleopathology relevant to the period under consideration (e.g. Brothwell and Sandison 1967; Cockburn and Cockburn 1980; Jackson 1988). See also PALEOPATHOLOGY.

3. The Geographical Background. Allusion has already been made to the possible significance of the geographical setting for the incidence of diseases. This relationship is most obvious for certain communicable diseases which are particularly associated with tropical and subtropical climates. Particular examples are insect vector-transmitted diseases; gastrointestinal infections, such as typhoid (enteric) fever, and dysentery, and certain parasitic diseases. Most directly recognizable are the effects of a hot climate as, for example, in the incidence of sunstroke (see D.2 below) and drought, which may itself have consequences leading to disease.

B. Infectious and Communicable Diseases

It may be thought strange that infectious and communicable diseases can be spoken of in a biblical context. However, the Hebrew word *nega‘* for "plague" or "pestilence" derives from the root *ng‘,* "touch, reach, strike." This may represent an ancient tradition or recognition of the relationship between contact or proximity and the spread of disease. The use of the word *nega‘* may suggest large-scale events, perhaps of an epidemic nature (Exod 9:14; Num 11:33; 2 Sam 7:14), including battle casualties in large numbers (*maggēpâ,* 1 Sam 4:17; 2 Sam 17:9; Num 18:7). The word *maggēpâ* was also used for epidemic disease (Num 14:37; 17:13–15; 25:8–19; 1 Sam 6:4, etc.).

Large-scale epidemics are mentioned on a number of occasions (e.g., Ezek 7:15), including epidemics in crowded cities (Lev 26:25). The 24,000 deaths after the contact between the Israelites and the Moabites (Num 25:9) are unlikely to have been due to sexually transmitted disease, as the text appears to suggest, but are more likely to have been due to some other infectious disease of which the Moabites were carriers, and thus immune, while the Israelites were susceptible. The discharge mentioned in Lev 15:2 has been identified as gonorrhea though there are no supporting details; however, the identification is plausible because of the related references to spermatorrhea (Lev 15:16) and menstruation (Lev 15:19–33), both genital discharges.

The deaths after the eating of the quails (Num 11:31–33) may have been due to food poisoning. Support for this suggestion may be found in the absence of any reference to deaths. The deaths among the returning Israelite spies (Num 14:37) could have been due to an imported travel-acquired infection.

1. Fevers. In the Pentateuchal passages of admonition (Lev 26:14–41; Deut 28:15–68), a number of terms are used that appear to be associated with diseases (Lev 26:16; Deut 28:22). Thus, *šaḥepet,* "wasting disease, consumption," comes from the root *šḥp* which, by comparison with Arabic cognates, suggests that a disease is meant in which the body becomes extremely emaciated. Though there is little

doubt that tuberculosis existed in the ANE (cf. Morse et al. 1964), *šaḥepet* must be taken as any disease in which there is severe loss of weight. (On tuberculosis, see *Cecil,* 1682ff.) This could, of course, possibly include such chronic wasting diseases as tuberculosis, but it would also include a wide variety of other wasting diseases of an epidemic nature such as massive parasitic infestation and other acute intestinal infections that can lead to dramatic dehydration, which might be seen as a kind of weight loss. Thus, *šaḥepet* should be seen not as the *name* of a given disease but rather as a *sign* of disease. Similarly, *qadaḥat,* "fever," from the verb *qādaḥ,* "be kindled," is a general term for fevers of any kind. One can merely speculate as to what these might have been. Clearly, they are likely to have included the major epidemic fevers such as malaria and typhoid (enteric) fever. The association with *mehalôt ʿēnayim,* "that consume the eyes" (Lev 26:16), suggests that some of the fevers referred to were accompanied by the sunken eyes that are so characteristic of extreme dehydration due to diarrhea. (On malaria and typhoid fever, see *Cecil,* 1641–42, 1857ff.)

Two further terms mentioned in Deut 28:22 are *daleqet,* from the verb *dālaq,* "burn," and *ḥarḥûr,* from *ḥārar,* "be hot." It is tempting to think that the various terms for fever are not simply tautologous but that they represent recognizably different types of fever, even if not separate diseases. Thus, the commentator Abraham ibn Ezra suggests (Deut 28:22 *ad loc.*) that *qadaḥat* represents quotidian fever while *daleqet* represents tertian or quartan fever. If this suggestion is correct, such distinctly periodic epidemic fevers are, of course, recognizable as malaria.

It is known that malaria was endemic in the E Mediterranean in the Roman period. Fever (Gk *pyretos*) is mentioned frequently in the NT (Matt 8:15; Mark 1:31; Luke 4:38–39; John 4:52; Acts 28:8). Since *pyretos* in the *Corpus Hippocraticum* is associated with marshes and is a recurrent fever, the NT references to this condition may safely be regarded as malaria, particularly because N Palestine, with which these references are associated, was until the early years of the present century associated with endemic malaria.

2. Yerāqōn. The Hebrew word *yerāqōn* (cf. *yārōq,* "herbs" or "green") is usually translated as "mildew" or "rust." It occurs six times in the OT (Deut 28:22; 1 Kgs 8:37; Jer 30:6; Amos 4:9; Hag 2:17; 2 Chr 6:28) and with the exception of Jer 30:6, it occurs in association with *šidapōn,* usually translated as "blast." Most medieval Jewish commentators (e.g. R. Solomon b. Isaac ["Rashi"] 1040–1105) regard *yerāqōn* as a disease of plants. In the Mishnah (*Taʿan.* 3:5) and the Babylonian Talmud (*Taʿan.* 19a; *Ketub.* 8b), they are regarded as epidemic diseases of man. In three Talmudic texts (*Šabb.* 134a; *Ḥul.* 47b; *t. Šabb.* 15:8) *yerāqōn* is used to describe the appearance of the newborn male infants in relation to his fitness to undergo circumcision. Rosner (1972) discusses the meaning of the word and, leaning heavily on Preuss (1923:187), suggests that in the OT it probably refers to a disease of grain plants, while in Jer 30:6 it means palor, anemia (which in some cases gives the skin a greenish appearance and was called "chlorosis" by past generations of physicians), or jaundice, but Rosner regards the problem as unresolved. (On anemia and jaundice, see *Cecil,* 808ff., 817ff., 878ff.)

3. Epidemics. A variety of epidemics are mentioned in the OT. Thus, the description in Zech 14:12 is very reminiscent of Asiatic cholera, although there is no reliable evidence of this disease in epidemic form before the 19th century (see *Cecil,* 1651–53).

The word *deber,* "pestilence" (Exod 5:3; 9:15; Lev 26:25, etc.), is nonspecific. It certainly cannot be taken to be "plague," as it is commonly translated. The Mishnah (*Taʿan.* 3:4) defines pestilence as a death (presumably from the same perceived disease) occurring on three consecutive days in a town of 500 able-bodied men, but possible causes are not given. The relationship with famine is indicated in Ezek 7:15. Various other terms are used indistinguishably for epidemics (*magepāh* in Num 14:37; *negep* in Exod 12:13 [from *nāgap,* "to strike, smite"]; *negʿa* in Exod 11:1 [from *nāgʿa,* "to touch"). It must be assumed that these terms refer to epidemics with deaths and that the diseases involved included a variety of acute infections prevalent in tropical and subtropical zones.

a. The Fifth Plague of Egypt. This (Exod 9:3–6) was a sudden epidemic that affected a wide variety of domestic animals and followed immediately on a plague of flies (Exod 8:20–31). Various suggestions have been made of the nature of this epidemic. Jacoby (1963) concluded that the description best fits an

epidemic of a virus disease such as foot-and-mouth disease or rinderpest. However, the wide variety of animals involved (Exod 9:3) are not susceptible to the causative viruses of these two diseases. Shimshony (1979; 1986) has, therefore, persuasively suggested that a better candidate is Rift Valley fever (*Cecil,* 1818–19), which is spread by flies and can infect all the animals named. A similar epidemic affecting humans, sheep, cattle, goats, and camels was reported in Egypt in 1977 (Anon. 1978). See also EGYPT, PLAGUES IN.

b. The Plague of the Philistines. The plague that struck the Philistines at Ashdod (1 Samuel 5 and 6) has frequently been diagnosed as an outbreak of hemorrhoids. This is, however, an unacceptable diagnosis. In the first place, hemorrhoids do not occur in epidemics, and secondly, the association with mice (1 Sam 6:5) may suggest an epidemic of an infectious disease. Preuss (1923:175) argues powerfully that the text represents an account of bubonic plague. The word *ʿōpalim,* which has been translated as "emerods" (AV) or as "tumours" (JB), derives from the root *ʿpl,* "swell." If it is assumed that we are dealing with an objective account, then we have an epidemic of swellings associated with mice and a high mortality rate. The diagnosis of plague, however, requires the presence of rats, since it is the latter that carry the fleas that spread the infection from the rat to man (see *Cecil,* 1661–63). We must also, therefore, assume that the author either did not know the difference or did not distinguish between mice and rats. Another difficulty is that plague was not reliably reported in the ANE until much later than the OT period (McNiell 1976:79). Shrewsbury (1964:33–39) has suggested that the epidemic was one of a severe form of tropical dysentery.

c. Sennacherib. The cause of death of 185,000 soldiers of Sennacherib's army (2 Kgs 19:35 = Isa 37:36) is now impossible to identify with any degree of certainty. In his account, Herodotus (2.141) speaks of an associated plague of mice, reminiscent of the plague that struck the Philistines at Ashdod. It must have been a remarkably sudden epidemic in which those affected died very rapidly. The phrase *pĕgārîm mētîm,* (RSV "dead bodies"), which appears to be tautologous, may suggest (cf. verb *pāgar,* "be exhausted, faint") that, when found in the morning, the soldiers were not yet actually dead but *in extremis* and that the present participle *mētîm* suggests an ongoing process. A possible explanation, other than poisoning, might be very severe bacillary dysentery (see *Cecil,* 1646–48). This has, since time immemorial, been a scourge of armies in the field, where sanitation and hygiene leaves everything to be desired and where flies abound.

d. Hezekiah's Illness. The intriguing possibility has been suggested that the disease of Sennacherib's army spread to and affected Hezekiah (2 Kgs 20:1; Isa 38:1; 2 Chr 32:24) who had a "boil" *(šĕḥin).* This solitary lesion can be seen as a plague bubo, but such a diagnosis presents serious problems, as we have seen above. Since, from the account, it appears that Hezekiah was the only one affected, the simplest diagnosis would be that he had an abscess, which was treated with a poultice and was cured (2 Kgs 20:7).

4. Parasitic Disease. Parasitic diseases are common in hot climates and particularly where hygiene is poor and drinking water is polluted. It would be surprising, therefore, if there were no evidence of such conditions in the biblical literature. However, the clinical presentation of parasitic diseases is usually not sufficiently specific for them to be distinguished clearly from other conditions. Nevertheless, there is occasionally sufficient clinical and circumstantial evidence to suggest a diagnosis.

Herod (Acts 12:23) was eaten by worms and died. According to Josephus (*Ant* 19.8.2), this was associated with acute abdominal pain and death five days later. Preuss (1923:211) does not accept that death was due to infection with worms followed by bowel perforation. He considered that the symptoms are more those of poisoning.

Antiochus (2 Macc 9:5–10) was also seized by severe abdominal pain. Later he fell from a chariot and sustained severe injuries. He was then carried on a litter (i.e, he was unable to move about by himself) and "his flesh fell off," worms swarmed from his body, and he emitted an objectionable odor. The abdominal pain cannot be plausibly connected with later events, except that the severity of it may have led to the fall. The subsequent events can then be accounted for by severe injuries and festering wounds. The worms, according to Preuss (1923:210), were fragments of necrotic (dead) tissue.

a. The Fiery Serpents. The "fiery serpents" of Num 21:6–9 have long been thought to be the guinea worm *(Dranunculus medinensis).* (See *Cecil,* 1918–19.) Though the identification dates back to Thomas Bartholin (cited by Preuss 1923:225–26), the case for the diagnosis has most recently been cogently and persuasively argued by Lee (1973). The adult worm, which may be up to one meter in length, occurs under the skin of the arms or, more usually, the legs. It arises not from a "bite" as the text suggests. Rather, the worm larvae are carried within a microscopic water flea *(Cyclops);* when infected water fleas are consumed in drinking water, digestion releases the larvae, which then migrate from the digestive tract to the skin, where the worm matures. An ulcer then develops, through which the worm discharges its eggs into the environment. The deaths (Num 21:6) are due to septicemia resulting from secondary infection of the skin ulcers. (On septic shock, see *Cecil,* 1538ff.)

b. The Abandonment of Jericho. Briefly, the story of the fall of Jericho begins with the discovery by the two Israelite spies that the inhabitants expected to be defeated by the advancing Israelite army (Josh 2:9–11). After the city had been captured, Joshua pronounced a curse (Josh 6:26) that anyone who would rebuild the city would do so at the cost of the life of his youngest son. Much later, in the days of Ahab, Hiel of Bethel lost his firstborn son when he attempted a rebuilding of the city (1 Kgs 16:34). Later again, during another attempt to recolonize the area, Elisha was asked to purify the well because the "water is bad" (2 Kgs 2:19), and this was done by adding salt (2 Kgs 2:20–22).

Archaeological evidence has shown that Jericho in the Bronze Ages was built of mud bricks, and that these were made with local water. Examination of the bricks has shown that these contained the intermediate host *(Bulinus truncatus)* of *Schistosoma haematobium,* the cause of genitourinary schistosomiasis. Hulse (1971) has argued, therefore, that schistosomiasis is a strong candidate for explaining certain ecological aspects of the history of the biblical city of Jericho. (On schistosomiasis, see *Cecil,* 1895ff., esp. 1898.)

C. Skin and Hair

Because abnormalities of the skin and hair are easily visible, they have a profound effect not only on the patient but also on the observer. This may be the reason why such conditions are frequently referred to and described in some detail in the OT. However, even in modern medicine, a scientific understanding, as opposed to a descriptive understanding, of the diseases of the skin is only comparatively recent. It is hardly surprising, therefore, that the biblical descriptions of skin diseases are often problematic in the extreme. As we shall see (C.1 below), in the classical case of the biblical "leprosy," the problem arose from a mistaken translation. Elsewhere, it is necessary to determine the meaning of words in the text in relation to our contemporary knowledge of diseases of the skin.

The term *ṣāraʿat* (Lev 13:2) has long been translated as "leprosy" as if it were a generic term. Apart from the fact, discussed in detail below, that it does not represent leprosy as now known, Sawyer (1976) has argued cogently that *ṣāraʿat* is not a general term but rather a specific term describing a particular kind of skin lesion.

Several specific terms are used in connection with the delineation of *ṣāraʿat* in Leviticus 13 and 14. Thus *śĕʾēt* (Lev 13:2) derived from the verb *nāśa,* "lift," suggests a raised lesion or a swelling. Contrasted with this in the same verse is *śapaḥat,* "eruption" or "scab." Though the meaning of the root *śpḥ* is dubious, the use of derivatives of *śapiaḥ* (derived from the same or a similar root) may indicate a connection with the idea of "outgrowth" or "outpouring" (e.g. Lev 25:5; 25:11; Job 14:19) and may suggest that the lesion intended by this term is one in which there is something emerging or separating from the skin, such as a scab or weeping discharge. Another term used to describe the appearance of lesions (Lev 13:2) is *baheret* from *bhr,* "bright, shine." This may indicate a shiny lesion, perhaps where the skin is under tension, or an inflamed lesion. Finally, *neteq* (Lev 13:32) from the verb *nātaq,* "pull away," suggests a scaly lesion or eruption from which scales fall or can be pulled off.

1. The Biblical "Leprosy." Leprosy (Hansen's disease) is a chronic, slowly progressive, bacterial infectious disease due to *Mycobacterim leprae* (see *Cecil,* 1696ff.). It affects not only the skin but also other tissues but that may not be apparent to the uninformed observer. The biblical "leprosy" has been considered in detail by Hulse (1975) in a paper that must now be considered definitive; a useful

discussion of the subject may also be found in Browne (1986). See also LEPROSY. The following summary leans very heavily on the work of Hulse (1975), which must be consulted for the details.

There is evidence neither from the available texts nor from paleopathology that leprosy was prevalent in the biblical world. The use, until recently, of "leprosy" to translate *ṣāraʿat* (Lev 14:2, etc.) follows from the use of Gk *lepra* in the NT and LXX. In the *Corpus Hippocraticum* the word *lepra* means an itchy, powdery or scaly thickening of the skin which probably represents psoriasis or certain fungal infections. There is, however, literary evidence that leprosy was prevalent in India ca. 600 B.C. and that it reached the Greco-Roman world much later and was called Gk *elephas* or *elephantiasis.* The first author to use *lepra* for true leprosy was John of Damascus (A.D. 777–857), who described lepromatous leprosy. This usage was adopted by some later Arabic writers and then by medieval European writers, who were thus responsible for the current name of the disease.

There are, of course, other good reasons for not regarding the biblical *ṣāraʿat* as leprosy. This biblical "disease" was seen in humans (Lev 14:2), buildings (Lev 14:34), and clothing (Lev 14:55), and could apparently progress quite quickly (Lev 13:5–8). None of this would apply to true leprosy. However, though *ṣāraʿat* could be long-lasting (e.g., in King Uzziah, 2 Kgs 15:5–7; 2 Chr 26:19–21), it was regarded as self-limiting or curable (Lev 14:3; 2 Kgs 5:1–27). It is also important to note that *ṣāraʿat* was not regarded as contagious in the biblical texts: it merely defiled ritually.

Hulse (1975) shows persuasively that *ṣāraʿat* was a long-standing, patchy skin condition associated with peeling or flakiness (desquamation) with underlying redness of the skin. Acute conditions which improved within seven days were not regarded as *ṣāraʿat.* We are, therefore, left with chronic, patchy, and scaly conditions such as psoriasis, fungal infections, seborrheic dermatitis, etc., as the sort of conditions of which the Bible speaks. (On psoriasis and seborrheic dermatitis, see *Cecil,* 2320–21, 2326–27.)

2. Job's Skin Disease. A variety of suggestions has been made about the identity of the disease Heb *šĕḥin* (from the root *šḥn,* "be warm, hot") from which Job suffered and which had earlier appeared in epidemic form in Egypt (Exod 9:10). Similarly, the association with *ṣārebet,* "scab, sore" (from the verb *ṣārab,* "burn" [Lev 13:23]) may suggest that Job's disease was an acute inflammatory condition.

Job complains of a broken and loathsome skin (Job 7:5); multiple lesions (9:17) which were hot (30:30), especially at night (30:17); bone pain (2:5; 19:20); insomnia (7:3–4); loss of appetite (30:20); and wasting (33:21). Levin (1970) has suggested that this is a description of yaws, an endemic disease due to the spirochete bacterium *Treponema pertenue,* which is prevalent in various parts of the world. (On yaws, see *Cecil,* 1723.) Preuss (1923:390–92) emphasizes the severe itch (Job 2:8) and the "dust" -covered skin (scales?) (7:5) and sees Job's disease as *eczema universalis.* (On the various eczemas, see *Cecil,* 2318–22.) However, if according to our methodological principles, "Occam's razor" is applied to this subject, we are entitled to believe that the author was merely trying to convey that with Job's poverty came the skin diseases that so often, and so sadly, beset the poor, and which we now know are due to malnutrition and self-neglect. These widely differing interpretations of a detailed biographical description serve to underline the problems that beset the biblical diagnostician.

3. The White Hand of Moses. In Exod 4:6–7 Moses is told, "put your hand under your bosom" (under his cloak?), and when he removed it, it was "leprous," presumably white, as snow. Then, when he returned his hand under his cloak and withdrew it a second time, the skin was once again normal. It has been suggested by Davis (1982) that this was an example of Raynaud's phenomenon, a condition in which the small blood vessels of the extremities contract inappropriately in response to a fall in temperature, leaving fingers and toes bloodless and white (see *Cecil,* 374ff.). In the case of Moses, his hand would have been warm and pink while close to his body under his cloak. Then, when withdrawn from his cloak, the hand would cool and the blood vessels would go into spasm, leaving the hand cold and white. Then, when returned under his cloak, the hand would once again become warm and pink by the time it was withdrawn again. This is an appealing explanation for the miracle, but the evidence is tenuous.

4. Miriam's Leprosy. After Miriam and Aaron had spoken slanderously about Moses' Ethiopian wife, Miriam's skin became "white as snow." The suddenness of the change makes it unlikely that it was the

result of a structural change in the skin. Davis (1985) has suggested that the blanching was due to changes consequent upon rapid shallow breathing (hyperventilation) associated with the shock of the dramatic events of the appearance of the divinity at the entrance to the sanctuary. If this is thought to be farfetched, a simpler explanation for the extreme pallor might be simple fear, which is associated with the release of the hormone adrenalin and which causes very rapid contraction of the blood vessels of the skin and hence pallor. We are left with a need to explain the use of the word *ṣāraʿat* in connection with Miriam's skin changes.

5. Naaman's Leprosy. Naaman is described (2 Kgs 5:1) as suffering from the skin disease *ṣāraʿat.* He bathed in the Jordan seven times and was cured. Once again, this could not have been leprosy, and must have been a condition susceptible to rapid recovery. It is tempting to suggest that Naaman's rash was eczema or, perhaps, of allergic origin and that the change in lifestyle alluded to at the end of the account was accompanied by removal of the source of the allergy and that a "cure" followed. Interestingly, Gordis (1975) has analyzed this story as an example of a classical physician-patient relationship.

6. Baldness. Loss of hair (alopecia) is a common condition and not usually regarded as a disease, but in the OT it is often regarded as a curse (Isa 3:24; Ezek 7:18; Amos 8:10). Elisha was bald (2 Kgs 2:23). Complete baldness (total alopecia) and even the common male-type baldness disqualified priests from service in the sanctuary (Lev 13:40–41). On occasion, baldness may be part of a disease process in the skin, and such seems to be described in Lev 13:42.

D. Diseases of the Nervous System

Paralysis or palsy is frequently mentioned in the NT (Matt 8:5–8 with pain; 9:2–8; Mark 2:2–11; Luke 5:18–26). The man at the Pool of Bethesda (John 5:2–9) had been crippled with paralysis for 38 years, and Aeneas at Lydda (Acts 9:32–35) was healed after being bedridden for 8 years. The nature of the paralysis in these cases can only be guessed at, but it has been suggested that the cause was poliomyelitis. In that case, excluding miracles, reversal of the paralysis is impossible, particularly in the long-standing cases. The cures could, however, be rationally explained if the paralysis was of hysterical origin or if it was feigned—a condition not unknown among, for example, beggars in the East. (On poliomyelitis, see *Cecil,* 2198ff.)

1. Stroke. Stroke, which describes the suddenness of the event, is the name given to motor and/or sensory changes resulting from brain damage due either to bleeding from or blockage of blood vessels of the brain (cerebrovascular accident). Though this pathogenesis was not understood, there are clear descriptions of stroke in the OT and apocrypha. Thus, Nabal (1 Sam 25:36) became paralyzed after being drunk, and he died ten days later. It is told of Alcimus (1 Macc 9:55) that his "mouth slipped" (paralysis of the facial muscles)—he became paralyzed, could not speak, and later died in pain. Similarly, Philopater (*3 Macc. 2:22*) lay on the ground motionless, paralyzed, and unable to speak.

Depending on the particular part of the brain that is damaged in a cerebrovascular accident, specific clinical pictures may be observed. Occasionally it is possible to recognize these with reasonable certainty, indicating that the description has not been modified by legend or license. We may have an example in Ps 137:5–6: "If I forget thee, O Jerusalem, let my right hand forget her cunning; let my tongue cleave to the roof of my mouth …" Benton (1971) has pointed out that this description conforms to the specific syndrome of paralysis of the right side of the body (right hemiplegia) and loss of speech (motor aphasia). It is noteworthy that this particular combination of signs, which is due to damage to the left side of the brain, was not recognized as such by physicians until the middle of the 19th century.

2. Sunstroke. The son of the Shunammite (2 Kgs 4:18–20) complained of a headache and "died after a few hours." Since the child was resuscitated (2 Kgs 4:34), a reversible event must be assumed, and this may have been sunstroke, though this is said to be unusual in children.

Manasseh, the husband of Judith (Jdt 8:3), died in the days of the barley harvest. He had stood in the field supervising the workers and "heat came on his head" and he became ill and died. This is as clear a description of heatstroke as is needed for a definitive diagnosis (see *Cecil,* 2382ff.).

3. Epilepsy. Epilepsy (grand mal) is due to electrical disturbances in the brain and usually presents with major fits (convulsions). (See *Cecil,* 2217ff.) These are so striking that they are likely to be accurately

described by observers. In the ancient world epilepsy was regarded as *morbus sacer et divinus,* and sufferers were regarded as holy, divine messengers (perhaps because of the similarity of the fits to behavior during trances). The patient falls to the ground, foams at the mouth, and clenches (and perhaps grinds) his/her teeth. This is precisely the case in some NT accounts (Luke 9:39; Mark 9:17–18). Similarly, the description in Matt 17:15 is consistent with epilepsy.

a. King Saul and Balaam. In the OT the verb *nāpal,* "fall," is used in descriptions of epilepsy. Thus, in 1 Sam 19:23, King Saul removes his clothes "and he fell *(wayippōl)* naked, all that day and all that night." Epilepsy can occur as an isolated event, usually in the course of another disease, and then not recur. However, Balaam describes himself (Num 24:4) as "fallen *(nōpel)* with open eyes." To describe himself in this way may suggest that he had fits over a long period.

b. Paul. The apostle Paul must have had a chronic illness (Gal 4:13); he complains (2 Cor 12:7) that he has a "thorn in his flesh" to prevent him from becoming too "elated," and he expresses pleasure (Gal 4:14) that he was not scorned because of his poor health. On his way to Damascus (Acts 9:3) he saw a bright light, fell to the ground, and heard a voice. He was then blind for three days and neither ate nor drank. Though the description is not diagnostic, it is consistent with an attack of epilepsy. The light is consistent with the aura that some epileptics experience just before an attack, and the visual disturbance can be accounted for by some disturbance of the circulation of the blood in the brain.

E. Diseases of the Eyes and Ears

Of all the diseases of the organs of special sense, diseases of the eyes and particularly blindness have a special place in the biblical literature. To be overtaken by blindness is the ultimate disaster because with it comes total dependence on others; thus, blindness is from earliest times associated with special injunctions of care (Lev 19:14), though the deaf are also given protection.

Among the disabilities that disqualify priests from service in the sanctuary (Lev 21:20) are *gibēn,* which is usually translated as "crook- or hump-backed," *daq* ("dwarf"), and *tēbalul* ("blemished in the eyes"). In the rabbinic tradition each of these terms is taken to be an abnormality of the eyes. Thus, according to the Mishnah (*Bek.* 7:2), *gibēn* is either absence of the eyebrows or presence of only one eyebrow, although Hanina ben Antigonos *(loc. cit.)* insisted that it meant duplication of the backbone (an interpretation more in keeping with the conventional translation). The Mishnah (*Bek.* 6:2) regards *daq* as a membrane covering the pupil of the eye, probably cataract, and *tēbalul* (cf. verb *bālal,* "mingle, confuse") is regarded as an abnormality in which the black of the pupil extends into the iris (or *vice versa*).

In the case of the blind man in Mark 8:22–26, Jesus spat in his eye and laid hands on him. When he could see again, the man reported that, "I see men; they look like trees but they walk about." Jesus then laid hands on him again and he began to see things clearly. After removal or displacement of the lens, the retinal image is markedly increased so that people will look much taller (Fraser 1973). In very advanced cataracts the lens may become displaced out of the line of sight, either spontaneously or by a very minor blow or disturbance. This suggests that Jesus may have cured the man's cataract by rubbing the eyes and so displacing the lenses. With the return of sight, the man will have been surprised that people should seem so tall. The final recovery will then simply have been due to adaptation of the sight to its new characteristics.

It is clear that, then as now, blindness is common in the Middle East. Much of this will have been due to trachoma, a chlamydial infection of the conjunctiva and cornea, transmitted by poor hygiene and flies, which commonly leads to blindness and lid deformities (see *Cecil,* 1734ff.). It remains the commonest cause of blindness in the world, particularly in the Middle East and Africa. It is interesting, therefore, that the Babylonian Talmud warns of the danger of flies and their association with eye disease (*Ketub.* 77b).

Congenital deafness or loss of hearing early in life is associated with speech defect because the learning of speech is heavily dependent on mimicry. In the NT deafness and mutism are clearly related (Matt 11:5; Acts 8:32–33). The case in Mark 7:32 was a man with deafness and an associated speech defect short of mutism, possibly suggestive of incomplete but severe loss of hearing early in life.

F. Psychological Diseases

References to mental diseases in the biblical literature, as elsewhere in the ancient world, are likely to be more affected by notions of the causes of these conditions than is the case for physical diseases. Thus, the *šigāʿōn,* madness (Deut 28:28), derives from the root *šgʿ,* which in the Arabic and Assyrian cognates suggests various noises and may suggest that sufferers made strange (animal?) noises. Mental disturbance was associated with evil spirits (e.g., 1 Sam 16:14), and *šigāʿōn* was the punishment for recalcitrance (Deut 28:28, 34; Zech 12:14).

In the NT the mentally disturbed are usually men, but women, including Mary Magdalene, were also occasionally affected (Luke 8:2–3). The picture of mental disturbance in the Gospels consists mainly of going about naked, self-mutilation, living in tombs (Luke 8:2; Mark 5:2), and violent behavior (Matt 8:28). Some cases are dumb (Matt 9:32) and blind (Matt 12:22). From these descriptions, which include possession by devils, a diagnosis is impossible, though they sound psychotic, and the associated references to exorcism are uninformative. It is significant that, in spite of references to Jewish exorcists (Acts 19:13), nothing of this kind is known in the Talmudic literature (Sussman 1967:217). It is also striking that possession is unknown in the OT.

1. Saul. King Saul suffered from paranoia with homicidal and suicidal tendencies accompanied by severe depression (1 Sam 16:14–16) and other psychotic components (1 Sam 19:24). The successful use of music to soothe Saul (1 Sam 16:23) is interesting but does not help in arriving at a diagnosis, unless it points to a reactive depression. In that case, the homicidal tendencies can be ascribed to the prevailing political circumstances, but the psychotic elements are then more difficult to accommodate, except as the psychosis that may be part of severe depression. Preuss (1923:356) argues in detail for a diagnosis of epilepsy in Saul (see below).

2. Nebuchadnezzar. Daniel's prediction and Nebuchadnezzar's illness (Dan 4:32–33) are suggestive of a psychosis with subsequent recovery. The self-neglect may suggest an associated deep depression.

G. Gynecology and Obstetrics

Normal menstruation is referred to in the OT (Lev 18:19) in relation to ritual cleanliness, but there is no reference to abnormalities as in the NT where the women with hemorrhage (Matt 9:20; Mark 5:25; Luke 8:43) was almost certainly suffering from menorrhagia (excessive menstrual flow). In tribal, nomadic, and agricultural communities particularly, the birth of children was regarded as one of the greatest of blessings (Gen 1:27; Ps 128:3). Conversely, infertility was regarded as a curse (Gen 16:2). The pain of childbirth was used as a paradigm of severe pain (Isa 42:14; Hos 13:13), and maternal death in labor must have been well known (Gen 35:16 see below).

1. The Birth of Benjamin. Briefly, the text (Gen 35:16–19) tells us that Rachel was in labor, that the gender of Benjamin was apparent before labor was completed, and that Rachel died in labor. It is clear that, under the conditions described, for the gender of the infant to be apparent we are dealing with a breech delivery (Blondheim and Blondheim 1982). The cause of Rachel's death may then have been due to any of the complications of breech delivery and prolonged labor.

2. Twins. Both Rebecca (Gen 25:24) and Tamar (Gen 38:27) were delivered of twins. In the case of Tamar there is evidence of a complicated delivery (Gen 38:28–30) and Preuss (1923:501) has discussed in detail the alternative obstetric diagnoses that might account for the details reported in the text. Nevertheless, it is difficult to avoid the suspicion that the account was devised to substantiate a claim to the rights of the firstborn for Zerah.

H. Deformity and Injury

1. Giants. It has been traditional to identify as giants the sons of Anak (Num 13:22 and 13:28) encountered by the Israelite spies in the region of Hebron (cf. Josh 15:14; Judg 1:20). The Hebrew word *ʿanaq* as used in Prov 1:9 suggests a necklace. Taub (1965), in an exegetical-type interpretation, takes the view that there is no paleopathological support for the existence of unusually tall individuals in the region, and that some other diagnosis must be found for the description of these individuals as *ʿanaqîm.* He suggested that because they had grossly enlarged necks due to endemic goiter, the "necklace" description was used. This exegetically skillful diagnosis is not persuasive, partly because there is no evidence that this condition was prevalent in the Middle East. Wiseman (1986), however, accepts that giant skeletons

with a height of 3.2 meters (over 9 feet) have been found in the Middle East. Though current clinical experience suggests that this is impossibly tall, such a height is consistent with the account in 1 Sam 17:4 of Goliath's height of "six cubits and one handbreadth" which approximates to 2.8 meters (over 8 feet tall). Interestingly, the pituitary abnormalities associated with giantism and acromegaly are, in fact, associated with goiter. It may be that our texts give a clue to accurate observation. (On goiter, see *Cecil,* 1338–39; on acromegaly, see *Cecil,* 1300ff.).

2. King Og. Taub (1965 has also suggested that Og (Deut 3:11), whose bed (sarcophagus?) was unnaturally large, was a sufferer from acromegaly. Straightforward giantism is probably a better diagnosis, as it is in Lev 21:18. Goliath was a giant (1 Sam 17:4) but it must be regarded as unlikely that he had true acromegaly. The giants referred to in 2 Sam 21:18–20 were probably not acromegalic either, but one of them was the brother of Goliath and the other may also have had an inherited abnormality, as is suggested by the fact that his son had additional fingers and toes.

3. Dwarfs. The stunted type also mentioned in Lev 21:18 is likely to have suffered from dwarfism as a result of pituitary deficiency in childhood.

4. Deformities. Deformities, both congenital and acquired, have been the subject of comment throughout history. In the OT they are listed in relation to disqualification from priestly service (Lev 21:18–20) and they include lameness (*pāseaḥ,* "limper," from *pāsaḥ,* "to limp," Neh 3:6; 1 Chr 4:12; Ezra 2:49 = Neh 7:51), limb damage, dwarfism, deformity of the back, and abnormality of the testicle (? varicocele *mārōaḥ,* from *rāwaḥ,* "enlarged"). Lameness can also be associated with paralysis (Prov 26:7). Mephibosheth became lame after being dropped by his nurse (2 Sam 4:4) and the likely cause was damage to the spinal cord, perhaps from fracture or dislocation of the backbone. In the case of Jacob (Gen 32:26), the result of his wrestling was damage to an intervertebral disk with a resulting deformity (*ṣōlēʿa,* "limp" from the verb *ṣālʿa* "curved") and limp (Gen 32:32).

The bent woman in Luke (13:10–17) may have had a developmental abnormality of the spine such as kyphosis or scoliosis. (See *Cecil,* 2257–58.) Alternatively, if she was elderly, she may have had a collapsed spine due to postmenopausal osteoporosis, in which bones become brittle as the result of calcium loss. Similarly, it is now impossible to diagnose with any degree of certainty what was wrong with the man who had a "withered" (Gk *xeros*) hand (Matt 12:10–13; Mark 3:1–5; Luke 6:6–10). The description would fit anything from a congenital abnormality through a spastic limb to muscle atrophy following poliomyelitis.

5. Injury. Injury usually results from a blow, sometimes from or with an object, or a fall, hence the use of *makah* ("blow" or "wound," from the verb *nakah,* "smite"). The word was also used for intentional injury leading to death (e.g., Exod 21:12). Wounds were generally regarded as severe (Jer 10:19; Nah 3:19) or incurable. Another term is *peṣʿa,* "bruise, wound," from the verb *pāṣʿa,* "bruise." In no case, however, are there details of the site or nature of the wound. Occasionally, a blow will lead to bone fracture, and in this case the verb *šābar,* "break," is used in conjunction with the limb (e.g., Ezek 30:21). The splinting of fractures is known from Egyptian sources and it may be that the practice is hinted at in the OT (Ezek 30:21).

I. Old Age

It is impossible to know at this distance in time what the life expectancy was in the biblical period, but it must have been much less than the proverbial "three score years and ten." Nevertheless, as would be expected, some individuals did reach a very advanced age and passing references to such individuals are common (e.g. Gen 24:1; 1 Kgs 1:1). See also OLD AGE. Old age brings with it a variety of problems of degenerative disease. Thus, it is reported of King Asa (1 Kgs 15:23–24) that he developed a disease of his feet in his old age and that he died two years later (2 Chr 16:12). In the Babylonian Talmud (*Sanh.* 48b; *Soṭa* 10a) his condition is identified as Gk *podagra* (*pod* "foot" + *agra* "seizure"), a term used to describe gout in the feet, but the grounds for the talmudic diagnosis are not given (Rosner 1983). However, it is unlikely that gout alone, even in an old man, can cause death over as short a period as two years. It is much more likely that the cause was degeneration of the blood vessels of the limbs (peripheral vascular disease), which is common in old persons. Degeneration of the blood vessels can in time lead to gangrene,

particularly in diabetics, which in Asa's days would rapidly have been fatal (see DeVries and Weinberger 1975).

The well-known allegory in Eccl 12:3–6 has often been taken as a representation of old age. Thus, figuratively, v 3 refers to limb tremor, bowed legs, and tooth loss; v 4 lists failing sight, the fallen-in edentulous mouth, insomnia, and voice changes, while v 5 speaks of breathlessness associated with heights. The "wheel broken at the cistern" may refer to the difficult micturition associated with enlargement of the prostrate gland, and the "pitcher broken at the fountain" may be heart failure.

A detailed biographical account of old age is that of Barzillai in 2 Sam 19:33–38. It describes the loss of the special senses of taste and hearing accompanied by thoughts of eternity.

SICYON (PLACE) [Gk *Sikyōn* (Σικυων)]. City in Achaia, on the S shore of the Gulf of Corinth, about 25 km W of Corinth, between the mouths of the Helisson and Asopus rivers (38°01´ N; 22°45´ E).

A major city of archaic and classical Greece, it flourished under the tyranny of the Orthagorids in the 7th and 6th centuries B.C. and was the home of important painters and sculptors in the 4th century B.C. Captured by Demetrius Poliorcetes in 303 B.C., the city was moved from its earlier location near the sea to an elevated site about 3 km inland. In the 3d century B.C., under Aratus, Sicyon played a leading role in the Achaian League in its military operations against the Aetolians, the Spartans, and Antigonus. Archaeological excavations at the site of the Hellenistic city have revealed an orthogonal street plan, several sanctuaries, a theater, an agora with gymnasium, fountain houses, bouleuterion, and stoa, as well as a Roman bath building and two Christian churches, one in the agora and one near the port. Comments by Pausanias (2.7.2–2.11.2) indicate that around A.D. 160 the city was already in decline, but still boasted a number of interesting buildings.

Sicyon is mentioned (1 Macc 15:23) as one of the cities to receive a letter from Lucius Caecilius Metellus, Roman consul in 142 B.C., instructing them to send political fugitives back to Judea. Sicyon is the only mainland city mentioned, except for Sparta: this is appropriate, for Sicyon was at the time one of the most important cities in Achaia. The Romans had appointed the Sicyonians arbiters of a dispute in 155 B.C. (between Athens and Oropus), and after the Romans destroyed Corinth in 146 B.C., Sicyon took over much of Corinthian territory and prerogatives, including the presidency of the Isthmian games (Pausanias 2.2.2; Strabo 8.381 = 8.6.23, 25).

SIDDIM, VALLEY OF (PLACE) [Heb *ʿēmeq haśśiddîm* (עֵמֶק הַשִּׂדִּים)]. This place name occurs only in Genesis 14. According to vv 3 and 8, the kings of Sodom, Gomorrah, Admah, Zeboiim, and Bela (Zoar) joined forces in the Valley of Siddim to give battle to the invading army of Chedorlaomer and his allies, but were defeated (vv 10–11). In v 3, the valley is identified with the Salt Sea (Dead Sea). According to v 10, the valley was full of bitumen pits, into which the kings of Sodom and Gomorrah fell when they fled from the battlefield.

Sõiddîm is a hapax in the OT, and both ancient and modern interpreters have had difficulties in explaining it. LXX rendered it "gorge of salt," Josephus *Ant* 1.9 §174, "valley called 'Bitumen Pits' " (both from the context), Vg, for reasons unknown, "wooded valley," Syr "valley of the Sodomites," *Tg. Onq. mêšar ḥaqlayā* "plain of fields," *Tg. Neof. myšr prdsy*› "plain of gardens," *Tg. Ps.-J.* same, with the note "this is the place that produces streams of water and pours them into the Sea of Salt" (confusion with the Valley of Shaveh, which is also called *myšr prdsy*› in *Tg. Neof.*). However, 1QapGen was on the right track in its translation ‹*mq*› *dy sdy*› "valley of furrows" (Syriac *sadā* or *sedā*), and so was the relatively early *Gen. Rab.* which explained that the place was so called "because it was made up of *śiddîm,* (that is) *telāmîm* (furrows)." In our time, KB, 915, 916 derived *śiddîm* from the root *śādad,* (usually translated "harrow" but more probably meaning "draw furrows," as in LXX and by comparison with Akk *šadādu*), explained it as "border furrows," and connected it with Ug *šd,* Akk *šiddu,* and the aforementioned Syriac *sedā.* This etymology is better founded than such interpretations of the place name as "Valley of the Spirits" (reading *šēdîm* for *śiddîm*), Winckler 1900:33 and n. 1.

Why did the author of Genesis 14 give such a name to the place of defeat of the kings of Sodom and Gomorrah? The reason lies in his acquaintance with, and reworking of, the "Chedorlaomer texts." See

CHEDORLAOMER. The Babylonians considered certain constellations as celestial prototypes of earthly lands, rivers, cities, and temples. The celestial counterpart of Babylon was the constellation Pegasus, which the Babylonians called \lang513i Ikû (a unit of area equal to 59.4 m^2, ca. 0.9 acre). One of the "Chedorlaomer texts" (Sp. 158+II,962:obv.15), describing the invasion of Babylon by Kudur-Naḫḫundu (the prototype of Chedorlaomer), says that "against *Ikû* … he advanced." Here the terrestrial Babylon is designated by the name of its celestial counterpart, a stylistic device also used elsewhere in these texts (cf. Astour 1966:104). In land transactions at Ugarit, the highest unit of area is *ikû* in Akk texts and *šd (šd* II, **šiddu*) in Ug texts; hence Ug **šiddu* was identical with Akk *ikû* (Dietrich and Loretz 1969:61–62 must be corrected accordingly). In later times, Syriac *sedā* "furrow," as a unit of length, was equated with one third of a stade; applied to the Olympic-Attic stade, this would amount to 59.4 m, thus a *sedā* square would be exactly equal to the Babylonian *ikû.* The author of Genesis 14, using the West Semitic equivalent of *ikû,* transferred the astral name of Babylon to the region of Sodom and Gomorrah, just as he did with the invasions of the four kings in the same "Chedorlaomer texts."

Gen 14:3 is the only place in the Bible to state that the Dead Sea was once a valley, with the implication that Sodom and Gomorrah were submerged after the events described in the chapter. Since the Dead Sea is part of the great Syro-Palestinian rift that formed millions of years before the advent of man, many authors proposed to limit the assumed catastrophe to the southern, shallow bay of the Dead Sea, S of the al-Lisān peninsula (Harland 1942, 1943; Speiser *Genesis* AB, 101). However, all the other, quite numerous, passages referring to the destruction of SODOM AND GOMORRAH know nothing about the submersion of those cities and their territories. They only speak about their "overthrow," and the more explicit passages (Gen 19:24–25; Deut 29:23; Zeph 2:9) make it clear that the area in question was burned out and changed forever into a waste—a genuine etiological story explaining the sterility of the shores of the Dead Sea. The idea that the Valley of Siddim was overflown with water is an innovation of the author of Genesis 14. Having moved the place of action of the "Chedorlaomer texts" from Babylon to the area of Sodom and Gomorrah, he also transferred there the persistent motif of "flooding Babylon with water" in those texts which was inspired by the actual method of destroying Babylon by Sennacherib and which was also evoked by Jewish prophets in Babylonia of the exilic period (cf. Isa 14:23 "And I will make it … pools of water," and Jer 51:42 "The sea has come up on Babylon, she is covered with its tumultuous waves").

MICHAEL C. ASTOUR

SIDE (PLACE) [Gk *Sidē* (Σιδη)]. A town on the S coast of Asia Minor (36°45′ N; 31°23′ E; now known as Selimiye) which, along with several other cities, received communication from Lucius, consul of the Romans (perhaps Lucius Calpurnius Piso, consul 140–139 B.C.; Johnson 260, rev. ed. 1973), affirming the alliance of the Romans with the Maccabees (1 Macc 15:15–24).

The town was located in a large bay called the Sea of Pamphylia and was about halfway between Syria and the W end of Turkey, and derived a significant part of its wealth and reputation from seafaring. During the conflict between Antiochus the Great and the Rhodians, ships from Side and Aradus formed one wing of Antiochus' fleet. During the early 1st century B.C., it was one of the chief ports of Cilician pirates, but their dominance was suppressed by Pompey in 67 B.C.

The harbor complex of Side was well known (McComiskey 1975:546), and consisted of a triangular promontory with double harbors protected by an artificial mole or sea wall. The entrance into the harbor was only 10 m wide. The sea wall can still be traced, but is now filled with sand. Keeping the harbor

cleared of sand demanded constant attention and led to a proverb, "a harbor of Side," which referred to a job that needed to be done over and over.

Side was founded in 1405 B.C. and settled by colonists from Aeolian Cyme in the 7th–6th centuries and issued its own coins in the 5th century B.C. The city was subject to the political vicissitudes of the area and came under the control of the Lydians, Persians, Greeks (and Seleucids), and became a Roman province in 74 A.D.

During the period of the Maccabees, Pamphylia and Side were part of the Seleucid Empire. One of the Seleucid kings, Antiochus VII Euergetes (138–129 B.C.), had been raised in Side and was sometimes popularly called "Sidetes" (Goldstein *1 Maccabees* AB, 512). Goldstein (*1 Maccabees* AB, 499) calls Side "an independent city" of Pamphylia, while Banks (*ISBE* [1939 ed] 4:2785) describes it as a metropolis. The fact that the letter of the Roman consul was sent to Side (1 Macc 15:23) has caused some to infer the presence of Jews in the city, but the text provides no indication of this. There was, however, an extensive Jewish population in Side in the Byzantine period.

The site of Side is marked by the very extensive ruins, which were excavated in 1947–1966 (see Bean 1976 for bibliography). Greco–Roman type city walls protected the N side of the city (2d century B.C. and later). In this wall was a gate which was protected with round towers. Portico-covered streets led from the N main city gate to the harbors. Near the harbors were three theatres, the largest of which dates from the 2d century A.D. A gymnasium (2d century A.D.) has also been excavated. Several deities were honored with temples—Dionysius (1st century A.D.), Tyche, Athena, Apollo (all 2d century A.D.)—and monuments were erected to honor the Roman emperors. A 5th–6th-century basilica and martyrium may be the remains of a Christian church.

The Romans built a 20-mile-long aqueduct into the city and a nymphaeum outside the N gate in the 2d century A.D. and a bath in the 5th century. Outside the city gate to the E was a street lined with sarcophagi and tombs, now mostly destroyed.

The city flourished during the first centuries of Roman rule, but declined under attacks by barbarians from Isauria in the 3d and 4th centuries. The Moslem invasions in the 7th century brought final decline.

A still-undeciphered script and dialect has been found in three inscriptions and continued to appear on coins down to 300 B.C. The people of Side had a poor reputation and Stratonicus called them the most rascally of mankind, though they submitted to Alexander without a fight in 333 B.C. (Bean 1970:986; 1976:835–36).

SIDON (PERSON) [Heb *ṣîdōn* (צִידֹן)]. The firstborn son of Canaan, according to the genealogical scheme of the Table of Nations (Gen 10:15). Sidon is used as a place name in the same context (Gen 10:19; both verses are attributed to J), implying that the name in v 15 is an eponym. Sidon is likewise listed as the firstborn of Canaan in the opening chapter of the Chronicler's work (1 Chr 1:13), which used Genesis 10 as a source. See CHRONICLES, BOOK OF, 1–2.

PHILIP C. SCHMITZ

SIDON (PLACE) [Heb *ṣîdōn* (צִידֹן)]. SIDONIAN. A city of ancient Phoenicia. The Greek geographer Strabo mentions Sidon as one of the most ancient of the Phoenician cities (16.2.22). Situated on the E Mediterranean coast about 25 miles N of Tyre, Sidon (modern Saïda, 33°32′ N; 35°22′ E) was prominent from a very early period. The city is paired with Tyre in the Epic of Kirta from Ugarit (*KTU* 1.14.IV.35, 39 *[ṣdynm]*), a composition that is probably centuries older than the extant copy dated about 1345 B.C.E.

A Hittite incantation from early in the 14th century B.C.E. mentions Sidon ahead of Tyre in a list of cities and regions (*ANET,* 352). In the Amarna correspondence, Sidon appears repeatedly as a leader of the anti-Egyptian coalition of city-states (on the chronology, see Katzenstein 1973:29–45).

No Phoenician city is mentioned in the campaign lists of the 18th–Dyn. Egyptian pharaoh Thutmosis III, but Thutmosis IV apparently visited Sidon (EA 85.70; Katzenstein 1973:26). A satirical Egyptian letter of the 19th Dyn., Papyrus Anastasi I, mentions Sidon in a N-S itinerary that includes Beirut, Zarephath, and Tyre (20.8; *ANET* 477). During the 21st Dyn., the report of Wenamun (ca. 1090–1080 B.C.E.) indicates that Sidon was a member of a trading corporation employing 50 coastal vessels in commerce between Egypt and Phoenicia (*ANET,* 27; *AEL* 2:226).

The invasion of the Levantine coast by the SEA PEOPLES may have marked the rise of Sidon. Justin's epitome of Pompeius Trogus, probably dependent on the Greek historian Timaeus, relates that the Sidonians, some years after their defeat by the king of the Ascalonians, embarked in ships and founded the city of Tyre shortly before the fall of Troy (Justin 18.3.5). While this narrative must refer to a refoundation (Tyre being of extreme antiquity), it perhaps preserves a memory of the disruption following after Sea Peoples swept down the coast of Phoenicia. Ugarit to the N was destroyed; Tyre was apparently destroyed or severely reduced (the account by Tiglath-pileser I of his campaign to the Lebanon [ca. 1100 B.C.E.] mentions Sidon but not Tyre [*ANET,* 275]), while Sidon managed to recover more rapidly from the invasion. (On the date of this refoundation, see TYRE).

The role of Sidon as the mother city of Tyre was recalled on Seleucid coins of Sidon bearing the legend *ʾm ṣr* "mother of Tyre" (Hill 1910:155–56). Other colonies associated with Sidon are Kition (in Cyprus), Hippo, and Carthage (in Cyprus?).

The names "Sidon" and "Sidonian" came to stand for Phoenicia generally. The "Ethbaal king of the Sidonians" mentioned in 1 Kgs 16:31 was, according to the citation of Menander of Ephesus provided by Josephus (*Ant* 8 §324), the ruler of Tyre. The Homeric epics contain ample reference to Sidon and Sidonians (17x total: *Il.* 6.290–91; 23.743–44; *Od.* 4.83, 84, 618; 13.272, 285; 14.288, 291; 15.118, 415, 417, 419, 425, 473), but no reference to Tyre or the Tyrians. (The dates of the *Iliad* and *Odyssey* are controversial.) The same metonymy is attested in contemporary inscriptions. An Akkadian inscription of Tiglath-pileser III (747–727 B.C.E.) mentions Hiram king of Tyre (not the biblical figure); this same Hiram is named in a Phoenician inscription from Cyprus (*CIS* I 5 = *KAI* 31), where his name and title are *ḥrm mlk ṣdnm* "Hiram king of the Sidonians."

During his campaign in the West in 701 B.C.E., Sennacherib deposed Luli king of Sidon, who had been part of an anti-Assyrian coalition (*ANET,* 288). Josephus, citing Menander (*Ant* 9.14.2 §283–85), gives the king's name as Elulaios, king of Tyre (it seems unlikely that one sovereign jointly held both thrones, as accepted by, e.g., Elayi 1978:28). Sennacherib replaced Luli with Ittobaal, whose successor Abdimilkutti again revolted against Assyria. Esarhaddon suppressed the revolt in 677 B.C.E. The city was destroyed to its foundations, and Abdimilkutti beheaded. A new city of Assyrian foundation, Kar-Asarhaddon ("Esarhaddon's Quay"), became the center of the middle zone of Assyrian administration of the area. (The succeeding decades are discussed by Elayi 1983.)

The literary difficulties of Isaiah 23 are many, but it is reasonably clear that the oracle refers to events during these years from 701 to 677 B.C.E., at least in vv 1–4 and 12. Its tone was provoked by the success of the Phoenician cities, whether Sidon or Tyre, as centers of trade (Isa 23:2, 4, 12; on Phoenician trade, see Frankenstein 1979; on its economic character, Snodgrass 1983).

Sidon was never part of the territory of ancient Israel (Judg 1:1). The city served as a fixed point with respect to which the territory of Canaan could be reckoned (Gen 10:19; on this text, see Simons 1948). Distinctive Sidonian customs (Judg 18:7; O'Connor *NJBC,* p. 135) and deities (Judg 10:6; 1 Kgs 11:5; 2 Kgs 23:13) were recognized. See PHOENICIAN RELIGION. The books of the major prophets include denunciations of Sidon in their respective oracles against foreign nations.

The precise status of Sidon after its submission to Nebuchadnezzar is unknown. Its conquest or submission is indicated by mention of the king of Sidon together with kings of Tyre and Gaza (*ANET,* 308). A Sidonian exile bore a Babylonian name at Erech in 580/79 B.C.E. (Zadok 1978:60), perhaps

indicating that he was already a second-generation resident. (Tyre submitted to the Neo-Babylonian Empire in 573/72 B.C.E.)

Jeremiah calls the "kings of Sidon" together with other monarchs (Jer 25:22) to drink from the "cup of the wine of wrath," of Babylonian oppression. (Jeremiah 27:3 indicates that the plural "kings" in 24:22 is rhetorical; there was only one king of Sidon at the time.) Ezekiel is aware of the maritime supremacy of Sidon (Ezek 27:8) and predicts judgment on the city (28:21–22).

In the Persian period, Sidon remained an important administrative center of the empire. Sidonian fleets were crucial in the Persian strategy against Greece (see Kelly 1987). The funerary inscriptions of kings of Sidon from the Persian period were discovered early in the 19th century (see *KAI* 13–16), and together with other epigraphic and numismatic evidence permit nearly complete reconstruction of the royal succession in this era (on the problems involved, see Henige 1986; a comprehensive historical statement is Elayi 1989).

In the postexilic prophets (Joel 4:4—Eng 3:4; Zech 9:2), and in the Apocrypha (2 Esdr 1:11) and NT (e.g., Matt 11:21; Acts 12:20), the merism "Tyre and Sidon" serves as a geographical designation of the southern Phoenician territory (note Jdt 2:28: "Sidon and Tyre").

The archaeological investigation and excavation of Sidon and its environs has been intermittent (a useful list of excavations and publications is to be found in *ISBE* 4:501). In the latter half of this century urban growth and warfare have prevented archaeological progress.

SIGNS/SEMEIA SOURCE. The hypothetical document comprising accounts of Jesus' miracles and held by a number of scholars to underlie the narratives in chapters 1–12 of the Fourth Gospel ("John"). Quite unlike the Synoptics, this gospel characteristically refers to the miracles performed by Jesus as "signs" (in Greek, *sēmeia*):that is, demonstrations of his messiahship, even his divinity. The evangelist would have derived this use from a distinctive narrative source (= *Quelle* in German; hence the conventional siglum: SQ [for *Sēmeia* 1031 Quelle]).

C. History and Variations of the Hypothesis
D. Major Objections

———

A. The Hypothesis and Its Advantages

This theory seeks to account for the many roadblocks facing the reader of the gospel's narratives. These so-called aporias (inconsistencies, sudden shifts, minor contradictions [lit., impasses]), extremely rare in the Synoptics, are due to the fact, the hypothesis holds, that this gospel's narratives—which in the first half of the gospel are comprised solely of miracle stories—were not written at one time by a single author, but in at least two major stages reflecting quite different times and circumstances. SQ, then, is the earlier written stage in the development of the present miracle stories and was used by the evangelist, the later author/redactor, in creating a very different work, virtually the gospel in its present form. SQ, it is held, is palpably distinctive within the canonical gospel and, in the face of the changes that were required, must have held such authority as to rule out any extensive rewording of it. Just this literary tension would have produced the aporias that so distinguish this gospel. A similar document, a Passion Source, is widely held to underlie the remaining narratives of the gospel in chaps. 11–13, 18–20.

The bulk of the gospel not based on these two narrative sources—that is, the dialogues and discourses now interspersing the miracle stories, and to a lesser extent the passion story, and found in purest form in chaps. 14–17 (Jesus' "Farewell Discourse")—would be of a different origin. Undoubtedly based in some way on a tradition of Jesus' teaching and possibly even on sources, nevertheless this material is far more extensively evolved than the narratives and reflects perhaps more directly the viewpoint and creative activity of the evangelist.

Such a view of the derivation of the gospel holds that the evangelist cannot simply have adapted these narratives loosely from one or more of the Synoptics, even when they are parallel to stories found there (cf., for example, 4:46–54 with Matt 8:5–13 = Luke 7:1–10), for then the aporias remain unexplained. Given the many gratuitous differences in the stories in the Fourth Gospel as compared with the Synoptics, proponents of SQ maintain, there can be no question of a direct literary dependence such as must prevail among the Synoptics themselves. Nor does the theory that the parallels are due to a late assimilation of the gospel to the Synoptics adequately account for the aporias. On the contrary, the connection of the Fourth Gospel to the Synoptics is to be explained by SQ's dependence on pre-Synoptic tradition—or even by dependence of the Synoptics themselves on SQ [Cope 1987].)

Further, the theory makes unnecessary the relatively unmanageable view that in the narratives the author redacted a still fluid tradition (as perhaps did "Mark") or that they developed gradually over many stages, as by a Johannine "school." Two discrete literary stages—best labeled "pre-Johannine" and "Johannine," respectively—are necessary and sufficient to account for the narratives' aporias, which in effect are the "seams" where earlier written material is adapted, without recasting, into a later format. (Aporias as such [e.g. 14:31b] are rare in this gospel's sayings material, which instead displays doublets, even flatly contradictory assertions, and considerable confusion of order and logic.) The nearest analogue to this kind of narrative redaction is not to be found in the widespread solution to the Synoptic Problem, according to which both "Matthew" and "Luke" rewrote Mark and Q, leaving those sources all but unrecoverable, but rather in the long-standing view of the way earlier written accounts of the national epic of Israel were combined in the completed Pentateuch, with all the resulting aporias.

Finally, although Bultmann only implicitly recognized it, the reconstruction of SQ, so far as that is possible, then allows for a systematic redaction-critical investigation of the gospel (Nicol 1972; Fortna 1988). See SYNOPTIC PROBLEM.

B. Grounds for Reconstructing SQ

Unlike the hypothetical Synoptic sayings source, Q, whose existence and reconstruction are supported by the comparison of two documents (Matthew and Luke), all evidence for SQ is found entirely in the text of the Fourth Gospel, so that it must be reconstructed solely on evidence internal to that gospel. And the aporias, so common there as compared to the Synoptics, make this possible: The seams indicate points of

juncture between source and redaction, where a choice can usually be made in assigning one of the colliding elements to the Johannine and the other to the pre-Johannine layer. How is this done?

As SQ's title indicates, it was first of all the word "sign" that suggested the survival of an older layer in the text of the present gospel. On the one hand, this term—and particularly its connection with faith—is used only rarely and negatively in the Synoptics and there never of the miracles Jesus has performed; and on the other hand, in the Fourth Gospel also "signs-faith" sometimes comes in for criticism (e.g., 4:48; 6:26) but at other points—presumably pre-Johannine—is to be understood in an entirely positive sense.

Further, in the first part of the gospel there are what seem to be vestiges of a pattern of numbering the signs (2:11; 4:54). In fact, it is these miracle stories and others now unnumbered, together with Jesus' dialogues and long monologues ("discourses") now growing out of them, that alone comprise his public activity. What in the other gospels, and in far more diverse form, has been called his "ministry" can only be described in this gospel as his self-presentation in the performing of signs and in extended talk about them.

Thus, to many scholars there has seemed to lie behind the present text a protogospel that presented only Jesus' signs, and a series of them, and did so wholly affirmatively. They were significations (that is, demonstrations) of his messianic status, on the basis of which his first disciples and then many others believed in him; those who "came and saw" (1:39) immediately recognized him as the one so long hoped for in Jewish expectation.

In their present order in the gospel (if not originally in SQ's—see C below), the following deeds of Jesus, less the Johannine insertions they now contain, would have comprised the bulk of SQ: changing water into wine (2:1–11), healing an official's son (4:46–54) and a lame man (5:2–9), feeding the multitude (6:1–14)—probably together with crossing the sea (6:15–25), giving sight to a blind man (9:1–8), and raising Lazarus (11:1–45). (Some would also include the catch of fish now found at 21:1–14.) An articulated series emerges from the reconstruction, not merely a gathering of miracle stories, and a few other passages are also to be included: part of chap. 1 (at least the gathering of the first disciples in vv 35–49) as introduction and, as conclusion, 20:30–31a, and perhaps also part of 12:37–41.

C. History and Variations of the Hypothesis

R. Bultmann, from the very first edition of his great commentary (1941 [MeyerK]), gave the classical statement to the Signs Source hypothesis (together with both another prose source, that recounting the passion of Jesus, and a highly artificial poetic Revelation-Sayings Source). Especially in the case of SQ Bultmann acknowledged several precursors, most notably Faure (1922). He nowhere spelled out the criteria for his separation of a pre-Johannine source from the Johannine gospel, nor did he precisely or systematically indicate what the source contained. This lack was filled, so far as possible, by others, e.g., Smith (1965), and more briefly, Van Belle (1975). Some aspects of Bultmann's outline of SQ have been less convincing than others. Thus, on the basis of 1:35–37, he held that the audience for such a source would very likely have been members of the Baptist sect; not many have agreed (but cf. Smith 1976a). And Bultmann also included material that is not so confidently attributed to SQ (e.g., the pericope of Jesus and the Samaritan woman of chap. 4, or material that now connects the miracle stories to their Johannine elaboration and that is usually regarded as purely Johannine [such as 7:1–13, 19–24; 10:40–41—but cf. Attridge 1980 on chap. 7 and Bammell 1965 on chap. 10]). However, no one who has worked subsequently on the SQ hypothesis has been able to ignore Bultmann's ground-breaking work, and in principle it won wide acceptance, particularly in Germany and the United States.

The first major work following that of Bultmann on the history of the gospel's composition was produced by Wilkens (1958). He accepted the existence of a signs source, calling it a "Signs Gospel," but maintained that it, like his two later stages in the gospel's evolution (its *Entstehungsgeschichte*), was already Johannine (a *Grundschrift*, reviving a view little held since the first years of the century). Consequently, he attributed to it still more than Bultmann of what subsequent advocates of SQ would consider posterior to the pre-Johannine source.

Major commentaries by Schnackenburg (1965–84) and Brown (*John* AB, [1966, 1970]) began to appear in the mid-1960s, and each in a way accepted the SQ hypothesis (Brown less explicitly, but note his later

discussion [1979]), fitting it into their conception of how the Johannine literature as a whole (that is, including the Epistles) originated. (In the first two volumes of his work, Schnackenburg is more confident of the possibility of identifying a source behind the present text than in vol. 3, despite the widespread acceptance of Bultmann's relatively uncontroversial passion source.)

Apart from Smith's exposition of Bultmann's original hypothesis in 1965, the first major attempt to examine and refine it was made by Fortna (1970, now updated [Fortna 1988:fine-print subsections of Part One]). His major innovations were an explicit consideration of method, particularly the choice of valid criteria for identifying the source (notably, "contextual" ones); at some points a curtailment of what Bultmann assigned to SQ (e.g., transitional matter—see above), at others an expansion (e.g., 1:6–7, 19–34; 21:1–14), and the discovery of an ordering of the series of signs with a geographical consistency (cf. 2:12; 4:46; [21:1]; 6:1; etc.); above all, the combining of SQ with a revised form of Bultmann's passion source (on the latter, cf. Dauer 1970), resulting in a rudimentary gospel, a "Gospel of Signs," as basis for the present text; and application of the stylistic tests of the source's integrity (see D below) and reproduction of the putative Greek text of the source. Fortna further held that the respect evidently shown the pre-Johannine source in the Johannine gospel demonstrates both what degree of authority SQ must have acquired by the time it was redacted by the Johannine author and the depth of crisis that nevertheless demanded its radical adaptation. Among factors accounting for such a crisis, the most critical would have been the expulsion of Christian Jews from their synagogue—thus from their spiritual home—that J. L. Martyn (1979) has shown to lie behind the present gospel. This crisis also defines the milieu in which SQ would have existed and suggests both the continuity and discontinuity of the later Johannine context with it. (See further Martyn 1970, and now many others such as Robinson 1971; Reim 1974; Kysar 1975; 33–37; Smith 1976a, 1976b; Corsani 1983; and Cope 1986, 1987.)

There shortly appeared Nicol's brief but important study (1972), which refined both Fortna's criteria (by the more explicit use of form criticism for the identification of pre-Johannine tradition) and the stylistic tests, and introduced a sketch of the Johannine redaction of the source. (See further Fortna 1974; Richter 1977.) Subsequently Temple (1974) and Teeple (1974) produced extensive variations on the theory by including material that most proponents could not accept as pre-Johannine. Temple reduces SQ to the two Cana signs (his 1962 article) and proposes a host of other sources. Teeple uses chiefly minute stylistic criteria (e.g., anarthrous personal names). It has been increasingly recognized, however, that stylistic criteria are the weakest of the handful available and that in any case one must look for an intersection of as many different criteria as possible to locate an aporia and assign strata.

In 1977 Boismard and Lamouille published their highly complex theory of the composition history of the gospel, involving a number of stages and dependence both on a source of five signs ("Document C") and on subsequent assimilation with the Synoptics ("Jean II-A"), when the two remaining signs (of chaps. 5 and 6) were included. Their theory is extraordinarily subtle, attempting to do justice to all the loose ends that any simpler reconstruction of the gospel's evolution inevitably leaves. It is not easily falsified, but neither is it convincing to many. (See Neirynck et al. 1979.)

The most faithful follower of Bultmann has been Becker, who in his 1970 article and now in his two-volume commentary (1984–85) has reasserted the original theory with relatively little change (only adopting from Fortna the inclusion of the Baptist pericope [1:19–34] at the head of SQ and a kind of rearrangement, to display a consistent itinerary connecting the signs, but rejecting Fortna's combination of SQ and passion source).

A curtailed version of the hypothesis was proposed by Heekerens (1984; cf. Temple 1962), who holds that only the three still numbered miracles (those of chaps. 2, 4, and 21) comprised the signs source. This more cautious approach would be valid if it weren't for the considerable evidence that the evangelist has extensively rearranged the miracle stories, necessitating a loss of any original enumeration beyond (strictly) the first two, the second retainable only via a contrived addition ("when he had come from Judea to Galilee"). (For more extended summaries of this history, see further: Teeple 1974:1–116; Kysar 1973; 1975; 1985; Bittner 1987:2–14; above all, the forthcoming revision of Van Belle 1975.)

D. Major Objections

Despite wide acceptance, the hypothesis has never been universally accepted. A number of dissenters from the theory either resist working backward from the present text for conservative reservations (e.g., Ruckstuhl 1951; Morris *John* NICNT; Carson 1978) or, especially in Britain, seem to be antipathetic toward anything Bultmannian (e.g., Lindars 1971:22–23, 28–42 [a frontal attack on Fortna 1970, despite his own theory (1972) of a fixed tradition analogous to SQ]). In both groups there appears not infrequently the overly cautious phrase that it would be "unsafe" to assume the theory (even as working hypothesis, apparently).

An increasing number of theorists (esp. the Leuven school), rejecting the wide consensus since Gardner-Smith 1938, maintain that this gospel is dependent either directly on one or more of the Synoptics (Neirynck 1977; 1983; 1984) or on a looser body of tradition (Busse and May 1980), so that no hypothetical source is needed to account for the (mostly) narrative parallels among the four gospels. Another group, making a fundamental assumption unnecessary in the view of exponents of SQ, holds that the gospel is the product of a long process of development by a "Johannine school" and so cannot be seen as the product of two principal phases (esp. Schnelle 1987:168–82 ["Arguments against accepting a 'Sēmeia-Source' "Richard (1988:197) cannot accept that the "creative fourth evangelist [would] employ at length and in detail such an uncongenial source."

Some (e.g., Haenchen 1980) have accepted the possibility of SQ but view its reconstruction as precarious at best, despite the aporias unique to this gospel. A more radical appraisal holds the aporias to be illusory, so that what is taken by others to be the collision of pre-Johannine and Johannine is simply the complexity of the author's subtle way of writing or of adapting a lengthy and no longer recoverable tradition (Schnelle 1987:168; Carson 1987).

Others object, probably rightly, to the subjectivity of any reconstruction of a source based chiefly on stylistic criteria (such as that by Teeple). Indeed, already in 1939 Schweizer proposed a test of the validity of source hypotheses: by identifying a list of Johannine style characteristics and applying them to a source, its stylistic distinctiveness can be tested. (On this basis, he cast several earlier hypotheses into doubt.) Ruckstuhl (1951) adopted this method, with a refined table of characteristics, to demonstrate, if that were possible, the "literary unity" of the gospel and hence the invalidity of all source theories, Bultmann's in particular (and, in 1977, Fortna's). (See further Schnelle 1987:171–77.)

Finally, the similarity of SQ to the format of Mark is said to betray Johannine dependence on the Synoptics. In fact, the similarity is rather loose: a Galilean period of Jesus' activity, followed by a Judean. (The hypothesis of a "Signs Gospel," with an apologetic passion narrative appended to the end of the signs, also bears little resemblance to Mark, where the theme of Jesus' passion is integrated with his deeds from the beginning and the passion is no longer apologetic [in contrast to Mark's underlying passion tradition].)

SIHON (PERSON) [Heb *sîhôn* (סִיחוֹן)]. Amorite king defeated by Moses and the Israelites prior to their entrance into Canaan. Following God's instructions to avoid conflict with Edom and Moab (Deut 2:4–9), Israel's exodus route took them NE toward the Kingdom of Sihon. King Sihon's land stood between Israel and the Jordan river. Moses requested that the Amorite king grant the Israelites passage through his territory. Sihon promptly refused and gathered his army at Jahaz where Moses met and defeated him. The victory over Sihon opened to the Israelites all the territory to the Jabbok river and to the boundaries of Og, King of Bashan. Sihon's defeat inspired Israel to possess all of Transjordan prior to crossing Jordan.

The Amorite kingdom extended E from the Jordan and bounded on the N by the Jabbok and on the S by Wadi Hesban, the southernmost of the E tributaries of the Jordan. At the time of the exodus, Sihon had extended his control S to the Arnon river in Moabite territory (Judg 11:22). This area is popularly known as S Gilead and was the allotment by request of the two tribes of Reuben and Gad (Num 32:33; Deut 3:12). Deuteronomy also associates Sihon with Og, King of Bashan, since these two Transjordanian kings

were defeated in succession allowing Israel to occupy all of Transjordan, from the Arnon river to Mount Hermon (a distance of 130 miles).

Sihon is identified as the King of Heshbon, his capital city (Deut 2:26, 30). In addition, his territory encompassed many villages and towns (Num 21:25). Heshbon was the first major city conquered by the Israelites under Moses. The modern site is Tell Hesbân (M.R. 226134), a fifty-acre site 17 miles SE of Amman (Jordan) and 6 miles N of Medeba. The destruction of Heshbon, Sihon's capital, is preserved in a poem in the Numbers narrative (21:27–30). This event, because of its monumental significance, is also remembered often in Hebrew literature (Josh 12:2, 5; 13:10, 21, 27; Judg 11:12–18; 1 Kgs 4:19; Neh 9:22; Pss 135:11; 136:19–20; Jer 48:24).

JOEL C. SLAYTON

SILAS (PERSON) [Gk *Silas* (Σιλας)]. Var. SILVANUS. The person called "Silas" in Acts is undoubtedly the same person named "Silvanus" in Paul's letters. Silas was a Jewish Christian and possibly a Roman citizen (see Acts 16:37). Along with Judas called Barsabbas, Silas was a leading member, emissary, and prophet of the Jerusalem church (Acts 15:22, 32), one who risked his life "for the sake of the Lord" (Acts 15:26). He was a travel companion and fellow missionary with Paul (Acts 15:40–18:5), one of the evangelizers in Corinth (2 Cor 1:19), and a co-sender, along with Paul and Timothy, of the Thessalonian correspondence (1 Thess 1:1; 2 Thess 1:1). Many interpreters also see the appelation "apostles of Christ" (1 Thess 2:6) as including Silas along with Paul (and Timothy).

Silas would have been his Jewish family name and may represent the Aramaic form of the Hebrew name Saul. Alternatively, Silas may also be a Greek shortened form of Silvanus (like Epaphras for Epaphroditus). The name Silvanus is a Roman cognomen, a Latinized form of Silas. Derived from the Latin *silva,* meaning "wood," Silvanus is also the name of a Roman deity, who represents the life-giving force of nature.

Silas is first mentioned in Acts 15 where he along with Judas is identified as one of the "leading men among the brethren" (Acts 15:22). Both Silas and Judas were chosen by the Jerusalem leaders as their official delegates and emissaries to accompany Paul and Barnabas to Antioch. Their mission was to deliver and explain verbally a letter addressed "to the brethren who are of the gentiles in Antioch and Syria and Cilicia" (Acts 15:23), which contained the decision reached in Jerusalem about entrance requirements for the gentiles. Circumcision was not required but the observance of some Jewish customs was (15:28–29). The sending of Silas, also identified as a prophet (15:32), indicates first that he was a reliable and respected representative of the Jerusalem leaders, and secondly, that he had the ability to function persuasively in a gentile community. Evidently Silas' own views were favorable to the gentile mission, and thus he was a fitting choice for the task at hand. According to Acts Silas and Judas were successful in their mission for the letter was well received; the community "rejoiced at the exhortation" (15:31).

After this Luke narrates that "they" (Silas and Judas) were sent back to Jerusalem (15:33); however, some manuscripts try to harmonize this verse with v 40, which puts Silas in Antioch, by adding v 34: "But it seemed good to Silas to remain."

Following an irreconcilable disagreement between Paul and Barnabas over John Mark (15:36–39), Paul chose Silas to accompany him through Syria and Cilicia (15:40). Silas had in hand the Jerusalem letter which was also directed to the gentiles in these provinces (15:23). The choice of Silas was certainly astute, since it had the diplomatic advantage of placing the Pauline mission under the auspices of Jerusalem. The presence of Silas could be interpreted by those who knew his Jerusalem stature as a personal legitimation of the Pauline Gospel.

Luke reports that after Timothy joined the mission in Lystra, the group (Paul, Silas, Timothy) went through Phrygia, Galatia, and attempted to go into Bithynia, but, as the result of a vision, they traveled down to Troas instead, then to the port of Neapolis in Macedonia and finally to Philippi (Acts 16:6–12). There, persuaded by Lydia, the travelers stayed at her home (16:15, 40). In Philippi Silas suffered the same fate as Paul: they were both dragged before the magistrates, beaten, and imprisoned (16:19–24; 1 Thess 2:2). Freed by an earthquake, the prisoners were taken by the jailer into his house, where he washed their wounds and fed them. Then, according to the narrative, Paul identified both himself and Silas as Roman citizens, *Romanoi* (16:37), after which they were released (16:39). Surprisingly, Paul says nothing about this incident, nor does he mention Silas, in his letter to the Philippians (but see 1 Thess 2:2).

Silas is also mentioned in Acts as being with Paul in Thessalonica where both of them (and Timothy) were expelled after an uprising by Jews and rabble-rousers of that city (17:1–9). The missionaries were then sent away by the brethren to Beroea at night (17:10), where opposition was again encountered from Jews of Thessalonica. Then Paul departed for Athens, but Silas and Timothy remained, although they were commanded to join Paul as soon as possible (17:15). Yet according to the Acts narrative they do not meet Paul until he is in Corinth (18:5). On the basis of Paul's writing, Timothy did join him in Athens (1 Thess 3:1–2), but the whereabouts of Silas remains unknown. Did he stay behind in Beroea to supervise activities there or did he travel with Timothy to Athens? If Silas did go to Athens then he may have collaborated in the decision with Paul (and Timothy?) to send Timothy back to Thessalonica (cf. "*we* sent …," 1 Thess 3:2).

While it is uncertain whether Silas actually went to Paul in Athens, Luke reports that he did join Paul in Corinth (18:5), having arrived with Timothy from Macedonia, possibly carrying a gift from the Macedonians so that Paul no longer had to ply his trade in Corinth (cf. 2 Cor 11:9). While in Corinth Silas evangelized. This Paul affirms when he reminds the Corinthians that Silas preached "the Son of God, Jesus Christ" (2 Cor 1:19). Silas is also named as a co-sender along with Paul and Timothy of the Thessalonian correspondence (1 Thess 1:1; 2 Thess 1:1), written from Corinth. Whether Silas had a hand in the composition of the letters themselves is debated (see Bruce *1–2 Thessalonians* WBC, xxxii). How long Silas remained there and whether he returned to Jerusalem is unknown. Nothing further is said about his association with Paul after Corinth.

The person named Silvanus in 1 Pet 5:12 is probably to be identified with the Silas/Silvanus known to Paul. The association of Silvanus with the tradition of Peter in 1 Peter is not unexpected since the two certainly knew each other in Jerusalem. The author of 1 Peter says that the letter has been written "by Silvanus" (*dia* with the genitive). This may mean 1) that Silvanus was the bearer of the letter (cf. Acts 15:22) [Elliott 1980:263], or 2) that Silvanus was the amanuensis of the letter, indicating either that he simply took dictation or that he had a more active part in its composition. According to Elliott, Silvanus is mentioned in 1 Peter not because he is a representative of Paul and would give the letter a "Paulinist" cast, but because he represents to the addressees in Asia Minor what he stood for earlier in Jerusalem: "the universal dimension of God's grace" [1980:264]. See TIMOTHY (PERSON).

SILLA (PLACE) [Heb *sillāʿ* (סִלָּא)]. A street or neighborhood below and S of the Millo in the City of David (2 Chr 32:5) during the reign of Joash (836–798 B.C.E.). The name is only mentioned in the account of Joash's assassination (2 Kgs 12:20–21) as he was lying (severely wounded, 2 Chr 24:25–26) in his Millo house on the way that descended to Silla. Some have concluded that Silla is the name of a street or

way that led down the ridge of the City of David because of Thenius' conjecture that *měsillâ* means "highway" (BDB, 698). If the root *sl*› lends any understanding, it may indicate a commercial district or city entrance where weights, measures and payments were determined. Except for the Fuller's Field to the S of the City of David, we have neither texts (such as the goldsmiths of Neh 3:31) or archaeological evidence that there was any commercial activity that would have been characterized by the name, "Silla."
DALE C. LIID

SILOAM INSCRIPTION. The Siloam inscription is an inscription of six lines written in archaic Hebrew dating from the 8th century B.C. This inscription, which was discovered in 1880 and since its removal in 1890 has been on deposit in the Imperial Museum in Istanbul, was carved on the E wall 10 m inside the S end of the tunnel that conducts the waters of the Gihon spring in the valley E of the City of David to the Pool of Siloam at its SE corner. The tunnel was dug from both ends at once; the joining at midpoint was an engineering feat. The inscription describes the event which demonstrated the head engineer's skill and success.

1. *]hnqbh.wzh.hyh.dbr.hnqbh.b‹wd[.hḥṣbm.mnpm.]*
2. *hgrzn.›š.›l.r‹w.wb‹wd.šlš.›mt.lhn[qb.wyšm]‹.ql.›š.q*
3. *r›.›l.r‹w.ky.hyt.zdh.bṣr.mymn.[wmśm]›l.wbym.h*
4. *nqbh.hkw.hḥṣbm.›š.lqrt.r‹w.grzn.‹l.[g]rzn.wylkw[.]*
5. *hmym.mn.hymwṣ›.›l.hbrkh.bm›tym.w›lp.›mh.wm[›]*
6. *t.›mh.hyh.gbh.hṣr.‹l.r›š.hḥṣbm[.]*

1. [ ] the tunneling, and this was how the tunneling was completed: as [the stonecutters wielded]
2. their picks, each crew toward the other, and while there were still three cubits to g[o], the voices of the men calling
3. each other [could be hear]d, since there was an increase (in sound) on the right [and lef]t. The day the
4. breach was made, the stonecutters hacked toward each other, pick against pick, and the water
5. flowed from the source to the pool [twel]ve hundred cubits, even though the
6. height of the rock above the heads of the stonecutte[rs] was a hundred cubits!

It is the nearly unanimous view of historians that the Siloam tunnel is Hezekiah's conduit, and that the inscription in it was written shortly before 701 B.C.E. The form of its script agrees with this dating. According to the Deuteronomist and the Chronicler, Hezekiah had the waters of the Gihon spring outside the city walls diverted to a reservoir inside the walls by means of a conduit, as part of his fortification of Jerusalem to withstand the anticipated siege by Sennacherib in 701 B.C.E. (2 Kgs 20:20; 2 Chr 32:30; cf. Isa 22:11; Sir 48:17). The construction of the tunnel from both ends at once, multiplying the difficulties in engineering, reflects the haste forced upon Hezekiah by the threat of Sennacherib.

The word translated "increase (in sound)" in line 3 *(zdh)* is regarded by most scholars as obscure. Since the well attested Hebrew and Arabic meaning "increase" has not seemed fitting, other suggestions have been made from context: crack, fissure, overlap, excitement, meeting, and others. These guesses are not necessary. The jumble of directional changes in the tunnels during the last few meters substantiates the inscription's point that it was their voices that finally brought the crews together, while those same changes also attest to the difficulty of locating the direction of sounds coming through the rock seemingly from all sides.

However, the remarkable achievement was not that the crews met over the last meter and a half, but that they ever came that close to each other in the first place. The tunnel follows not a straight line but a ragged s-shaped curve. See Fig. DAV.04and Fig. JER.09. Whatever the purpose of this intentionally winding path—long a puzzle to investigators—it vastly complicated the survey required by the head engineer, and hence magnifies his accomplishment. When each crew was between 40 and 45 m from the eventual meeting-point, the engineer initiated a series of at least four highly accurate corresponding corrections in both tunnels that brought the crews within shouting distance. Evidence suggests these corrections were performed by use of a method similar to "plane table surveying" as developed by the Romans. The successful joining of the tunnels demonstrated the engineer's proficiency with the primitive

means at his disposal. The satisfaction evinced by the inscription may reflect as well the realization that if the crews had not met, the engineer's life would doubtless have been forfeit.

The success of the moment enabled and induced the engineer to commemorate the event by an inscription. It appears that his commemoration was more private than public, as it was clearly not intended for public notice and makes no mention of the ruler of the city or its god, the political crisis that necessitated the construction, nor even of the master excavator himself, at least in the present form of the inscription. The inscription occupied the lower half of a prepared surface; it is probable that the upper half was intended for a relief showing the joining of the tunnels, with possibly the name of the engineer inscribed thereon. Suggestions that the inscription was written by the stonecutters themselves or that it records an excerpt from annals have not found wide acceptance.

ROBERT B. COOTE

SILOAM, POOL OF (PLACE) [Gk *kolymbēthra tou Silōam* (κολυμβηθρα του Σιλωαμ)]. Siloam, and its related forms (Heb *silōaḥ* [Isa 8:6]; *šelaḥ* [Neh 3:15]) probably applied originally to the earliest reservoir, and later to any other reservoirs which collected water from the channels or aqueducts on the W side of the Kidron valley. It also referred to an area apparently near the reservoirs as reflected in "the tower in Siloam" (Luke 13:4). The modern village, Silwan, located opposite the City of David, carries the name.

A. Siloam before Hezekiah

The GIHON Spring (1 Kgs 1:33, 38, 45), later known as the Virgin's Fountain, was the major source of water for the one or more pools which carried variants of the name Siloam; water also was channeled from the intermittent supply of water from the valley bed itself. Traces of a partially covered and partially open aqueduct or channel exist which passes southward from the Gihon along the W side of the Kidron valley. This channel was called Canal II by early explorers and excavators at the turn of the 20th century. The canal had a number of openings in its E wall to allow water to irrigate the gardens on the floor of the valley (Simons 1952:175–77). See KING'S GARDEN. This aqueduct may have carried the water referred to in Isa 8:6 as "the gently flowing waters of Shiloah"; the vertical descent is only a few feet from the Gihon to the lower (Siloam) Old Pool (Isa 22:9–11; now known as Birket el Hamra) below the City of David (Mare 1987:106). "The aqueduct of the Upper Pool" (2 Kgs 18:17; Isa 7:3; 36:2) may be identified with the present Pool of Siloam (i.e., Birket es Silwan), located about 100 feet NW of the Lower Pool.

B. Siloam in Hezekiah's Time

The threat of a siege by Sennacherib prompted Hezekiah to secure Jerusalem's water supply and to rob the Assyrians of a water supply. He therefore "stopped all the springs and the brook that flowed through the land" (2 Chr 32:4) and "closed the upper outlet of the waters of the Gihon" (2 Chr 32:30a); and "directed them [i.e., the waters] down to the west side of the city of David" (2 Chr 32:30b). The redirection of the water was accomplished by tunneling through the rock under the city to the SW corner of the City of David. 2 Kgs 20:20 summarizes how Hezekiah "made the pool" (the Pool of Siloam) and

the tunnel (Hezekiah's Tunnel) by which he brought water into the city (see also Sir 48:17–19). Kenyon (1965) has argued that the pool of Hezekiah was originally an underground cistern inside the city walls.

From Gihon, the tunnel (with an average width of 2 feet and an average height of 6 feet) was cut in a circuitous course, with a length of ca. 1,750 feet (a direct route of ca. 1,090 feet) to the Pool of Siloam (possibly the Upper Pool). For the construction and technical details of Hezekiah's tunnel, see DAVID, CITY OF, section E, and Shiloh, 1984. See also SILOAM INSCRIPTION. The statement in 2 Chr 32:30 that Hezekiah "blocked the upper outlet of the Gihon spring and channeled the water …" may imply that, besides the use of the new tunnel to store water in the Upper Pool (i.e., the present Pool of Siloam; 2 Kgs 18:17; Isa 7:3; 36:2), the king may have camouflaged the old Canal II and allowed it also to deliver water down to the earlier Old or Lower Pool (cf. Isa 22:9–11), thus providing an additional source of water when under siege (although procuring water from the Lower Pool might present considerable danger). Ben Sira's statement that Hezekiah "built *pools* for water" (Sir 48:19) seems to indicate that there were additional water sources. An alternate view suggests that Hezekiah's tunnel actually emptied into another pool in the Kidron valley, a pool about 360 feet E of the Pool of Siloam, and that this old pool was forgotten when Empress Eudocia in the 5th century A.D. identified the present Pool of Siloam as the reservoir for the water of Hezekiah's tunnel. This view is somewhat problematic because it would put Hezekiah's pool outside the city walls on the E slope and would be at variance with 2 Chr 32:30 which states that Hezekiah directed the water to the W side of the City of David (i.e., toward the modern Pool of Siloam). The majority of scholars believe that the water of Hezekiah's tunnel emptied into the modern Pool of Siloam (Mare 1987:105).

After the Exile, the Old or Lower Pool in Hebrew was called Shelah, translated Pool of Siloam in the NIV; Neh 3:15), and was probably still used as a reservoir for the waters coming down from the Gihon through the Kidron valley through Canal II, and for the overflow of water coming from the newer Upper Pool fed from Hezekiah's tunnel.

C. Siloam in the Roman Period

Of the two references to Siloam in the NT, John 9:7 simply states that Jesus sent the blind man to "wash in the Pool of Siloam," giving the impression that the pool was a well-known landmark. Josephus (*JW* 5.4.2 §145) specifically calls Siloam a *pēgē,* a "fountain," [not a spring; Siloam received its water from the Gihon] and indicates it was at the S end of the Tyropoeon valley. This would place it in the vicinity of either the Lower, Old (earlier) Pool or at the nearby Upper Pool which Hezekiah made, the modern Pool of Siloam. There is, however, a difference of opinion as to which pool Josephus means. In the other reference, Luke 13:4, we are told that there was a tower in a place called "the Siloam" (Gk *tōi Silōam*), with the implication that everyone knew of its location. Presumably it was built on the S end of the ridge of the old City of David, just above the pool of the same name.

At the Lower, Old Pool some remains of a Herodian bath have been found. The Talmud (*Sukk.* 4.9) states that at the Feast of Tabernacles, water was taken in a golden vessel from the Pool of Siloam to the Water Gate and carried in the procession up to the Temple and the altar. In reference to the ceremonies at the Feast of Tabernacles in John 7:37–38 Jesus, in speaking about his dispensing "streams of living water," may be comparing his activity with this ceremony of carrying the water from the Pool of Siloam to the Temple.

D. Siloam in the Byzantine Period

The Bordeaux Pilgrim (A.D. 333; CChr.SL, 175.16) states that there was a four-sided colonnade above the Pool of Siloam, but says nothing about a church. But in the 6th century A.D., Antoninus Martyr (CChr.SL, 175.142) describes the pool and a church, which is also depicted on the Madaba Map (A.D. 575), a structure built by the Empress Eudocia (ca. A.D. 440). The ruins have been investigated by archaeologists and consist of a central apse, a nave, and atrium; these were built over the N part of the colonnade (Mare 1987:241–43).

E. The Pool of Siloam Today

The remains of the Lower, Old Pool are called the Birket el Hamra (the "red pool") and is dry. The Upper Pool (modern Pool of Siloam) is NW of the Old Pool. The S end of Hezekiah's tunnel, conveying

water from the Gihon spring, empties into the reservoir, and the water is still used by the local residents. A mosque now stands on the remains of the Byzantine church.

SIMEON (PERSON) [Heb *šim‹ôn* (שִׁמְעוֹן)]. SIMEONITE. **1.** The second son of Leah and Jacob and the full brother of Reuben, Levi, Judah, Issachar, Zebulun, and Dinah. Simeon is also the eponymous ancestor of the tribe whose territory is found within the S limits of Judah. The etymology is obscure, but some suggest the name refers to an animal, perhaps a hyena (Westermann 1985:473; BDB, 1035). Noth (*NHI*, 58) argues that it originally was a personal name, as found in Ezra 10:31. In Genesis 29 the popular etymology is explained as coming from the verb *šm‹*. Leah, who became Jacob's wife because of her father's deception, is unloved by her husband who prefers his more beautiful wife, Leah's sister Rachel. Although Leah suffers from this situation, she, not Rachel, is granted abundant fertility. When she bears Simeon she exclaims that God has given him to her "because the LORD has heard *(šām‹a)* that I am hated" (Gen 29:33).

The most striking account of Simeon occurs in Genesis 34, the narrative of the rape of Dinah and the revenge of Simeon and Levi. Dinah is violated by Shechem, prince of the city which bears his name. After this act, however, Shechem comes to love Dinah, and he and his father Hamor ask permission from Jacob and his sons for Shechem to marry Dinah. The brothers agree on one condition: that the townsmen of Shechem agree to be circumcized. The brothers, however, are not sincere and use the circumcision as an excuse to attack the townsmen. Their violence is extreme: They not only kill the men of Shechem, but capture the women, children, and animals. Although the historicity of the account is doubted, the narrative may explain Simeon's difficulty in obtaining its own territory. Some scholars (*IDB* 4:356; *NHI*, 70–71) think the account indicates that Simeon's original tribal allotment was in the Palestinian highlands. Gottwald (1979:252–53), who considers the specific references to Simeon and Levi in vv 25 and 30 interpolated, argues nevertheless that the account demonstrates that Simeon needs to take refuge in Judah in the face of some situation of threatened annihilation.

Simeon also plays a small but interesting role in the account of Joseph in Egypt and in his brothers' encounter with him. After Joseph is sold into Egypt and rises to a position of power in the government, his brothers, unaware of his identity, come to him to request grain. In light of the account of Simeon's violence in Genesis 34, it is not surprising that he is the brother kept for ransom by Joseph when the remaining brothers go to retrieve Joseph's full brother Benjamin from Canaan (Gen 42:24). Simeon, along with Levi, is singled out for chastisement in Jacob's blessing. The poem laments Simeon's use of unbridled violence against people and animals; the tribe consequently will be scattered among Israel (Gen 49:5–7).

No separate tribal boundaries are given for Simeon. The list of cities included in Simeon's territory, found in Josh 19:1–9, probably reflect administrative concerns of the monarchy. These cities are found in the southernmost section of Judah's territory. Some surmise that Simeon had to seize the least settled areas, and was successful in occupying the Canaanite city Hormah (*LBHG*, 198). Aharoni (*LBHG*, 234–35) discusses a tribal covenant of Judah with Simeon, Caleb, Kenaz, Jerahmeel, and the Kenites centered

at Hebron. Judges represents Judah and Simeon as forming a pact; both agree to cooperate in face of threats. Simeon does assist Judah in battles against "the Canaanites and the Perizzites" at Bezek (Judg 1:4) and at Zephath (Judg 1:17), yet there are no accounts of Judah defending Simeon, reflecting Simeon's dependency on Judah.

Not much else is known about the activities of Simeon. Simeon is portrayed as one of the tribes which represents the blessing over the people on Mt. Gerizim after they pass over the Jordan (Deut 27:12). Ezekiel hopes for the restoration of Simeon alongside Benjamin and Issachar (Ezek 48:24–25).

2. A man in Ezra's day who married a foreign woman (Ezra 10:31). Nothing else is known about him.

SHARON PACE JEANSONNE

3. A man living in Jerusalem who is recorded as offering a prayer and blessing for the infant Jesus (Luke 2:25, 34). The way in which Simeon is introduced in the biblical text makes it probable that he was unknown apart from this context and unlikely that he is any of the other Simeons suggested by later tradition or recent scholars. For example, *Prot. Jas.* 24:3–4 states that this Simeon was a high priest and the successor of Zechariah, John the Baptist's father; *Acts of Pilate* 17:1 makes mention of Jesus later raising Simeon's two sons from the dead; and Cutler (1966:29–35) identifies this Simeon with Simeon the son of Hillel and father of Rabban Gamaliel the Elder, whose existence has been doubted (*HJP²,* 367–68).

Nevertheless, the commendable description of Simeon is to be noted. The same word, "righteous" (Gk *dikaios*), is used of him as is used of Zechariah and Elizabeth in Luke 1:6 and of Joseph in Matt 1:19, probably referring to his obedience to God's law, rather than some standard of personal holiness (see Fitzmyer *Luke 1–9* AB, 322). He is also commended as "devout" (Gk *eulabēs;* Acts 2:5; 8:2; 22:12, a Lukan word), referring possibly to his carefulness in performing religious duties (see Plummer *Luke* ICC, 66, who cites extrabiblical examples, including Plato *Politics* 311B; followed by Brown 1977:438), although probably in light of later Greek evidence with reference to his reverence and awe for God (Creed 1930:39–40; Fitzmyer *Luke 1–9* AB, 426). Simeon is further described as "looking for the consolation of Israel." Although this phase is obscure in its specific reference, it probably connotes the expectation in the postexilic period of a time of trouble relieved by the reestablishment of God's reign through the coming of the Messiah (Fitzmyer *Luke 1–9* AB, 427; Plummer *Luke* ICC, 66). The language is reminiscent of portions of Isaiah (40:1; 49:13; 51:3; 61:2; 66:13), and is apparently echoed at Luke 2:38 referring to Anna and Luke 23:50–51 referring to Joseph of Arimathea; later rabbinic writings refer to the messiah as "consoler" (see Str-B 1:66). Lastly, of Simeon it is said, *pneuma ēn hagion ep auton,* which is variously interpreted. Plummer (*Luke* ICC, 66) argues that separation of the word for "spirit" (Gk *pneuma*) from the word for "holy" (Gk *hagion*) by the copulative verb, "was" (Gk *ēn*), makes the meaning "an influence which was holy was upon him," distinguished from reference to the Holy Spirit in the next verse (cf. D, where the word order is changed, probably for theological reasons, so that the reference is to the Holy Spirit). Brown (1977:438), however, claims that reference to the Holy Spirit in v 26 "shows that Luke is thinking of the Holy Spirit" in v 25. Anarthrous use of "holy spirit is also found in Luke 1:15, 35, 41, 67.

In light of mention that it had been revealed to Simeon that he would not see death (a euphemism; see Trollope 1848:57) until he saw the anointed (Christ) of the Lord, Brown (1977:438) reasonably hypothesizes that Simeon was old at the time of his encounter with Jesus. When he enters into the temple "under the influence of the Spirit" (Plummer *Luke* ICC, 67), he sees Jesus there and takes the infant into his arms. Here the temple area is thought by most scholars to be either the court of the gentiles or the court of women, since Mary is present and Luke distinguishes between the sanctuary and the court of the temple (Brown 1977:438–39). Simeon is recorded as reciting what is traditionally called the Nunc Dimittis. For recent and differing analyses of the origins of this prayer song, besides the standard commentaries and Brown, see Grelot (1986:481–509) and Berger (1985:27–39). Then Simeon is recorded as blessing Jesus and his parents, selecting Mary for special comments (see Marshall *Luke* NIGTC, 121–22 for possible reasons). Rather than the tone of expectation for salvation found in the Nunc Dimittis, the

blessing forecasts pain and trouble. Since the blessing is priestly in nature (see Fitzmyer *Luke 1–9* AB, 429) some commentators have speculated that Simeon was a priest. As Brown (1977:437–38) says, "Despite the close relationship that Simeon has to Levi in the patriarchal stories (Gen 29:33–34), there is nothing in Luke's account to favor the idea that Simeon was a levitical priest, although gentile Christians may have decided that from his blessing the parents in vs. 34."

In light of the events cited above, the language used of Simeon in relation to other NT figures, and the content of his two pronouncements, some recent commentators have drawn out the literary significance of Simeon in Luke's gospel. For example, Figueras (1978:89–93; cf. Brown 1977:451–54) equates Simeon with Moses, while Tannehill (1986:38–44 esp. 44) sees Simeon's as a crucial voice used by the author of the gospel to express a tension in the world regarding the scope of God's salvation and human resistance.

4. The father of Levi and son of Judah, according to Luke's genealogy tying Joseph, the "supposed father" of Jesus, to descent from Adam and God (Luke 3:30). D omits Simeon, substituting a genealogy adapted from Matt 1:6–15 in Luke 3:23–31. Simeon the father of Levi occurs nowhere else in the biblical documents, including Matthew's genealogy, as a relative of Jesus, and appears here in a list of eighteen otherwise unknown descendants (Fitzmyer *Luke 1–9* AB, 501). Jeremias (1969:296) believes that it is anachronistic for Luke to include this name here, since there is no record of its use after the patriarchal period until Ezra 10:31, although caution must be exercised in light of the limited nature of the available evidence. Kuhn (1923:208–9) argues that two seemingly parallel lists of names—Luke 3:23–26 (Jesus to Mattathias) and 3:29–31 (Joshua/Jesus to Mattatha)—were originally identical, the first perhaps reflecting a Hebrew context and the second, an Aramaic context, tracing Mary's line of descent (since it does not mention Joseph as Jesus' father). Simeon, in the second list, corresponds to Melchi, in the first list. With no major textual variants for Simeon and Melchi to support confusion of the two in the NT, Kuhn's theory has little plausibility.

5. One of those listed, along with Barnabas and Saul, as a prophet or teacher in the church at Antioch (Acts 13:1). Simeon is said also to have been called Niger. An apparent example of a Jew with both a Latin name and a Hebrew name (cf. 12:12), the nature of his Latin name as led Bruce (1951:252) to speculate that Simeon was an African. Apart from Barnabas and Saul, Simeon and the others mentioned here are otherwise unknown, although Smaltz (1952:214–15) has equated this Simeon with the one in 15:14 (see 4.), and Marshall (*Acts* TNTC, 214) notes that, since the name here precedes mention of Cyrenia, some have thought that Simeon was the Simon of Cyrene mentioned in Luke 23:26. Both proposals are without foundation.

6. Another possible name for Simon Peter, used once apparently of him in Acts 15:14 and in some texts in the introduction to 2 Peter. At 2 Peter 1:1 a number of versions read Gk *simeōn,* while one papyrus and other versions read Gk *simōn,* a fairly equally divided external attestation. Simeon probably was changed to the more common Greek form Simon in many texts, thus the odd juxtaposition of the names Simeon and Peter is to be preferred (see Metzger 1975:699; the reading gets a C rating in the *UBSGNT*^{3} text). During the centuries on either side of Christ's birth Simeon apparently was a very common Jewish name, although Jews with the name often preferred to use the Greek form (see Bauckham *Jude, 2 Peter* WBC, 166, 165). With respect to Acts, Conzelmann (*Acts* Hermeneia, 117) calls the form an Aramaism and says that it is archaic. Lake and Cadbury (1933:15) note that Chrysostom equates this Simeon with the Simeon of Luke 2 and his speech with the Nunc Dimittis (see #3 above); Riddle (1940:179–80) claims that Simeon/Simon is an early Christian leader to be distinguished from one named Peter; and Smaltz (1952:214–15) has equated this Simeon with the one in 13:1, believing that Simon Peter is recorded in Acts 12:17 as having died. Lake and Cadbury argue that a more probable explanation is that choice of the name Simeon shows the author's sensitivity to appropriate wording. For the occasion, Peter was addressed by a Palestinian Jew by his Jewish name, and the Jewish spelling is used in the account. See also PETER (PERSON).

SIMILE. See PSALMS, BOOK OF.

SIMON (PERSON) [Gk *Simōn* (Σιμων)]. The name of a number of persons mentioned both in the Apocryphal literature of the OT as well as in the NT.

1. Simon Chosamaeus (Gk *Chosamaios*), who provided a list of those who were found to have married foreign wives (1 Esdr 9:32; cf. Shimeon in Ezra 10:31).

2. Simon I, the high priest (d. ca. 270 B.C.E.), son of Onias and grandson of Jaddua (high priest in the days of Nehemiah [Neh 12:11, 22]).

3. Simon II, high priest from ca. 219–196 B.C.E., grandson of Simon I, son of Onias II, and the father of Onias III.

4. Simon the Benjaminite chief administrator of the temple during the high priesthood of Onias III (2 Maccabees 3–4).

SCOTT T. CARROLL

5. The second son of Mattathias, also known as THASSI. He was the last of Mattathias' sons to lead the Jews against Seleucid rule. Though he was older than his predecessors Judas and Jonathan, he was the last to ascend to a position of leadership. Yet Simon was the real founder of the Hasmonean dynasty, which endured at least four generations after him.

We do not know why Simon was skipped over when Judas and then Jonathan were chosen to lead the revolt, but it seems that they were considered militarily more suitable for the task. He is praised in 1 Macc 2:65 as a man "wise in counsel" and second only to Judas. When Mattathias addresses his sons at his deathbed (1 Macc 2:49–70), Simon is mentioned even before Judas, and elsewhere he precedes his other brothers as second to Judas, sharing with him the rescue of the Jews in the country, when Judas went with Jonathan to Transjordan, and Simon went alone to Galilee (1 Macc 5:17, 20–23, 55).

Yet these and further references to Simon in 1 Maccabees only confirm the accepted view that 1 Maccabees was written to support among other things the Hasmonean dynastic claims, i.e., the legitimacy and position of Simon's descendants as rulers of Judea. See MACCABEES, BOOKS OF (FIRST AND SECOND MACCABEES).

When Simon took over leadership after Jonathan had been detained and then murdered by Trypho (142 B.C.E.), he did not lack experience either in military affairs or in diplomacy and administration. He had participated in the military exploits of Judas and of Jonathan and then shared in the aggrandizement of the position of Jonathan within the framework of the Seleucid Empire.

In addition to his leading the expedition to Galilee, defeating the enemy up to the gates of Ptolemais, and delivering the Jews (1 Macc 5:22–23), he was also entrusted with the siege of some fortresses in Idumea (2 Macc 10:19–20). His efforts were hindered because some of his men took bribes from those

who had taken refuge in the towers. This story, however, is to be viewed keeping in mind the unfavorable attitude of 2 Maccabees towards Simon (cf. 2 Macc 14:17).

Later, Simon and Jonathan took their brother Judas' body after the battle of Elasa and buried it at Modein (1 Macc 9:19), and together fought for survival at the outskirts of Judea after Judas' fall (1 Macc 9:33, 37, 62). The defense of Bethbasi was entrusted to Simon by Jonathan, and he defended it successfully (1 Macc 9:65–68). To what extent these events are historically grounded, or whether are they merely efforts to enhance Simon's prestige, is hard to tell (cf. 1 Macc 10:74).

Yet the gradual promotion of Jonathan under the Seleucids brought in its wake the promotion of Simon too. He was appointed under Trypho governor (Gk *stratēgos*) of the seacoast (1 Macc 11:59). Whether he was able to perform in this capacity is doubtful. When Jonathan went to fight the Seleucid generals who supported Demetrius II, he left Simon in Judea, and at that time he subjugated Beth-zur, and put his own garrison there (1 Macc 11:65–66). Shortly afterward, Simon entered the coastal region of which he was governor, took Joppa, and put a garrison there (1 Macc 12:33–34). He also built and fortified Adida NE of Lydda.

In the year 142 B.C.E. Trypho put Jonathan cunningly away and tried to overrun the Jews, who were deprived of leadership. This was Simon's time of trial, and he successfully filled the gap and took over his brother's position. He became the leader of the Jews and took the necessary military steps. Trypho, faced by unexpected Jewish resistance, began negotiations with Simon and got from him, in return for the promise to release Jonathan, money and Jonathan's two sons as hostages. Simon fulfilled his part of the deal but Trypho did not fulfill his (see 1 Macc 13:15–19, esp. vv 17–18, which are strongly apologetic). Then Trypho tried to invade Judea, but repulsed by Simon, he killed Jonathan and withdrew.

The break in relations with Trypho was complete and Simon approached Demetrius II to renew relations with him. Demetrius was anxious to give a positive response (1 Macc 13:36–40), and even freed Judea from taxes. This, along with Simon's success in finally subjugating the Akra and with Judaizing Gezer, brought Judea to the stage of independence and Simon was not slow to act accordingly. 1 Maccabees 13:41–42 takes this same year (142 B.C.E.) as the beginning of the independence of Judea.

A symbol of this newly gained independence was the dating of documents by the ruling years of Simon. Two years later, in 140 B.C.E., Simon was made high priest and ruler, and a decree in his honor was inscribed upon bronze tablets for all to see. The text of this decree is preserved in 1 Macc 14:27–45.

Once Judea had become independent of Seleucid rule, there was a need for a constitution and some kind of legitimacy for the ruler's house. Appointment by the Seleucid sovereign was out of the question, since his rule was no longer recognized. Divine sanction was also out of the question. One thing was left for Simon and that was to appeal for a national decree. But, this was also typical of Simon, who usually preferred stability over expansion. With this attitude he was able to achieve a broad consensus. That not all agreed to an appointment of him for an indefinite amount of time, and that some compromise was made with a certain opposition, is implicit in 1 Macc 12:41, where his appointment is limited "… until a true prophet shall arise."

After his aforementioned appointment, Simon ruled for about six years (140–134 B.C.E.). His policy was one of consolidation, not one of expansion (note the poem about Simon's glory in 1 Macc 14:4–15). His tour of inspection, which took place just before he was murdered, may be an indication of the attention he paid to the administration of Judea.

Simon was soon confronted with a real political challenge in the person of Antiochus VII Sidetes. Antiochus VII made a final effort to revive the Seleucid kingdom and to regain its lost territories. In the beginning of Antiochus' struggle for the Seleucid crown (against the usurper Trypho, and after his brother Demetrius II fell into Parthian captivity), in 139/38 B.C.E., he sent a friendly letter to Simon, recognizing what had already been granted to him by Demetrius II, and granting him the right to mint coins (1 Macc 15:6), which Simon never utilized. Afterwards Antiochus VII laid siege to Trypho at Dor. Simon sent military aid which was rejected. Antiochus dispatched a delegate, Athenobius, who demanded of Simon either the return of the territory conquered by the Jews or financial retribution. Simon proudly rejected

this demand, saying that that which the Jews had conquered was their ancestral heritage (1 Macc 15:33–34), and that he was ready to give only a hundred talents to the king.

Sometime later, after taking Dor, Antiochus ordered Cendebeus, his new governor *(stratēgos)* of the coastal region, to harass the Jews. Simon sent his sons, Judas and John, against Cendebeus, and they defeated him somewhere on the W slopes of the Judean hills.

After this defeat, Antiochus resorted to a conspiracy in which Simon's son-in-law, Ptolemy, son of Abubos, played a role. Simon and two of his sons were murdered by Ptolemy on their way to visit him in Jericho, where he was governor. Although Simon and his two sons were murdered, John, another son of Simon, escaped the assassins sent to kill him and took over the government of Judea, even before Antiochus invaded the country.

So, even the last of Mattathias' sons did not die in peace, even though he was the one must prone to peaceful consolidation of the new Jewish state. But the foundations he laid down for this state served well for a few decades.

URIEL RAPPAPORT

6. THE APOSTLE SIMON PETER, SON OF JOHN (JOHN 1:42; 21:15–17; MATT 16:1, 7). SEE PETER (PERSON).

7. One of the half-brothers of Jesus (Matt 13:55; and Mark 6:3).

8. A Pharisee who invited Jesus to a dinner (Luke 7:36, 40, 43–47).

9. A leper who was a resident of Bethany and in whose house Jesus was annointed by a woman with a costly ointment (Matt 26:6; and Mark 14:3).

10. The father of Judas Iscariot (John 6:71; 13:2, 26; 12:4).

11. A Jew from Cyrene who was compelled to carry Jesus' cross (Matt 27:32; Mark 15:21; and Luke 23:26).

12. Simon the Zealot, one of the Twelve (Acts 1:13). See ZEALOTS.

SCOTT T. CARROLL

13. A magician ("Simon Magus") who gathered a following in Samaria by presenting himself as "somebody great" (Acts 8:9–24). The Samaritans recognized him as "that power of God which is called great." It is reported that Simon and his followers were converted and baptized by Philip. However, Simon was rejected by the apostles Peter and John when he tried to buy the power of communicating the Holy Spirit. The story says little about Simon's person or teaching. The author's interests are in the spread of the Christian mission from Jerusalem to Samaria (cf. Acts 1:8) and the character of the Holy Spirit (Barrett 1979). The author does not even say whether Simon repented. The charges of magic are part of the author's polemic against competing cults (cf. Acts 13:6–12; 19:13–20).

The title "Great Power" appears in several strands of Simon tradition and may go back to the historical Simon. Unfortunately, the phrase is not sufficient to determine the content of Simon's claim to be "somebody great" or even the background of his thought. Parallels have been found in Christian and Samaritan texts as well as pagan inscriptions, where the phrase designates God or a god. In Samaritan literature the phrase can also be applied to the chief angel of God. "Great Power" designates several types of being in various gnostic systems, and appears in magical papyri as an entity invoked in spells (Rudolf 1978:320–28).

Later Christian sources regularly refer to Simon as a Magus ("magician"). Although this title could be used positively, it is used derisively of Simon. Both the heresiologists and the popular portrayals of Simon indicate that he and his immediate successors used magic for propaganda. While their great success is admitted, they are accused of defrauding people for the sake of worship or material gain.

Because the heresiologists sought to distinguish Simon's claims from those of their own faith, their accounts probably reveal more about Simonians of the 2d century than about Simon himself. Justin Martyr, writing near the middle of the 2d century, cites Simon as an example of the way in which demonic forces could mimic Christianity (*apol.* 1.26). He reports that Simon came from the Samaritan village of Gitta. During the reign of Claudius, Simon worked his wonders in Rome by means of demons. Justin says that Simon was accompanied by a former prostitute named Helen. She was identified as the

first thought *(ennoia)* of the first god, namely Simon. Justin indicates that Simon had a large following in Samaria and that Simonians in Rome and other regions were called Christians. The Simonians in Rome were probably responsible for the interpretation of a recently erected statue as a dedication to Simon rather than to the Sabine god Semo Sancus who is actually named on the base (*apol.* 1.26, 56). This identification was probably aided by the fact that both Semo and Simon (as the "Great Power") could be identified with Zeus. The extent to which later heresiological accounts of Simon depend upon Justin's lost work *Against All Heresies* is debated.

Irenaeus, writing around 180 A.D., was the first to identify Simon as the source of all heresies (*haer.* 1.23–27). Irenaeus repeats most of what is found in Acts and Justin but explains that Simon's conversion was feigned. He notes that after his rejection Simon set out to learn more impressive magic tricks in order to contend with the apostles. According to Irenaeus, Simon claimed that "he was to appear among the Jews as Son, would descend in Samaria as Father, and would come among the other nations as Holy Spirit." While being the "Absolute Authority," he was willing to be called by whatever name men use. Irenaeus also amplifies the report concerning Helen, citing a myth similar to early forms of the Sophia myth among Valentinians (a gnostic group). The first thought of the father created the angelic powers, who then trapped her in the world. Having passed through many incarnations, including Helen of Troy, she finally appeared in the brothel in Tyre from which Simon rescued her. Similarly, Simon rescues his followers by his grace, although it is not clear whether faith in Simon or self-recognition was required (Rudolf 1978:349). Irenaeus also reports that the Simonians worshiped images of Simon and Helen in the form of Zeus and Athena. They were libertines and rejected the prophets since they believed that the world is ruled by misguided angels. These accusations are commonplaces of heresiology.

Hippolytus' *Refutations* 6. 2, 4–15, written around 230 A.D., adds a description of Simon's death according to which Simon had himself buried with a promise that he would raise himself on the third day, but he did not reappear, "for he was not the Christ." The tale is a polemic portrayal of Simon as a false Christ. The most intriguing parts of Hippolytus' report on Simon are the extracts from the *Apophasis Megale,* which is attributed to Simon himself. Hippolytus' source was probably an interpretive paraphrase of the original (Frickel 1968). The tract presents the revelation of the "Standing One," which can refer to either God or an angel. The tract apparently presented a relatively primitive gnostic system based in allegorical interpretations of the OT with a philosophical overlay, similar to the *Exegesis on the Soul.* It is unlikely that the original document goes back to Simon. Even its relationship to Simonian gnosis has been disputed. In the 4th century, Eusebius quoted Justin *apol.* 1.26, referred to Irenaeus, and added vague charges of immorality (*Hist. Eccl.* 2.13.1–8). Epiphanius attributed features of many gnostic systems to Simon (*haer.* 21.2.4).

While the heresiologists concentrated on the systems and behavior of Simon and his followers, popular Christian literature portrayed Simon as a charlatan, opponent of the apostles, and anti-Christ. The *Acts of Peter,* from the second half of the 2d century, reports a miracle contest between Simon and Peter in Rome. It also mentions a statue erected in Simon's honor in Rome. The climax comes when Simon, the standing one, flies above the city of Rome, but is caused to fall by the prayer of Peter. The use of titles like "Power of God," "Name of God," "Standing One," and "Angel (of Satan)" shows an awareness of Simonian—perhaps Samaritan—traditions. However, the main interest is in Simon as a foil for the apostle's successful preaching.

In the Pseudo-Clementine literature of the 3d century, Simon is presented as a disciple of John the Baptist. After wresting leadership from Dositheus, elsewhere known as a heretical Samaritan, Simon attracts a large following through his teaching and magic. Peter follows Simon from Caesarea to Antioch, refuting his teachings and outdoing his magic. Their conflict becomes the vehicle for debating philosophy and the interpretation of scripture. Simon's use of the title "Standing One," his claim to be the Christ, and the presence of Helen link this material to the heresiological tradition. Later Christian portrayals of Simon seem to depend on the *Acts of Peter* and the *Pseudo-Clementines.* An independent Samaritan tradition treats Simon as a heretical Samaritan, who practiced magic (Fossum 1989:357).

Because the earliest evidence, Acts, represents Simon as a magician without any clear traces of gnostic speculation, Beyschlag (1975) argued that Simon's association with gnostic ideas is secondary, and Simonian gnosis is derived from fully developed Christian gnostic systems. However, the passage is not intended as an exposition of Simon's thought and there is no incompatibility between gnosis and magic. Lüdemann (1975) arrived at the radically different conclusion that Simon himself was a gnostic whose speculation was rooted in Greek thought. The Christian elements were added to the original worship of Simon and Helen under the names of Zeus and Athena. The association with magic was created by Christian polemic. More recently Lüdemann (1987) has argued that the sophisticated wordplay elsewhere in Acts 8:5–24 suggests that the mention of Simon's intent *(epinoia)* is a veiled reference to his female companion *(ennoia),* which would show the author's awareness of Simonian gnosis.

The review essays by Meeks (1977) and Rudolf (1978) show that the study of Simon and Simonian gnosis remains far from consensus. Nevertheless, it is probably safe to suggest that Simon was a contemporary of the apostles who established a syncretistic sect in Samaria. Simonianism was rooted in a mixture of Greek and biblical thought that characterized Samaria. The movement was influenced by Christianity and developed into a gnostic sect by early in the 2d century. Simon's following was dying out by the time Origen wrote in the early 3d century (*Cels.* 1.57). In later times his name was given, on the basis of the story in Acts, to the sin of Simony (the act of purchasing ecclesiastical position). Simon's story continued to develop within the medieval Faust legends.

SIN [Heb *śin* (שִׂן)]. Alternate form of *šin,* the twenty-first letter of the Hebrew alphabet.

SIN, SINNERS. This entry explores the concept of sin—of human deviation from the expressed will and desire of God—as it is developed and presented in the OT and NT.

OLD TESTAMENT

The elaborate conception of sin in the Hebrew Bible reflects the influence of Semitic culture and the strongly ethical-moralistic character of ancient Israelite religion. The complexity of sin as a doctrine in the Hebrew Bible is heightened because different literary genres depict sin in various ways. The richness of these ideas will be illustrated in the following sections:

———

A. Terminology
1. The Term *ḥṭ꞉*
2. The Term *pš꞊*
3. The Term *꞊wn*
4. Other Terms for Sin
B. Origins and Universal Extent of Sin
C. Cultic and Unintentional Sins
D. Sin as Disobedience
E. Sin without Conscience: The Sinner
F. Consequences of Sin
G. Removal of Sin

———

A. Terminology

Like Hittite, Sumerian, and Akkadian literature, Israelite literature draws upon a rich thesaurus for terminology relating to sin. One may count over fifty words for "sin" in biblical Hebrew, if specific as well as generic terms are isolated (*DBSup* 7:407–71). The plethora of Hebrew terms and their ubiquitous presence in the Hebrew Bible testify to the fact that sin was a dominant concern of the Israelite theologians. Indeed, their highlighting of human failure, deficiency, or offense in the cultic, ethical, and moral spheres constitutes a central theme of OT theology. A survey of major Hebrew words for sin will illustrate how the Israelite writers conceived of sin in terms of their own language.

1. The Term *ḥṭ꞉*. The three most important Hebrew roots for sin *(ḥṭ꞉, pš꞊, ꞊wn [꞊wy/w])* have been studied in detail by R. Knierim (1965). Of these, the root *ḥṭ꞉* is by far the most frequent, occurring some 595 times in the Hebrew Bible. The primitive sense of Heb *ḥṭ꞉*, as confirmed by Akkadian and other Semitic cognate evidence, is simply "to be mistaken, to be found deficient or lacking, to be at fault, to miss a specified goal or mark." Thus Judg 20:16 tells of Benjaminite archers who could sling stones at a hair and not "miss"; Prov 19:2 speaks of a hasty person who "misses" the correct road; Job 5:24 uses the verb of finding nothing "missing" among one's property; Prov 8:36 speaks of someone who "fails" to find wisdom. The root *ḥṭ꞉* frequently expresses the ethical failure of one person to perform a duty or common courtesy for another, as in the failure of a vassal to pay tribute to his overlord (2 Kgs 18:14; cf. Gen 31:36; 43:9; 44:32; Exod 5:16; Judg 11:27). The theological sense of *ḥṭ꞉* comes into play when the offense is committed against God, or when failure (even unconscious, inadvertent, or unavoidable) takes place in the sphere of the cult. Sin against God is of utmost seriousness, so that punishment and compensation (expiatory sacrifices) must be exacted. The close relationship between sin *(ḥṭ꞉)* and its consequences is illustrated in the use of the nominal derivatives, which may signify "guilt," "punishment," or "sin/guilt offering" *(ḥēṭ꞉; ḥăṭā꞊â; ḥaṭṭā꞉t);* similarly, two of the derived verbal conjugations may signify the purgative of sin, "to purify or cleanse from sin through sacrifice and ritual."

2. The Term *pš꞊*. A second Hebrew root for "sin" *(pš꞊)* occurs about 135 times, and signifies willful, knowledgeable violation of a norm or standard. Normally it would not refer merely to "a[n inadvertent] mistake," as might be the case with *ḥṭ꞉*. The verb *pš꞊* is thus translated "to rebel, revolt, transgress." The meaning "revolt" is illustrated by the use of the verb in the realm of international politics, where *pāša꞊* signifies the breach of allegiance through violation of a covenant (1 Kgs 12:19; 2 Kgs 1:1; 8:20, 22). These political connotations were imported into the theological sense of the term to mean "rebellion" against Yahweh as Israel's suzerain (1 Kgs 8:50; Isa 1:2; Jer 3:13; Hos 7:13; 8:1). The noun *péša꞊* ("rebellion, revolt") is translated "transgression" in some modern versions of the OT, but this rendition fails to communicate the idea of "rebellious deeds" which is probably to be understood. Other terms for

religious "rebellion" against God include *mārad* ("act insolent, rebel"; e.g., Num 14:9; Josh 22:19; Ezek 2:3), *mārâ* ("contend, revolt, rebel"; e.g., Num 20:24; Ps 105:28; Lam 3:42), and *sārar/sûr* ("be stubborn, rebellious"; e.g., Isa 30:1; Hos 9:15; Jer 6:28).

3. The Term *ʿwn.* A third important Hebrew term for "sin" is the noun *ʿawôn*, which finds some 229 attestations in the Hebrew Bible. Though the etymology of the presumed root *(ʿwy/w)* is disputed, the general meaning of the noun "error, iniquity" is accepted. Hebrew *ʿawôn* is a deeply religious term, almost always being used to indicate moral guilt or iniquity before God (rarely, of guilt before a human: 1 Sam 20:1, 8; 25:24). Metonymic usages of the term illustrate clearly the relationship in Hebrew thought between "sin" and resultant "guilt" and "punishment," since *ʿawôn* may denote any of these three senses (or all three meanings) in a single passage. In Gen 4:13, for example, it clearly signifies "guilt" (forensic and psychological) or "punishment," (penal), and probably connotes both. When used in the plural, *ʿawôn* often refers to a person's iniquitous deeds or crimes against God (e.g., Job 13:23, 26; Dan 9:13). The distinction between the nuances (sin, guilt, punishment) is frequently difficult to ascertain in a specified instance of *ʿawôn.* In at least eight passages, *ʿawôn* is used alongside both *ḥṭ›* and *pšʿ* in simply designating "sins" (Knierim 1965:229–35; *DBSup* 7:339–40). In such cases, especially if the texts are late or liturgical, we may suppose that the individual terms have lost some of their crisp distinctiveness, and are employed as virtual synonyms.

4. Other Terms for Sin. The OT writers describe human evil or "sin" with a wide range of additional terms. The root *ršʿ* signifies criminal wrongdoing or wickedness; the substantival adjective *rāšāʿ* is a common word used collectively for "the wicked." Ethical and moral badness are designated by the root *ršʿ;* various forms of the root indicate "evil, distress, injury, misery, calamity." The root *ʿbr,* "cross over," may be used in the religious sense of transgressing divine statutes, hence "transgression." To disobey God is to "despise" him *(bāzâ),* "spurn" him *(n›ṣ),* "refuse" *(m›n),* or "reject" *(m›s; znḥ)* his rule. The person who rejects religious values is "godless, profane" *(ḥānēp),* "wicked, base, irreverent" *(bĕlîyáʿal),* or "wanton" *(nbl).* Sometimes sins are designated by words which describe how loathsome and abhorrent they are to God, and thus constitute terms for taboo (*tôʿēbâ; šiqqûṣ; šaʿărûrâ;* cf. Humbert 1960; L'Hour 1964). Criminal violence, dishonesty, treachery, oppression, and injustice were ceaselessly denounced by the prophets (*ḥms; šdd; zmm; bgd; rṣ; ʿšq; lḥṣ; ynh; ʿwl;* etc.). Such crimes against persons were judged as abominable and abhorrent to God as specifically cultic sins (Hallo 1985:21–40). Religious apostasy was depicted in terms of sexual promiscuity *n›p; znh*). Cultic inadvertences *(šgg/šgh)* and sacrilege (*mʿl;* cf. Milgrom 1976a) were counted as serious sins even though they might result from negligence. Hebrew words for "trouble, calamity, sorrow" frequently overlap with sin, since in Hebrew thought sin inevitably leads to hardship and suffering (e.g., *›áwen; rāʿâ; ʿāmāl*). The richness of the Hebrew lexicon in terms for sin (only sampled above) cannot fail to impress the reader that human failure in the religious realm was of central importance to the OT theologians.

B. Origins and Universal Extent of Sin

Israelite theologians shared with their 1st-millennium Hittite and Mesopotamian contemporaries several fundamental assumptions about sin. Of first importance: sin was a universal moral flaw, pandemic in the human race. A few citations from Mesopotamian religious texts will establish the context for Israelite thought on this doctrine. In an early Sumerian wisdom text we hear the penitent plead for leniency with his god: "Never has a sinless child been born to its mother, … a sinless workman has not existed from of old" (*ANET*, 590, lines 102–3). An Akkadian incantation for appeasing an angry god employs a similar argument: "Who is there who has not sinned against his god? Who that has kept the commandment for ever? All humans who exist are sinful" (Lambert 1974:281–82, lines 132–43; Seux 1976:207, lines 12–14). Rhetorical questions of this sort were popular forms of expression for this universally acknowledged dogma, reminding the gods that they should not expect too much: "Mankind, as many as there are, Which one of them comprehends his faults? Who has not transgressed, and who has not committed sin? Which one understands the way of the god?" (Ebeling 1953:72–73, lines 8–11; cf. Seux 1976:170 and similarly, *BWL*, 40–41, lines 33–38); "Whoever was there so on his guard that he did not sin? Whoever was so careful that he did not incur guilt?" (Lambert 1959–60:57, lines 105–6; Seux 1976:176; CAD N/ 1:3);

"Where is the wise person who has not transgressed and [committed] an abomination? Where is he who has checked himself and thus not ba[ckslid]?" (Langdon 1927:23, lines 15–18; cf. *BWL*, 16).

The ubiquitous nature of sin emerges with equal clarity from the OT, even on the most superficial reading: disobedience, punishment, and the forgiveness of sin constitute major themes in nearly every book from Genesis through Chronicles. Explicit declarations about universal sinfulness are encountered less frequently in the Hebrew Bible than in Mesopotamian sources, but are nevertheless clear. In the primeval history of Genesis 1–11, God himself is the first to accept this moral verdict against humankind. Having seen that the human race was "only evil continually," and having come to regret "that he had made humankind," God ordered a flood to destroy every living thing, resolving to start anew with the family of Noah (Gen 6:5–7). Yet the catastrophe did not alter the fundamental human problem (sin), as God later conceded: "I will never again curse the ground on account of man, though the imagination of man's heart is evil from his youth" (Gen 8:21). The Israelite theologians never doubted that sin was an intrinsic character trait of the human species (Prov 20:9; Qoh 7:20, 29), for they frequently appealed to this fact in petitions for mitigated punishments or leniency. Thus we read in a lament psalm: "Enter not into judgment with your servant; for no person living is righteous before you" (Ps 143:2), or in the dedicatory prayer of Solomon, "If they sin against you—for there is no one who does not sin …" (1 Kgs 8:46 = 2 Chr 6:36). See similarly Pss 103:3; 78:38–39; 155:9–10 (= 11QPs^{a} column 24, lines 6–7).

What could be the cause and origin of this monstrous human evil? Though the problem of sin's "origin" did become a matter of theological speculation in the intertestamental period and afterward, it was apparently of little importance to the Israelite theologians. The tradition of the "fall" preserved in Genesis 3, which became so important in early Christian thought, was not alluded to in the classical Hebrew writings. Instead, human sinfulness was related merely to creatureliness. Humans were made of dusty chthonic substance (hence, frail and ephemeral), born of impure women in a tainting birth process (hence morally tainted) and made to inhabit a polluted, lower-than-celestial realm called earth (hence, having even more natural proclivity to sin than celestial creatures, who themselves all too frequently fall into error). The relationship of sinfulness to creatureliness is elaborated most fully in the book of Job, where it forms a literary topos (Job 4:17–21; 15:14–16; 25:1–6). The argument is found in the mouth of Job's friends, but no doubt would have represented a dominant Israelite belief (Lévêque 1970:1:259–77; Habel 1981:373–92; Urbrock 1974:1–33). Job himself agreed with the major premises of this argument (Job 14:1–6; esp. 14:1, 4) but disputed its relevance to his own outrageous "punishment."

The unrighteousness of humankind as a function of ephemeral makeup is argued syllogistically by Eliphaz in Job 4:17–21: If God's holy angels are not to be trusted and are occasionally charged with error, *a fortiori* "how much more those who dwell in houses of clay, whose foundation is in the dust?" Elsewhere in genres of lament and petition, Israelite poets appeal to human frailty and ephemerality (under the figures of dust, breath, grass, shadow) in an effort to elicit God's compassion, clemency, or intervention (Job 10:8–9; Pss 90:3–4; 89:47–49—Eng 89:46–48; 102:4–5, 12—Eng 102:3–4, 11; 39 and 103, passim; cf. Pss 78:38–39 and 130:3). These arguments from frailty and ephemerality are themselves linked to human mortality, as articulated in Gen 3:19, "Since you are mere dust, to dust you shall return." The implications of this poetic line, though not always appreciated in modern commentaries, were correctly perceived and exploited in Job 4:19: Human mortality, tragically, was poetically foretold in earthly human origin, so that human failing is a natural and inevitable concomitant of human frailty.

The notion of humans being "impure from birth" was even more easily understood in light of the laws of the Israelite cultus. The psalmist would confess, "Behold, I was brought forth in iniquity, and in sin did my mother conceive me" (Ps 51:7—Eng 51:5). Eliphaz could employ cultic language to argue, "What is man, that he can be clean? Or he that is born of a woman, that he can be righteous?" (Job 15:14; cf. Job 25:4 and note Job's agreement, 14:1, 4). Levitical law and perhaps even earlier ritual customs stipulated mandatory expiatory sacrifices for the defilement of the woman incurred during parturition (Lev 12); every newborn, to that extent, had come into contact with impurity at birth, and hence had a sinful beginning. Biblical assertions about intrinsically sinful human character, such as those found in Ps 58:4—Eng 58:3 and Isa 48:8, are consistent with the explicit arguments in Job.

The argument for inherent human sinfulness found three times in Job might best be corroborated by the experience of Isaiah in his inaugural vision (Isa 6:1–7). The prophet was raptured into the divine assembly where his moral inferiority and sinfulness as merely human were immediately apparent. Only when the seraph (a heavenly creature) removed his guilt and sin with the burning coal could the prophet enter into the proceedings of the council and receive his commission as a prophetic messenger. Isa 6:5–7 is but one of many biblical passages where the lips are identified as the locus of sin, perhaps because the lips are the visible and audible gateway of the human heart (Prov 6:14) where evil originates (Gen 6:5; 8:21; Jer 17:9). At least one Mesopotamian poet thought along these lines, since the interlocutor in the "Babylonian Job" *(Theodicy)* concedes to the righteous sufferer in his final speech that societal injustices are irradicable, being part of the created world order: "Narru, king of the gods, who created humankind; And majestic Zulummar, who dug out their clay; And mistress Mami, the queen who fashioned them; Gave perverse speech to the human race; with lies, and not truth, they endowed them forever" (*BWL*, 88–89, lines 276–80).

It is highly doubtful, however, that the Israelite poets even in the midst of theodicean struggle would have ascribed the intrinsic human sinfulness to the handiwork of God. They might accuse God of meting out punishment too harsh for frail humans to bear (Job 6:12; 10:4, 9); or accuse him of covenant disloyalty (Ps 89:29–46—Eng 89:28–45); or lament that he had created human beings for mere futility (Ps 89:48b—Eng 89:47b), but they stopped short of the claim that God personally endowed them with sinful tendencies. In fact, "sin" *(ḥaṭṭāʾt)* makes its first and only appearance in the primeval history at Gen 4:7, where it crouches like a lurking demon, ready to spring upon unwary Cain to dominate his will. The origin of the sin-demon in Genesis 4 is never told. Despite this shadowy appearance of sin, and despite the Israelite conviction that sin and sinfulness were congenital moral defects, it must also be stressed that the OT theologians never wavered in holding humans responsible for their sins. The spontaneous eruption (origin) of sin in the human heart became a much stronger theme in the oracles of Israel's writing prophets.

C. Cultic and Unintentional Sins

OT texts which treat sin as disobedience, rebellion, disloyalty, or crime are easily understood in modern Western culture where similar categories of ethics and jurisprudence render them immediately familiar. Yet, another vast domain of the biblical understanding of sin is foreign to modern Western religion, but critical to an appreciation of Hebrew religion. This is the Israelite conception of sin as cultic trespass, ritual impurity, sacrilege, and inadvertent sin. As with ancient Mesopotamian religious texts, the distinction in Israelite literature between sin as ethical-moral and sin as cultic-ritual is often difficult to specify. Cultic sins, like moral sins, were counted as grave offenses against the deity: similar punishments (including death) were exacted for both, and similar expiatory sacrifices were mandated for cultic and moral sins alike (e.g., the *ḥaṭṭāʾt* "sin offering" and *ʾāšām, ʾašmâ* "guilt offering"). Furthermore, in many cases it did not matter whether the sin/guilt were committed/incurred intentionally or unintentionally: the consequences, including death, would be the same.

As an approach to the cultic-ritual dimension of sin, we may summarize some representative Israelite laws which reveal the elaborate Hebrew conception of sin. The Kohathite-Levites were to be killed if they even unintentionally looked at or touched the sanctuary vessels (Num 4:13, 20). An animal raped by a human was to be judged guilty and subject to execution (Lev 20:16). The Nazirite who accidentally contacted a dead body (Num 6:9–11) was required to offer an expiatory sacrifice for his "sin." Death was decreed for the Israelite who would eat of the peace-offering on the third day (Lev 19:5–8), and likewise for the Israelite who ate of a sacrifice while in a state of ritual impurity (Lev 7:20–21). One priestly prescription called for the burning of a red cow (her burnt skin, flesh, blood, dung) and a mixing of her ashes with cedarwood, hyssop, scarlet cloth, and water; when applied to a corpse-contaminated Israelite, this concoction was said to "remove sin" (Num 19:1–11). In the same passage it is said that the contaminated person not cleansed with this mixture "has defiled the sanctuary of the Lord" (Num 19:20). An astonishing case is found in an instance of violating a ban: both Jonathan and his father Saul agreed to Jonathan's execution for the offense of "tasting honey" (1 Sam 14:24–44), even though Jonathan knew

nothing of his father's temporary ban on eating. Ritual texts declare that anyone with a pelvic discharge (nocturnal emission, emission of semen during intercourse, regular menstrual flow; Lev 15:16–30) must subsequently offer expiatory sacrifices, or that such persons while "unclean" following such emissions should be removed from the camp (Num 5:1–4) or otherwise face death for "defiling the sanctuary of the Lord" (Lev 15:31). See UNCLEAN AND CLEAN.

The examples above are meant to illustrate that sin and guilt in Israelite religion were serious and complex religious problems, arising not merely from willful disobedience or malice. Sin and guilt in Hebrew terms might have nothing to do with volition, but might be as unavoidable as natural bodily function (see Toorn 1985:23–36). Sin might come through the trespass of one of hundreds of taboos, which only priestly lore could hold in complete compendium. In the case of Jonathan given above (similarly with Jephthah, Judg 11), only superhuman awareness might have averted the transgression and mandatory death sentence which both father and son were prepared to accept. In the examples from Num 19:20 and Lev 15:16–31, the sanctuary is said to be "defiled" by the impure/guilty Israelite because ritual impurity from unatoned guilt is viewed as an aerial contaminant, mystically settling down over the community to pollute it, and most heinously, it comes into contact with the residence and property of God (Frymer-Kensky, *WLSGF*, 399–414).

These brief glimpses of the priestly perspective on sin, or guilt as it was understood in the Israelite cultus, are essential to a balanced understanding of Hebrew religion. If these religious assumptions and values seem odd to us in the modern West, we must remember that Hebrew culture, like other ANE cultures, was dominated by belief in the supernatural and by a clear separation of "sacred" and "profane." Hebrew conceptions of sin must be understood within a universe of thought that transcends the static, materialistic viewpoint of modern science. The Israelite understanding of cultic sin and ritual impurity is recorded mainly in the legal (priestly) sections of the Pentateuch, but also in Ezekiel and to a lesser extent in the Psalter and other prophetic books. The notion of sin as animate evil belongs to the realm of dynamistic thought (*ETOT* 2:382) where divine punishment of a violated taboo might be instant and mechanical. In this clearly supernatural realm, the spoken or written word (oath, vow, blessing, cursing, execration, incantation) was nearly magic. Violations against the holiness of God had a potency of their own, so that the offense of one individual could pollute the land (Num 35:33; cf. Jer 3:1–2, 9; Isa 24:5; Ps 106:38) and bring the entire community under divine wrath. Though the dynamistic conception of sin receives relatively less representation than "sin as disobedience" in the canonical biblical corpus, it must have always been a powerful religious force. Similar notions of sin and impurity are found in religious literature of the Hittites, Sumerians, and Akkadians, where they provide a context within which Israelite laws may be understood.

It was within the framework of Israelite conceptions of sanctity that sin thus became a serious religious problem: by polluting the land and defiling the temple sancta, sin rendered the entire nation susceptible to disease, injury, and direct punishment from God. The elaborate cultic system with its expiatory blood sacrifices, ritual ablutions and sacred rites was meant to counteract this form of evil. It must be stressed that the terms used for "sin" in the realm of the cult *(ḥaṭṭāʾt, ʾāšām, ʿawôn)* are the same terms used to denote "guilt," and sometimes "punishment" (for sin/guilt); the irrelevance of disobedient intent is thus evident even in the nomenclature. Similarly, the root *ṭmʾ* "be (come) impure/unclean/defiled/polluted" often had moral and cultic components which cannot be separated. In the priestly system of thought, it was this concomitant feature of defilement (through sin/guilt) which took on the most menacing and terrifying proportions. To quote Jacob Milgrom, apropos of the Hebrew *ḥaṭṭāʾt,* (the sin/guilt offering):

> The *ḥaṭṭāʾt* as the authorized purgative of the sanctuary echoes with a familiar ring for students of ancient Near Eastern cults in which temple purifications play so dominant a role. Impurity was feared because it was considered demonic. It was an unending threat to the gods themselves and especially to their temples, as exemplified by the images of protector gods set up before temple entrances (e.g., the *šedu* and *lamassu* in Mesopotamia and the lion-gargoyles in Egypt) and, above all, by the elaborate cathartic and apotropaic rites to rid buildings of demons and prevent their return. Thus for both Israel and her neighbors impurity was a physical substance, an aerial miasma which possessed magnetic

attraction for the realm of the sacred … Israel thoroughly overhauled this concept of impurity in adapting it to its monotheistic system, but the notion of its dynamic and malefic power, especially in regard to the sancta, was not completely expunged from the Priestly Code (Milgrom 1976b: 392; cf. Milgrom 1983:250–51 with documentation, and Wright 1987:129–46).

Sin as a form of nonmoral or nonethical evil is also expressed clearly in the Hebrew conception of unintentional (unwitting, inadvertent, unconscious) sin. Sins committed in ignorance were of grave concern to ancient priests and penitents, as the following excerpts from three Mesopotamian prayers will illustrate. In a bilingual *eršaḫunga* prayer, the sufferer admits his proclivity to sin, but does not know which infractions have incited the god's wrath: "I know not what taboo of my god I have violated; I know not how I have encroached upon the sancta of my goddess … The crime I've committed, I know not; The sin I have sinned, I know not; The taboo I have violated, I know not; The sacrilege I have committed I know not … Humans are stupid, and know nothing; People, whoever they might be, what do they know? Whether they've offended or done well, they know not at all; [So] O Lord, do not reject your servant …" (Langdon 1927:40–43, obverse lines 32–35; 42–47; reverse 29–36; cf. Seux 1976:140–42, lines 19–20; 26–29; 51–54). In an incantation for the appeasing of the angry god *(DINGIR.ŠÀ.DIB.BA)* the worshiper queries: "Ea, Šamaš, Marduk, what are my iniquities? … [Though] my iniquities are many, I do not know what I did" (Lambert 1974:274–75, lines 1; 29; cf. 278–79, lines 71–79; 284–85, lines 10–17). In a literary prayer to Marduk, the priest reminds the deity: "People don't know their [faults], they don't see them at all; A god reveals what is good and what is abhorrent; He who has a god, his sins are warded off; He who has no god, his sins are many; When you [Marduk] are at his side, his utterances are choice and his words propitious" (Lambert 1959–60:57, lines 107–12; cf. Seux 1976:176, lines 107–12). In other ritual texts, the sick or suffering penitent confesses a long list of potentially relevant offenses, moral and cultic, recognizing that one or more of them must lie at the basis of his punishment by the deity (Reiner 1956:137, lines 88–95; 143, lines 38' –59'; Reiner 1958:13–16, lines 1–128; Mayer 1976:114–15; Geller 1980:181–92). In both Mesopotamian and Israelite thought, illness was sometimes thought to be related to unintentional or secret sin (Toorn 1985:94–99; 67–87).

In the OT, guilt incurred through unintentional sin was of equal theological significance (Milgrom 1976b: 76–80 [79]) since it might have adverse consequences even for the community. Evidence may be drawn most readily from priestly materials, where "P accords completely with the historical sources that the principle of intention plays no part in violations of sacred taboos, e.g., Uzzah's touching the Ark (2 Sam. 6:6) and the Beth Shemeshites' viewing of it (1 Sam. 6:19) were not deliberate acts" (Milgrom 1970:20). The Hebrew root *šgg/šgh* signifies sin by inadvertence, or unconscious, unwitting sin; see Leviticus 4–5; Lev 22:14; Num 15:22–29; Ezek 45:20 (where *mippétî* means "from naivete"). Unwitting sin was of concern to the biblical psalmists as well; Ps 19:13—Eng 19:12 contains the confession and petition "But who can discern his errors *(šĕgî·ôt)?* So clear me from hidden faults *(nistārôt).*" Punishment for unintentional or unconscious sin also underlies the thought in Gen 20:3–5; 26:10 (cf. Reiner 1956:136–37, line 84); 1 Sam 26:18–19; 2 Sam 16:10; Job 1:5; 11:6 (Heb *tā·ălūmôt*); cf. Num 22:34. The communal lament of Psalm 90, if not referring to the "sins of one's youth," contains the accusation in v 8: "You have set our transgressions right in front of you, and our hidden (*·ălūmîm*, = unwitting, unconscious) sins in the light of your face." From a cultic-ritual viewpoint, unconscious sin would have been dangerous: the menace of its contagion would continue to grow as long as the offense were undetected and unatoned.

In Israelite and Mesopotamian literature, the "sins of one's youth" are sometimes allied with sins of ignorance. Accurate account books were thought to be kept in the heavenly court, so that sins left unpunished and unexpiated from one's youth might later be "remembered" by the deity and brought forward as a basis for punishment. Thus an Akkadian penitential prayer to Šamaš reads: "[the sin(s) which I have commit]ted from my youth [until] adulthood—may they not pursue me. May they be removed 3600 'miles' from me" (Ebeling 1953:54–55, lines 18–20; cf. Seux 1976:287), or in a prayer to Marduk: "The sins which I have committed, known and unknown, from my youth up, please forgive … The grievous transgressions which I have committed since my youth, please absolve and forgive seven times"

(Ebeling 1953:72–73, line 18; 74–75, lines 36–37; Seux 1976:170, 172). A confession of the following sort is not uncommon: "When I was young and naive, I didn't know what sin I committed; Being young and sinful, I am sure to have transgressed the will of my god" (Mayer 1976:115; cf. Seux 1976:404).

The OT psalmist could pray similarly, "Do not remember the sins of my youth" (Ps 25:7), or "Cast far from me the sins of my youth, and may not my transgressions be remembered against me" (Ps 155:12 = 11QPs[a] column xxiv, line 11). Job, though lacking the privileged viewpoint of the modern reader on the real cause of his suffering (a cosmic wager—known from the prologue), assumes that sins of adolescence might be brought up by God for reckoning: "You write harsh decrees against me, and make me to inherit the iniquities of my youth" (Job 13:26). Israelite literature preserves the parallel idea of children inheriting the punishment for their parents' sins—an idea once again shared by the Mesopotamian theologians (Lambert 1974:280–81, lines 114–20; Seux 1976:171, note 22 and lines 22–24). The idea of delayed penalty seems to be consistent with other notions of corporate (national) personality in the OT (Exod 20:5–6; 34:6–7; Num 14:18; Deut 5:9–10; Jer 32:18; cf. 1 Sam 15:2–3; 1 Kgs 21:28–29), but the application of delayed punishment to individuals was less readily accepted (Scharbert 1958:22; 1957:130–50). More than once the Israelites who bore the punishment for their "fathers' sins" were inclined to question the justice of such a principle (Jer 31:29; Ezek 18:2) and lamented its application: "Our fathers sinned, and (Heb Qere reading) now they have passed away; But (Heb Qere reading) *we* are the ones who bear their punishment!" (Lam 5:7). The individual application of delayed punishment (imputed guilt) may be seen in the psalmist's imprecation: "May the iniquity of his father (!) be remembered before the Lord, and let not the sin of his mother be blotted out; Let them be before the Lord at all times" (Ps 109:14–15a; see a similar imprecation and the singular usage of *ʾābôt* in Isa 14:21 [*HALAT* 1:2 (#9, and Ps 109:14 and Isa 14:21)]). The importance for Israelite theology is that sin (guilt, punishment) would accumulate if not expiated and forgiven: it might be visited upon an individual later in life, or upon a subsequent generation.

D. Sin as Disobedience

If the priestly literature in the Hebrew Bible depicted sin in terms of injury to God's holiness and violation of cosmic order, with deleterious consequences for the community (contamination and contagion), Israel's prophets and historiographers more characteristically spoke of sin in terms of disobedience, rebellion, covenant disloyalty, and religious apostasy. Both conceptions are important in Israelite theology, for even the prophetic corpus shows concern for cultic-ritual sin. Sin as moral-ethical evil implicates the human being as a creature of choice in a contest of wills and allegiances: the autonomous will of the creature versus the authority and will of the Creator. Stated thus, sin is "comprehended as a *conscious and responsible act*, by which Man rebelled against the unconditional authority of God in order to decide for himself what way he should take, and to make God's gifts serve his own ego" (*ETOT* #2:383). Students of the Bible frequently find the highest literary expression of this "contest of wills" in Genesis 3. In that profound and paradigmatic story, human curiosity, jealousy, and mistrust join with the desire for personal autonomy, leading finally to the overt act of hybris, rebellion, and disobedience. The conditions of sin inaugurated by these acts of disobedience immediately initiate the fracture of harmonious relationships within culture and the physical environment. In the remainder of the primeval history (Genesis 4–11), the reader encounters successive episodes of humans transgressing the limits established by divine revelation: fratricide (4:1–16); illicit sexual liaisons with divine creatures (6:1–4); pandemic societal violence (6:11–12); the assault of heaven itself in the building of the Babel tower (11:1–10). Described in such terms of rebellion and hybris, sin alienates humans from each other, from their earth, from its animal population, and from their Creator.

In the canonical flow of the OT, despite repeated demonstrations of divine grace in mitigated punishments, election, promise, covenants, and means of forgiveness, the propensity for human rebellion is never diminished. The covenants based upon human institutions (feudal systems of land grants, suzerainty treaties) were meant to heighten Israel's awareness of the demands for allegiance and obedience: since God had pledged his loyal love to the nation, he could legitimately expect their obedience to his commands. Yet the biblical theologians never tire of telling how Israel sinned great sins

of infidelity: failing to trust their suzerain, violating the stipulations of their sworn agreement with him, and ever being lured away by the forbidden religious practices of their Near Eastern neighbors. Sin as covenant disloyalty permeates most of the Hebrew Bible, but particularly the theology of the Deuteronomistic historians (Weinfeld 1972) as found in the books of Deuteronomy, Joshua, Judges, 1–2 Samuel, 1–2 Kings. The prophets likewise found a basis for indictment in the covenants, but each added his personal imprint on the description of sin, "sometimes as ingratitude (Amos) or as inner aversion and hostility (Hosea), as arrogance and self-exaltation (Isaiah), or as deep-seated falsity (Jeremiah). But they all point in the same direction, namely toward an alienation from God which, because it is a voluntary abandonment of Yahweh, breaks the bond between God and Man, and can therefore be nothing other than disruption and destruction of the divine order" (*ETOT* #2:387). The national religious leaders (notably the kings, prophets, priests) who by their divine election and spiritual qualifications might have restrained sin through exemplary leadership all too often, the biblical theologians tell us, actually led the Israelites in sins of religious apostasy (e.g., 1 Kgs 14:16; 15:26, 34; 16:2, 13, 19, 26; 21:22; 2 Kgs 21:11, 16). Sin at the national level (e.g., the book of Judges) or individual level (e.g., Jeroboam) could thus provide a controlling literary theme used to structure the composition or redaction of theological narrative in the Hebrew Bible (Mullen 1987:212–32).

E. Sin without Conscience: The Sinner

The Israelite doctrine of universal sin (see section 2 above) poses a certain tension for modern readers who will also encounter texts making categorical contrast between the character and fate of "the righteous" as opposed to "the sinner." Psalm 1, for example, characterizes the "sinner" (vv 1, 5; also called "the wicked," vv 1, 4, 5,6) as unstable and doomed to an early death, while promising blessedness and triumphant fate for the "righteous" (v 6). If all people are indeed "sinners," how then may some be called "righteous"? The nouns and substantives used to designate the "wicked" as a class are derived from familiar Heb roots: "sinners" (*ḥaṭṭāʾîm = qattāl* noun-of-occupation); "rebels" *(pôšĕʿîm);* "godless" *(ḥănēpîm);* "evil" *(rāʿîm);* "wicked" (*rĕšaʿîm* = unpardonably guilty), etc. The Wisdom Literature of the OT, in particular (Proverbs, Job, Qoheleth, many Psalms), contrasts the "wicked" and the "righteous" as categorical opposites. According to this conventional manner of speaking, the wisdom tradition affirmed that the "wicked" produce only evil deeds and face a calamitous end, while the "righteous" prosper under the blessing of God. According to other representatives of the wisdom tradition (Job, Qoheleth), empirical evidence shows that such optimism is naive; a major burden of theodicy (Job, Qoheleth, certain Psalms, sections of Jeremiah) was to explain the failure of this religious optimism when applied to the individual. But the prophets also spoke of those opposed to the rule of Yahweh as "the wicked," and they prophesied eschatological doom upon these "sinners" (e.g., Isa 1:28; 13:9). In the case of corporate punishment (national disaster), it was easier to see that the political agents of divine judgment might not discriminate between the guilty and the innocent. Despite such theological tensions, generalizations about "wicked" and "righteous" are made throughout most of the OT.

The use of such categorical distinctions recognizes on the one hand a natural proclivity to sin (inherent in humanness, and predicated of all people) and on the other hand an utterly lawless orientation to life which characterized sinners without conscience. Among the latter might be irreligious, impious, sacrilegious people who refused to accept religious norms; they also might be oppressive, violent, murderous people who behaved only according to selfish interest. The "wicked" of the Hebrew Bible might also be those whose religious faith was not purely Yahwistic, or whose religious practices were not approved by the official Jerusalem priesthood. It may therefore be suggested that these characterizations as "wicked" and "righteous" were sometimes moral judgments and at other times were more fundamentally sociological categories. The conscientious Yahwist might well be guilty of sin in many respects (Ps 51:3–11—Eng 51:1–9), but could be joyful only when confession, restitution and forgiveness had brought a restored relationship with God (Ps 51:12–19—Eng 51:10–17). The wicked, by contrast, were incorrigibly bad (Prov 9:7) and utterly refused to recognize the rule of Yahweh (Ps 94:7). It was in this light that Hebrew poets writing for the cult might include embarrassing declarations of innocence and unqualified claims of righteousness (Pss 7:9—Eng 7:8; 17:1–5; 18:21–25—Eng 18:20–24; 26:1–7, 11a)

as well as deep confessions of sin (Pss 25:11, 18; 32:5; 38:4–5, 19—Eng 38:3–4, 18; 39:9—Eng 39:8; 40:13—Eng 40:12). It was this ambiguity of language which Job's friends artfully exploited to their advantage in the debate over Job's "sin." Job avowed his innocence (10:7a; 11:4; 13:23; 33:8–11) which the reader knows to be accurate from the prologue (1:1, 8), and he claimed to be *ṣaddîq* ("righteous"; see 12:4; 6:29; 27:6; 13:18–19); at the same time, Job admitted that in an absolute test for righteousness, no one could emerge *ṣaddîq* (9:2; cf. 9:29–31; 14:4). Job's friends clung desperately to this latter belief, affirming that some hidden sin must stand behind his suffering.

The tendency to identify "sinners" as a class became most pronounced when Israel's national security was threatened: the wicked were those who threatened God's rule, or who were responsible for the weight of guilt which brought the chastisement of God. In the Psalter these wicked "workers of iniquity" become the personal enemies of the king and of Yahweh. They are inveterate sinners and incorrigible criminals, whose wickedness takes on a demonic character. Israel's poets hurl vile imprecations against these godless, perverse, oppressive, and sacrilegious opponents of righteousness (Pss 69:23–29—Eng 69:22–28; 109:6–20; 137:7–9; 140:8–12—Eng 140:7–11; cf. Jer 20:7–12). Though the identity of the "enemies" has not been determined with precision, they are seen to be such a great menace that they are better dead than alive (Westermann 1981:188–94; Birkeland 1955; Keel 1969). The prophets of Israel, though usually in less passionate and vitriolic language, likewise looked forward to the day when these "wicked" would be eradicated from the earth or reduced to impotence.

The categorical differentiation of "sinners/wicked" from "righteous" is found in several genres of Hebrew writing. Wisdom and prophetic literature display this feature, as do the Psalms and some other liturgical texts. If this simple categorization scheme appears unrefined, it must have nevertheless provided Israelites with a powerful incentive to behave in accordance with ethical norms. The catalogs and descriptions of behavior assigned to "sinners/wicked" reminded Israelite citizens that sinners weakened the moral stability of society, and that to violate ethical principles marked one as a treacherous person and a corrupting influence. It must be stressed that the "sinner" in these texts is one who falls under divine disapproval *primarily* for immoral or unethical conduct toward other human beings. In Proverbs, for instance, the catalog of "abominations" *(tôʿēbâ)* hated by the Lord lists mainly sins against persons: deceit, dishonesty, favoritism, devious plotting against another person, punishing of the innocent, inciting quarrels (Prov 6:16–19; 26:25; see also 3:32; 11:20; 12:22; 15:8, 9, 26; 17:15; Hallo 1985:34–38; Toorn 1985:10–23). The Psalms lament and denounce disloyal citizens who vilify neighbors and colleagues with slander, gossip, lies, false accusations, and sorcery (see Toorn 1985:19–20). The Hebrew prophets indict as sinners those who selfishly abuse power and wealth to institutionalize social injustice, using political and economic oppression to maintain their own privileged positions. Thus, while "sin" as a relational concept usually sets the unethical, immoral or irreligious person against God, the specific "sins" which inform the categorization "sinner" are often violations of the dignity and rights of other persons. Toorn carefully documents a comparative study of sin in Israelite and Mesopotamian thought, clarifying how fundamental social and ethical concerns were in definitions of sin (Toorn 1985, esp. 13–23).

While some OT texts depict the wicked as unredeemably bad and unpardonably guilty, some writers held out hope for the sinner's reform. Reform was the usual outlook in Mesopotamian prayers: the punishment of sin in chastisement and suffering (with ultimate healing) was meant to instruct other sinners to reverence the deity more faithfully. An Akkadian absolution ritual ("*lipšur* litany") thus contains the following petition: "[Through] all my sins, all my errors, all my crimes, may the unbeliever [lit., "he who does not fear god"] learn from my example, whoever was neglectful, whoever committed grievous sins against his god and his goddess" (Reiner 1956:142–43, lines 50' –52'). The Babylonian "Righteous Sufferer" who has come through chastisement and healing admonishes his countrymen: "He who has done wrong in respect to Esagil (the Temple), let him learn from my example" (*BWL*, 56, line p; cf. Mayer 1976:307–49, esp. 327–30). Israelite psalmists entertained the same hope, as expressed in Ps 51:15—Eng 51:13, "Then I will teach transgressors your ways, and sinners will be converted to you" (cf. Ps 25:8). The prophet Ezekiel likewise pleads with the "wicked" *(rāšāʿ)* of Israel to avert divine punishment by turning from evil (Ezek 18:21–23; 33:10–19).

F. Consequences of Sin

The consequences of sin, according to the Israelite theologians, were manifold and always grave. Sin ruptured the relationship between the creator and the creature, and set in motion a series of consequences which, if unchecked, would eventuate in the "death" of the individual sinner. The emotion first shown by God in response to sin is told in the primeval history: he felt regret and remorse for having created the human race (Gen 6:5–7). Within the framework of covenantal theology, God's response to sin was more commonly a visible display of "wrath" *(ʾap)* which "grew hot" *(ḥārâ)* against the sinner and led to punitive action (Considine 1969:85–159). Human sin would awaken the righteous indignation of God, and his holiness demanded further response. Divine disapproval was automatic in the case of calculated and malicious acts. Yet, a study of divine wrath would show that violations of taboo and other cultic infractions were just as likely to kindle God's anger as were rapacious acts of violence (Lev 10:6; Num 1:53; 16:22; 18:5; Josh 22:20; 1 Sam 4:17; Qoh 5:5—Eng 5:6; cf. Milgrom 1970:21 note 75). On other occasions, divine wrath in response to human error cannot be readily explained, and though it may appear as mere caprice, can be understood as essential to divine freedom (Num 22:20–22, 31–35; 2 Sam 6:6–8; 24:1, 10 [cf. the Chronicler's midrash in 1 Chr 21:1]; Exod 4:24). Sin is said to provoke God's "jealousy" (Heb *qnʾ;* verbal, adjectival and nominal forms); it is that which "irritates" *(kʿs, Hipʿil)* or "antagonizes" *(nsh, Piʿel*) him, and issues forth in divine "vengeance" (*nāqām, nĕqāmâ;* cf. Pitard 1982:5–25).

The OT emphasis on divine wrath and vengeance has prompted modern theologians to ponder the problem of "injury" and "harm" being done to God through sin. If God is truly transcendent, why should he feel so threatened by human misbehavior, as though sin personally harms him or takes something from him? How can the sin against him be compensated through expiatory (substitutionary) sacrifices? The question of how God is injured by sin was already a matter of speculation in the story of Job: both Job and his friends, ironically, doubted that human sin should disturb the divine agenda significantly (Job 7:20, 12; 22:2–4; 35:6–8; cf. Jer 7:19). Perhaps on the deepest level neither ancient nor modern theologians have adequately answered this question. Yet all ancient religions of the Near East maintained as axiomatic the religious principle that the gods were duty-bound to uphold the moral order of the universe by rewarding righteousness and punishing sin. Societal stability depended upon the maintenance of its moral fabric, and this the gods had to insure. If the ancient poets employed anthropological language in describing divine emotions concomitant with the discharge of this divine obligation, they can surely be forgiven; would it be less troublesome theologically to have God mete out justice in the stoic, dispassionate and uncaring manner of an executioner?

According to what principles did the OT theologians envision the execution of divine punishment? If indeed there was a consistent Israelite dogma of talionic retributive justice, why are there so many apparent exceptions—including the major voices of dissent heard in the books of Job and Qoheleth which were also endorsed as canonical by official Judaism? Did God intervene by fiat to personally administer punishment, or did he employ agents, or did he merely maintain the balance of natural events which automatically bring the sinner his just due (so Koch 1955:1–42)? Evidence for each of these modes of punishment may be found in the OT, and the narrative in 1 Kings 22 shows how convoluted schemes of divine punishment might become. However, the lack of scholarly consensus on these questions testifies to the fact that the diversity of viewpoint and the complexity of the problem even among ancient writers have not been fully appreciated. In the following broad canonical sweep we may survey some of the dominant and influential viewpoints on the topic of God's punishment of sin.

In the primeval history of Genesis 1–11, recurrent episodes of sin result in the alienation and estrangement of humankind from God. The first episode (Genesis 3) also leads to the fracture of human society and disruption of nature: hostility now dominates the relationship between the woman and the serpent, between the woman and the man, between the woman and her sons. The man and the ground from which he was taken become mortal enemies, each struggling to take life from the other, until the ground finally gains victory. Cain's sin (Gen 4:1–16) results in ostracism and exile; his expulsion from civilized, cultured society leads to the birth of a new restless, violent society apart from God (Gen 4:17–24; 5:28–29). Global violence and forbidden marriages with celestial potentates prompt God to decree

global destruction (Gen 6:1–9:18), and even in the salvation of Noah's family, crime leads to the enslavement of one nation by another (Gen 9:17–27). Human hybris reaches its zenith at Babel: the assault of heaven is answered by God in the dispersion of races through the confusion of language (Genesis 11). In such pictures the epic narrator unveils sin and punishment in paradigmatic form: these episodes prefigure the character of sin and suffering which will reverberate throughout the canonical telling of Israel's history.

In the election of Israel as the covenant people of Yahweh, a new basis for the punishment of sin was established. Israel now became bound under oath to observe the terms of the covenant with Yahweh (Exodus 24), and Yahweh became the God who must uphold drastic forms of punishment if Israel wavered in covenant fidelity (e.g., Deuteronomy 27–28). Thus the Deuteronomistic historians and the prophets would ceaselessly remind the wayward nation that the rise and fall of national fortunes was a direct function of covenant loyalty: When they were under the heel of foreign oppression, it was because Yahweh had abandoned them, allowing their enemies to exact a penalty for their sins.

The doctrine of retributive justice meted out mechanistically against human sin appears simplistic to a modern read of the OT. However, parallel literary genres of the Fertile Crescent suggest that ancient historiographers and theologians adopted this construct as a didactic literary convention. We may illustrate two episodes of Israelite history with contemporary Near Eastern parallels to show how pervasive this paradigm was. In 1 Samuel 21 the narrator tells of a three-year famine which had come upon the land of Israel for unclear reasons. When King David finally inquired of the Lord to ascertain the cause, Yahweh told him it was on account of Saul's murder of the Gibeonites, in violation of a sworn oath. Expiation for the crime was immediately made (through a reciprocal bloodbath of Saul's descendants) and the Lord relieved the famine. A strikingly similar story is told in the prayer of the Hittite king Mursilis to the Hattian storm god. He laments that a plague which had broken out during the reign of his father had continued unabated in his own reign. Upon inquiry, the storm god revealed through an oracle that violation of a sworn agreement with the Egyptians was the basis for the divine punishment. Restitution and confession were needed to expiate the crime perpetuated by the Hittites during his father's reign (*ANET*, 394–96; cf. Malamat 1955:1–12). The assumption in both accounts was that national disaster was necessarily a consequence of sin (even if committed during the reign of a previous ruler); it was imperative that the sin of the fathers be identified and expiated so that divine wrath might be assuaged.

A second illustration of the pan-semitic doctrine of retribution may be drawn from the Israelite historians' account of the fall of Judah in 586 B.C. The Hebrew prophets leave no doubt that the destruction of the temple and the "seventy-year" exile are divine punishment for sin. A similar logic is found in Esarhaddon's report of the downfall of Babylon a century earlier (ca. 689 B.C.E.). Esarhaddon's account is found in several editions, all of which ignore the important political realities, viz., the destruction of Babylon by Sennacherib's armies; they offer instead a theological interpretation of the sequence of events (Brinkman 1983:35–42). According to Esarhaddon's court historiographers, the Babylonians had become excessively evil: they constantly spoke lies and deceit to one another; they took bribes, abusing the weak and enriching the strong; they allowed murderers and oppressors to become established in the city; robbery became commonplace, as did disrespect for parents and disobedience of slaves; the Babylonians even plundered the temple treasury to make protection payments to the Elamites. The sins of the Babylonians finally became too much for Marduk their god: Marduk flew into a rage, ordering the destruction of the city through a violent flood and its return to a swamp. The gods flew up to heaven and the Babylonians themselves were sold as slaves among the foreign riffraff (Borger 1956:12–15, episodes 1–10). Though Marduk originally decreed for his city seventy years of desolation, ultimately his mercy prevailed and he reversed the number ("turned it upside down"), authorizing Babylon's restoration in the eleventh year (*LAR*, 243). Though modern political historians would reconstruct the events quite differently, Esarhaddon's version conforms to an ancient (and biblical) perspective where causality in history can be reduced to the simple matter of sin and punishment (see in addition to Brinkman's article further examples discussed in *AHG*, 98–114).

An important contribution on the nature of divine punishment mirroring the sin has been published by P. D. Miller (1982). Miller demonstrated that judgment and punishment in the OT conform to a pattern of "poetic justice," where the penalty inflicted upon the sinner constitutes a matching repayment in kind for the harm done in the offense. Thus, the king who does "evil" *(rāʿâ)* will suffer "calamity" *(rāʿâ)* of his reign as punishment (e.g., 1 Kgs 21:17–19). While the general principle of commensurate talionic punishment was found in ANE treaty curses and law codes, the literary vehicle used in the Hebrew Bible employs of a poetic form of the talion, often achieved through paronomasia and other elaborate turns of phrase.

We have already discussed some of the consequences of sin in priestly thought (see section C above). The sinner incurs guilt through transgression, and is made to "carry" *(nśʾ; sbl)* the weight of guilt until it is removed through cultic rites and divine forgiveness. In the interim, depending upon the precise nature of the sin, the guilt-laden sinner may expect sorrow *(ʾáwen),* sickness (Pss 102; 107:17–18; cf. Seybold 1973) and other forms of suffering (*ʿāmāl,* etc.). Israelite theologians at some periods linked sin and suffering so closely that suffering apart from sin was inconceivable (Job; cf. John 9:2). For very serious offenses the sinner might expect the death sentence (at least according to the ideals of the Law). The death penalty might be carried out by the community as part of their judicial responsibility, or administered by God himself in the law of *karet* (Wold 1979; Milgrom 1970:5–8; Knierim 1965:48–50, 73). The "*karet* formula" ("[that person shall be] *cut off* [from my presence]"; Lev 22:3 and often) most often envisages death through direct divine intervention, and is consistent with the many passages which cite "death" as the consequence of sin (e.g., Num 18:22; 27:3; Deut 24:16; 21:22; 22:26; 2 Kgs 14:6; 2 Chr 25:4; Ezek 3:20; 18:4, 20; Amos 9:10). If a persistent sinner did not die physically as a result of sin, living under the threat of imminent death must have itself been a terrifying punishment. In the case of a capital crime, the sinner might still hope that repentance would move God to commute the sentence (e.g., 2 Sam 12:13) or delay it (e.g., 1 Kgs 21:28–29).

G. Removal of Sin

If the OT theologians spoke of sin's consequences in very grave terms, it must also be remembered that forgiveness of sin formed a vital doctrine in Israelite faith. Though the path to forgiveness through repentance and cultic ritual might be complicated, though compensation and expiation might be costly, and though some natural consequences of sin might be irreversible, the hope of restored relationship with God found an equally important place in the Hebrew Bible. One Israelite poet's expression of this confidence in the *Miserere* (Psalm 51) provides a supreme and elegant display of such faith. On a national scale, even though punishment of sin should result in expulsion from the holy land of Israel, the exiled community could pray and hope for forgiveness and national return (1 Kgs 8:44–53). Nourished in the poems of Israel's psalmists and writing prophets, this promise of forgiven sin formed the basis of hope for permanent national identity which would live on in the hearts of Jewish believers for many centuries.

NEW TESTAMENT

Following Jewish usage, the NT authors consider "sin" to be an activity or a stance which is opposed to God. Since God loves humanity and commands that humans love their fellows, sins against humans are also sins against God. There are three distinguishable although partially overlapping views of sin and sinners: (1) a sin may be an individual wrong act; (2) a sinner may be a person who lives without regard to the will of God and who consequently sins by routine; (3) sin may be conceived as a "power"—some sort of active agent—which opposes God and which can capture humans and make them sinners.

D. Sin as an Enslaving Power

———

A. Terminology

1. *Hamartia* and its cognates, translated "sin," "to sin," and "sinners," are the most general terms and exhibit the widest range of meaning. In the OT and other literature known in both Hebrew and Greek (such as Ben Sira), *hamartia -tanein, -tōlos* translate *ḥātā᾽* ("sin," sometimes "impurity") and its cognates, which gives it a wide range, but it also is used for Heb *pāša῾,* "transgress, rebel," and especially for *rāšā῾,* "wicked," and their cognates, as well as other words (for a list of translations in the Greek OT see *TDNT* 1:267–71). We shall see the significance of this in section C below. In pagan Greek usage the meaning of *harmartia* is also quite wide. In early Greek literature "sin" can refer to almost any sort of error: missing the mark in throwing a javelin, committing a procedural mistake in sacrificing, or harming or disregarding

others. In later Greek philosophy (from Plato to the Stoics and Cynics), "sin" was especially connected with ignorance: the person who really understands what he or she is doing and its consequences will do what is right (*TDNT* 1:293–96, 296–302; Kaye 1979:30–33).

2. *Paraptōma, parabasis* mean respectively "trespass" and "transgression" and thus refer to individual acts ("trespass":Matt 6:14–15; Rom 5:15–20 and elsewhere; "transgression":Rom 4:15; Gal 3:19; Heb 9:15 and elsewhere).

3. *Parakoē* is "disobedience" (Rom 5:19; 2 Cor 10:6; Heb 2:2; the verb in this meaning appears in Matt 18:17).

4. *Adikia* means "unrighteousness," usually against a fellow human (e.g., Luke 13:17, where it is translated "dishonesty").

5. *Asebeia* means "impiety," usually against God. *Asebeia* and *adikia* appear together in Rom 1:18, translated "ungodliness and wickedness." *Asebeia* and its cognates appear six times in Jude (vv 4, 15, 18).

6. *Kakia* and *ponēros* mean "wickedness" (e.g., 1 Pet 2:6) and "evil." *Ponēros* is very common in the gospels (e.g., Matt 5:11, 37, 39, 45).

7. *Opheiletēs* is a "debtor," and sometimes it and the cognate verb are used to refer to "debt" to God or the neighbor incurred by transgression (Matt 6:12; Luke 11:4; 13:4, translated "offenders"). This usage probably depends on the Aram and late Heb use of *hôb, hôbâh, hôbā*, to mean both "debt" and "sin" or "guilt" (Black 1967:140).

B. Sin as Transgression or Trespass

The general Jewish view, accepted throughout the NT, was that all people "sin" in the sense of "commit a sin at some time or other." According to Paul, "all have sinned and fall short of the glory of God" (Rom 3:23), and in Rom 5:12 he traces this situation back to Adam in a difficult passage which will occupy us below. He found it hard to think of anything which he himself had done wrong, save persecuting the Church (1 Cor 15:9; Phil 3:6), but he had to grant that at the judgment, God might find some flaw in his behavior (1 Cor 4:4). The assumption of universal sinfulness is also seen in the Lord's Prayer, where the disciples are told to say, "forgive us our debts" (Matt 6:12) or "forgive us our sins" (Luke 11:4). All four Gospels and Acts place early a passage which displays the assumption that all have sinned: "he [Jesus] shall save the people from their sins" (Matt 1:21); John the Baptist preached "a baptism of repentance for the forgiveness of sins," and Jesus preached, "repent" (Mark 1:4, 15); Zechariah prophesied that his son John would "give knowledge of salvation to his people in the forgiveness of their sins" (Luke 1:77); John the Baptist said of Jesus that he "takes away the sin of the world" (John 1:29; on the assumption of universal sin in John, see Kümmel 1973:290); at the conclusion of the first Christian sermon there is a call to all to repent and receive forgiveness of their sins (Acts 2:28). The assumption that all humans sin can be found in the major parts of the NT: the gospels, Acts, and Paul's letters. The same assumption is found in the other major divisions and books of the NT. In the Deutero-Pauline epistles, see Eph 2:1 (before conversion the readers were dead in their trespasses and sins); in the Catholic Epistles note James 5:16 (the readers should confess their sins to one another) and 1 Pet 2:24; 3:18. The view is reflected in Heb 2:17–18; 4:15 and Rev 1:5, and argued strongly in 1 John 1:8–10.

The passages just listed do not specify what the sins are which have been committed, but they are viewed as individual wrong thoughts or actions (for a fuller list of passages, see *TDNT* 1:295). There would not have been much disagreement about what counted as "wrong," at least at a general level. Jewish sexual ethics differed in part from those of pagan society, but otherwise there was general agreement about right and wrong. In detail, of course, there would be differences from group to group. One group, for example, may have had stricter rules than another about what to do in the case of property left on deposit which was not reclaimed. Everyone would agree, however, that appropriating it for one's use before the set date was wrong. The general view that all people transgress would strike a responsive chord everywhere even without defining what counted as sin.

Sins (or trespasses, transgressions, and the like; see the list of terms in section A), since they are individual wrong thoughts or deeds, may be atoned for. The very call to repentance implies this, and it is stated explicitly in Matt 12:31, which gives an exception to the rule: blasphemy against the Holy Spirit

will not be forgiven. In Judaism, sins were to be confessed to the priest and accompanied by a sacrifice. In the case of transgression against a fellow human, restitution should also be made (usually with an added fifth of the value of what was acquired dishonestly; see Lev 5:24—Eng 6:5). This view is continued in Matt 5:23–24, but the general Christian opinion was that the sacrificial system had been superseded. One should confess directly to God, or to other members of the Christian community, and thus obtain forgiveness. According to the book of Hebrews, forgiveness of sins requires the shedding of blood (9:22), but the sacrificial system is no longer effective (10:11). Forgiveness is obtained, rather, by the blood of Christ (9:14; 10:12). The connection between Christ's blood and forgiveness appears also in Matt 26:28; Rom 3:25; Eph 1:7; 1 John 1:7; Rev 1:5b; 7:14; cf. Rom 5:9; 1 Pet 1:18–19.

Some Christians thought that those in Christ should be empowered to live without transgression. Paul's view was that Christians had been freed from "the law of sin and death" (Rom 7:24–25; 8:1–8), and he urged his converts to live "blamelessly" or "without fault" (Phil 2:15; 1 Thess 5:23). The author of John could write as if those who accepted Jesus would have no sin (John 15:22, 24), and a member of the same school proposed that "no one who abides in [God] sins" (1 John 3:6). This could be stated in the positive: Those in whom God abides have love perfected in them, and this gives them "confidence for the day of judgment," apparently the assurance that if love abides in them sin does not (1 John 4:12, 17). The author of Hebrews, thinking that sin requires atonement and that Jesus had offered "once and for all" the one satisfactory atonement (9:26), stated that those who sinned deliberately after conversion could not be forgiven (Heb 10:26–27; sexual immorality may be especially in mind: 13:4). But this ideal of perfection foundered on experience. Paul, as we saw, was not completely confident that he achieved blamelessness himself (1 Cor 4:4; cf. 1 Cor 9:27; Phil 3:11–12), and he had to reckon with quite serious transgression on the part of some of his converts (1 Cor 5:1–5, 11). The author of 1 John wrote that those who say they have not sinned make God a liar (1:10). While this possibly refers to pre-Christian sin, the perfect tense of the verb implies that the consequences of sin remain, and thus it appears that sin by Christians is granted, despite the theological principle that those who participate in Christ, who was sinless, are themselves sinless (1 John 3:5–6). Christian sin is also reckoned with in 1 John 2:1; 3:20; 5:16 (Kümmel 1973:297).

The last passage refers to a sin which is not "mortal" *(pros thanaton)* and states that a sin by a Christian which is "mortal" may not be prayed for—that is, forgiven. It may be that nonmortal sin is unintentional, in which case 1 John agrees with Hebrews in the view that there is no forgiveness for Christians who sin intentionally (Heb 10:26). In OT and subsequent Judaism, there is a major and obvious distinction between intentional and unwitting transgression, and in view of this it is striking that NT authors do not make more use of it. See LAW (IN JUDAISM OF THE NT PERIOD). The other principal distinction in Jewish law—between sins against God and those against one's fellow—is not explicitly made in the NT (but cf. Luke 15:18, 21, "against heaven and before you"). Apart from the passages in Hebrews and 1 John just cited, the NT also does not rank sins as "heavy" or "light" (Bultmann *BTNT* 2:234). For this distinction in Rabbinic literature see *Šebu.* 1:6; further, Sanders 1977:157–60.

The standard Jewish view was that sin or transgression, if not atoned for in ways prescribed in the Bible, would be punished—either in this world, by sickness, suffering, or death, or in the world to come. This view was also inherited in at least some parts of Christianity. The connection between sin and sickness is seen in John 9:2 (attributed to the disciples) and 9:24 (attributed to Jews who did not follow Jesus). In a Synoptic passage Jesus heals a sick man by telling him that his sins are forgiven (Matt 9:2–6 = Mark 2:5–11 = Luke 5:20–24). Paul explains death and sickness among the Corinthians by saying that they ate the bread and drank the cup in an unworthy manner, and he continues by saying that the Lord "chastens"—that is, punishes—those who do not adequately judge their own actions. This chastening prevents their ultimate destruction, on the standard Jewish view that sins are punished only once (1 Cor 11:27–32; cf *2 Bar.* 13.10). Similarly the body ("flesh") of the man who was committing incest was to be destroyed *so that* his spirit would be saved (1 Cor 5:5):punishment in this world prevents punishment in the next. That sin results in death is indicated in Rom 1:32; 5:12; 6:16, 23 (Bultmann *BTNT* 1:246). This assumption lies behind the view that Jesus' death atones—he died instead of the believer (Rom 3:25 and elsewhere)—and

also behind the view that the believer, by "dying" with Christ and gaining a new life, escapes death (Rom 6:2–11; cf. 7:6).

Within the NT there is no development of a standard system of atonement for postconversion transgressions. Paul, we saw, urged perfection and thought that transgressions would be punished. He knew about repentance (2 Cor 7:9–10), but in his closing admonitions he does not urge repentance and the seeking of forgiveness, but rather "blamelessness." Even where repentance is emphasized, as in Acts, it usually refers to conversion (see section C), not to the correction of postbaptismal transgression. Since repentance, restitution, and sacrifice for transgression are major conceptions in Judaism, and were routinely expected to be offered by Jews who were generally upright and only occasionally transgressed, the relative unimportance of postbaptismal repentance in the NT must be explained. We have already seen that the emphasis was on perfection, and probably this idealism prevented the early authors from spending much time and energy on coping with transgressions by Christians. Secondly, many of them expected the Lord soon to return, and thus they were not motivated to work out a system of pastoral care for straying members of the Church. The stark position of Hebrews—no forgiveness for intentional postconversion sin—is explained by this view: Jesus offered the sacrifice for sins "once for all at the end of the age" (9:26). As centuries passed, a denial of repeated forgiveness, even for intentional sins, was difficult to maintain. The hope for or expectation of Christian perfection, so prominent in the NT, has never disappeared entirely, though in most branches of the Christian faith postbaptismal transgressions are expected and provided for. The rite of penance was a major aspect of Christianity in the late antique and medieval periods, and one of Luther's most important views was that the Christian is at the same time "justified" in the sight of God and, in terms of actual performance, a sinner *(simul iustus et peccator).* The heirs of these traditions give the correction of sin, and repentance for it, a prominent place in life and worship.

The Christian authors of the NT believed that Jesus came to save people from their sins, and consequently that faith in him was required for the remission of sin (e.g., John 1:29; Matt 1:21). John puts the matter strongly and seems even to equate nonbelief in Jesus with sin (John 16:8–9; cf. 8:21–24). Jesus' own view, however, was that "righteousness" was possible in the standard Jewish way: obedience to the Law. He did not come to call the righteous (Mark 2:17), but he did not deny that there were such. He did not disagree with the rich man who assured him that he had kept the commandments, though he told him that "perfection" required yet more: giving his possessions to the poor and following him (Matt 19:16–30 = Mark 10:17–31 = Luke 18:18–30). "Following," however, was not a general requirement which Jesus laid on all (Hengel 1981:59). He proclaimed the nearness of the kingdom, and he urged people to prepare for it, but he did not limit "the righteous" to those who followed him, nor did he equate "sin" with refusing to do so. He saw himself, however, as having come especially to call people who were "sinners" in a worse sense than "occasional transgressors."

The early Christians—at least those who have left literary remains—considered all non-Christians to be sinners in this worse sense. They were of the view that others needed to be converted to faith in Jesus, and thus their view of universal or common sin became more radical than Jesus' own: all were "sinners" in the sense of "lost." We now turn to consider people who as such were "sinners."

C. Sin as Complete Alienation from God

While the verb "to sin" usually refers to an individual transgression, the noun "sinner" often (not always) indicates a worse state: a life which is not orientated around obedience to the will of God, but which is rather lived apart from him entirely. The cure for this condition is a change of one's life, sometimes indicated by the word "repentance" in the sense of "conversion."

"Sinners" as the enemies of God, and thus of the "righteous," are prominent in the Psalms, where Gk *hamartōloi,* "sinners," translates Heb *reša῾îm,* "the wicked." These are people who boast of the desires of their hearts, who think that there is no God, who believe that there is no retribution, whose mouths are "filled with cursing and deceit and oppression" (Psalm 10). They appear also in Ben Sira (e.g., 41:5–10), the *Psalms of Solomon* (e.g., 3 and 4), and elsewhere. There are lists of passages and explanations of

terminology in Sanders 1977:342–46 (Ben Sira); 398–406 *(Psalms of Solomon);* cf. also 352–58 (*1 En.* 91–104); 358–60 (some other sections of *1 Enoch*); *TDNT* 1:320–24.

1. Jesus and the Sinners. It is sinners in this sense of whom Jesus was said to be the friend ("a friend of tax collectors and sinners," Matt 11:19 = Luke 7:34) and whom he came to call (Matt 9:13 = Mark 2:17 = Luke 5:32; Luke adds "to repentance"). John the Baptist came "in the way of righteousness" and was not accepted, except by "the tax collectors and prostitutes" (Matt 21:32).

The use of tax collectors to represent sinners is more of a puzzle than most scholars, at times including the present author, have granted. The tax or toll collectors of Galilee in Jesus' day were not servants of Rome, but rather of Herod Antipas. He paid tribute to Rome, but this does not necessarily mean that his toll collectors were seen as traitors, though this has often been said. It is more likely that they were regarded as dishonest and greedy. One may compare Philo's remarks on Capito, the tax collector of Judea, a poor man who became rich (*Gaium* 199). He was not a toll collector in semi-independent Galilee, but rather an administrator of taxes in the province of Judea, governed directly by Rome. While he may have been worse than the Galilean toll collectors, it is probable that all tax collectors were thought of as rapacious. That is not to say that, objectively considered, they were all wicked. John, a toll collector in Caesarea, joined together with the leading members of the Jewish community there to bribe Florus (the procurator) to protect access to the synagogue (*JW* 2.14.4 §285–88). He does not fit the image of "outcast" which one derives from the stories in the gospels. When he was collecting money, however, he may not have been seen as a pillar of the community.

At any rate the toll collectors constitute the one named group who represent "sinners" in the Synoptic Gospels, and once prostitutes are associated with them (Matt 21:32). The meaning is that their manner of life was basically antithetical to the will of God.

Luke contains many more references to both sinners and toll collectors than do Matthew and Mark, and the author was especially concerned to emphasize that those who accepted Jesus "repented" in the sense of "changed their lives." In Luke's version of the call of the first disciples, Peter at first tells Jesus to depart from him, since he was a sinner (Luke 5:8), an unworthy companion for a righteous person. Matt 5:46 criticizes toll collectors, but Luke uses "sinners" instead (6:32). In Luke 7:36–49 there is a story of a woman who was a sinner. She ministers to Jesus and he announces the forgiveness of her sins. The parables in Luke 15 are told in the presence of toll collectors and sinners (15:1), and they proclaim that God rejoices over a sinner who repents (15:7, 10). In the parable of the toll collector and the Pharisee, the former confesses himself a sinner and craves God's mercy (Luke 18:10–13). The most elaborate story is that of Zacchaeus, a toll collector who was considered by the crowd to be a sinner, and who made abundant restitution to those whom he had wronged (Luke 19:1–10).

It is probable that Luke has expanded the theme of Jesus' appeal to toll collectors and sinners, but the theme itself reflects the ministry of Jesus. The surest fact is that his call was accepted by one Galilean toll collector, who is called Levi in Mark and Luke, while in the first gospel he is named Matthew and is probably thought of as one of the twelve (Matt 9:9 = Mark 2:14 = Luke 5:27).

The gospels represent Jesus' association with sinners as being a subject of criticism (Matt 11:19; Mark 2:16). This was not seen as problematic so long as scholars supposed that most Jews, or at least the Pharisees, opposed the idea of God's grace and forgiveness. According to this interpretation, Jesus told sinners that if they repented God would forgive them. The Pharisees, hating grace, repentance, and forgiveness, and even more those who believed in them, decided to kill him (so Jeremias 1963:124; 1969:267; 1971:108–21; Perrin 1967:102–3; Schweizer 1971:28–29). This school even proposed that the Pharisees thought that ordinary people were "sinners" in the extreme sense of "without hope in God's sight" (Jeremias 1969:259; 1971:112, 118; *TDNT* 1:323, 328). When this is seen as historical fantasy in the service of theological anti-Semitism (e.g., Sanders 1985:200–4; cf. 1987:230–31), one is left with a question: what was the offense? Another way of asking the question is to focus on the material which is only in Luke. If Jesus' call of sinners meant that toll collectors repaid those whom they had cheated, who would have been aggrieved? One suspects that Luke's portrayal is too bland and that more was at stake. It is certain that Jesus favored honesty, especially in toll collectors, and that he would have liked for habitual

sinners to change their lives. In that sense, Luke's stories are true to Jesus. They do not, however, answer the historical question: Who objected to Jesus' association with sinners and for what reason?

The prevalence of the fantasy mentioned above has left few possible answers from which to choose. The most probable is that Jesus' offense was that he said, or was understood to say, that even heinous sinners who followed him were acceptable to God, and that he did not require of them the standard acts of atonement which are provided for in the law (Sanders 1985:204–8). It is to be noted that in no instance is Jesus said to recommend confession to a priest and sacrifice. In this case the offense was his self-assertion rather than his belief in grace; more precisely, his connection of God's grace with response to himself (as in the story of the woman who was a sinner, Luke 7:36–50).

A striking use of "sinner" to mean one who habitually and willfully flouts God's law is seen in John 9, where Jesus is said to have been considered a "sinner" by some, since he did not keep the sabbath (John 9:16; cf. vv 24–25, 31). It is not to be accepted, however, that Jesus actually disregarded the sabbath. The stories in the Synoptic Gospels (e.g. Mark 2:23–28; 3:1–5) prove rather the contrary, and John here as elsewhere pushes to an extreme a theme which is also found in the Synoptics. It is unlikely that during his lifetime Jesus was viewed as a "sinner" himself; he was criticized for including them, not for being one of them.

2. Sinners in the View of the Early Church. Christians viewed all who did not accept their message as sinners, totally cut off from God. The use of "sinners" to mean non-Christians or pre-Christians is seen in Rom 5:8 ("while we were yet sinners Christ died for us"; cf. 1 Tim 1:15). That the fate of sinners is eternal death unless they convert is stated in James 5:20, where it is also implied that a "sinner" has committed a "multitude of sins." Those who had a role in Jesus' execution are described as sinners in Matt 26:45 = Mark 14:41 = Luke 24:7; Heb 12:3. We saw above that those who do not believe in Jesus are considered sinners in John 8:21–24; 16:8–9.

Acts does not have the noun "sinner," but repentance of sin and forgiveness are connected with baptism into the Christian faith. This is needed by all, both Jew and pagan, and thus these terms refer to conversion: Acts 2:38; 3:19; 5:31; 7:60; 10:43; 13:38; 22:16; 26:18. The first and last passages may be taken as representative. In Acts 2:38, Peter calls on the Jews to repent and to be baptized "in the name of Jesus Christ for the forgiveness of your sins." In 26:17–18, the risen Lord tells Paul that he is to open the eyes of the gentiles, "that they may turn from darkness to light and from the power of Satan to God, that they may receive forgiveness of sins and a place among those who are sanctified by faith in me."

In the categories thus far considered, sin is avoidable. If sin is an individual wrong action, a trespass (B), it is possible not to sin, even though all authors grant that humans, being weak, inevitably sin at some time or other. One who is a sinner in the sense of "wicked" (C) can change, as Zacchaeus is said to have done. In both these categories, atonement and change, rely on God's grace. In neither Judaism nor Christianity (at least in most forms of them) is it doubted that God loves those who sin and wishes to save sinners. The standard view in both is that atonement or conversion is always open and that God stands ready to welcome the wanderer back into the fold. A harsher view appears in Christian literature in Heb 10:26; 1 John 5:16; and in Jewish literature in *4 Ezra,* where virtual perfection is required, and in the Dead Sea Scrolls and *Jubilees,* where some sins are not forgivable (e.g., 1QS 7.16–17; *Jub.* 2.27; 15.34). Rather, the typical view is that of Pseudo-Philo, who attributed to God the attitude that "even if my people have sinned, nevertheless I will have mercy on them" (*L. A. B.* 31:2; cf. *Let. Arist.* 192; *Sib. Or.* 4.66–70; *T. Mos.* 4).

D. Sin as an Enslaving Power

In the letters of Paul there is a more radical view of sin: it is an active power. This is most clearly the case when the noun *hamartia,* sin, is the subject of a verb other than "to be." When *hamartia* is the subject of "to be," as in Rom 5:13, "sin was in the world," the same view may be implied; but the case is clearer in other passages. Outside the letters of Paul one sees this usage only in Heb 3:13, where it is said that Christians may be hardened "by the deceitfulness of Sin." Here Sin is the active agent.

The usage of "Sin" as power comes mostly in Romans 5–7. According to Rom 5:12, Sin "entered the world"; thereafter one reads that "Sin reigned in death" (5:21); that Sin may "reign" in one's body (6:12)

or "have dominion" over one (6:14); that Sin found opportunity in the commandment and "wrought in me all kinds of covetousness" (7:8); that it "revived" (7:9); that it found "opportunity in the commandment, deceived me and by it killed me" (7:11); and that it "worked death in me through what is good" (7:13). Sin as power may be served (6:16–18), and thus it enslaves (6:20). It can be escaped only through "death" (6:2–11). Put another way, Sin is a "law" which lurks in one's members and prevents the fulfilling of the law of God (7:17–23). The only escape is to leave "the Flesh" (8:8), that is, to die with Christ. Christians have died with Christ and thus to Sin (6:6, 11), and they have thereby escaped not only Sin but also the Law (which condemns) and the "Flesh," the state of enmity toward God (7:4–6).

In this section of Romans, Sin is treated as a power which is not only alien to God but which is almost as potent; in fact, it often wins the struggle. This extreme conception of Sin in part explains Paul's not making much use of the idea of repentance: one does not escape bondage to an alien power by repentance. The radicalness of the problem corresponds to the radicalness of the solution, escape from the "Flesh" by sharing the death of Christ.

It is important to note that Paul does not offer an anthropological, theological, or cosmological explanation of this conception of Sin. In the Jewish view, God had created the world and declared it good. This doctrine is not easily reconcilable with the view that Sin is a power strong enough to wrest the Law from God's control or to render humans powerless to do what is good (Rom 7:11, 19). There are two principal passages which lead up to but do not account for the view that all humanity, apart from Christ, is under the power of Sin. In Romans 1–2 both gentiles and Jews are accused of gross transgression (homosexuality and "all manner of wickedness" on the part of gentiles, robbing temples and committing adultery on the part of Jews), and Paul draws the conclusion that all people, "both Jews and Greeks, are under sin" (Rom 3:9). The RSV here translates "under sin" as "under the *power* of sin," and this interpretation seems to correspond to Paul's meaning. The accusation is not only that people transgress, but that all are *under* Sin, governed by it. The charges of heinous immorality do not actually account for the conclusion, however, partly because they are exaggerated. Both the gentile and the Jewish worlds contained "saints," people whose lives were largely beyond reproach. It is unlikely that Paul's conclusion—that all are under Sin—rests on empirical observation. Further, in the midst of the catalog of charges, comes the admission that some gentiles, though without the Law, nevertheless "do by nature what the Law requires," and these will be justified by their works in the judgment (Rom 2:13–14). The conclusion in 3:9 does not correspond to what leads up to it in any respect: the charges in chaps. 1–2 overstate the case and the conclusion is contradicted by 2:13–14. What this means is that Paul's conclusion, that all are under Sin, was not derived from the line of observation and reasoning he had presented in the previous two chapters.

The same is true of the second passage which argues for the universality of sin. Adam, states Paul, sinned, and this introduced sin and its consequence, death, into the world; "and so death spread to all people because all sinned" (Rom 5:12). This is followed by the statements that "sin is not counted where there is no law" and that "death reigned from Adam to Moses, *even over* those whose sins were not like the transgression of Adam" (5:13–14). In order to make the grip of sin universal, Paul wished to make Adam instrumental. Yet he had two problems: transgressions of the Law which preceded it should not count; not everyone sinned, as did Adam, by rebelling against God's commandment. Despite these problems, he asserted the consequence: "by one man's disobedience many were made sinners" (5:19). His anthropology did not include the conception of inherited sin, and thus he had no logical way of proving universal condemnation by appeal to Adam. He simply asserted it, while himself citing points which count against it.

What we see in both cases is a conclusion which is independent of the arguments which precede it. Adam's sin does not—in Paul's own statement of it—prove that all humanity is sinful and stands condemned. The heinous sins of some Greeks and Jews do not—even in Paul's own presentation of them—lead to the view that all humans are under Sin. This means that he held the conclusion as a fixed view and tried to bring forward arguments in favor of it, though without logical success. The conclusion, in other words, is not only independent of but is also more important than the arguments. (Some scholars

still think that one must understand the human predicament in Paul's view before it is possible to understand his soteriology: e.g., Kümmel 1973:173; others note the relative incoherence of the explanations of universal sin: e.g. Conzelmann 1969:195–98.)

If the considerations put forward in Romans 1–2 and 5 do not explain the origin of Paul's conception of Sin, we can say where it came from? There are two principal possibilities. One is that Paul did not come to Christianity with a preformed conception of humanity's sinful plight, but rather deduced the plight from the solution. Once he accepted it as revelation that God intended to save the entire world by faith in his Son, he naturally had to think that the entire world needed saving, and thus that it was wholly bound over to Sin. His soteriology is more consistent and straightforward than his conceptions of the human plight, and thus may show that in describing sin he had to go in search of arguments which led up to a preformed conclusion. This explanation gives a good account of why Romans 1–2 and 5 are weak as reasoned arguments but lead to a definite conclusion. The conclusion that all need to be saved through Christ, to repeat, came by revelation, and so could not be questioned; the arguments in favor of universal bondage to sin are then seen as efforts at rationalization. (For the argument that Paul's thought ran "backward," from solution to plight, see Sanders 1977:442–47; 474–75.)

The second possible explanation is that Paul had imbibed aspects of a dualistic world view, according to which the created order is at least partly under the control of the god of darkness. Iranian (Zoroastrian) dualism had penetrated the Mediterranean, and it can be seen in the Dead Sea Scrolls, for example, when they distinguish between the angel of darkness and the angel of light, the children of darkness and the children of light (e.g., 1QS 3.17–4.1). There are echoes of this terminology in Paul: Satan (standing in for the angel of darkness) could disguise himself as the "angel of light" (2 Cor 11:14). "This age" is governed by another "god" (2 Cor 4:4) or by other "rulers" (1 Cor 2:6). It is probable that Paul was influenced by dualism, especially since he considered the entire created order to be in need of redemption (Rom 8:19–23), though it could not have been guilty of sin. Paul, it must be emphasized, was not a dualist. He proposed that God himself had subjected the creation to "futility," and that he had done so "in hope," planning its redemption. Formally, there is no admission in Romans 8 of a second power, much less a second god. Yet Paul did believe in evil spiritual forces, "so-called gods" (1 Cor 8:5); "beings that by nature are no gods," as the RSV nicely translates a difficult phrase (Gal 4:8); "demons" (1 Cor 10:20); the "god" or "rulers" of "this age" (above). These non-gods could enslave (Gal 4:8), as could Sin (Rom 6:6).

When we add these references to evil spiritual beings to Paul's conception of Sin as a power, and further note that even the nonhuman creation needs redemption, it must be concluded that Paul was influenced by some form of dualism. By piecing together references to hostile demons, or gods, and Sin, one could even create a dualistic theology. Satan's deception of Eve (2 Cor 11:3) could be combined with Sin's deception of humanity in Rom 7:11 (taking the "I" in Romans 7 to represent humanity in general), and further with the fall of Adam (Rom 5:12–13), to draw a picture of a fully personified second power, which could also be seen in the reference to "the god of this age" (2 Cor 4:4). This second power then might be viewed as the referent of "Sin" throughout Romans 6–7. This, however, would be a false construction. Paul twice employed the word "deceive" from Gen 3:13 (*exēpatēsen* in Rom 7:11 and 2 Cor 11:3; *ēpatēsen* in Gen 3:13), he inherited Satan from biblical and Jewish tradition, and he accepted the existence of "beings that by nature are no gods"; but he did not put all these together to form a dualistic theology. We shall shortly see the dominance of monotheism in his thought about sin.

It is difficult to say, in fact, just how realistically Paul conceived of Sin as a power. Röhser (1987) argues that "superhuman being" is too strong, "only a metaphor" too weak, and he proposes "a certain form of hypostatizing," for which the term "personification" may be used. In this case, Sin in Romans 6–7 is approximately what Wisdom is in Sirach 24: personal attributes are assigned to a reality whose presence in the world can be perceived, but the step of making the reality a Being is not taken.

If there is some truth in the suggestion that Paul was influenced by dualistic thought, there is more in the view that his discussions of sin are the reflex of his soteriology. The force of the latter is most fully seen if we pursue the question posed by our consideration of dualism: Did Paul think that there was an enemy power which enslaved the universe, human and nonhuman alike? In part, we have seen, he did. But this

ran into competition with one of his basic theological views, a doctrine embraced in all the surviving Jewish literature of the period: God controls what happens, both in nature and in history. This view, applied to the issue of sin, means that *God intended human disobedience.* That is just what Paul thought, as he thought that it was God who subjected the creation to futility. (On *praedestinatio ad malum* see Räisänen 1972.) In Paul's view, God intended universal sin so that he could subsequently save everyone by grace. For this very reason he gave the law: "Scripture consigned all things to sin, *in order that (hina)* what was promised to faith in Jesus Christ might be given to those who believe" (Gal 3:22). "God consigned all people to disobedience, *in order that (hina)* he could have mercy upon all" (Rom 11:32). God "endured with much patience the vessels of wrath made for destruction [by him], *in order that (hina)* he could make known the riches of his glory for the vessels of mercy …" (Rom 9:22–23).

In these passages and others, which at first seem impious—charging God with creating transgression—we see the combination of Paul's twin convictions: the one God is the God of Hebrew Scripture, the one who created the world, who called Abraham and who gave the Law; and the same God always intended to save the world by faith in Christ. Thinking backward from the second point, he had to conclude that Creation, Election, and the Law did not save. In his black-and-white world, if they did not save, they did not even help; election and the Law were not stepping-stones to salvation in Christ. Yet God gave the Law. What is its result? Not salvation, therefore damnation. This meant that God intended the result, he "consigned all to disobedience." One might say that humanity was consigned to iniquity as the result of prior sin, which stirred God to wrath (Rom 1:18, 24). But in Romans 1 this is used only to account for gentile corruption, and it is the result of idolatry. The giving of the Law cannot be attributed to God's wrath in the same way. Paul's monotheism, which included the view that God controlled *everything* that happened, was braver than that. God intended all of human sinfulness, just as he intended the subjection of the nonhuman world to "futility" and "travail" (Rom 8:20, 22), but throughout the intended good (8:28):the salvation of the entire cosmos.

No form of ancient Judaism directly known to us (that is, possibly excluding Sadduceeism) considered "predestination" and "freewill" to be incompatible. In Qumran the members of the community were called both "the elect" and "the volunteers"; they were gravely warned not to disobey, but wickedness was also attributed to the "angel" who governed their "lot." Paul puts the two side-by-side as well. Most Jews, he wrote, did not accept Jesus because God "hardened" them; on the other hand, they did not "heed" (Rom 10:7, 16). When predestination and freewill are applied to sin, the result is both that God intended it and that humans are guilty of it. No ancient Jew, including Paul, worked out a consistent explanation of how human decision to sin relates to God's determination of all that happens. Paul at least dealt seriously with the problem, as Romans 9 shows. Dualism provides an alternative: there are two powers which have different intentions, and humans are pulled first one way then the other. In Paul (as in 1QS) we get all three. Sin is avoidable transgression, and it is therefore punishable; Sin is a power external to humanity which enslaves the entire creation; sin was intended by God in order to lead up negatively to salvation through his grace in Christ.

These conflicting views naturally lead to the search for some means of harmonizing them, and, failing that, for some way of defining the "heart" or "center" of Paul's thought, not just about sin, but about God, Christ, and the world, for these are all bound up together. Recent discussions include, in chronological order, Sanders 1977:434–42; Hickling 1980; Beker 1980; Räisänen 1983; Sanders 1983:4–10; Räisänen 1987:xi–xxxi. We cannot hope to solve the question of the center of Paul's thought here, but in the discussion of sin it should be noted that, despite his bravery, Paul was uncomfortable in holding that God gave the Law in order to condemn (Gal 3:22; cf. Rom 3:20; 4:15; 5:20), and that this view was temporarily retracted in Romans 7 (especially v 10), only to reappear (though without the word "Law") in Rom 11:32 (on the movement toward Romans 7 and the retraction of the previously stated view there, see Sanders 1983:70–81). It was in trying to avoid laying the intention to condemn at God's door that Paul shifted to a modified dualism. Sin is an external power which can manipulate the Law (7:8), or it is a power within the flesh (7:18, 23)—in defiance of the goodness of creation. The presence of dualistic influence in Romans 6–7 cannot be denied, and it is confirmed by the passages about inimical non-gods.

Yet in the discussion of sin there is a more powerful theology at work, one which is seen throughout his thought: God created the world and controls history; he will save the world through Christ; everything else, even sin itself, follows from his will but is subjected to it and used for his purpose.

E. P. SANDERS

SIN, WILDERNESS OF (PLACE) [Heb *midbar sîn* (מִדְבַּר סִין)]. A desert area located between

Elim and Mount Sinai which the Israelites traversed in the Exodus (Exod 16:1; 17:1; Num 33:11, 12). It is one of the seven wildernesses (Shur, Etham, Sin, Sinai, Paran, Zin, Kadesh) crossed by Moses and the children of Israel. Here the children of Israel murmured against Moses and Aaron: "Would that we had died by the hand of the Lord in the land of Egypt, when we sat by the fleshpots and ate bread to the full" (Exod 16:3). The Lord responded by sending manna and quail (Exod 16:4–21). From the Red Sea the Israelites went to Elim then to the Wilderness of Sin (16:1), Rephidim (Exod 17:1), and finally arrived at the Wilderness of Sinai (Exod 19:1). According to Numbers the order is Elim-Red Sea-Wilderness of Sin-Dophkah-Alush-Rephidim-Wilderness of Sinai (Num 33:10–15).

The Wilderness of Sin is not to be confused with the Wilderness of Zin. While there is no distinction made in the LXX or the Vg between Heb *sîn* and *ṣin,* both of which are rendered "Sin," modern English translations uniformly render the distinction as Sin and Zin. The similarities of the words Sin (Heb *sîn*) and Sinai (Heb *sînay*) may suggest that Sinai is derived from Sin or that they are otherwise related.

The precise geographical location of the Wilderness of Sin, between the Red Sea and Mount Sinai, depends on where the other related stopping places and Mount Sinai are to be located. The location of all of these places is uncertain. Those who hold the view of the S location of Mount Sinai—either at Jebel Musa or in the vicinity—have identified likely locations for Elim at Wadi Gharandel, Dophkah at Serabit el-Khadem, Rephidim at Wadi Rafayid or the oasis at Feiran. This scenario would locate the Wilderness of Sin as a sandy plain, Debbet er-Ramleh, below Jebel Tih, or the plain of el-Markha—both on the SW fringe of the Sinai plateau (*GP* 2:210–13; *GTTOT,* 252–53). Those who propose a N Exodus route would locate the Wilderness of Sin in the vicinity of various mountains argued to be Sinai in central Sinai, N Sinai, the Negeb, or the land of Midian. For a review of these views see Beit-Arieh 1988. See also DOPHKAH; ELIM; REPHIDIM; SINAI, MOUNT.

It is unlikely that the Wilderness of Sin is to be associated with Sin, also Heb *śin* (RSV Pelusium; LXX Syene), in Ezek 30:15–16, which probably derives from an Egyptian word *sìn* and refers to an Egyptian stronghold in the NE corner of the Nile delta. See PELUSIUM.

DAVID R. SEELY

SINAI, MOUNT (PLACE) [Heb *sînay* (סִינַי)]. The hill or mountain *(har)* in the wilderness of Sinai at which Israel entered into a covenant with Yahweh after the release from Egyptian bondage, and where Moses received laws and instruction for the people before continuing on the wilderness journey.

A. In the Bible

1. Names. Mount Sinai is mentioned fifteen times in the books of Exodus, Leviticus, and Numbers as the place where Yahweh met with Israel and revealed his law, and in three poetic passages it is more generally the place where Yahweh "dwells" or from which he comes (Deut 33:2; Judg 5:5; Ps 68:9—Eng v 8, note also v 18—Eng v 17). In Num 10:33 Sinai is called "the mountain of Yahweh" (elsewhere this name refers to Mount Zion in Jerusalem). In Deuteronomy 1–28 and some passages in Exodus (3:1; 17:6; 33:6) and elsewhere (1 Kgs 8:9; 19:8; 2 Chr 5:10; Ps 106:9; Mal 3:22) the name Horeb is used, apparently for the same place. Traditional source-criticism of the Pentateuch has regarded "Sinai" as the name used in the Yahwist (J) and Priestly (P) documents, while "Horeb" was found in the Elohist (E) and Deuteronomic (D) sources. This did not of course account for the poetic and other non-Pentateuchal occurrences. More recently it has been suggested that all occurrences of the name "Horeb" are Deuteronomic-Deuteronomistic or later (Noth *Exodus* OTL; Perlitt 1977). A few passages refer to "the mountain of God (or gods?)" (Exod 3:1, with "Horeb"; 4:27; 18:5; 24:13), which the present text of Exodus equates with Sinai/Horeb: a few scholars have held that a different mountain may originally have been meant (see Davies 1979b: 68–69 [bibl.]).

2. Traditions. The Sinai-complex occupies some sixty chapters in Exodus-Numbers (Exodus 18–40; Leviticus; Numbers 1–10), in addition to several passages in Deuteronomy (esp. 1:6–18; 4:9–14; 5:2–31; 9:8–10:11). The great majority of the chapters in Exodus-Numbers derives from the Priestly narrative and supplementary material of a similar character. After the arrival in the wilderness of Sinai (Exod 19:1), Moses ascends Mount Sinai, where the glory *(kābôd)* of Yahweh has settled (Exod 24:15–18), and remains there for forty days, during which he is given detailed instructions, chiefly about the construction of the tabernacle (or tent of meeting) and about the ordination of Aaron and his sons as priests (Exod 25:31). On his return to the people (Exod 34:29–35) arrangements are made for the building of the tabernacle and its furnishings, and when it is complete the glory of Yahweh takes up residence within it (Exodus 35–40). The consecration of Aaron and his sons follows (Leviticus 8–10), between the revelation of laws about sacrifice (Leviticus 1–7) and the clean and the unclean (Leviticus 11–15) and the ritual for the Day of Atonement (*yôm hakkippurîm;* Leviticus 16). After this follows the varied collection of laws normally referred to as the Holiness (H) Code (Leviticus 17–26), additional laws about vows and redemption (chap. 27), arrangements for the first census of the Israelites, the layout of the camp and the duties of the Levites, and further laws (Numbers 1–6). Then the sacrificial altar is dedicated (chap. 7), the Levites are ordained to their office (chap. 8), the feast of the Passover is celebrated (9:1–14), and details of the procedure for continuing on the wilderness journey are given (9:15–10:28). Dates appear at various stages of the Priestly Sinai narrative, including arrival (Exod 19:1) and departure (Num 10:11–12); these imply that nearly a year was spent there, most of it apparently being occupied with the construction of the tabernacle and its furnishings (cf. Exod 40:17).

In Deuteronomy (the passages are assigned by some to the Dtr Historian(s) rather than the original lawbook; e.g., Mayes *Deuteronomy* NCBC, 41–47) the main Horeb narrative is incorporated in chaps. 5, 9, and 10 as part of the hortatory introduction to the laws. According to this, a covenant with lasting validity was made at Horeb on the basis of the Decalogue, which was inscribed on two stone tablets (5:2–22), and at the same time Yahweh delivered to Moses other laws (now contained in Deuteronomy) for transmission to the people (5:23–6:1). Following the apostasy of the golden calf, however, the tablets were broken, and only Moses' intercession saved the people and Aaron from destruction (9:8–29). Yahweh inscribed two new stone tablets, for which the ark was constructed as a container, and the Levites

were appointed to carry it and act as priests (10:1–9). After this Yahweh sent the people from Horeb to enter the land promised to their forefathers, and Moses set up a system of judges to assist him and gave the people further instruction (10:10–11; 1:6–18).

Much of this account can be paralleled in the nonpriestly sections of Exodus, but there are also important differences there. The appointment of judges appears at the beginning, not the end, and arises out of the visit of Jethro, Moses' Midianite father-in-law (chap. 18). The Decalogue is preceded by a long description of preparatory rituals and the theophany itself (chap. 19), and is given in a different textual form (for details see Hossfeld 1982:21–162). There follows a short legal passage (20:21–26) and a longer series of laws (21:1–23:33, the so-called Book of the Covenant) which are only loosely related to those in Deuteronomy. Next come two interwoven narratives describing an act of worship in which the leaders of Israel "see God" (24:1–2, 9–11) and the making of the covenant (24:3–8). Following Moses' ascent (with Joshua; 24:13) to receive the stone tablets, there is the episode of the golden calf (chaps. 32–34), in which some sections appear which (like the narrative in Exodus 3–4) establish Moses' authority as a spokesman of Yahweh (33:7–34:9). At the end a (new?) covenant is established on the basis of laws of a chiefly cultic character (34:10–27, the so-called Cultic Decalog).

The composition of these chapters and the extent to which the similarities to Deuteronomy are due to Deuteronomistic editing are hotly disputed questions (see, e.g., Beyerlin 1965; Perlitt 1969:156–238; Childs *Exodus* OTL, 318–624; Nicholson 1986:121–78); the Decalogue at any rate appears to be a later addition to its context (Nicholson 1977:422–33; Hossfeld 1982:163–213). On the other hand, it is likely that the themes of theophany, covenant, and law already appeared in the pre-Deuteronomic written account(s) of the Israelites' stay at Sinai; Exod 24:1–11 is of particular importance in this regard, and v 7 probably presupposes the presence of either 21:1–23:33 or 34:10–27 before it. Attempts have been made to identify elements of a treaty pattern in such an early narrative (e.g., Beyerlin 1965:49–90), but a penetrating criticism of them was made by D. J. McCarthy (1978:243–76; cf. Nicholson 1986:56–82). Nevertheless it remains possible, as was first suggested by S. Mowinckel and G. von Rad, that the early Sinai-narrative(s), like the book of Deuteronomy, were shaped by the liturgy of a festival which celebrated the making of a covenant between Yahweh and Israel in ancient times (cf. Deut 31:10–13; Psalm 50).

B. Location

From early in the 4th century A.D. (Eusebius of Caesarea) Christian tradition has located Mount Sinai in the S massif of what is now known as the Sinai peninsula. The specific identification with Jebel Musa is clearly attested in the *Peregrinatio Egeriae* (381–384 A.D.), and already in her time a monastery existed at the foot of the mountain, which Justinian later rebuilt (Davies 1979b: 30–48). Possible evidence of this location exists in a 2d-century A.D. Jewish source (ibid., 23–26), but other early evidence is imprecise or points to a location closer to Palestine. There is, however, no foundation for the view that Paul knew a tradition which located Sinai in Saudi Arabia (see Davies 1972:152–63). In modern times at least a dozen different sites have been proposed, including mountains in the N and W of the Sinai peninsula, in S Palestine, in Transjordan, and in Saudi Arabia. Some have thought that Sinai and Horeb were the names of different mountains, either close together or far apart. Recently archaeological and textual evidence have been claimed to support the identification of Sinai with Har Karkom, between Kadesh-barnea and Eilat (Anati 1984; see Davies fc.). The reason for the uncertainty lies partly in the conflicting indications in the biblical evidence and partly in the vagueness of much of it. The association with Midian and allegedly volcanic features in the theophany descriptions have suggested an easterly or southeasterly location, but their link with Sinai appears to be secondary. Poetic passages such as Deut 33:2 and Judg 5:4–5 are probably too vague to be of great use. The wilderness itinerary (Num 33:1–49, etc.) has seemed to some to point to a mountain in Saudi Arabia, but this view is less likely than that which relates it to routes in the Sinai peninsula. See WILDERNESS WANDERINGS. The most precise indication in the Bible is Deut 1:2, "It is eleven days' journey from Horeb by way of Mount Seir to Kadesh-barnea," and this tends to favor a location in the S of the Sinai peninsula (see Davies 1979a; and, for a more general review of the arguments for the different theories, Davies 1979b: 63–69).

C. History

Several arguments confirm that "there was from ancient times a special relationship between Yahweh and Mount Sinai which was already in existence before the Exodus from Egypt" (Nicholson 1973:63). Even in later poetry Yahweh is still said to come to Israel's aid "from Sinai" (Deut 33:2; Ps 68:18—Eng v 17). Sometimes other areas to the S of Palestine are mentioned (Judg 5:4; Hab 3:3), but the link with Sinai is particularly close. The phrase *zeh sînay* in Judg 5:5; Ps 68:9—Eng v 8 (RSV "yon Sinai") most probably means "the lord of Sinai" (NEB, NJPS, NIV; for this interpretation of *zeh,* see *HALAT,* 253). It is there that Yahweh's name is first revealed, according to Exod 3:14–15, and the previous sacredness of the mountain is implied by Exod 3:5 and 19:12–13. In view of this it is a priori likely that the traditions in Exodus 19ff. go back ultimately to a visit or visits to the mountain by an element or elements of early Israel, most probably including Moses, and that this was the origin of the identity of this group and of later Israel as the *ʿam yhwh,* "the people of Yahweh" (Judg 5:11, 13). It is difficult to separate this event, historically and traditio-historically, from the Exodus (Nicholson 1973:53–84). Whether the term "covenant" was used already at this early stage to describe the relationship between Yahweh and Israel, and what, if any, obligations the worship of Yahweh was thought at first to imply, it is impossible to know with certainty. But the exclusiveness of later Yahwism must have been a feature of it from early times (Judg 5:8; Ps 81:9–11—Eng vv 8–10) and the ban on images and the observance of the sabbath may also be very ancient (see further *EHI,* 464–72). There is no positive evidence that Sinai was a place of pilgrimage in OT times (against Noth 1940) and from the beginning of the monarchic period at least the old desert-sanctuary of Yahweh ceased to be of any importance, apart from what seems to be an isolated narrative of a journey there by the prophet Elijah (1 Kings 19). The emphasis fell instead on sanctuaries within the land of Canaan (Exod 15:17), one of which even became known as "the mountain of Yahweh" (Isa 2:3; 30:29). But Sinai/Horeb retained its place in tradition and became the gathering point for an increasingly elaborate body of religious law and narrative which sought to define the essence of Yahwism.

D. Theology

The presupposition of the Sinai tradition as a whole is a God of majesty and holiness who demands from his people not only exclusive worship but a life regulated by justice. At the same time he is a God who has chosen to meet with and remain with his people; both the tent of meeting and the ark of the older tradition (Exod 33:7–11; Num 10:33–36) and the priestly tabernacle symbolize this commitment. It is a place where Yahweh allows himself (Exod 24:11; 33:18–23) or at least his "glory" (Exod 24:17) to be "seen" and reveals his own nature or "name" (Exod 34:5–7); it is also where he reveals his will in a succession of legal collections. It is also the place where the regular worship of Yahweh is inaugurated and regulated, and where a pattern of leadership, priestly and lay, is established. But it is above all the place of the making of a covenant between Yahweh and his people, though here as much as anywhere the divergent theologies embedded in the tradition need to be recognized. In Exodus 18–24 (and probably in 34:10–27 as originally composed) Yahweh establishes a covenant on the basis of a body of law (24:8), but while disobedience will be punished (22:24; 23:21, 33; cf. 34:7b), there is no hint that Yahweh will finally cast off his people. In Deuteronomy on the other hand, the observance of the covenant is expounded as a matter of "life and death, blessing and curse" (30:19), and the possibility of expulsion from the promised land and utter desolation is seriously reckoned with (28:15–68). Only in exilic additions is the covenant seen as the basis for the restoration of a penitent people (4:31; cf. 30:1–10), a theology which is also found in the conclusion of the Holiness Code (Lev 26:40–45). Finally, in Exodus 32–34 the redaction of older tradition has been shaped by a theology of a new covenant established through the mediatory intercession of Moses, a theology that is present in its essentials also in Deut 9:18–10:11 (Childs *Exodus* OTL, 557–58, 607–8; Moberly 1983).

G. I. DAVIES

SINAITICUS, CODEX. See CODEX (SINAITICUS).

SINAITICUS, SYRUS. "Syrus Sinaiticus" denotes Codex Syriacus 30, a palimpsest, in St. Catherine's Monastery, which is at the foot of Jebel Musa (Mount of Moses, the traditional site for the revelation of the Ten Commandments) in the Sinai. The under writing preserves a late 4th- or early 5th-century Syr script and represents the oldest and best copy of the Old Syriac Gospels. The upper writing is a copy of the *Lives of the Female Saints* and was written in 778 C.E.

Sometime between 1889 and 1892, J. Rendell Harris told Agnes Smith Lewis that in 1889 he had seen some unexamined and old Syr manuscripts in St. Catherine's Monastery. She resolved to travel to the monastery with her twin sister, Margaret Dunlop Gibson. The two of them arrived at St. Catherine's in 1892, found this famous manuscript with the help of the librarian, Father Galakteon, and photographed it. Gibson quotes her sister's words that the leaves "were mostly all glued together, and the least force used to separate them made them crumble. Some half-dozen of them we held over the steam of the kettle" (1893:52–53). It was not until later in Cambridge that the text of the Gospels was correctly identified by Bensly as a copy of the Old Syriac Gospels similar to Codex Curetonianus in the British Museum (which was also found in Egypt, but in St. Mary Deipara in the Nitrian Desert).

Codex Syriacus 30 contains an upper and a lower writing. The upper is a clear black script of the *Lives of the Female Saints* (edited by Lewis in 1900). The obscured reddish brown lower script, the treasure in this codex, contains in Syriac the four canonical gospels, the *Acts of Thomas,* the *Transitus Mariae,* and in Greek portions of a gospel, a homily, and unidentified passages.

The critical edition of the Old Syriac Gospels is A. S. Lewis' *The Old Syriac Gospels, or Evangelion da-Mepharreshe* (1910), which contains the insights she obtained from numerous trips to the monastery. Her own photographs were never published. They were rediscovered in 1988 by the principal and librarian of Westminster College, Cambridge, and by J. H. Charlesworth. Copies are now preserved in Speer Library, Princeton Theological Seminary, and in Westminster College. Charlesworth, Bruce Zuckerman, and Ken Zuckerman have rephotographed the manuscript, thanks to the permission and assistance of the Holy Council of St. Catherine's Monastery, and especially the revered Archbishop Damianos. A new critical edition is being prepared by these scholars.

There are major variants in the gospel text of Codex Sinaiticus; note the following from Matthew: "Joseph—to whom Mary the Virgin was engaged—fathered Jesus, who is called the Christ" (Matt 1:16); "We have seen his star from the east" (Matt 2:2); and "Jesus Bar Abba" (not Barabbas) (Matt 27:16).

JAMES H. CHARLESWORTH

SINITES [Heb *sînî* (סִינִי)]. According to the Table of Nations (Gen 10:17) and the parallel genealogy in 1 Chr 1:15, the Sinites were the next generation after Canaan, son of Ham, Noah's son. They are one of eleven members of that generation. Descendants of some of these siblings are located on the Mediterranean coast (Sidon), Asia Minor (Hittites), or inland in Israel (Jebusites) and N Syria (Amorites, Hamathites). The Genesis reference seems to indicate this geographical dispersion as a later development, since the original Canaanite territory is said to stretch from Sidon in the N to Gaza in the S, and from the Mediterranean in the W toward the Dead Sea in the E (Gen 10:18–19). From the biblical understanding, the Sinites must have originated in this area.

A location close to this Canaanite locale is provided in Ugaritic and Neo-Assyrian texts. They speak of *syn* (Ugaritic; *VT* 3:449) or Sianum (Neo-Assyrian; Parpola 1970:308) on the coast S of Ugarit. This would be within the area of other names in the genealogies.

The only other biblical reference places the Sinites at some considerable remove from Canaan, if in fact the same group is intended. Isa 49:8–26 describes the joyful return of exiles from afar whom Yahweh restores to the land. They will come, some from the N, some from the W, and still others "from the land of the Sinites" (49:12; RSV "Syene"). This seems to indicate a far distant land either to the S or to the E. Both directions have received support.

A S location is favored by the reading of 1QIsa 49:12 where it is called "the land of the Syenites *(swnyym).*" This is apparently identical to Syene mentioned in Ezek 29:10 and 30:6 (cf. LXX 30:16). In these prophecies against Egypt, her power will be destroyed from one geographical extremity (Migdol, possibly a frontier fort on Egypt's N border) to the other (Syene). The latter is explicitly placed in the far S, toward the border with Cush (Ethiopia; 29:10). It probably is identical with Egyptian *swn* whose Greek form is Aswan. This is at the location of the first Nile cataract and thus the upper limit of river navigation (Strabo, *Geography* 17.1.3; Kraeling 1952:50). It is on the Nile bank opposite Elephantine, an outpost of the Jews during the 6th and 5th centuries B.C. The prophecy against Egypt could be envisioning the repetition of an earlier conquest by Ashurbanipal. In the mid-7th century he had reached Thebes and possibly as far south as Aswan (Kitchen 1973:392, n. 875).

An easterly direction for the location of the Sinites is suggested by the LXX of Isa 49:12 which instead of "Sinites" reads "the land of the Persians." Some have looked even further E to China, based on later Hebrew, Latin, and Greek identifications of that area as Sin (see the English form "Sino"). This proposal does not commend itself since Jewish settlement in that area occurs only later.

From the available evidence, there appears to have been two distinct locales with similar names. One of these was in N Canaan and was associated with the Genesis and Chronicles genealogies. The other was most likely in S Egypt, with a previously different form of the name which became corrupt in the MT, but was preserved by the Dead Sea Isaiah scroll.

DAVID W. BAKER

SINUHE, TALE OF. The Tale of Sinuhe is considered the finest piece of literature to survive from pharaonic Egypt. The events and characters depicted date to the first two reigns of Dynasty 12 (Amenemhet I and Senusert I), i.e., to the 20th century B.C.; and two of the papyri preserving copies of most of the text date back to within perhaps a century of this time (certainly to the Middle Kingdom). The Tale (*ANET,* 18–22) is a posthumous autobiographical narration by one Sinuhe, a highly placed official in the court of Amenemhat I, who was attached to Neferu, Amenemhat's daughter and wife of Senusert. During an expedition Sinuhe somehow overhears a treasonous conversation following news of the old

king's death. He flees to Syria-Palestine (the land of Retjenu), where he lives in voluntary exile for most of his life, divorced from his Egyptian roots, and slowly coming to terms with his apparent cowardice and defection. He recovers his dignity and self-esteem by proving both his courage and his loyalty to the royal house. In old age he is urged by Senusert, now king, to return to Egypt. He does so and is given a warm and genuine welcome by the royal family he had served, returned to his place in the inner circle of advisers, given all the appurtenances of advanced status, and held in the highest esteem until his death.

The Tale reflects the texture of Egyptian court circles ca. 2000–1900 B.C. and also gives a glimpse of conditions in the area which would some centuries later become the Holy Land. The now anonymous author's handling of the narrative elements of the Tale—characterization, plot, setting and atmosphere, etc.—is so skillfully accomplished that the piece (usually translated as prose but quite probably written in verse) is one of the high points of pre-Homeric literature. For further discussion, see *LÄ* 5:950–55.

JOHN L. FOSTER

SIPHMOTH (PLACE) [Heb *śipmôt* (שִׂפְמוֹת)]. A town in S Judah (1 Sam 30:28), included among the Judahite towns to which DAVID sent a portion of the booty he and his men had recovered from a band of marauding Amalekites (1 Sam 30:16–20). This gesture was surely part of a calculated strategy to consolidate support behind David in his conflict with Saul, as well as a reward for aid given to David and his men in previous years. Siphmoth may also have been the hometown of Zabdi the Shiphmite, an official of King David's court in charge of the royal wine cellars (1 Chr 27:27). The precise location of ancient Siphmoth remains unidentified.

WADE R. KOTTER

SIPPAI (PERSON) [Heb *sīppay* (סִפַּי)]. See SAPH (PERSON).

ṢIPPOR, TEL (M.R. 125118). A site situated in the heart of the Philistine plain, about 3 km NW of Kiryat Gat. The small mound (ca. half a dunam) rises to a height of about 5 m above a surrounding terrace. Excavations on the mound in 1963–65 indicate a well-defined sequence of occupation. The top three strata yielded remains dating to the early Iron Age (strata I–II) and the end of the LB Age (stratum III), while stratum III contained a number of LB levels with pottery typical of the 14th–13th centuries B.C. Below these LB levels was found a thin level containing MB I pottery (Biran and Negbi 1966; Biran 1978).

The Canaanite material of stratum III (including a bronze figurine and a stone statuette) was sealed by a well-made plaster floor belonging to stratum II. This last Canaanite settlement (stratum III) seems to have escaped destruction, perhaps due to its small size. It was followed by a Philistine settlement (stratum II) which, judging from the abundance and quality of its pottery, was a fairly prosperous community during the mid-12th to mid-11th century B.C. The transition from stratum II to stratum I appears to indicate cultural continuity, although it cannot be determined at present whether the stratum I occupants were Philistines or Israelites. The site was abandoned toward the end of the 11th or at the beginning of the 10th century B.C.

SIRACH, BOOK OF JESUS BEN-. See WISDOM OF BEN-SIRA.

SIRAH, CISTERN OF (PLACE) [Heb *bôr hasirâ* (בּוֹר הַסִּרָה)]. A well N of Hebron where Joab's messengers found Abner, intending to bring him back to Hebron to murder him (2 Sam 3:26). The

site is usually identified with the modern *Siret el-Bellā* N of Hebron (M.R. 159108). Josephus (*Ant* 7.1.5) locates it about 20 stadia N of Hebron.
TOM WAYNE WILLETT

SIRION (PLACE) [Heb *śiryôn* (שִׂרְיוֹן)]. A name used by the Sidonians to refer to Mt. Hermon (Deut 3:9). Hermon, well known from biblical sources (M.R. 220300), is part of the Anti-Lebanon range. In a poetic description of the majestic power of God, Sirion is paralleled with Lebanon (Ps 29:6), and placed in geographical contrast with the wilderness of Kadesh (v 8). These support a N locale.

Two additional instances to Sirion are proposed on the basis of textual emendation. Jeremiah (18:14) seeks to contrast the incredible—Israel forsaking her God—with the impossible—the disappearance of the snow of Lebanon from "the crags of Sirion" (cf. RSV, BHS margin). The MT "my fields" is enigmatic in the context and relatively minor textual alterations (the loss of one letter and a minor change in the form of another) yield the clearer meaning. Snow on the Lebanon ("white") range could have led to its name, and Hermon, as one of its higher peaks, has its share of snow.

The Transjordanian territory taken by Israel from Og and the Amorites is said to stretch from Aroer in the S to "Mt. Sion, that is Hermon" in the N (Deut 4:48). Syriac (cf. RSV) reads this as "Sirion," and would involve a reordering of letters and the interchange of two letters which have somewhat similar forms in the early Hebrew script (Craigie *Deuteronomy* NICOT, 197).

An Ugaritic text (*KTU* 1.4.iv.18–21; *ANET*, 134) mentions *shryn* in parallel with Lebanon as a source of the cedar for building Baal's palace. Cedar is also produced in *sirara* according to the annals of Sennacherib (704–681 B.C.; Luckenbill 1924:106.25; 107.51). This mountain, associated with Mt. Amanus, is also snow-covered (ibid. 106.25; 119.23; see Parpola 1970:312). An Egyptian text from the 19th century B.C. mentions a location *sryn* in proximity with other sites in the N (Aharoni and Avi-Yonah *MBA*, 27, map 23; Posener 1971:555), apparently another reference to Sirion.

SISERA (PERSON) [Heb *sîsĕrā*ʾ (סִיסְרָא)]. **1.** Chief antagonist of Israel during the famous battle in the Valley of Jezreel wherein Israel, led by Deborah and Barak, decisively defeated the Canaanite forces near the brook Kishon. This battle is recounted twice, once in the prose narrative of Judges 4, and once in the poetic treatment of Judges 5. Sisera's precise status as leader of the Canaanites is a matter of debate, since the prose account (Judg 4:2) lists him as the commander of the army of Jabin, king of Hazor, while the poetic account (Judg 5:20) simply presumes he is the leader of the coalition of Canaanite kings (5:19), making no mention of Jabin. Joshua 11 lists Jabin, king of Hazor, as the leader of a coalition of kings who fought against Israel during Joshua's time, but nothing is said there about Sisera being Jabin's general (Gottwald 1979:135–36, 153, 528–29). 1 Sam 12:9 describes Sisera as the "commander of the army of Jabin king of Hazor" (LXX), but the words "Jabin king of" are lacking in the MT. Ps 83:10—Eng 83:9, in alluding to the destruction of the Canaanites "at the river Kishon," mentions Sisera and Jabin together.

Scholars have commonly assumed that Jabin king of Hazor fought in a conflict between Israel and the Canaanites that occurred early in the conquest/settlement period (Joshua 11), and that editors of Israel's premonarchic traditions subsequently (and incorrectly) associated Jabin with the later battle pitting Sisera against Deborah and Barak (Judg 4:2). Aharoni (*LBHG*, 203–6) also discusses two separate battles, but places events at the waters of Merom (Joshua 11) *after* the battle involving Sisera, Deborah, and Barak. Whether or not Sisera was associated with Jabin king of Hazor, it is quite clear that he is the active leader of the Canaanite forces in Judges 4–5.

The precise location of Sisera's home Harosheth-ha-goiim ("Harosheth of the gentiles," Judg 4:2) is unknown, as is also its significance within the Canaanite coalition. Particular sites have been proposed, such as Tell Amr (M.R. 159237) or Tell el-Harbaj (M.R. 158240), but such identifications have thus far proven inconclusive. Harosheth-ha-goiim is not mentioned in the OT outside Judges 4–5 or in other ancient literature, and may simply refer to the forested regions of Galilee (Mazar 1952–53:81–84). Intriguingly, Judges 5, unlike Judges 4, does not link Sisera's activity directly with Hazor, which at this time was a powerful city in N Palestine, nor does it mention Harosheth-ha-goiim. Sisera's name may indicate he belonged to the Sea Peoples who had come to Palestine as part of the broader movement of peoples in the E Mediterranean world around 1200 B.C.E. (*NHI*, 35–38, 150).

Going into the battle Sisera's troops enjoyed a considerable strategic advantage, since the tactical maneuverability of their 900 chariots on the flat terrain of the valley near Taanach and Megiddo (Judg 5:19) would normally have enabled them to rout Israel's foot soldiers. In fact, Israel had repeatedly found itself incapable of defeating the Canaanite chariots in the plains areas (Judg 1:19, 27–36). This time, however, the outcome was dramatically different, and Sisera was forced to flee on foot from the battlefield. While Judges 5 implies that a torrential rain confounded the Canaanites' efforts, Judges 4 mentions no such deluge, stating only that "the Lord routed Sisera and all his chariots" (v 15).

In both the prose account of the Canaanites' defeat and in the poetic account, surprisingly little attention is paid to the battle itself. In Judg 4:15–16 there is only the terse mention of the Lord's routing of Sisera and his chariots, with the Canaanite army falling to the last man before the pursuing Barak. Sisera flees on foot to the tent of Jael, the wife of Heber the Kenite. In Judg 5:19–22 the defeat of the Canaanites is presented indirectly; "They took no spoils of silver." There is no detailed description of the battle. Instead, we see the stars fighting against Sisera, the torrent Kishon sweeping away the Canaanites, and the horses' hoofs beating loudly in retreat. The joy and satisfaction regarding Israel's victory is conveyed not so much through these brief treatments of the battle as through the carefully crafted scenes in which Sisera dies ingloriously, victim to the plotting of Jael.

In the prose narrative (Judg 4:17–22), Jael lures Sisera into her tent, covers him with a cloth, gives him milk to drink, and lets him think she will hide him. Sisera's words in v 20 are ironic, for while he tells Jael to conceal him from the men outside the tent, his real enemy is within the tent. After he has fallen asleep, Jael sneaks up on him and uses a hammer to drive a tent peg through his temple. She then calls Barak into her tent and shows him the victim she has snared. Jael's triumphant presentation to Barak of the dead Sisera with the tent peg driven through his temple leads directly into the joyful statement in vv 23–24 about God's having subdued Jabin king of Canaan.

Sisera's demise is presented even more dramatically in the Song of Deborah (Judg 5:24–27). The scene opens with a threefold repetition of the fact that Jael is a woman (Boling *Judges* AB, 114), thereby emphasizing how humiliating it is for Sisera the proud warrior to meet his death by her hand. When Sisera asks Jael for water, as in 4:19, she gives him milk, but here there is an added twist. Torrential, raging water had caused the downfall of Sisera's army (5:21), but now the fleeing Sisera is forced to beg water of Jael to soothe his parched throat. First he has too much water, then too little, and his thirst leads to his demise. As Sisera drinks, Jael uses her implements to bash his head. The writer of Judges 5 has Sisera standing at the onset of Jael's attack, not lying on the ground as in Judges 4, in order that the fall of Sisera, which embodies within it the fall of the Canaanites before Israel, may be emphasized. It is at this moment (vv 26–27) that the Israelites' joy over the defeat of the Canaanites is most powerfully expressed. The words prolong, and in effect place in slow motion, the fall of Sisera to the ground. "And she hammered Sisera;/She crushed his head;/And she shattered and she pierced his temple./Between her feet he sank, he fell, he lay still;/Between her feet he sank, he fell;/Where he sank,/There he fell,/Dead." This extraordinary drawing out of the fall of Sisera allows the audience to savor, indeed, to gloat over, the fall of both Sisera and the Canaanites before the Israelites and their god Yahweh. This is the moment of cathartic release for all the pent up frustrations Israel would have felt over its previous inability to defeat the powerful Canaanites (Hauser 1980:34–38).

Sisera's mother, however, provides one last opportunity for rejoicing over the defeat of the Canaanites. As the final scene opens, she peers out her window, wondering why Sisera is taking so long to return home. She and her "wisest" ladies tell themselves that Sisera is preoccupied with gathering all the spoil he will bring them. This scene, which underlines the greed of the Canaanite women and their inability to imagine that Israel might have won, is very effective, since the reader still has in mind the picture of Sisera lying on the floor of Jael's tent with his skull smashed in. The reader's anticipation of the surprise and grief awaiting Sisera's mother and her "wise" ladies provides great satisfaction to the audience.

The defeat of Sisera seriously curtailed the ability of the Canaanites to dominate the Israelites in this part of Palestine. The Canaanites, however, maintained their independence from Israel until the time of King David.

2. "Sons of Sisera" *(bĕnê sîsĕrā᾽)* are included in the lengthy list of temple servants *(nĕtînîm)* who returned from exile in Babylon (Ezra 2:53; Neh 7:55; 1 Esdr 5:32). It has been suggested that the "temple servants" were non-Israelites taken as prisoners of war. See NETHINIM. Consequently, it is possible that these are the descendants of Sisera, the commander of the Canaanite forces, who was defeated by Deborah and Barak (see above #1), or that the name was included by the genealogist to create this impression.

SISINNES (PERSON) [Gk *Sisinnēs* (Σισιννης)]. According to 1 Esdras 6, Sisinnes is the governor of Syria (6:3, 7, 27; Coelesyria in 1 Esdr 7:1) and Phoenicia under the Persian king Darius Hystapis. He is called TATTENAI (Heb *tattĕnay*), "the governor Beyond the River" in Ezra 5:3, 6; 6:6, 13. Sisinnes' initial suspicion of the efforts of the Jews to rebuild the Temple in Jerusalem interrupted their work until he could confirm the prior authorization issued by Cyrus. Brockington (*Ezra, Nehemiah and Esther* NCBC, 78–79) suggests that the governor's concern was roused by "the adversaries," who according to Ezra 4:4–5 attempted to hinder the progress of the Jews up to the reign of Darius. Since neither 1 Esdras nor Ezra implies that Sisinnes had any personal hostilities against the Jews, the adversaries may have been the underlying cause for the investigation (see Williamson *Ezra, Nehemiah* WBC, 76 and Ellison 1976:21). Once the record of consent was located in Ecbatana and reported to Sisinnes, he and his associates carefully supervised and supported the rebuilding of the Temple in Jerusalem to its completion. Sisinnes is essentially the Greek spelling of the Persian name *Thithinaia* rendered in the Aramaic script with aspirated t̲.

SISMAI (PERSON) [Heb *sismay* (סִסְמַי)]. A leader in the tribe of Judah and a descendant of Jerahmeel through his wife Atarah (mentioned twice in 1 Chr 2:40). He is the son of Eleasah and father of Shallum in the line of descent from the marriage of Sheshan's daughter (?) Ahlai to his Egyptian slave Jarha. Sismai (AV and NEB spelling is Sisamai) was the great-grandfather of Elishama (the apparent interest of this portion of the Chronicler's genealogy). Variant spellings are found in the LXX (B and A *Sosomai,* L *Sasamei*) although many scholars consider those genealogies corrupt (especially codex

Vaticanus). However, the records of Jerahmeel in the MT are viewed by most contemporary scholars as being in good order. For further discussion of the provenance and authenticity of the genealogies in 1 Chronicles 2, see MAAZ. Sismai appears to be derived from the name of a Phoenician god (*IPN*, 252).
W. P. STEEGER

SITHRI (PERSON) [Heb *sitrî* (סִתְרִי)]. A son of Uzziel, who was a brother of Aaron's father Amram (Exod 6:22). Thus Sithri was also a cousin of Moses and a Levite from the clan of Kohath. The lines of Uzziel and Izhar were traced in such detail perhaps to include important men who were contemporary with Aaron and Moses (Childs, *Exodus* OTL, 117). Sithri, Nepheg, and Zichri (vv 21–22) appear only here.

"Sithri" is a shortened Israelite personal name from the premonarchic period. The form, which bears the much used hypocoristic ending *î,* probably represents an abbreviation from the compound of the verb *str,* "to hide, conceal," or a noun meaning "hiding place, refuge," and an original theophoric element (Fowler 1988:163). There is no reason to assume that the divine element would have been *yhwh* (cf. Talmudic *stry*ʾ*l*). The name is (like the related *stwr;* Num 13:13) an expression of piety and trust, a figure of speech for divine protection. Under the image of a hiding place in which one takes shelter from impending dangers, it praises the refuge which the devout person enjoys in the deity, as is also the case in Pss 32:7; 119:114 (Noth *IPN*, 158). In the Jewish colony at Elephantine, the form *stry* has been found belonging to a woman, in an Eg Aram letter to her from her brother (*CAP*, 176). An Aram ostracon from the same site mentions a certain *stryh;* from a Persian period Heb inscription comes *strh* (Vattioni 1969:361).

EDWIN C. HOSTETTER

SITNAH (PLACE) [Heb *śiṭnâ* (שִׂטְנָה)]. A well dug by the servants of Isaac somewhere in the vicinity of Gerar (Gen 26:21; M.R. 112087). The biblical narrative derives Sitnah's name, which means hostility or accusation (Heb root *śāṭan*), from a dispute which arose between the shepherds of Isaac and those of Abimelech over use of the well. In this, Sitnah resembles the neighboring wells of Esek and Rehoboth (Gen 20:20, 22) whose names are also punningly connected to circumstances surrounding their construction. The precise location of Sitnah is unknown.
STEVEN WEITZMAN

SIVAN [Heb *sîwān* (סִיוָן)]. The third month of the Hebrew calendar, corresponding roughly to May and June. See CALENDARS (ANCIENT ISRAELITE AND EARLY JEWISH).

SIX HUNDRED AND SIXTY-SIX [Gk *hexakosioi hexēkonta hex* (ἑξακοσιοι ἑξηκοντα ἑξ) or *chxs* (χξς)]. This number is given as the number of the beast in Rev 13:18. The number is in opposition to the mark of God (3:12; 7:3), and mention of it is the climax of the Satanic imitation which dominates Revelation 13. An important textual variant intrudes here, for the Western tradition reads 616 (C, 5 and 11 [lost], and mss according to Irenaeus). Interpretation of the number of the beast has taken two approaches.

A. Cryptogram

This approach assumes that either 616 or 666 is a cryptogram representing a name that the author assumes the audience will decipher ("let him who has understanding reckon the number of the beast" 3:18). It also assumes that to form the cryptogram the author used gematria or isopsephos, a technique used by both Jews and Greeks to conceal names from the uninitiated by substituting the numerical equivalent of the name. Thus in this approach the numerical value of the letters of Hebrew and Greek names are added up to find those names whose sum is 616 or 666.

Assuming that 616 is the original reading, two identifications are *Kaisar Theos,* "Caesar is God" (*k* = 20, *a* = 1, *i* = 10, *s* = 200, *a* = l, *r* = 100, *th* = 9, *e* = 5, *o* = 70, *s* = 200) and *Gaios Kaisar,* "Gaios Caesar"

or Caligula (*g* = 3, *a* = 1, *i* = 10, *o* = 70, *s* = 200, *k* = 20, *a* = 1, *i* = 10, *s* = 200, *a* = 1, *r* = 100). The problem with these identifications is, of course, that 616 is an inferior textual reading.

Assuming that 666 is the original reading, one proposal first put forth by Irenaeus (*Haer.* 5.29–30) is that 666 represents *lateinos,* the Greek word for "Latin" (*l* = 30, *a* = 1, *t* = 300, *e* = 5, *i* = 10, *n* = 50, *o* = 70, *s* = 200). Thus 666 represents the Roman Empire and its emperor. The problem with this proposal is that the number is given in Revelation as the name of a man, not an empire. It has been noted that the initials of the Roman emperors from Julius Caesar to Vespasian equal 666, but this only works if Galba is included and Otho and Vitellius are excluded.

A second proposal is that 666 represents Nero Caesar. The Greek *Neron Kaisar* has a numerical value of 1,005. However, when transliterated into the Hebrew letters *nrwn qsr* it has the sum of 666 (*n* = 50, *r* = 200, *w* = 6, *n* = 50, *q* = 100, *s* = 60, *r* = 200). The proposal that 666 is Nero Caesar can explain the variant 616, for the transliteration of the Latin Nero Caesar into Hebrew *(nrw qsr)* yields 616. In support of the assumption that 666 is the name of an emperor is *Sib. Or.* 5:12–42 which refers to the Roman emperors in succession by mentioning the number of the first letter of each name. This proposal relating the beast and Nero assumes that the author of Revelation was relying upon the well-known *Nero redivivus* myth. See NERO.

The major problems with the cryptographic position are three: (1) the usual Hebrew spelling for Caesar is *qʿsr,* not *qsr* which results from direct transliteration of the Greek, although the form *qsr* is attested; (2) it is assumed that the audience has the ability to transliterate Greek into Hebrew; and (3) the ancient commentators never identified 666 with Nero.

B. Symbol

This approach focuses on the symbolic nature of the number. Underlying the proposals is the assumption that the phrase "a human number" does not mean "the number of a man's name," but "humanly intelligible" as opposed to the need for supernatural wisdom to interpret it. One proposal assumes the use of triangulation. Some numbers, called *arithmos trigonos,* are the sum of a string of numbers. Here 666 is the sum of all the numbers from 1 to 36. In turn, 36 is the sum of all the numbers from 1 to 8. Thus 666 is a double triangular number. The triangular number of the beast contrasts the square numbers of the martyrs (144,000 [Rev 7:4]) and the heavenly city (144 [Rev 21:17]).

Another proposal notes that 6 is an imperfect number, 7 being a perfect number. Thus 666 represents the "superlative imperfection." The *Sib. Or.* 1.325–28 notes that the sum of Jesus' name *Iēsous* is 888. Perfection would be represented by 777 and "superlative perfection" by 888. Therefore 666 represents the ultimate evil posed by the antichrist in opposition to the ultimate good offered by Jesus Christ.

None of these proposals is totally satisfactory. They are not to be seen in isolation, for both the cryptic and the symbolic nature of 666 may have led to its choice as a representation for the beast.

DUANE F. WATSON

SKEPTICISM. Skepticism can be understood in various ways. Taken as the designation of a philosophical current, influential in classical antiquity, it has no analogue in the civilization of ancient Israel. Nowhere in the OT do we find traces of a methodological suspension of judgment based on the presumed unreliability of sense impressions. If we understand skepticism, however, as the mental attitude underlying doubt concerning the truth of religious views and doctrines, the notion can be applied to certain phenomena that are known from the ANE, Israel included. Atheism and religious agnosticism as we currently know them were foreign to ANE peoples, who could not conceive of a universe without the divine. Yet within this basically religious outlook, there was room for doubt. In the biblical texts, one finds traces and expressions of skepsis in connection with certain miraculous events, the belief in divine retribution, and the hope of a beatific afterlife. Although at times they overlap, we will discuss these areas

separately. When it seems useful, reference will be made to expressions of skepticism from ANE civilizations other than Israel, such as Egypt and Mesopotamia.

A. Skepticism Concerning Miracles

Miracles call for faith; the biblical authors knew this. They were aware of the fact that their accounts of miraculous events might meet with doubt and disbelief. Usually, we find no outright expressions of skepticism in the miracle stories themselves, but they often contain elements of authentication by which the authors wished to underscore the truth of their tale. Obliquely, then, these stories attest to the presence of skepticism in the audience. The writers endeavored to counter the arguments of possible skeptics beforehand. Some examples can illustrate this practice.

According to 2 Kings 2, Elijah was taken up to heaven by a whirlwind, after a chariot of fire and horses of fire had separated him from Elisha. Such accounts of *Entrückung* ("Assumption Stories") were familiar at the time, especially in classical antiquity. Privileged humans, such as Heracles and Romulus, are said to have entered the heavens in order to enjoy life among the immortals. Inevitably, these "Assumption Stories" often raised the protests of skeptics. Was the account of Elijah's ascension a target of skeptical comments in Israel as well? We know that the Samaritan tradition pictures Elijah's exit in quite a different way. There the prophet is depicted as a scoundrel, responsible for the death of the son of the widow of Zarephath by stealing their last morsels of food. During his flight from king Ahab, Elijah would have fallen into the Jordan and drowned. Although the Samaritan tradition serves the interests of theological propaganda, it could hardly have arisen without any support in popular belief.

The version of the LXX suggests that the assumption of Elijah was indeed surrounded by doubts. The translators reduced the extraordinary character of the events in a subtle fashion. Whereas the Hebrew text states that "Elijah went up by a whirlwind into heaven," the Greek translation says that "Elijah was taken away by a whirlwind as if *(hōs)* into heaven." The LXX rendering may have been inspired by the Hellenistic tendency to make such stories more palatable to skeptical minds.

The biblical account itself, as given in 2 Kings, betrays conscious efforts on the part of the author to prevent skeptical reactions. The story mentions an eyewitness, Elisha, who was present at his master's departure (v 12). Afterwards, prophets are said to have engaged in an investigation to see whether Elijah had not been cast upon some mountain or into some valley. They verify, so to speak, the truth of the *Entrückung* hypothesis. Three days of unsuccessful research convince them—as it should the reader of the story—that Elijah has indeed been taken to heaven.

Other miracle stories insist on the presence of witnesses in a comparable way. Moses caused water to come out of a rock by striking it "in the sight of the elders of Israel" (Exod 17:6). The *Mekilta* of Rabbi Ismael, a Tannaitic Midrash, explains that the elders had to be present, so that the Israelites would not be saying that perhaps there were natural sources of water in the neighborhood. In the extraordinary story of the quails, sent by God in such numbers that it took two days and one night to gather them (Num 11:32), it is Moses himself who voices the skepticism of the reader (Num 11:21–22). He expresses doubt concerning the possibility of the miracle announced by God. The rhetorical question that he gets for an answer, "Could the hand of the LORD be too short?" is an oblique reminder to the reader that nothing is beyond God's might (Num 11:23; cf. Isa 50:2; 59:1). In Genesis 18, the skepticism of the audience is also anticipated by the reference to Sarah's incredulous laughter (Gen 18:12, 13). In reply, we are warned that "nothing is too hard for the LORD" (Gen 18:14). The biblical authors needed to convince their audience that the miracles they describe really happened. To suppress all doubt, they sometimes inserted episodes in which miracles are confirmed by impartial witnesses, such as the Shunammite woman (2 Kgs 8:1–6).

In this respect, the NT writers followed similar procedures. The miraculous events occurring in Jerusalem at the time of Jesus' crucifixion are reportedly witnessed by a Roman centurion (Matt 28:54). As Paul comes to speak of the Lord's resurrection, he refers to more than five hundred witnesses (1 Cor 15:6). Apparently, not all Israelites, nor all Christians were ready to accept miracles without further questioning.

B. Skepticism Concerning Divine Retribution

In the ANE, the gods were believed to be the guardians of the moral order. People were supposed to act in conformity with the reigning code of conduct by virtue of their social conscience ("Act as a gentleman should!"; "Such a thing is not done in Israel"), out of fear of judiciary action, and, ultimately, because God or the gods would otherwise punish them. Social solidarity and the distribution of human justice were limited in their effects; the gods, at once powerful and all-seeing, were believed to make justice triumph. By meting out punishments and sending rewards, they were thought to respond to human behavior. This is divine retribution.

Experiences of undeserved suffering, however, might lead people to question the belief in divine retribution. Particularly in times of political unrest and social upheaval, theodicy could become an acute problem. We know quite a number of literary compositions from Mesopotamia which deal with this issue. Most of them seem to have been written by the end of the Kassite rule (ca. 1200 B.C.). In the *Babylonian Theodicy* (*ANET*, 601–4), a dialogue between a destitute nobleman and his pious friend, the answer to the seeming injustice of the gods is sought by stressing the imperfections of human understanding: "The divine mind, like the center of the heavens, is remote; knowledge of it is difficult; people do not know it" (lines 256–57). If such a gulf separates man from the gods, however, the validity of the moral code itself becomes problematic. Such is indeed the mood of the complaint of the righteous sufferer found in *Ludlul bēl nēmeqi* ("I will praise the Lord of Wisdom"). Following a résumé of his meritorious deeds, the sufferer gives vent to his doubts:

> I wish I knew that these things were pleasing to one's god!
> What is proper to oneself is an offense to one's god,
> What in one's own heart seems despicable is proper to one's god.
> Who knows the will of the gods in heaven?
> Who understands the design of the abyss?
> Where have mortals learned the way of a god? (Tablet II, 34–38 [*BWL*])

These lines translate a skepticism that does not stop short of the gods' dealings with man, but attacks the religious basis of ethics. If the gods are so radically different, how can one be sure of their demands? The inaccessibility of the gods, an idea one sporadically finds in Egyptian wisdom texts, too, makes the assumed correspondence between divine commands and human ethics extremely precarious.

Similar misgivings have sometimes been voiced in ancient Israel and their echo can be heard in the Wisdom Literature. "I have not learned wisdom, nor have I knowledge of the Holy One—who has ascended to heaven and come down?" says Agur (Prov 30:3–4a). The distance between God and his creatures, so the author suggests, forbids all hopes of their ever understanding Him. Such a statement is more than an irenic reminder of human imperfection. In the face of inexplicable adversity, the emphasis on God's transcendence condemns the sufferer to impotent acceptance of an arbitrary lot. In the debate about good and evil, he is no party to God:

> Can you get to the bottom of God's secrets,
> Or fathom the limits of Shadday?
> It [God's wisdom] is higher than heaven—what can you do?
> It is deeper than Sheol—what would you know? (Job 11:7–8)

The recognition of God's absolute superiority can easily lead to skepticism. When God's distribution of justice is felt to be incompatible with the human sense of wrong and right, there is no way of knowing whether the human norms of behavior are, in the final analysis, sustained by God.

Skepticism concerning divine retribution could take on various forms. It usually led to doubts about God's active involvement in the world of human affairs: "The LORD does neither good nor ill" (Zeph 1:12). When it comes to the business of everyday life, "God does not manifest Himself," many an Israelite may have been thinking (Pss 14:1; 53:2). The frequent inconsistency between a man's moral attitude and his career, however, raised the far more serious question concerning the divine validation of morals. Experience gave fuel to the conviction that God's conception of right and wrong differed from that of men. If the logic of His plans was beyond human reach, it might well be that He entertained ideas about appropriate behavior far removed from what man would suppose. These considerations could easily lead

to doubt about the validity of the accepted code of conduct. Skeptics would not suggest that God had purposefully given "statutes that were not good and ordinances by which they could not have life" (Ezek 20:25), but that there was no way of knowing how He wanted man to live.

Skepticism of the latter type is attested to by the polemical overtones of Deut 30:11–14. In retrospect, the commandments laid down in Deuteronomy are said to be within human reach:

> For this commandment which I command you this day is not beyond your understanding, neither is it far off. It is not in heaven, that you should say, "Who will go up for us to heaven, and bring it to us, that we may hear it and do it?" Neither is it beyond the sea, that you should say, "Who will go over the sea for us, and bring it to us, that we may hear it and do it?" But the word is very near you; it is in your mouth and in your heart, so that you can do it.

The images used here reflect the traditional Near Eastern conception of heaven and underworld—"beyond the sea" refers to Sheol, cf. Ps 139:8–9—as the abode of the gods. These are realms to which mortals have no access. Thanks to God's revelation, so Deuteronomy stresses (cf. Deut 29:28[29]), the divine norms are no longer hidden in these remote spots of the universe. Skepticism is combated by an appeal to the special status of the written law, the authoritative body into which revelation has solidified (cf. Prov 30:5–6).

C. Skepticism Concerning a Beatific Afterlife

In Egypt, from the First Intermediate Period (ca. 2130–1938) onward, the transitoriness of human existence becomes a literary theme elaborated in the various *Harper's Songs.* The authors of these compositions are skeptical about the efficacy of the funerary cult and urge the enjoyment of the present life. Similar admonitions run through Mesopotamian literature. According to the words of Siduri, one of the characters in the *Gilgamesh Epic,* "When the gods created mankind, they assigned death to mankind, but held life in their own keeping" (Old Babylonian version, Tablet X iii 3–5). Consequently, it is best to make merry as long as the circumstances allow one to do so. Both in Egyptian and in Mesopotamian thought, however, death did not annul the existence of the individual. After one's departure from the world of the living, life continued in the realm of the dead, albeit in a modified way. In Mesopotamia, this afterlife was never considered a happy prospect. Egyptian religion, on the other hand, is known to have stressed the importance of adequate preparations for one's burial and the subsequent care of the tomb, because only thus a relatively comfortable continuation of one's existence could be ensured. Skeptics had occasionally cast doubt on the realism of these expectations. Judging by biographical inscriptions from the 1st millennium B.C., their skepticism came to enjoy some popularity. Considering the persistence of the traditional funerary ideology and the burial practices, skepticism remained an active undercurrent (see also *LÄ* 2:972–82).

The belief in a *postmortem* retribution arose at a relatively late date in ancient Israel, presumably as an answer to the problem of theodicy. From the outset, it met with skepticism. In the OT writings, the issue is explicitly dealt with in the book of Qoheleth (Ecclesiastes). The author is familiar with the idea of a future redressal of life's injustices: "God will judge the righteous and the wicked, for there is a time for every matter and every deed—over there!" (Qoh 3:17). This doctrine, however, is cited with skeptical overtones. God wants to show men that they are but beasts (Qoh 3:18). Both man and beast end up by going to the same place; there is no way of telling whether the spirit of man goes upward and the spirit of the beasts down to the earth (Qoh 3:20–21). The uncertainty of the future should incite man to enjoy his present lot (Qoh 3:22). Since, moreover, nobody has reached perfection (Qoh 7:20) and neither vice nor virtue can guarantee a happy life (Qoh 7:15–18), one had best take the good times as they come and entertain no vain hopes of future rewards (Qoh 9:7–10). The tone of Qoheleth cannot be called pessimistic; the author is a pious and, on the whole, irenic skeptic. His keen eye for the pleasures of life saves his meditations from bitterness and gives him a place in a time-honored stream of ANE wisdom teachings.

D. Conclusion

In many respects, Israelite skepticism differs from its modern versions. For one thing, its scope was limited. The existence of God was never called into question, nor were the basic elements of the religious

world view abandoned. In other words: the skepticism that manifested itself in ancient Israel did not pave the way for a purely secular mentality. This does not, however, diminish its importance as a factor in the shaping of Israelite religiosity as we know it. The skeptical reception of miracle stories has contributed to, as much as it was an expression of, a religious culture that prized the word above the feasts of miracle-workers. Doubts concerning the divine settlement of accounts in the afterlife bolstered the fundamentally this-worldly orientation of Israelite faith. The most important contribution of skepticism, in the last analysis, has probably been the impetus it gave to the formulation of a doctrine of canonical revelation. Skeptics stressed the discontinuity between a transcendent deity and the human norms of behavior. Faced with this dilemma, the Deuteronomists brought the entire code of conduct under the tutelage of God by claiming its origin to be in divine revelation. Revelation became a key theological notion, raising the written body of commandments to canonical status. Thus, skepticism has had a catalyzing effect in the development of some of the distinctive facets of Israelite religion.

SLAVE GIRL AT PHILIPPI (PERSON) [Gk *paidiskē* (παιδισκη)]. A young woman with a spirit of divination encountered by the apostle Paul and his companions at Philippi and exorcised of the spirit by the apostle (Acts 16:16–19). Although the majority of scholars (e.g., Schille *Apostelgeschichte* THKNT, 344–45) view the incident of the slave girl as nonhistorical, and others have argued that the story of the exorcism originated with respect to some other figure and was secondarily applied to Paul, there are still some who will defend the account as historical. Lüdemann, for example (1987:189–91), believes that the question of historicity must remain open in the light of Paul's own statements about his miraculous accomplishments (Rom 15:18–19; 2 Cor 12:11–13).

A spirit makes the slave girl clairvoyant and able to predict the future (Marshall *Acts* TNTC, 268). More specifically, the Greek text reads *pneuma pythōna* "spirit of divination" (Acts 16:16). According to Greek myth, the *pythōn* was the serpent or dragon that inspired and guarded the oracle at Delphi; the creature was slain by the god Apollo. The word *pythōn* came to mean a divining spirit, and ventriloquists were called *Pythōnes* (BAGD, 728–29). In antiquity, ventriloquists (Gk *engastrimythoi*) were thought to have in their stomachs a mantic spirit that spoke oracles (Festugière 1947:133). The writer of the account in Acts undoubtedly viewed the slave girl as possessed; the exotic quality of *pythōn* possession enhances the literary appeal of the passage.

The story of the slave girl manifests considerable Lukan theology. She is a slave, a woman, possessed, and put to use for mere profit by her owners; evidently she should be numbered among the disadvantaged of the sort who are the particular object of Jesus' saving activity (O'Toole 1984:109–35). Her act of "following" Paul (Acts 16:17) is not hostile. The slave girl (through her demonic spirit) has insight into the identity and mission of Paul and his company, much as the demons exorcised by Jesus knew his true identity (Luke 4:34, 41; 8:28). Her repeated shouts exposing their mission, "These men are servants of the Most High God, who proclaim to you the way of salvation" (Acts 2:28; Tremel 1981:101), so annoyed Paul that he commanded the spirit in the name of Jesus Christ to come out of her, and it did.

In its context, the story of the exorcism creates the circumstance of Paul's imprisonment at Philippi. It is one of a group of stories of Paul's encounter with preternatural phenomena in Greco-Roman cities. In all of these (the sons of Elymas [Acts 13:4–12]; the sons of Sceva [19:11–20]; the silversmiths of Ephesus

[Acts 19:21–40]) the preternatural is distinguished from and subordinated to Christianity. Other Lukan themes salient in the story of the slave girl are the power of the name of Jesus, the continuing activity of the risen Christ, and the salvation of the disadvantaged.

ROBERT F. O'TOOLE

SLAVERY. Slavery is the institution whereby one person can hold ownership rights over another. In the biblical world, this institution took on forms quite unlike the New World slavery practiced in the West particularly in the 18th and 19th century. This entry consists of three articles that explore slavery in the biblical world. The first focuses upon slave labor in the ANE (particularly Mesopotamia); the second focuses upon the practice of slavery as it is depicted in the OT, and the third focuses upon Greco-Roman practices of slavery and how these are depicted in NT texts.

ANCIENT NEAR EAST

A. Types of Labor
B. Sources of Slavery
C. Use of Slave Labor
D. The Legal Status of Slaves
E. Manumission of Slaves
F. Conclusion

A. Types of Labor

Society in the ANE consisted of three large social groups: freemen, semi-free population, and slaves. Although an unusual variety of forms of socioeconomic relations was characteristic of antiquity, there existed three main types of labor: independent labor of free peasants and craftsmen, labor of slaves, and labor of various groups of the semi-free populace.

Independent or free producers worked in their own fields and craft workshops. There also existed free hired-labor which is attested in earlier as well as in later periods of Mesopotamian history and was used in the Hittite kingdom, Palestine, and many other countries of the ANE. This type of labor was especially characteristic of Babylonia in the 1st millennium B.C., when temples and private individuals were forced to resort to the large-scale use of free hired labor in handicrafts and in agricultural work. These masses of hired hands consisted mainly of land-starved free persons.

Semi-free groups, which can be called serfs or helots, were subjected to extra-economic coercion and worked from generation to generation on land that belonged to the palace and temples. Ethnically, they consisted of native population and captives settled on the land. Depending on the specific historical conditions, the serfs could be deprived of property in the means of production or could have access to them. In other words, some of these persons owned plots of land and possessed immovable and movable property, including even slaves. They worked part-time on their own and part-time in palace and temple households. Other groups of serfs did not have their own land and worked full-time for public estates.

The serfs, although closely akin to slaves, occupied an intermediate position between freemen and slaves. They were the principal labor force in state and temple estates in Egypt, Asia Minor, Mesopotamia (*guruš* in early periods, *šušānu,* etc. in the 1st millennium), Achaemenid Iran *(kurtaš),* and in other countries of the ANE. In later periods the role of such groups in production and in the social structure decreased appreciably from that of the 3d and the 2d millennia, while the role of slave labor became more important.

Slavery was a further form of personal dependence and extra-economic coercion. The slave was a person deprived of the means of production and was merely a thing belonging to his master with regard to whom he had only duties and no rights whatsoever. The institution of slavery probably came into existence at the end of the 4th millennium and developed along different lines in different countries, depending on concrete historical conditions. Its forms also changed in one and the same country within the course of time.

The usual term for "slave" in Mesopotamia was *wardum,* which at the same time was used not only to designate an actual slave but also dependence in the broad sense or servility, thus corresponding to Heb *ʿebed,* Aram *ʿabdā,* Old Pers *bandaka,* Gk *doulos,* etc. In the ANE, all the subjects of the king, including even highly placed officials, were regarded as slaves of the king. In 1st millennium Babylonia, a large number of terms appeared which were either completely unattested in the earlier texts or were used with different meanings (for example, *qallu* which literally means "the little one" or *amēlūtu,* the abstract collective term for slaves of both sexes, which literally means "people"). In addition, in many countries there existed temple slaves whose status was also hereditary. In Mesopotamia, the main term for such slaves was *širku*.

B. Sources of Slavery

In all probability, slaves were originally foreigners, mainly prisoners of war. Within all the periods of antiquity, Egyptian, Mesopotamian, Hittite, Persian, and other Oriental rulers carried away great masses of captives from their victorious battles. But only an insignificant part of them was turned into slaves; all the others were settled on the land as palace and temple serfs. In later periods the labor of prisoners of war was more widely used in the construction of canals and the building of roads, palaces, and temples.

Many of the foreign slaves were brought from abroad. For instance, slaves from Sabartu in N Mesopotamia were highly appreciated in Babylonia and Assyria at the end of the 3d and beginning of the 2d millennia.

In the Old Babylonian period, a distinction was drawn between native and foreign slaves. Thus, according to the Code of Hammurapi (par. 280), citizens who had been carried off to foreign countries were subject to redemption. But in the 1st millennium such a distinction was not made in Babylonia or Assyria.

Beginning with the earlier periods, debt slavery was one of the basic sources of replenishing the slave population. However, from time to time debtors were able to gain release from slavery. Thus, the Babylonian king Ammiṣaduqa in the 17th century issued an edict, according to which all inhabitants of his kingdom who had been compelled by debt to become slaves should be released together with their families. See also PUNISHMENTS AND CRIMES.

In earlier Mesopotamian periods, debt slavery was usually limited by law to a specific period of time, usually to three or six years. For instance, the Code of Hammurapi (par. 117) stipulates that debt slavery should be limited to three years, but no such limitation existed in Assyria. In Nuzi, debt slavery was widespread, and the time required to work off the loan sometimes lasted up to 50 years. In 1st-millennium Babylonia, however, any limitation of debt slavery to a specific period of time was no longer in force. Moreover, debt slavery was not widespread at this time and was no longer of great significance. Besides, the creditor could no longer sell a debtor into slavery to a third person. Usually the debtor paid off the loan by *antichresis* (free work for the creditor), thereby preserving his freedom.

The self-sale of destitute freemen is attested in documents from the Ur III period and from Larsa in the period before the accession of Hammurapi. In the Old Assyrian period, a man at Kanesh sold himself and his wife into slavery, and at Nuzi self-sale in order to obtain food and clothing was very widespread (Dandamaev 1984:175, n. 121). In 1st-millennium Babylonia self-sale became an extremely rare phenomenon. Thus, about 648, at the time of the siege of Babylon by Ashurbanipal, one woman sold herself into slavery on the condition that her master feed her. The document contains the stipulation that, after the siege has been lifted, husband, son, brother, or any other member of the family may redeem her by offering something equivalent to her value (Weidner 1952/1953:37.2).

The sale of children of free persons into slavery was permitted in Sumer, Babylonia, and Assyria in the 3d and 2d millennia. In Assyria of the 1st millennium, parents could sell their children and brothers could sell their sisters. In Nuzi the sale of children was widely practiced (Dandamaev 1984:174, n. 118). Nine Neo-Babylonian contracts concerning the sale of children by free persons have been preserved from Nippur. In 626, when the troops of the Babylonian king Nabopolassar laid siege to Nippur, which had maintained allegiance to the Assyrians, some parents sold their children to moneylenders (Oppenheim 1955:69–89).

In the 3d and 2d millennia, parents who were not in the position to feed their young children sometimes left them at walls or in baskets on the river and also abandoned them on the street where anyone who desired could pick them up and raise them, either to turn them into slaves or adopt them. The Code of Hammurapi regulates the legal position of such persons (pars. 185–87, 192).

In earlier periods of Mesopotamian history, free persons could be enslaved for violation of law. For example, in Sumer thieves were turned over to their victims as slaves. The wife and children of a murderer who had been sentenced to death were also condemned to slavery. According to Sumerian law, if the son renounced his father, the latter could place upon him the mark of a slave (Driver and Miles 1968, 1:306). The Code of Hammurapi (par. 141) permitted a husband to sell his dishonest or spendthrift wife into slavery. According to the same Code (par. 54), a man through whose fault his neighbor's field was flooded had to compensate for the damage, and if not in the position to do this, then he was to be sold.

In 1st-millennium Babylonia, slaves were permitted to live as families, and their natural reproduction from generation to generation had great significance, being the basic source for replenishing the number of slaves.

An important source of temple slavery was the dedication of privately owned slaves to the temples by their devout masters. This practice of making dedications is attested as far back as the Old Babylonian period and was also known in Assyria. Under the Chaldean kings, one of the principal sources of temple slavery was the dedication of prisoners of war to the temple. Other sources were the slaves transferred to the temple by insolvent debtors, the children of temple slaves, and finally the children of free persons given to the temple for economic reasons. Thus, according to a document dated to the reign of Nabonidus, a time of famine in Babylonia, a woman whose husband had died dedicated two of her young children to the Eanna temple in Uruk to be slaves and branded them. The text notes that the children were given to the temple so they would not die of starvation (Dougherty 1920:no. 154).

C. Use of Slave Labor

The documentary sources contain little information about the employment of privately owned slaves in agriculture, except cases when slaves appear as tenants of leased fields. Thus, in 1st-millennium Babylonia, the slaves rented fields, seed, animals, and implements from their own masters or from other persons. The large landowners preferred to lease out the land to tenant farmers instead of employing slaves, because slave labor required constant supervision, and therefore increased expenditures.

A relatively large number of slaves worked on the temple estates. However, temple slaves caused many problems by their frequent escapes and their reluctance to work, thus requiring constant supervision. The letters of temple officials of the Neo-Babylonian period are full of complaints that the slaves are lazy and do shoddy work. Therefore the temples were often forced to employ seasonal workers and occasionally rented out land to free tenants. Besides, a considerable part of the temple estates was tilled by serfs.

In the ANE, there existed no artisan workshops based on slave labor. Trade professions were to a considerable extent passed down from father to son among the free members of the society. Thus, in ancient Oriental societies the labor of free farmers and tenants constituted the basis of agriculture, and the labor of the freemen was predominant in handicrafts as well.

Slave labor reached its highest level of development in 1st-millennium Babylonia. Wealthy individuals owned several slaves, and some families (e.g. the Egibi business house) actually possessed over a hundred slaves. It was not uncommon for persons of moderate means to own three to five slaves. Nevertheless, the number of slaves would not have been greater than half of the free population.

The question arises, why the masses of war prisoners were not enslaved. Slavery was the optimal form of dependence, and very often there was no shortage of prisoners captured in war. Besides, there were no legal or ethical norms preventing these prisoners from being turned into slaves. But this happened in a negligible percentage of cases, while the overwhelming majority were settled in places specially set aside for them, paid royal taxes, and carried out obligations, including military service.

The reasons why foreign prisoners could not be turned into slaves were that the palace economy could not use slave labor because of its low level and that the state machinery was too weak to exert effective supervision over masses of slaves (Gelb 1973:91). In other words, the slave labor sector in the ANE, unlike the world of Greek and Roman antiquity, proved unable to absorb masses of captives because of the comparatively weak development of the economy and commodity-money relations and, consequently, because of the absence of sufficiently advanced methods of production in which slave labor could be widely used. Therefore, slave labor was primarily used for domestic work which did not require much training or costly supervision, that is, where it could be used the year round and not only seasonally.

D. The Legal Status of Slaves

Slaves, just like livestock, constituted a basic form of movable property. They were deposited as security, included in dowries, transferred by inheritance, etc.

Slaves were frequently branded for the purpose of identification. The marking most often consisted of tattooing or "writing" the name of the slave's owner on his hand with a red-hot iron. In Assyria ears of slaves were sometimes pierced. The Code of Hammurapi (par. 282) permitted the master to cut off the ear of a disobedient slave. In Mesopotamia starting with the end of the 3d millennium, many slaves were already being marked with marks of the *abbuttum* type. This was probably a special mark placed on the shaven head by a barber who also functioned as the professional marker of slaves (Szlechter 1949:404). According to the Code of Hammurapi (par. 226), if a barber shaved an *abbuttum* from a slave's head without the knowledge and consent of his owner, the barber's hand would be cut off.

The escape of slaves was quite a widespread phenomenon. Fugitive slaves were caught, incarcerated in fetters, and returned back to work. The Laws of Eshnunna (pars. 49–50) already stipulate a fine of two times the value of the slave for the theft of someone's slave or the concealment of a fugitive slave. The Laws of Lipit-Ištar (par. 12) obligate the citizen who sheltered a fugitive slave to return him to his master within a month's time or to pay the latter 25 shekels of silver. The Code of Hammurapi (pars. 15, 16) establishes the death penalty for the theft or concealment of a fugitive slave.

During the sale of a slave the seller in some cases guaranteed that within the first hundred days his slave would neither run away nor suddenly die. In addition, a guarantee was given that the slave was not subject to epileptic fits. The Code of Hammurapi (par. 278) restricts this warranty to one month, while Neo-Assyrian documents stipulate a term of one hundred days after the purchase (Driver and Miles 1968, 2:279–80).

The average price of a slave or slave woman in the period of the dynasty of Akkad and in the Ur III period fluctuated between 10 and 15 shekels of silver. It was 20 shekels in the Old Babylonian period. In late Assyria, slaves were sold for approximately 50 to 60 shekels and slave women for 40 shekels. In the period of the Chaldean dynasty, an adult male slave cost an average of 50 to 60 shekels and a slave woman a little less. Under the Achaemenids, the prices for slaves gradually rose to about one and a half times their previous level (Dandamaev 1984:181–206).

It is natural that the slave's life was valued less than that of a freeman. According to the Code of Hammurapi, the killing of someone else's slave was to be punished only by the payment of compensation to his master for his material loss (par. 116), and, when bodily injuries were inflicted on a slave, it was necessary only to pay half the purchase price of the slave (par. 199).

Although in view of the law the slave was mere chattel, the actual position of slaves varied greatly even in a single society in the same historical period. Some slaves were subjected to cruel forms of exploitation, while others found themselves in relatively good circumstances.

In many countries of the ANE marriages between free people and slaves were permitted. According to Old Babylonian law, the children of a slave woman and her master were regarded as free persons in all

instances. As seen from the Code of Hammurapi (par. 175), children from a marriage between a male slave and a free woman were considered free persons.

Sometimes slaves were permitted to possess various kinds of property *(peculium).* Naturally, a slave received the right to a *peculium* only in those cases when the master took an interest in this. Such slaves were left to themselves with the payment of a fixed quitrent. The size of the quitrent fluctuated depending on the property of the slave, and in 1st-millennium Babylonia, on average, when calculated in money, amounted to twelve shekels of silver a year. Such a sum was also equal to the average annual pay of an adult hired worker regardless of whether he was free or a slave. Sometimes a quitrent was replaced by work for the master. Temple slaves who led an independent economic existence were also obliged to pay a monetary quitrent or provide the temple with finished products in accordance with the established norms.

In 1st-millennium Babylonia enterprising slaves owned land, houses, and considerable amounts of movable property. They actively participated in all spheres of economic activity, were engaged in trade, ran taverns and workshops, taught other persons various trades, pawned and mortgaged their property, and they themselves received the property of others as security for loans.

In the legal sphere such slaves could appear as witnesses, plaintiffs, and defendants in court. They also could have their own personal seals and take oaths. Moreover, there were apparently no differences in the ways in which the interests of slaves and freemen were defended, though the slaves, of course, could not engage in litigation with their masters. In affairs with a third party, the slave could mortgage only the *peculium,* but not his own person.

Slaves sometimes even purchased other slaves or hired free individuals to work in their own households. Such wealthy slaves, however, remained the property of their masters, at whose whim they could be deprived of their property and influence.

E. Manumission of Slaves

A slave's right of manumission belonged exclusively to the slave's owner. According to Sumero-Babylonian law, the freeing of a slave took place either before a court or in the form of a contract between the slave and his master or through a ritual purification of the slave. Court protocols as early as the Third Dynasty of Ur contain mention of the manumission of slaves. The freeing of the slave took place before judges, was recorded in a document of an official nature, and could not be contested later by the former master or his heirs (Driver and Miles 1968, 1:221–30).

Sometimes the act of manumission was formulated as a sale contract between the master and his slave. In a number of cases, the freeing of a slave was effected through adoption by his master on the condition that he maintain his former master while he was alive. Sometimes a master married his slave woman to a free man so that the latter would buy her or maintain his wife's former master along with her. An Assyrian document from around 1800 records that a free man manumitted his slave and adopted him, with the stipulation that, as long as the former master and his wife lived, the adopted son was to support them and obey them. After their death he was to receive a plot of land and one ox. If the former master reclaimed his adopted son as a slave, he was to pay two minas of silver. If the manumitted slave repudiated his adoptive parents and ran away, he was to be sold at the place where he was caught (Veenhof 1982:359–85). Another Assyrian document from ca. 1115 records that a slave redeemed himself from slavery for 1 mina 55 shekels of silver. In all probability, he was a debt slave. The text also stipulates that the former master and his descendants shall not initiate any lawsuit concerning this manumission (Jankowska 1989:82–85).

As seen from Neo-Babylonian documents and Aramaic papyri of the 5th century B.C. from Egypt, slaves were sometimes freed with the stipulation that they continue to serve the master or provide him with food as long as he was alive (Dandamaev 1984:438–50). Thus, the manumission of slaves was mainly limited to those cases where the slave owner, advanced in years and without children, sought to arouse the interest of a slave through the prospect of being freed in the future. There is also attested such a form of manumission when a free person (either the master of the slave himself or another person) adopts

the slave. Both of these forms existed in Mesopotamia for two millennia, and their legal character remained the same from the Old Babylonian period on.

F. Conclusion

The institution of slavery had a profound influence on the social structure, ideology, law, social psychology, morals and ethics of the various cultures of the ANE. However, the idea of a slave as exclusively the object of rights and as a person outside regular society was apparently alien to the laws of the ANE. The institution of slavery was taken for granted not only by the free persons but also by the slaves themselves, who never demanded its abolition. Therefore ideology of the ANE contains no condemnation of slavery or any protest against it.

MUHAMMAD A. DANDAMAYEV

OLD TESTAMENT

A. Terms Designating Slaves
B. Sources of Slavery
C. The Use of Slave Labor
D. The Legal Status and Actual Position of Slaves
E. Conclusion

A. Terms Designating Slaves

The usual term for slaves in the OT is *ʿebed* derived from the verb *ʿābad*, "to work." In the LXX it is translated *doulos,* which is the most general attributive of a slave, and sometimes *oiketēs,* i.e., a household slave. The Heb *nʿr* (fem. *nʿrh*), literally "youth," is also used in the OT with respect to young slaves. Its Greek equivalent *pais* in the LXX designated domestics, young slaves as well as freeborn young persons. Finally, the word *āmāh* is encountered with the meaning slave woman in ancient Hebrew.

The word *ʿebed,* however, denoted not only actual slaves occupied in production or in the household but also persons in subordinate positions (mainly subordinate with regard to the king and his higher officials). Thus the term *ʿebed* is sometimes translated as "servant." Besides, the term was used as a sign of servility in reference to oneself when addressing persons of higher rank. Finally, the same term was also used in the figurative meaning "the slave (or servant) of God." Thus, the patriarchs Abraham, Isaac, and Jacob, prophets, David, Solomon and other kings are regularly called slaves of Yahweh (Exod 32:13; Lev 25:55; 1 Sam 3:9; Ezra 9:11, etc.). Similarly, all the subjects of Israel and Judah are called slaves of their kings, including even wives, sons, and brothers of the latter (1 Sam 17:8; 29:3; 2 Sam 19:5, etc.; cf. also Gen 27:37; 32:4). Addressing Moses and prophets, the Israelites called themselves their slaves (Num 32:25; 1 Sam 12:19, etc.). Ruth refers to herself as a slave girl of her relative Boaz (Ruth 3:9). Being a vassal of the Philistine king Achish, David called himself his slave (1 Sam 28:2). It is natural that the same vague and inexplicitly formulated social terminology characteristic of the ANE is also used in the Bible in

relation to the subjects of foreign rulers. For example, courtiers of an Aramean ruler or the soldiers of the Babylonian king Nebuchadnezzar II were considered slaves of their monarchs (2 Kgs 6:11; 24:10–11). It is natural that kings of Judah depending on more powerful rulers of neighboring countries were considered their slaves. Thus, Ahaz is referred to as a slave of the Assyrian king Tiglath-pileser III (2 Kgs 16:7). In modern translations of the Bible *ʿebed/doulos* and several other similar terms are rendered "slave" as well as "servant," "attendant," etc. Such translations, however, might create some confusion and give the incorrect impression that special terms for the designation of servants and slaves are attested in the Bible.

However, selecting the proper meaning from such a broad metaphorical application of the term designating a general dependence rarely presents great difficulty. For example, Abimelech, king of Gerar, called up his slaves and told them his dream (Gen 20:8). Apparently, these "slaves" were royal courtiers and officials. Abraham gathered 318 of his slaves, born in his household, in order to recover his kinsman Lot who had been captured by Chedorlaomer and three Mesopotamian kings (Gen 14:14). At least, a part of these persons constituted freeborn members of Abraham's family. Upon ascending the throne of Judah, Amaziah executed his slaves who had murdered his father, the former king (2 Chr 25:3). These slaves were certainly royal dignitaries. When Josiah, king of Judah, had been killed at Megiddo, his body was taken in a chariot to Jerusalem by his slaves (2 Kgs 23:30). It is quite evident that these slaves were royal soldiers. In a number of cases, however, the interpretation of the actual meaning of the ambiguous *ʿebed* may be disputed. For instance, the steward of Abraham's household who was in charge of all his possessions is called his slave (Gen 24:2). His status can only conjecturally be interpreted as an indication of actual slavery and, of course, he could have been a freeborn person.

The nations subjected by the Israelites were considered slaves. They were, however, not slaves in the proper meaning of the term, although they were obliged to pay royal taxes and perform public works. Thus, during the conquest of Canaan, the inhabitants of Gibeon and three other towns avoided defeat by tricking the Israelites into granting them a treaty. When their trick became known, the treaty was upheld but the populations of the towns were reduced to "perpetual slaves" and were obliged to chop wood and draw water for the altar (Josh 9:23). When David subdued the Philistines, Edomites, Moabites, and Arameans, they became his tribute-paying slaves (2 Sam 8:2, 14; 1 Chr 18:2, 6, 13). Solomon took a census of all people who did not belong to Israel and reduced them to "slavery" making such a status hereditary. He also imposed forced labor on them in order to build the Jerusalem temple and royal palace (2 Chr 2:17; 8:7–9). An ideological background of this dependence can be found in the story of Ham, the father of Canaan, who saw his father Noah naked during the latter's drunkenness. Therefore Noah cursed Canaan who was then destined to be a slave to his brothers (Gen 9:25–27). It can also be mentioned that the Philistine champion Goliath challenged the Israelites to decide the struggle between them in a single combat. The conditions of the duel were that if the Israelite champion defeated Goliath the Philistines were to become slaves of the Israelites, and *vice versa* (1 Sam 17:8–9). The Israelites were saying that the king would give a rich reward to the man who would kill Goliath and would make his father's house free, i.e., would exempt his family from paying taxes and performing royal service (1 Sam 17:25).

According to the Bible, the Israelites were slaves in Egypt (Exod 13:3, 14; Deut 5:15; 16:2; 24:18, etc.). They, however, were not slaves in the exact meaning of the word and were only obliged to perform forced labor for the pharaoh.

Our information about the Babylonian captivity of the Jews is much more abundant. The biblical sources describe this captivity as the yoke of cruel slavery (2 Chr 36:26; Isa 14:3; 47:6; Ezra 9:9, etc.; cf. Jer 25:11; 27:7). According to Lamentations (5:5, 8, 13), the prisoners were given no rest, young men were to grind corn, and they stumbled under loads of wood (cf. also Isa 51:14). These captives, however, cannot be legally classified as slaves at all since they were not included in the palace or temple households, but were settled in places set aside for them, particularly in the Nippur region. Initially, these people probably did not have the right to leave their place of residence. Referring to Yahweh's order, Jeremiah urged the prisoners that the captivity would be long, and he encouraged them to build houses and lay out gardens, to marry and raise children (Jer 29:4, 7, 28). Later, after the capture of Babylonia by

the Persians, some of the Jews returned home, taking their own slaves with them (Ezra 2:64–65; Neh 7:66–67). The status of the rest was essentially the same as that of the local free population, as can be seen from the information contained in the documents of the Murashû archive.

B. Sources of Slavery

Beginning with the earlier periods, debt slavery was one of the basic sources of replenishing the slave population. Besides, the law permitted the sale of children by parents of free status. Such slaves, however, could not have been sold by their creditors to a third party. The debtors continued to work for the creditor in order to pay off their loans.

In the Deuteronomic law a clear distinction is drawn between slaves of Hebrew and foreign descent. Debtors who were Hebrews and sold themselves in utmost need could be held in slavery for only six years, after which they should be set free without any pay (Exod 21:2; Deut 15:12; Jer 34:14). If a Hebrew slave was married when he was forced into slavery, his wife went free with him after a six-year period (Exod 21:3; Lev 25:40–42). If his master gave him a wife, she and any children remained with the master and only the slave was set free (Exod 21:4). If, however, the slave was content with his master and chose to remain with his family, the master was instructed to bring him to the doorpost and to pierce his ear with an awl and then he was to be his slave for life (Exod 21:6; Deut 15:16–17). If a Hebrew sold his daughter into slavery, she could not obtain freedom even after six years of work. Her master, however, had no right to sell her to a foreigner. If he did not want to treat her as his concubine or to give her in marriage to his son and if he deprived her of food, clothes, and conjugal rights, she could go free without any payment (Exod 21:7–11).

The law also demanded that the status of a Hebrew who sold himself into slavery to another Hebrew should be that of a hired workman and after six years he could go back to his family (Lev 25:39–41). Thus, such a self-sale did not lead to actual slavery. If a Hebrew sold himself to a foreigner, the latter was obliged to set him free as soon as the slave or his relatives could pay for his redemption (Lev 25:39–41). Then the slave was required to compensate his redeemer by working for him or repaying the sum of the ransom (Lev 25:47–52; cf. Exod 21:2; Neh 5:8). If the slave was not in the position to redeem himself he had to work as a hired laborer until the Sabbatical year when he was to be set free together with his children (Lev 25:53–54).

According to the Deuteronomic law (15:13–14, 18), upon manumission, it was required to give the slaves some gifts to enable them to maintain their households, since for six years' work they paid off twice as much as the wage of a hired man.

It seems, however, that these laws were not always observed. For example, during Zedekiah's reign it was decided to proclaim an act of freedom for the slaves of Hebrew descent, and nobody objected to this decision; however, afterward they changed their minds and continued to use the labor of the persons whom they had freed (Jer 34:8–11, 14–17). As seen from the book of Nehemiah (5:3–5), in 5th-century Judah, some free persons were forced to mortgage their fields, vineyards, and houses to escape starvation, or to borrow silver to pay the king's taxes, delivering their sons and daughters into slavery. The inhabitants of Judah complained that they were required to sell their sons and daughters into slavery and that it was not possible to redeem them. Similar protests occur also in some other biblical books. For instance, according to 2 Kings 4:1, a freeborn Jewish woman was complaining that after the death of her husband, his creditor took both her sons as his slaves. Proverbs (22:7) say that the rich rules over the poor and the borrower is a slave to the lender.

Thus, one of the chief sources of privately owned slaves was defaulting debtors and their families. Aliens who fell into debt slavery could become perennial slaves. Besides, the self-sale was permitted by law. Finally, free persons had the right to sell their children or to use them as security.

Already in earlier periods, the abduction of freeborn persons for the purpose of enslaving or selling them into slavery was also known. The law, however, stipulated the death penalty for the kidnapping of Israelites (Deut 24:7; see also Exod 21:16). A number of biblical books contain an appeal not to covet slaves, slave women, and other property belonging to one's neighbor (Exod 20:17, etc.).

In earlier periods, when the Israelites conducted successful wars against neighboring peoples, prisoners of war constituted an important source of slavery. As was characteristic of other ANE societies, captive men, boys and even women were often put to death and only girls were sent into slavery (Num 31:9–18). Thus, during one military campaign there were captured 67,500 head of sheep, 72,000 head of cattle, 61,000 asses, and 32,000 girls (Num 31:32–35).

Deuteronomy (20:11–14) contains instructions that when advancing on an alien city in order to occupy it, it was necessary to make an offer of peace. If this offer was accepted and the city's gates opened, its inhabitants were to pay taxes and perform corvée labor. If this offer, however, was declined, all the men were to be put to the sword, and women and children as well as movable goods were to become the plunder of the victors. But if any soldier married a captive girl who had caught his fancy and afterward divorced her, he could not sell her into slavery and was obliged to set her free (Deut 21:10–14).

In later periods of Israelite society, the influx of prisoners of war was very limited, and for this reason the basic source of slaves was natural reproduction.

The next source of slavery was obtaining slaves through purchase from neighboring nations. This source was in every possible way encouraged by biblical instructions (Lev 25:44–46, etc.; cf. also Eccl. 2:7). Such slaves were legally considered the absolute property of their owners, and their status was permanent: they were sold, passed on by way of inheritance, pawned, and branded or marked like livestock (cf. Isa 44:5).

Apparently, the prices for slaves varied in different periods and depended on their ages, skills, sex, and the like. It is known that Midianite traders sold Joseph to the Ishmaelites for 20 shekels of silver (Gen 37:28). To judge from Leviticus (27:3–7), an adult male slave cost an average of 50 shekels of silver and a slave woman 30 shekels; boys between five and twenty years old about 20 shekels, and girls of the same age about 10 shekels; babies and five-year-old boys 5 shekels and girls 3 shekels; old men and women (over sixty years) 15 and 10 shekels respectively. See also OLD AGE.

Finally, it is possible that free persons could be condemned to slavery for violation of law. In any case, to judge from Genesis (43:18; see also 44:9–10, 17), thieves could be sent into slavery.

C. The Use of Slave Labor

The slaves referred to in the Bible were in most cases privately owned. Naturally, there existed a royal economy which, however, was organized on the pattern of private households and, probably, the status of slaves of both types did not essentially differ.

It seems that there was no temple household in the Israelite and Judean society. In other words, the Jerusalem temple did not possess its own fields and livestock. Therefore the Bible does not mention any slaves working in the temple household. The main source of temple revenue consisted of various taxes, the most important being the tithe. A number of biblical books mention a group called *netīnīm* (1 Chr 9:2; Ezra 8:20, etc.). Scholarly opinion has been divided on the problem of whether this group constituted temple slaves or a class of cult servitors. See NETHINIM.

As seen from the book of Job (7:2), a slave's life was associated with exhausting labor, and the slave was longing for shadows like a hireling waited for his wage.

We have, however, almost no information about the use of slave labor. In this connection, only a few examples can be referred to, and even in these cases we cannot be sure that actual slave labor and not hired free labor is meant there. Jacob's shepherds are called his slaves (Gen 32:16); Abraham's and Isaac's slaves dug wells (Gen 26:15, 19); one of Saul's slaves, an Edomite, was his herdsman (1 Sam 21:7). There is also very scanty evidence on the use of slave labor in cultivating the land (2 Sam 9:10; Ruth 2:5). During the building of the walls of Jerusalem, Nehemiah ordered the people that every man and his slave were to act as guards by night and work by day (Neh 4:22). The number of these slaves is unknown to us but, according to the same source (4:16, 18), all the adult free population of Jerusalem was engaged in the construction.

For no period of Israelite and Judean society (as well as for any other society of the ANE) is the ratio of free persons to slaves even approximately known. The Bible, however, gives some related information which may be used for comparison (Ezra 2:64–65; Neh 7:66–67). When the Babylonian captivity ended

and the Jews returned to their homeland after the Persians had captured Mesopotamia, the adult composition of the repatriated people was as follows: out of 42,360 persons (30,000 of them men), the number of slaves and slave women came to 7,337, i.e., between one-fifth and one-sixth of the number of free people.

There is no doubt that the number of slaves was probably far less than the number of the free population. In any case, indirect information attests to this. For example, throughout the entire period of the grandiose construction of the Jerusalem temple and royal palace during the reigns of David and Solomon, nothing is known about the use of slave labor. The sources, however, clearly testify to using free subjects of the state for these purposes. According to 1 Kings (5:13–14), Solomon imposed corvée labor on the population of Israel. In particular, ten thousand men were sent each month to Lebanon in order to supply the construction with cedar and pine. Solomon also raised a forced levy of seventy thousand porters and eighty thousand stonecutters (1 Kgs 5:15; 2 Kgs 2:2, 18). It seems that these workmen were conscripted mainly from the Canaanite population which was dependent on the Israelites but was not subservient. According to biblical sources, only descendants of the subjected local population were employed by Solomon on perpetual forced labor for his public works. As to the Israelites, they were used only as fighting men (1 Kgs 9:21; 2 Chr 2:17–18; 8:7–9). This, however, can hardly be right since we know that after the death of Solomon, the Israelites were complaining to his son Rehoboam that his father had laid a cruel yoke upon them. They also asked him to improve their position. However, on the advice of the young men in his attendance, Rehoboam said that he would make their yoke even heavier (1 Kgs 12:4, 14; 2 Chr 10:4, 14). Thus, in all probability, the labor of the free Israelites began to be widely used for corvée works. It is also appropriate to mention that the prophet Samuel warned his countrymen that if they chose a king, he would take their sons and would make some of them plough his fields and reap his harvest, he would take their daughters as cooks, etc., and he would use their slaves and slave women to work for himself (1 Sam 8:11–16).

When the construction of the temple was finished, many master craftsmen were regularly used to carry out repairs in it. There were, however, no slaves among them. They were freeborn carpenters, builders, stonecutters, and masons hired and paid by the temple administration (2 Kgs 12:11–12; 22:5–6; 2 Chr 24:11–12).

D. The Legal Status and Actual Position of Slaves

Non-Israelite slaves were legally considered movable property of their masters who could dispose of them as they wished. Slaves were supposed to be in fear of their masters (Mal 1:6). In a number of biblical passages, slaves are listed as part of valuable property along with cattle, gold, silver, etc. (Gen 12:16; 20:14; 24:35; 30:43; 32:5; Exod 20:17, etc.).

A number of proverbs and aphorisms have been preserved which show a contemptuous attitude toward slaves: a slave ruling over princes is out of place (Prov 19:10); mere words will not discipline a slave, since he does not respond even if he understands (Prov 29:19); a slave pampered from boyhood will become ungrateful in the end (Prov 29:21). The case when a slave becomes king is listed among the things which the earth cannot bear (Prov 30:22). A similar case is when slaves are on horseback and nobles go on foot (Eccl 10:7).

Nonetheless, slaves were not only the object of law. Thus, the 4th Commandment contains an interdiction against forcing the slaves to work on the Sabbath (Exod 20:10; 23:12; Deut 5:14). It seems, however, that these instructions were often violated since some biblical sources condemn the breach of the Sabbath (Ezek 23:38, etc.). We have in the Bible the first appeals in world literature to treat slaves as human beings for their own sake and not just in the interests of their masters. Thus, slaves both born in the household and those bought with money, just like the free Israelites, were to be circumcised in order to share cultic life and eat the Passover (Gen 17:13, 23, 27; Exod 12:44; Deut 12:12, 18; Lev 22:11). The Hebrew law also restricted the master's power over his slaves. The premeditated killing of a slave was considered a crime and was punishable by law in cases where the slave died immediately from a beating, although the kind of punishment for this is not indicated in the text (Exod 21:20). But the master was not

to be punished if the slave survived a day or two (Exod 21:21). If the master put out his slave's eye or knocked out his tooth, the slave was to be set free in compensation (Exod 21:26–27).

In contrast to all the ANE laws, Deuteronomy (23:15–16) forbade the handing over of a fugitive slave who had sought asylum from his master. The law instructed the owner to let the slave stay where he chose to live. Our information about fugitive slaves is very scanty. For example, Nabal, a contemporary of David, said that many slaves had escaped from their masters in his day (1 Sam 25:10). Two slaves belonging to an Israelite had run away to Achish, king of the Philistine city of Gath, and their master had to go there to retrieve them (1 Kgs 2:39–40).

An appeal for the humane treatment of slaves can also be found in the advice not to slander a slave to his master so that the slave would not curse the slanderer (Prov 30:10). According to the book of Job (3:19), after the death of a master all of his slaves are free. It is said in the book of Isaiah (24:2) that when the Lord destroys the earth it will be the same for a master and his slave. Job (31:13) says that he never rejected any appeal of his slaves when they brought their complaint to him. Job (19:15–16) also complained that his slave girls treated him as a stranger and his slaves did not respond to his call.

It seems that, according to the Hebrew law, marriages between freeborn men and slave girls as well as between freeborn women and slaves were legally recognized. Thus, a certain Sheshan who had no sons gave his daughter in marriage to his Egyptian slave (1 Chr 2:34–35). Leviticus (19:20) contains instructions that if a slave girl had been assigned to a free man and not yet set free or ransomed, her seducer and she were not to be put to death.

Naturally, there were a certain number of privileged slaves. Thus, according to 2 Samuel (19:17), Ziba, a slave of Saul's family, had fifteen sons and twenty slaves. To judge from Leviticus (25:47–50), some slaves of Hebrew origin could have raised the means in order to purchase their freedom.

The difference in defense of interests of free persons and slaves is seen from Exodus (21:29, 32), according to which if a man had been warned by his neighbors that his ox was known to gore but did not keep it under control, and it gored a free man or woman thereby causing their death, the owner was to be put to death. However, if the ox gored a slave or a slave woman the owner was only to pay 30 shekels to their master.

E. Conclusion

Slavery had a profound influence on the social structure, ideology, law, and social psychology of the ANE cultures. However, throughout the entire history of Israel and Judah as well as of all other countries of the ANE, slave labor did not play a decisive role in agriculture and it was used to a very limited extent compared to the labor provided by small landholders. As the Bible indicates, the artisan trades were also in the hands of free persons (1 Chr 4:14, 23; Jer 37:21; Neh 3:8). For this reason, there existed no artisan workshops based on slave labor and the decisive role in the handicraft industries was played by free labor, especially in the area of manufacture depending upon skills. Thus, there was no predominance of slave labor in any branch of economy, and it was used primarily for household tasks requiring neither skill nor extensive supervision, i.e., in jobs where slaves could be employed all the year round, not those which were seasonal in character.

In contrast to many ancient doctrines, the Hebrew law was relatively mild toward the slaves and recognized them as human beings subject to defense from intolerable acts, although not to the same extent as free persons. The early Christian ideology undermined the institution of slavery, declaring an equality of all people in Christ.

A. Orientation

Among a variety of institutions for maintaining dominance and dependence characteristic of the early Roman Empire, slavery was an especially important form of compulsory labor in which part of the population legally owned other human beings as property; it was practiced in all cultures relevant to the writing of the documents of the NT. Dio Chrysostom, a popular orator in the 1st century C.E., spoke for the Mediterranean consensus when he defined slavery as the right to use another man at pleasure, like a piece of property or a domestic animal (XV.24). Extensive and differing legal traditions in Jewish, Greek, and Roman culture regulated this inherently ambiguous categorization of large numbers of persons as property (chattel slavery). "There was no action or belief or institution in Graeco-Roman antiquity that was not one way or other affected by the possibility that someone involved *might be* a slave" (Finley 1980:65).

Yet it must be stressed that for the most part knowledge of slavery as practiced in the New World in the 17th–19th centuries has hindered more than helped achieving an appropriate, historical understanding of social-economic life in the Mediterranean world of the 1st century, knowledge which is absolutely essential for a sound exegesis of those NT texts dealing with slaves and their owners or using slavery-related metaphors. For example, in contrast to the Authorized Version's translation of the Gk term *doulos* as "servant," the word "slave" should be used in order to stress the legally regulated subordination of the person in slavery. Yet in contrast to present connotations of the term "slave" resulting from the specific racial, economic, educational, and political practices characteristic of slavery in the New World, the slaves and slavery mentioned in NT texts must be defined strictly in terms of the profoundly different legal-social contexts of the 1st century C.E.

Central features that distinguish 1st century slavery from that later practiced in the New World are the following: racial factors played no role; education was greatly encouraged (some slaves were better educated than their owners) and enhanced a slave's value; many slaves carried out sensitive and highly responsible social functions; slaves could own property (including other slaves!); their religious and cultural traditions were the same as those of the freeborn; no laws prohibited public assembly of slaves; and (perhaps above all) the majority of urban and domestic slaves could legitimately anticipate being emancipated by the age of 30.

The extent of the owner's control over the life, the production, the "family" (a slave had no legal kin in Greek and Roman law), and the potential freedom of the enslaved person varied greatly. And sufficient differences existed among the three traditions (Jewish, Greek, and Roman) relevant to NT texts to require that serious students investigate the specific legal-social-philosophical background of each NT passage. This article seeks to reduce that great amount and complexity of detail to balanced examples and appropriate generalizations.

For example, the Greek tradition tended to regard an enslaved person as inferior by nature and thus fortunate to have a Greek master (Herodotus, Plato, Aristotle, echoed by Cicero), and to view human freedom as divisible into parts. The Jewish tradition, despite the practice of debt-slavery and the use of slaves even in the Jerusalem Temple, tended to regard any enslavement of Jews by Jews as improper because every Jew had already become exclusively a "slave of God" by means of the liberation of his or her ancestors from Egyptian bondage (Lev 25:55). In the Roman tradition, slaves on the one hand were rigorously regarded in much legislation as things (*instrumentum vocale*—a "speaking tool"), yet on the other hand they were regularly treated as well as free human beings and were normally granted Roman

citizenship when set free, as happened regularly. For this reason, it has been argued that urban and domestic enslavement under Roman law is best understood as a process rather than a permanent condition, a process of social integration of outsiders (Wiedemann 1981:3).

It must also be stressed that, despite the neat legal separation between owners and slaves, in none of the relevant cultures did persons in slavery constitute a social or economic class (see Garnsey and Saller 1987:109–25 for an analysis of class and status). Slaves' individual honor, social status, and economic opportunities were entirely dependent on the status of their respective owners, and they developed no recognizable consciousness of being a group or of suffering a common plight (Bradley 1987:15). For this reason, any such call as "slaves of the world, unite!" would have fallen on completely deaf ears.

Furthermore, by no means were those in slavery regularly to be found at the bottom of the social-economic pyramid (MacMullen 1974:93–94). Rather, in that place were those free and impoverished persons who had to look for work each day without any certainty of finding it (day laborers), some of whom eventually sold themselves into slavery to gain some job security.

Although slavery was practiced in most (but not all) cultures from as far back as records have been found, ancient Greece and Rome are two of only five societies in world history which seem to have been based on slavery. Apparently independently, the Greeks and Romans transformed slavery into something wholly original, "namely, an institutionalized system of large-scale employment of slave labour in both the countryside and the cities" (Finley 1980:67). Thus whereas there is no justification for referring to 1st century Jewish society as a "slave economy," this is an entirely appropriate designation for the Greco-Roman world in general. The leisure used by the Greeks to create their extraordinary cultural achievements had been made possible for the most part by the surplus taken from the work of a large number of slaves (Ste. Croix 1981:133–73). So a part of the population's freedom from the demands of a subsistence existence advanced hand in hand with the increase of the number of human beings held in Greek and Roman slavery. Polybius (IV.38.4), e.g., speaks of slaves, equally with cattle, as essential to life.

These systems of slavery were fully developed and stabilized as social-legal institutions by the 2d century B.C.E. Yet the analysis of the functions and significances of this fact is not easy. For the uniformity of legal rightlessness in principle of all persons in Greco-Roman slavery "masks the wide range of different social and economic roles slaves played, and the fact that most functions performed by slaves could also be undertaken by persons of free status" (Wiedemann 1981:2).

B. How a Person Became a Slave

Prior to the 1st century C.E., prisoners of war and people kidnapped by pirates provided the Mediterranean world with the vast majority of its slaves. By the 1st century C.E., however, the children of women in slavery had become the primary source of slaves. Apparently these children were born in sufficient numbers to maintain the large slave population, which comprised at least a third of the inhabitants of most major urban centers. This prolific source was supplemented by self-sale, the sale of freeborn children, the raising of foundlings, and debt-bondage.

Stealing human beings and selling them into slavery had been practiced in the Mediterranean basin for many centuries. Even though the establishment of law and order within the Empire had eliminated piracy by the middle of the 1st century B.C.E. and had greatly reduced kidnapping, the term *andrapodistes* in 1 Tim 1:10, translated "kidnapper" (RSV, NEB), "menstealer" (AV), "slave trader" (NIV), appears in a traditional list of vices, indicating that knowledge of this practice could be assumed in the late 1st century C.E. (see also Rev 18:13).

Prisoners brought to Rome as slaves after the war with Antiochus III in 192–188 B.C.E. may have formed the nucleus of the Jewish community there (see Smallwood 1976:129–31). Pompey brought thousands of prisoners as slaves to Rome in 62 B.C.E., including many Jews. Philo (*Leg* 155) states that "the large district of Rome beyond the Tiber" (modern Trastevere) "was owned and inhabited by Jews. The majority of them were Roman freedmen, who had been brought to Rome as prisoners of war and manumitted by their owners." It is highly likely that the "synagogue of the freedmen" mentioned in Acts 6:9 had been founded by such Jewish freedmen who had returned to Jerusalem.

With the cessation of the great wars of conquest after the death of Caesar Augustus, the primary source for slaves became the children of women in slavery. To be sure, prisoners taken during the First Jewish Revolt (66–70 C.E.) briefly opened up a new source of slaves for the Empire; e.g., Vespasian sent 6,000 Jews to Nero for use as forced labor to dig a canal through the Isthmus of Corinth (unsuccessful because of extensive granite formations). But the slaves who are mentioned and addressed as Christians in the NT were most likely among those born into slavery. Nevertheless other sources of slaves, not as significant as breeding, are important to note in light of early Christian practices. Large numbers of people sold themselves into slavery for various reasons, e.g., to pay debts, to climb socially (Roman citizenship was conventionally bestowed on a slave released by a Roman owner), to obtain special jobs, and above all to enter a life that was more secure and less strenuous than existence as a poor, freeborn person.

It is highly probable that the Erastus mentioned in Rom 16:23 as the "city treasurer" *(oikonomos tes poleos)* of Corinth had to sell himself to the city (as a form of "bonding insurance") in order to secure this responsible position. According to Roman law, such special slaves were usually held in provincial municipal slavery until about age 40, at which time as freedmen and Roman citizens they were given opportunities to pursue political careers. Inscriptional evidence suggests that this Erastus followed that course by being elected an *aedile* (a local Roman administrator) of Corinth, who then, befitting his office, gave this provincial capital the paving of the street in front of the main theater (Theissen 1982:75–83). In any case, even while legally a slave of the city, as "treasurer" of a Roman provincial capital, Erastus was probably the most socially distinguished member of the Christian congregation in Corinth. Such an apparent conflict between legal and social status was by no means unusual during this period.

The money that a poor freeborn person received from self-sale into slavery usually became the beginning of the personal funds (in Roman law the *peculium*) that would later be used to purchase freedom under more favorable circumstances, e.g., with former debts extinguished. Greek law also recognized the validity of self-sale into slavery, often with a contract limiting the duration of the enslavement. Such sales were frequent in the eastern provinces in imperial times. Dio Chrysostom commented: "Great numbers of men, we may suppose, who are freeborn sell themselves, so that they are slaves by contract, sometimes on no easy terms but the most severe imaginable" (XV.23). Time-limited self-sale had been known in Jewish circles for centuries.

The practice of self-sale into slavery is the most likely context for understanding Paul's admonition to the Corinthian Christians: "You were bought with a price; do not become slaves of men" (1 Cor 7:23), even if his emphasis was primarily metaphorical (Bartchy 1973:181–82). Knowledge of such self-sales provides the necessary background for appreciating the commitment of those Roman Christians who exploited the system by selling themselves into slavery in order to gain money to ransom others (apparently having worse owners) from slavery and to provide food for others (*1 Clem.* 55:2).

The "exposure" (throwing away) of newborn infants was a frequently used means of post-birth control; when such infants were found alive, they could be raised as slaves. This practice is not mentioned in the NT, but later Christians urged each other not to expose their children (*Did.* 2:2; *Ep. Barn.* 19:5; Justin *Apol.* I 27:1; Tertullian *Apol.* 9:6–8). Older children were often sold into slavery by their parents, Greek, Roman, and Jewish, either to pay debts or perhaps to improve a child's situation. Among 1st-century Jews "an extremely frequent phenomenon was the selling of daughters as slaves by their fathers" (Urbach 1964:15–18). The selling of children is not addressed in the NT.

A further source of slave labor was the enslavement of debtors by their creditors. Although Ste. Croix (1981:136) argues that these persons should not be regarded as slaves but rather as "bondsmen" because of the possibility of putting a time limit on their enslavement, he also notes that there are no Greek or Latin terms used to distinguish the persons enslaved by this means from those who were born into it (all were called *doulos* or *servus/servitus*). Athens was remembered as unique among Mediterranean cities for having forbidden such enslavement for debt in 594/93 B.C.E. In all other known places, such enslavement was a standard practice; some Greek cities, as well as Rome, apparently insisted, however, that their citizens could only be enslaved for debt outside the debtor's home city. Plutarch (ca. 100 C.E.) spoke of

debtors who were sold by their creditors (*Mor.* 829e) and of others who fled for sanctuary to the temple of Artemis in Ephesus (828d), evidently to save themselves from seizure.

Enslavement of debtors was a widespread practice in Palestine, and Jesus of Nazareth relied on knowledge of it in his parable of the unmerciful slave (Matt 18:23–34). Ste. Croix (1981:165) calls attention to this parable as illustrative of three aspects of debt bondage: (1) outright sale into slavery: the king threatens to sell one of his "slaves" *(doulos)* along with his wife and children in order to obtain at least some money in place of the stupendous sum of 10,000 talents (= a "zillion" dollars) he owed the king; (2) the fact of debt bondage: but after receiving the king's forgiveness rather than such a cruel punishment, this slave then places under guard (in prison?) a fellow slave who owes him 100 denarii (= about 4 months' work), a significant sum; this results in the king's ordering debt bondage along with torture for the first slave; (3) the process of enslavement for debt: it was carried out either by "personal execution" (seizure by the first slave) or by official condemnation (by the king).

Ste. Croix (1981:165) is convinced that this parable reflects conditions in most of the Greek East, including Egypt where clear evidence has been found for both debt bondage and full enslavement for debt. In the context of Roman law, seizure by a creditor ("personal execution") remained the primary means for coercing a defaulting debtor, who often was forced to work in the creditor's house until the debt was paid.

In face of the widespread claim that Jesus of Nazareth never called into question slavery as practiced in Palestine, based on the observation that he often used slaves as typical figures in his teaching (e.g., Matt 24:45–51; Luke 15:22; 17:7), the initial conclusion in the parable of the unmerciful slave must be carefully noted. In the context of debt slavery, first the king's financial mercy (18:27) and then his expectation that his slave would extend the same mercy to another potential debt-slave (v 33) must have struck Jesus' hearers as profound critiques of an exceedingly oppressive practice that produced slaves.

By "spiritualizing" the "forgiveness" as presented in the Matthean framework (vv 21–22, 35), later interpreters of this parable have obscured Jesus' challenging description of the "kingdom of heaven" as a realm in which forgiveness removes the grounds for enslaving people for debt. The same obscuring fate overtook the similarly directed petition in Matthew's presentation of the so-called "Lord's Prayer":"Forgive us our debts, as we also have forgiven our debtors" (6:12), an appeal that assumes that the petitioner has rejected the use of debt slavery (including forcing impoverished parents to sell their children). "Here as elsewhere in the gospel tradition the term *opheilo/opheilema* ("debts") refers to one's economic or other legal obligations (e.g., Matt 18:24–33; Luke 7:41; 16:5, 7)" (Horsley 1987:254–55). Luke's presentation of this petition (11:4) prominently stresses the completeness of merciful financial forgiveness as the presupposition for requesting divine forgiveness for sins in general: "Forgive us our *sins (hamartias),* for we ourselves forgive *every one* who is indebted *(panti opheilonti)* to us." Luke's inclusion of this tradition is in full accord with his programmatic description of Jesus' ministry in terms of the promise in Isa 61:1–2 that God's spirit will bring good news to impoverished persons and release to prisoners (4:18).

The NT presents no further reference to how persons became slaves. Nor does any NT writer comment on the origins of slavery as an institution or seek in any way to justify human beings' owning other human beings. This fact stands in sharp contrast to Augustine, who 300 years later claimed that the institution of slavery was part of the punishment for Adam's sin (*Civ. Dei* 19.15). The fact that no theological sanctions for slavery can be found in the NT itself became important for those Christians who later fought to abolish this institution.

C. The Patriarchal Context

Neither the growth of the early Christian movement nor its impact on persons in slavery in the NT period can be understood apart from the study of the ubiquitous social arrangement now referred to as the "extended household" (Gk *oikos;* Lat *familia;* see Laub 1982:19–62; Klauck 1981). Here the central, dominating figure was the father, the *pater familias,* who in all NT cultures exercised total legal control (Lat *potestas*) over both his children and the enslaved members of his household. According to Roman law, this *potestas* even included the power over life and death (see Harris 1986).

While the slaves in Jesus' parables usually are presented as agricultural workers and thus probably did not live as part of their owners' households, all the slaves mentioned in the NT as Christians labored in urban settings and belonged to such patriarchal "families." Thus, the NT list of slaves who became Christians must include not only those who are clearly designated as slaves (*douloi;* e.g., 1 Cor 7:21; Col 3:22; *oiketai;* 1 Pet 2:18–25), but also the ones whom Paul referred to as "Chloe's people" (1 Cor 1:11), and the slaves who, we may assume, were among the Christians Paul greeted as "those who belong to the family of Aristobulus" and "those who belong to the family of Narcissus" (Rom 16:10–11, RSV).

In many cases, such slaves became Christians along with their owners (1 Cor 1:16; 16:15; Acts 16:15, 31–34; 18:8). Yet the conversion of entire households should not be regarded as the norm for the early Christian missionary movement: NT evidence shows that slaves, wives, sons, and daughters were called to conversion *as individuals,* and that at least some of them became members of a Christian house-church even if their patriarchs did not (e.g., 1 Cor 7:10–11, 21; 1 Pet 2:18–25; 3:1–2; 2 Tim 1:5). Primarily for this reason the early Christian movement was perceived as a serious challenge to the sanctity and axiomatic quality of traditional kinship ties and patriarchal family structure (Nisbet 1973).

Some scholars suggest that such negative, pagan responses to this challenge to patriarchy stimulated the formulation of the so-called "household codes" in the NT, which leave the basic patriarchal structure unchallenged (and thus reinforced; e.g., Crouch 1972; Balch 1981; Schüssler Fiorenza 1984). These pairs of admonitions to wives/husbands, children/parents, and slaves/owners (in complete form only in Col 3:18–4:1 and Eph 5:21–6:9, but see 1 Tim 6:1–2; Titus 2:9–10) do indeed take the patriarchal structure for granted, addressing all members of a typical household for the purpose of transforming the usual attitudes and behavior of both the ruler and the ruled.

The quality of daily life of all those in slavery, but especially that of household slaves (and children), depended almost entirely upon the particular character and mood of the owner (or father; see Eph 6:4):Greco-Roman slave systems and legal frameworks gave slave owners much room to be cruel or compassionate.

For example, even as adults those in slavery were subject to corporal punishment, private or public. Demosthenes had said (22.55) that the greatest difference between a slave and a free person is that the slave "is answerable with his body for all offenses." And the reputation of slaves for deception was met by Roman laws requiring that their testimony for law courts had to be verified under torture. Here it is noteworthy that by the 2d century C.E. Rome made corporal punishment and torture legal also for the *humiliores,* the lower classes among the free, citizen population.

Further, the fact that the owner of slaves owned the bodies and not just the work of the persons in slavery meant that slaves were generally regarded as sexually available without restriction. With respect to sexual exploitation of slaves, Hillel is remembered to have said: "Whoever multiplies female slaves multiplies promiscuity" (*m. ʾAbot* 2.8). So it is striking that neither the sexual risks for slaves nor the related temptations for their owners are mentioned specifically in NT documents, unless Paul had owners of slaves in mind when urging Christians "that you abstain from immorality, that each of you know how to take a wife for himself in holiness and honor" (1 Thess 4:3–4, RSV).

Specifically the "household codes" sought to transform attitudes that were endemic to the patriarchal system, such as cruel dominance by owners into fairness and compassion, and servile deception by slaves into honesty and hard work. Christian slaves are admonished to "obey in everything," "not as men pleasers" but as those who "do the will of God from the heart" and "work heartily as serving the Lord and not men" (Col 3:22–23; see Eph 6:5–8). Christian owners are urged to treat their slaves "justly and fairly," without threatening, since they have a "master in heaven" who owns them as well as the slaves, and who shows no partiality (Col 4:1; Eph 6:9). An interesting comparison is found in the admonition of owners by the contemporaneous Stoic philosopher Seneca "to be moderate in what you tell slaves to do. Even with slaves, one ought to consider not how much you can make them suffer without fearing revenge, but how much justice and goodness allow" (*On Mercy* 1.18).

Concern for the reputation of Christians in the eyes of a patriarchal society clearly motivated admonitions to Christian slaves not to take advantage of being "brothers" or "sisters" of Christian owners,

lest "the name of God and the teaching be defamed." Moreover, Christian slaves in converted patriarchal households should "serve all the better since those who benefit by their service are believers and beloved" (1 Tim 6:1–2). Such a concern regrettably left slavery and patriarchal structures, if not patriarchal attitudes, intact.

D. Economic Functions and Social Status

For understanding the economic contexts of the NT, the significance of the "extended households" in the life of the Roman Empire, and of the slaves within these households, can hardly be overestimated. Greco-Roman society had come to depend on persons in slavery as the basic labor force, as essential components of the imperial economy, and a normal part of the daily life of most families. This extensive use of slave labor produced much wealth and the leisure that permitted the development of Greco-Roman culture.

Slaves were used for "an enormous variety of functions in enormously different circumstances" (Bradley 1987:15), some of which when compared to New World slavery seem astonishingly responsible: "doctors, teachers, writers, accountants, agents, bailiffs, overseers, secretaries, and sea-captains" (Hopkins 1978:123). Two primary factors led to this situation. First, the Romans had no tradition that made it acceptable for free men to take orders from anyone except their fathers or their military leaders, either on the farm, in urban workshops and homes, or in government bureaucracy. Cicero, e.g., stated that working every day to earn a living was beneath the dignity of a citizen and that working with one's hands was a "dirty business" (*De Officiis* i.150). Those citizens who nevertheless entered domestic work were regarded as serving "in place of slaves" *(loco servorum)* during their employment. Second, the Romans used large numbers of slaves from the E empire to bring greatly admired Hellenistic high culture to Rome.

The contexts of enslavement varied from such a small-scale owner as the poet Horace with three domestics at Rome and eight laborers on his farm in the country to the household of L. Pedanius Secundus, a senator during the reign of Nero who had 400 slaves in his town house alone. Yet the emperor owned by far the largest number of slaves (see Weaver 1972). Claudius built up the extensive Roman bureaucracy using his slaves and his freedmen, a practice followed by his successors (see Phil 4:22: *hoi tes Kaisaros oikias,* "those of Caesar's household"). Former imperial slaves often gained great wealth and influence, including high office such as admiral of the navy or provincial governor. For example, Marcus Antonius Felix, the procurator of Judea who judged Paul (Acts 23:23–24:27), was a freedman of Claudius' mother Antonia.

Such an economic and political context made it practically impossible for anyone to conceive of abolishing slavery as a legal-economic institution. The great slave rebellions, all of which were led primarily by prisoners of war between 140–70 B.C.E., never sought to abrogate slavery. Rather, these rebels sought either to escape or to turn the tables by enslaving the owners. No Greco-Roman author attacked slavery as a legal-economic institution, not even those who, like the philosopher Epictetus, had been raised in slavery. Dio Chrysostom, the Cynic preacher, concluded that the social and legal status of slavery had nothing to do with the values which the philosophers held to be important (15.29–32).

Only the Essenes at Qumran (see Josephus *Ant* 18.18–22) and the Egyptian Therapeutae (see Philo *Vita Cont* 70) appear to have rejected slavery in principle. To be sure, according to all known traditions, neither Jesus of Nazareth nor his immediate followers owned slaves; nor at the least did Paul, Barnabas, or Timothy. So both the example of Jesus and his great concern for the poor challenged many early Christians to live among themselves in an alternative social-legal environment (see Paul's appeal to Philemon regarding his slave Onesimus, and especially the practice of selling oneself to help the poor, mentioned in *1 Clem.* 55:2). See also PHILEMON, EPISTLE TO.

Because the preaching of the Gospel called into existence congregations that began to function as alternative households, the penetration of the Gospel into the Roman extended family, made up of both freeborn and slaves, threatened in no small way its economic structure (Drexhage 1981:4). Furthermore, the early Christians appear to have disagreed strongly with the prevailing negative attitude toward work and thus toward the persons who had to work to earn a living, including those in slavery. Paul, at least, expected all Christians to work for their living (1 Thess 4:11–12; see Eph 4:28).

Neither a slave's dress, nor race, nor usual occupation, nor fellow workers, nor religion revealed his or her legal or social status. When working as a "tentmaker," Paul most probably had slaves frequently as his shop companions. A slave's actual social status was largely determined by the status of his or her owner.

E. Making the Slave System Work

The Romans sought to make their slave system function well by following practices already perfected by the Greeks: providing slaves the security of room and board, and granting them the privileges of owning property (including their own slaves), of making contracts, and in some cases of sharing in profits and receiving wages. Perhaps the major factor was the realistic anticipation by most urban slaves of personal emancipation and Roman citizenship (if owned by a Roman), an expectation sharply distinguishing this system from that to come in the New World.

Since slaves represented a substantial investment by their owners (an unskilled adult male was worth about four tons of wheat), they could at least expect to receive enough food to keep them alive and working. Manumission could mean the end of that security. Epictetus, himself an ex-slave, took pleasure in pointing out that the slave who thinks only of gaining his freedom may be reduced, when he is manumitted, to "slavery much more severe than before" (II.1.27).

Yet at the beginning of the 1st century, owners were manumitting their slaves with a frequency that provoked Augustus Caesar to introduce laws which restricted the numbers and ages of those who could be lawfully emancipated. Augustus took this action because of the unique and surprising Roman practice of usually granting full citizenship to the freed men and women of Roman owners (note the astonishment expressed by Dionysius of Halicarnassus, a leading Greek literary critic who lived in Rome at the end of the 1st century B.C.E., *Ant. Rom.* IV.22.4–23.7). This emperor, who sought to upgrade the dignity of Roman traditions and protect the moral character of citizenship, was convinced that too many uncultured ex-slaves were becoming Roman citizens.

Manumission, however, was generally regarded as a reward for faithful work; and it functioned as an important safety valve, especially for Roman society in which so many capable and educated persons were enslaved. Substantial inscriptional evidence strongly suggests that persons in domestic slavery under Roman law in the 1st century C.E. could generally expect to be set free by age 30 (Alföldy 1972; opposed by Wiedemann 1985, who argues that these inscriptions represent a Roman ideal but not a standard practice). For those enslaved in rural areas the evidence for an anticipated age for manumission is not so clear. Those who had been enslaved by the courts as convicted criminals had no hope of manumission; rather, they could count on being worked to death in the mines and on galley ships or on fighting to the death as gladiators.

The anticipation of becoming a freedman or woman encouraged a slave to exercise self-discipline and work hard, behavior that was rewarded in two ways. Such conduct was usually the quickest means to accumulate the substantial funds (usually much more than enough to buy a younger replacement) that could be offered to an owner in exchange for manumission. It also provided the kind of example for all others in slavery which an owner would want to encourage by willingness to manumit. Thus, rather than leading to the gradual dissolution of the slave system, frequent manumissions encouraged its smooth functioning.

Most commonly, an owner granted manumission to a *servus fidelis* as the due reward for faithful work and loyalty; this was frequently done by the owner's will at death (Duff 1958). Innumerable former slaves throughout the Empire were living proof that Roman slavery was not usually a permanent state. On the other hand, owners could punish disloyal slaves by including in their wills a clause prohibiting the heirs from ever manumitting them (Wiedemann 1985:165). Although Roman law probably is not directly relevant to the relations between Paul, Philemon, and Onesimus, Roman practice suggests that Paul was pleading with Philemon at the least not to delay Onesimus' anticipated manumission because of the wrongs he had done. See also PHILEMON, EPISTLE TO.

For many, self-sale into slavery with anticipation of manumission was regarded as the most direct means to be integrated into Greek and Roman society. For many this was the quickest way to climb socially and financially. As such, in stark contrast to New World slavery, Greco-Roman slavery

functioned as a process rather than a permanent condition, as a temporary phase of life by means of which an outsider obtained "a place within a society that has no natural obligations of kinship or guest-friendship towards him" (Wiedemann 1981:2).

Slavery also functioned well among 1st century Jews, not only because of the usually limited length of enslavement before manumission (court-ordered sale for debt was limited to six years, the usual period for self-sale) but also because enslaved Jews were generally treated considerately by their owners, according to the demands of Hebrew law (see Exod 21:2, 11, 20–21, 26–27; Lev 25:39–55; Deut 5:12–18; 21:10–24; 23:15–16). Because of these regulations, later tradition claimed: "Whenever one acquires a Hebrew slave, he acquires a master" (*b. Qidd.* 22a). Thus Jews forced by circumstances to sell themselves into slavery sought Jewish purchasers, who often were in short supply. According to Leviticus 25, Jewish slaves were to be treated substantially better than gentile slaves. By the 1st century, however, enslaved gentiles were also given favorable treatment, as "slavery became an influence contributing towards proselytism, and there were many who were accepted into the Jewish faith *via* this route" (Urbach 1964:48). Such a convert became a Jew in the fullest sense at manumission, often granted to facilitate marriage to the owner's daughter.

Enslaved converts to Christ were regarded as "complete" Christians without respect to their legal status (see Gal 3:28; 1 Cor 7:21), a fact which must have subtly served to make the slave system seem less onerous. This fact also prompted exhortations to Christians in slavery to subordinate themselves to their owners, even to the overbearing ones, in imitation of Christ's self-subordination to his suffering and life-demanding mission. The reception of these admonitions as divine counsel surely, if unintentionally, contributed to the smooth functioning of the Greco-Roman slave system (1 Pet 2:18–25; 1 Tim 6:2).

F. Emancipation and the Status of Freedmen/Women

Releasing slaves from legal bondage was a frequent and carefully regulated event under Jewish, Greek, and Roman laws, by which at one stroke the person in slavery ceased to be a property and became a legal person. "In juristic terms, he was transformed from an object to a subject of rights, the most complete metamorphosis one can imagine" (Finley 1980:97). No matter how much authority the former owner, now patron (Gk *prostates;* Lat *patronus*), may have retained under Greek or Roman law, the freedman/woman was now unequivocally a human being.

Among such Augustan laws is the *lex Aelia Sentia* (4 C.E.) that required slaves to have reached 30 years old (and the owners 20 years old) if they were indeed to receive Roman citizenship with their legal freedom. Pertinent inscriptions suggest, however, that large numbers (approaching 50 percent) were set free *prior to* their 30th birthdays (receiving the intermediate status of Junian Latins)—women more frequently so than men, especially those between ages 15–20 whose owners decided to marry them. The law provided these freed Junian Latins a number of ways to obtain Roman citizenship, including marrying and producing a son.

Manumission was practiced very generously; sometimes all the slaves of an entire household were released by testament upon the death of the owner. However effected, manumissions were entirely normal events of urban daily life and were expected by both owners and slaves. Thus, few persons are known to have reached old age in urban slavery, not because of ill-treatment, but because they had already been released before dying as freedmen/women in their 30s, 40s, 50s or more (Alföldy 1972:105–6).

To be sure, owners of slaves were not obligated to emancipate their slaves at a particular age. Manumitting a slave or not could serve a wide variety of purposes. For example, an owner who feared that the courts might force his slaves under torture (the standard procedure) to reveal "too much" about the owner's activities could emancipate the slaves in question; ex-slaves could only be required to testify against their patrons in cases involving treason. An owner often freed an older slave because it had become more economical to use his or her services as a freedman or woman than to continue to provide him/her with food and lodging as a slave. And if a slave had accumulated a large *peculium* (Roman law) or savings (Greek law) with which he could purchase his freedom (the prevailing rates were much higher than the price of slaves on the market), an owner could benefit financially while legally binding the ex-slave to continue to perform most of his prior duties.

This, then, is the necessary context for understanding such strongly debated texts as 1 Cor 7:21 and Phlm 8–16. When Paul, in the earliest Christian text mentioning slavery (1 Cor 7:21–24), points to the possibility of Christian slaves being manumitted, he is not only speaking of a normal, everyday occurrence in his world; he is referring to an event over which the enslaved person had very little control. Owners granted manumissions in order to advance their own various personal and business interests and to keep the system functioning.

Thus, in contrast to the conclusions of the majority of continental European scholars (see the chart in Bartchy 1973:6–7), there would have been no point for Paul to have urged Christian slaves to "remain in slavery" (so the Zürcher Bibel, La Bible de Jerusalem, and the Einheitsübersetzung der Heiligen Schrift):there was little influence the slave could have over the timing of his or her manumission apart from offering the owner an attractive sum of money or pleading with the owner to delay manumission for the slave's personal or financial advantage. Likewise, Paul's urging Christian slaves to "take freedom" (so Moffatt, RSV, NEB, JB [vs. the French edition], the Luther Bible, NIV, TEV and the majority of English and American scholars) would seem in these circumstances to be superfluous. The point of his admonition (the aorist imperative verb *chresai* at the end of 1 Cor 7:21d must be completed from the context) seems most likely to be that, as a Christian, the manumitted slave was to "use" or "live according to" the new identity in Christ (the "calling"; see 7:17 and 24) that, for Paul, had become more fundamental than any social, legal, or religious status (see 7:19, Bartchy 1973:155–59).

In this social-legal context, Paul's brief masterpiece of sensitive persuasion sent to Philemon and "the church in his house" seems best understood as Paul's presentation of his requests that Onesimus' manumission not be delayed because of any misdeeds (v 18) and that Philemon forgive his slave and manumit him very soon (v 16: "no longer as a slave but … as a beloved brother"). Paul confronted Philemon with the choice either of continuing to regard himself as Onesimus' owner or of becoming his brother in a new social reality. See PHILEMON, EPISTLE TO. Paul may have hoped that Onesimus would be sent back to help him, with the legal status of Philemon's freedman (v 13).

In light of the fact that Greek notaries often openly rejected procedures prescribed in Roman law, one unique aspect of Greek legal traditions should be noted: viz. the description of stages of partial freedoms for those who were manumitted. Freedom was broken down into four elements: to represent oneself in legal matters; to be secure from seizure as property; to earn one's living as one chooses; and to live where one desires. More than ¼ of the 1,000+ manumission contracts inscribed on the sacred wall at Delphi fix limitations on at least two of these freedoms, usually of movement and employment, by means of a so-called *paramone* clause that remained valid for a limited time (usually 2–10 years). Such a freed slave could not be sold (and was thus legally a free person), but the freedman was still bound to the former owner in a variety of ways.

When Paul describes the Christian slave as a "freedman of the Lord" (*apeleutheros kuriou;* 1 Cor 7:22 only), he has in mind either such continuing personal and legal obligations a manumitted slave owed to his or her former owner according to Greek law, or (more likely) the Roman legislation that guaranteed to the former owner (now the ex-slave's patron) lifelong *obsequium* ("eagerness to serve"), *operae* ("days of work"), and *officium* ("moral duty").

Freedmen/women were potentially no longer without kin, for any children born subsequent to manumission were born free and remained their legal sons and daughters. In contrast to the fact that in the New World skin color often continued to identify the children of slaves and ex-slaves for many generations, freedmen and women in the Roman Empire easily blended into the general population within one generation.

Finally, whether or not a person was a slave or a Roman freedman or a freeborn Roman or Greek was in the long run often less important "than the question of *whose* slave or freedman he was or had been and what financial condition he had reached" (Ste. Croix 1981:175).

G. Metaphorical Uses of Slave Terminology

NT writers and their readers were heirs of both the Israelites' description of themselves as "slaves of God" after their liberation from Egyptian slavery at the Exodus (Lev 25:55) and of the popular

philosophical/metaphorical use (especially Stoic and Cynic) of Greek and Roman legal terms for slavery and freedom to describe the moral and spiritual state of both slaves and free persons. How much of this dual inheritance did they claim?

The Greek tradition of encouraging slaves to believe that their minds could be "set free" even while their bodies were enslaved seems to have begun with Socrates, and was stressed, e.g., by Sophocles, Menander, Bion, and Epictetus. An enslaved person could attain an "inner freedom" of the mind from the domination of the passions, conventions, and external circumstances, factors which on the other hand could easily "enslave" a free slave-owner. These metaphorical uses of slave/free language were employed powerfully by the Jewish philosopher and biblical interpreter, Philo of Alexandria, in his treatise, *Every Good Man is Free.*

Such was the air in which Paul urged Christian slaves to regard themselves as "freedmen of the Lord" (1 Cor 7:22), adding that they had been "bought with a price" by God (7:23); and Paul addressed them as free, moral agents. In this case, the point of the metaphor is probably twofold: (1) a stress on the slaves' true moral and spiritual freedom; and (2) a reference to their personal tie to Christ and their obligations to him as their authentic "patron."

On the other hand, for freeborn or freed persons who became Christians, both the Jewish sense of being God's slaves and the common Greco-Roman practice of self-sale into slavery provided conceptual models for them to regard themselves as having become "slaves of God" (1 Peter 2:16) or "slaves of the Lord (Jesus)" (1 Cor 7:22). In 1 Cor 7:23, Paul reminds the legally free Corinthians that they too had been "bought with a price" (see 6:19c–20a) and thus should not become "slaves of men." In the context of 1 Corinthians 7, this exhortation seems to be intended metaphorically, i.e., Christians are not to lose "inner freedom" by becoming slaves of any human expectations or ideas. Yet Paul's Jewish traditions and his expectations for financial solidarity within the Christian community (see 2 Cor 8:14–15) would have led him also to oppose any legal self-sale by a Christian.

Deissmann's attempt (1927) to explain this language (and Paul's redemption metaphors in general) on the basis of the more than 1,000 manumission contracts inscribed on the sacred wall at Delphi attracted much scholarly attention, but has been completely rejected. In these sacred contracts, dated between 200 B.C.E.–74 C.E., Apollo (through his priests) functioned as the trustworthy intermediary of the manumission money and as the strong religious and public guarantor of the contracts.

A thorough study of these inscriptions, however, has demonstrated that none of the slaves set free at Delphi became either "slaves of Apollo" or "freedmen of Apollo." This makes sense, because in Greek culture generally such metaphors were regarded as entirely inappropriate to designate "freedom" (Bömer 1957–63, 2:133–41); therefore, these inscriptions yield nothing that helps to understand Paul's teaching about redemption, including 1 Cor 7:22–23 (Bartchy 1973:121–25). It now seems clear that Israel's conception of herself as "slaves of Yahweh" provided an entirely adequate source for Paul's description of freeborn Christians as "slaves of the Lord."

The OT's use of "slave" language as a designation of a special and honored relationship to God is continued in the NT, especially by Paul who described himself (Rom 1:1), along with Timothy (Phil 1:1), as "slaves of Christ Jesus," thereby stressing not only full dependence on Christ but also their place of honor in the OT tradition of Abraham, Moses, David, Elijah, et al. In Titus 1:2 Paul is further designated as a "slave of God."

Paul makes a further striking application of slave language when using the term *paidagogos* in Gal 3:24 to describe the historical function of "the Law." This metaphor has created confusion for translators: RSV "custodian"; AV "schoolmaster"; NEB "tutor." Despite the present meaning of the derivative "pedagogue," a *paidagogos* was not a teacher. Rather, such a slave was entrusted with the care of schoolboys in order to make certain that they got to and from school safely, and that they did their homework and generally behaved well (Plutarch, *Mor.* 439F). For this task no particular education was assumed; and the assignment was usually given to a slave who, because of age or injury, was no longer able to perform his usual physical labor.

In addition Paul refers to life under the Law as "slavery" (*douleia;* Gal 4:24), the yoke of which is to be avoided (5:1). (Compare the use of the same term in Heb 2:15 to speak of the "lifelong slavery" of those "who fear death.") Paul warns the Roman Christians against living as "slaves of sin" and urges them to "become slaves of righteousness" (6:6, 16–18). In Rom 8:15, he contrasts the "spirit of slavery" (leading to fear) with the "spirit of sonship." Finally, in his grandest use of such language, he portrays the entire creation "in slavery to decay" from which it will be liberated to share "the glorious freedom of the children of God" (8:21).

SMYRNA (PLACE) [Gk *Smyrna* (Σμυρνα)]. A city (modern Izmir; 38°25´ N; 27°09´ E), which lies at the foot of Mt. Pagros, at the mouth of the Melas river on the S shore of the gulf of Izmir. It was the recipient of one of the addresses of the book of Revelation (1:11; 2:8–11). The area in which the city is located was one of the most ancient places of Greek settlement in Asia Minor, and remained so from the first establishment of the community in the 10th century B.C. until the destruction of the Greek population by the Turkish government in 1923.

The first Greeks in the region, which is defined by Mt. Sipylos in the N and the ridge of Pagros in the S, appear to have been Aeolians, and they occupied the first settlement of Smyrna, "Old Smyrna," on the N side of the gulf. Their harbor was on the coast and the acropolis lay on an E ridge of Sipylos, just above the harbor. The Aeolians seem to have arrived and dominated the indigenous population in the 10th century; they remained in control until the end of the 8th century, when they were replaced by Ionian Greeks who had settled to the S. There is no way of knowing the accuracy of Herodotus' story about this event. According to him, a group of Ionian exiles from Clazomenai, who had been welcomed by the Smyrnaeans, seized the whole city while the native Aeolians were outside of the walls celebrating a festival in honor of Dionysus (Hdt. 1.150). It apparently occurred before 688, when Onomastos, whom Pausanias calls an Ionian from Smyrna, won the first boxing competition at the Olympic games (Paus. 5.8.7).

The site has been well excavated, and the remains confirm Smyrna's reputation as a substantial place during the archaic period. The city had massive walls which surrounded an area of about 3000 m^2, containing about 500 houses. The city was organized with a regular street plan that suggests that the city's government had the authority to override the rights of individual property owners, and force them into compliance (Cadoux 1938:55–85; Cook 1982:203–4; Boardman 1982:443–45).

In the generation after Onomastos' victory, Smyrna came into conflict with the forces of the emerging Lydian kingdom, which was centered at Sardis on the plain of the Pactolus river, N of Sipylos. The struggle ended in disaster around 600 B.C. (Nicholls 1958/59:88–91, 128–34; Cook 1958/59:23–27). The city was captured, deprived of its civic status, and its former inhabitants were scattered in villages about the plain. Apparently however, as with the Messenians who had suffered the same fate at the hands of the Spartans a century earlier, they continued to identify themselves as "Smyrnaeans." Throughout this period, the memory of Smyrna was preserved in the works of earlier Ionian poets and, possibly, in stories that were beginning to develop about Homer (according to some, Smyrna was Homer's birthplace).

When Alexander invaded Asia Minor in 334 B.C., he found the people of Smyrna living as they had been for three centuries, and according to tradition, he was inspired in a dream to refound the city, though on a new site (its present location). If this was indeed Alexander's desire, he did little to implement it: nothing essentially was done in this area until well after his death in 323. King Lysimachus finally put the new city on the map as part of his major reorganization of W Asia Minor after the battle of Ipsus in 301. The first work at Smyrna appears to have been done in 288/87, and the city grew rapidly in importance during the following century (Cadoux 1938:94–141). Furthermore, even though the city passed under the control of the Seleucid dynasty in 281, the Smyrnaeans were able to exercise a great deal of freedom in the arrangement of their foreign and domestic affairs. So much so, that in the 190s it aligned with Rome against the interests of the Seleucid king Antiochus III. In 195, it became the first city in Asia Minor to erect a temple to the goddess Roma: an act of open defiance which followed upon its appeal to Rome against the king in 197 (Tac. *Ann* 4.56). This astute reading of the relative strength of the two sides, which may have been influenced by contacts with King Eumenes of Pergamum, placed the city in a favorable position after a Roman army overwhelmed Antiochus in 189. Smyrna remained a "free city" for a century, even after Rome took direct control of W Anatolia following the death of the Pergamene king, Attalus III, in 133. It was only after Smyrna had been swept into the conflagration of the first war between Rome and Mithridates VI of Pontus (89–85 B.C.) that it was reduced to tributary status within the Roman province of Asia. This was punishment for aid the city had given to Mithridates.

The next fifty years were troubled ones for Roman Asia. There was another invasion by Mithridates in 73 B.C., and various Roman generals extracted enormous sums of money from the cities of the region to support their armies in the civil wars which began with Caesar's crossing of the Rubicon in 49 B.C. and which ended with Augustus' defeat of Antony in 31–30 B.C. There was a brief occupation of the province by the Parthians in 41–39 B.C. But these events do not seem to have done Smyrna any lasting harm. The geographer Strabo, writing at the end of Augustus' reign (31 B.C.–A.D. 14) and early in the reign of Tiberius (A.D. 14–37) called it the "most beautiful city of all" (14.1.37). It was one of the four centers of the provincial assembly, which was a sign that the Romans regarded Smyrna as one of the most important cities in the province (the others were Ephesus, Sardis, and Pergamum). Its own government, as was the case in the Greek cities of the Roman Empire, was in the hands of the *boule* or town council, which was drawn from the ranks of the richest citizens. The *boule* was administered by a committee of its members (the *prytaneis*) and its primary function was to oversee the actions of the city's magistrates, who were also members of the *boule*. The most important of these magistrates were the *strategoi* (generals, even though they retained no military functions) who were charged with the city's general administration. Other important officials were the *grammateus* (secretary) of the *boule* and *demos* (popular assembly), the *tamias* (treasurer), *agoronomos* (market inspector), and the *eirenarch* (police chief; Cadoux 1938:186–201). In addition to the *boule*, there was also a council of elders *(gerousia)* and the *demos* which, although it had the power to ratify all public business, had little effective power, unless its members chose to riot. Negotiations with the imperial authorities would be carried out through the magistrates, through the offices of prominent citizens, or through the provincial assembly and its officials, the high priests of the imperial cult.

Recognition as a center for the provincial cult was an indication of a city's eminence in the eyes of the Roman state. Further, as one of the major cities of the province, Smyrna acquired three temples; one under Tiberius, one under Hadrian (A.D. 117–138), and the third under Caracalla (A.D. 211–217; Price 1984:258–59). The priests at these temples were Smyrnean citizens and citizens from other cities brought in to serve the function; Smyrna was technically the warden, or *neokoros*, of the temples for the whole province, and priests were expected to expend a good deal of their own money in the performance of their duties. Substantial private expenditure on city services was also expected of the city's own officials while they were in office.

Smyrna's importance in the 2d century A.D. is remarkably well documented. This results from the fascination which its greatest adoptive citizen, M. Antonius Polemo, held for the biographer Philostratus, as well as from the survival of the extensive corpus of another adoptive citizen, Aelius Aristides. Polemo, a descendant of the family which had been given the kingdom of Pontus by Mark Antony in the 30s B.C., was born at Laodicea on the Lycos, but he moved to Smyrna because the city offered him a greater venue for the display of his talents. He was immensely wealthy, a skilled *sophist* (professional orator), an authority on physiognomy (his work on the subject has been preserved in an Arabic translation), one of the most arrogant Greeks of his generation, and one of the most influential. He rose to be a special favorite of Hadrian and to dominate the life of Smyrna. It was said that he spoke to cities as inferiors, emperors as not his superiors, and gods as his equals (Phil. *VS* 535). This was not always to the liking of his contemporaries, but even if his relations with Smyrna were not always amicable, his ostentatiousness enhanced its reputation (as well as his own) to a considerable degree. He may be taken as a paradigm for the international aristocrats of the imperial period who took whole cities under their patronage (Cadoux 1938:254–64; Bowersock 1968:17–18, 22–49).

Aelius Aristides' relations with the city were less amicable. Like Polemo, he used the city as a departure point for a career which he apparently hoped would take him to the pinnacle of Roman society, even to the consulship (which he did not obtain). In representing the city, he did obtain imperial relief for the city after an earthquake. More often than not, however, he was at odds with the *boule*, which persisted in nominating him for civic and provincial posts, but he persisted in claiming immunity from the posts on the basis of a grant from the emperor Antoninus Pius (136–161). The main source for this story is Aelius' spiritual autobiography, *The Sacred Tales*. It is a remarkable work in which he describes various illnesses

(he was an extreme hypochondriac, but this was acceptable in an age when members of the upper classes seem to have enjoyed discussing the signs of their physical decay), the aid that the god Asclepius gave him in these circumstances, and his appearances before various Roman governors when he argued that he should be spared the burden of public office. As a result, *The Sacred Tales* stands not only as testimony to his psychological state, but also to the problems that even a great city could have in extracting services from its most distinguished citizens, citizens who felt that their wealth put them beyond the rules of ordinary civic life (Cadoux 1938:264–81; Syme 1988:8; Bowersock 1968:36–41, 60–62; Burton 1975).

Other texts from Smyrna illustrate conflict in a very different context. Two of the most important early martyrologies, the *Acts of Polycarp* and the *Acts of Pionius and his Companions,* illustrate the tension between the growing Christian community (founded in the mid-1st century) and its neighbors, especially the very powerful local Jewish community. Polycarp was executed in 155, Pionius in 250; the former in a bitter local persecution in which the members of the synagogue played a prominent role, the latter after the edict of the emperor Decius (249–251) ordering all inhabitants of the empire to sacrifice. Both works appear to be authentic transcriptions of the trials and therefore cast essential light on conflicts within the city, not only between Christian and non-Christian, but also between rich and poor, and between local and imperial authorities (Delehaye 1921:11–59; Cadoux 1938:343–400; Lane Fox 1987:462–92).

Little is known about events connected with Smyrna in the 3d century beyond what appears in the *Acts of Pionius,* though the city no doubt suffered as did others from the political chaos of those years. Still, it remained one of the greatest cities of Asia and gradually came to eclipse its former rivals. It seems to have escaped serious damage at the hands of the Persians in the early 7th century A.D., and it did not suffer permanent damage from the Islamic sack in 654. By 869 it was recognized as the equal of Ephesus when its bishop was raised to the rank of Metropolitan, and by the beginning of the 13th century A.D., it stood alone as the greatest city in the Aegean (Foss 1977:481–82).

SNAIL. See ZOOLOGY.

SNAKE. See ZOOLOGY.

SNARES. See ZOOLOGY.

SNUFFERS [Heb *mĕzammĕrōt* (מְזַמְּרֹת); *melqāḥayim* (מֶלְקָחַיִם)]. Metal instruments used in connection with the lamps in the Tabernacle and Temple. Those used in the Tabernacle were made of gold (Exod 25:38; 37:23; Num 4:9) and are known in Hebrew as *melqāḥayim,* a word also used in the temple text in Kings, where RSV renders it "tongs" (1 Kgs 7:49; cf. Isa 6:6). Since the root is *lqḥ,* which means "to take, grasp," the word is perhaps better understood as an instrument to pull up the lampwicks. The "snuffers" of the Temple are indicated by *mĕzammĕrōt,* from the root *zmr,* which means "to trim," as for trimming lampwicks. In this case, a kind of scissors, rather than a snuffer, would be a more accurate rendering. The temple "snuffers" were also said to be of gold (1 Kgs 7:50; 2 Kgs 12:14 [—Eng 12:13]),

except for one text (2 Kgs 25:14 = Jer 52:18) that lists them as bronze instruments, although the bronze designation here may simply be the result of the compression of a longer series of temple vessels.
CAROL MEYERS

SO (PERSON) [Heb *sôʾ* (סוֹא)]. According to 2 Kgs 17:4, Hoshea sent without avail to "So, King of Egypt" for military aid against the Assyrians. This brief reference has given rise to a plethora of identifications and interpretations (for a general survey see *LÄ* 5:994). The identification with the Egyptian field commander in the Annals of Sargon II (von Zeissl 1944:19), has been ruled out by Borger's reading of SIPA-*ʾe-ʾe* (etc.) as *Reʾeʾ*$^{(e-)}$ rather than "Sibʾe" (Borger 1960). The desire to connect "So" with the 25th or Kushite Dynasty as a hypocoristicon of Shabako (cf. *LÄ* 5:994–95; Krauss 1980:29) was enhanced by Lucian's substitution of *Adramelech ton ʾAithiopa ton Katoikounta ʾen ʾAigyptō,* but this has been universally abandoned (Redford 1981:75). Some have regarded So as a title misinterpreted as a personal name; Yeivin (1952) suggested *ṯ€ ty* "vizier" and Krauss (1978, 1980) *nsw* "king" (cf. Gk *ʾAmonrasonter* for *ʾImn-Rʿ-nsw-nṯrw* "Amen-Re, King of the Gods"). *Ṯ€ ty* has been objected to on phonetic grounds, and it has been noted that *pr-ʿ€* ("Pharaoh"), not *nsw,* was the most normal designation of kings at this period (Kitchen 1973 §§333–34; Goedicke 1977; Redford 1981:75). Others have continued to favor identifications with specific royal names, Sayed (1970) with *Sʾi€ -ʾib,* the Horus-name of Tefnakhte, Kitchen (1973 §§333–34) with a hypocoristicon of Osorkon. Osorkon IV has been regarded as the likely identity of the king in question even by some who analyze the biblical name differently (Krauss 1980:29; *LÄ* 5:995); Ahlström has appealed to LXX *Sēgōr* in support of an identification with Osorkon II (1985:65), but Redford (1985:15 n. 71) regards *Sēgōr* as a pejorative ephithet meaning "The imprisoned one," from the root *sgr,* and further finds its fit with Osorkon unlikely on phonetic grounds. Yet another line of approach has taken the name as a toponym or an epithet derived from one, namely *S€ w* "Sais" or *S€ ww* "Saite" (Goedicke 1963; Albright 1963; Redford 1981 and 1985:15 n. 69–71). Redford supports this identification with Semitic (cf. Albright 1963) and Greek evidence. He notes that the personal name "The Saite" (*P€ -n-S€ w)* appears in Aramaic with the spelling *Psʾ* (1981; 1985:15 n. 69) and further compares *-psō* in Gk *Nechepsṓ(s),* which he takes as "Necho the Saite" (1981), not Ray's "Necho The Ram" (Ray 1974), which would have kept the final *r* of *sr* (Redford 1981:75 n. 11). Despite his rejection of Sayed's derivation from *Sʾi€ -ʾib,* Redford inclines toward a historical identification of *So* "The Saite" as Tefnakhte and proposes to place the plea for help chronologically in 724–23 B.C.E. (1985:15). Goedicke's choice is likewise Tefnakhte; he first placed the reference in 724 B.C.E. (1963) and subsequently has preferred 727 (1977).

SOBATA (M.R. 114032). A town in the central Negeb, which was apparently part of the Nabatean trade network.

A. Identification and History

Sobata is located ca. 40 km SW of Beer-sheba. The place is known by the Arab name of Subeita (Shivtah in Hebrew). Its ancient name, Sobata is frequently mentioned in the Nessana papyri. The origin of the name is uncertain. A. Negev suggests that, like other Nabatean place names, it originated from a Nabatean personal name, perhaps Shubitu, or Shabtai.

Sobata is never mentioned in ancient sources, and its history may be studied from only archaeological finds and the Nessana papyri. The earliest find on the site is an inscription mentioning Aretas IV (9 B.C.E.–40 C.E.) and pottery of the Middle Nabatean Period. It was probably founded as a roadstation on the secondary caravan route connecting Oboda with Nessana. It shared the prosperity of the other towns of the Negeb in the Late Nabatean Period, and to this period pertains about one third of the development. The history of Sobata in the Late Roman–Post Nabatean Period remains unclear. By the middle of the 4th century C.E. the first churches were built at Sobata. At the N border of the Nabatean town, E of the public pools, was the East Church, the town cathedral, whereas on the N, outside of the built up area was a large monastery church, the North Church, apparently a center for pilgrimage. In the course of the 5th and 6th centuries, the town expanded and reached the limits of the compound of the North Church. At this time, a new church, the South Church, was built in the center of town, and the other two churches, which had suffered severe damage by an earthquake in 502 or 503 C.E., were repaired. Like the other towns in the W part of the central Negeb, Sobata survived after the Islamic conquest of 636 C.E. for about a century or two. It seems that when the Moslems built a small mosque in the baptistry of the South Church in the 9th–10th century, Christian Sobata was already a passing memory.

B. Exploration

E. H. Palmer was the first scholar to describe the ruins of Subeita (1871:29–30), and especially the rich agricultural hinterland. He was the first to record the Arabic names of Tuleilat el-Anab, the mounds of grapes, and Rugum el-Kurum, the stone-heaps of the vineyards, which abound in the vicinity of the town. On the assumption that biblical Hormah should be identified with this site, he suggested that the spies sent by Joshua brought the cluster of grapes from this place, and not from the region of Hebron. Subeita was visited in 1901 by A. Musil (1907:36–45), who drew the first inaccurate plan of the site, not noticing that the streets of the town do not follow straight lines. In 1905 the French dominican scholars from Jerusalem, A. Jaussen, R. Savignac, and H. Vincent (1905:256–57) discovered the only Nabatean inscription found at Sobata. The most detailed survey of the site was made in 1914 by C. L. Woolley and T. E. Lawrence (1914–1915:72–93). A new fairly accurate general plan of the city and plans of the churches and several other houses were drawn. This was repeated in 1916 by the German team headed by T. Wiegand (1920:62–83). Extensive excavations at Sobata were made in the years 1934–1938 under the direction of H. D. Colt. The three churches and the public reservoirs were cleared, several private houses were excavated, and a winepress was investigated. Except for some incomplete preliminary reports, this important excavation remains unpublished. In the years 1958–1960 the city was cleaned and partly restored under the supervision of M. Avi-Yonah. In surveys made in 1970–1974 by A. Negev, Sobata was investigated several times. The town plan was studied, and the Nabatean town was located in the S half of the ruin. R. Rosenthal-Heginbottom investigated the North Church from 1972–1974 (1982). A. Segal investigated in 1980–1982 the town plan and the plan of several dwellings (1983). A. Negev published the numerous Greek inscriptions of Sobata (1981:47–72, 94–97), and in 1985 S. Margalith made additional trial excavations in the North Church, to try to solve some persisting questions regarding the structural history of the building (1986).

C. Excavations

1. Early Roman–Middle Nabatean Period. Although the Colt Expedition discovered pottery in a dump in the SW part of the site which included much Middle Nabatean and Early Roman pottery, Crowfoot (1937) dated it to the 3d and 4th centuries. The nature and location of the Middle Nabatean settlement are unknown. However, just N of Sobata is a large cistern whose walls were dressed in the typically Nabatean dressing in oblique lines.

2. Late Roman–Late Nabatean Period. Somewhat better known is the settlement of this period. It extended along the N bank of Nahal Zeitan, occupying the S, SE, and SW parts of the developed area.

This part of the town has an orthogonal plan, and at the N end is the large double pool. The S pool is 13.5–14.5 m long, and 11.50–20.5 m wide, and approximately 3 m deep with steps into it on the E and W sides. The N pool measures 20.60 × 22.0–24.0 m, and is 2.5 m deep. It is estimated that the N pool has an estimated capacity of 850 m^3 and the S pool contains 700 m^3. To the W of the pools one house was excavated apparently dating from the Late Nabatean Period. Two doors lead directly from the street into a court. A small staircase tower leads to the upper floor. Under the floor of the court a small cistern was excavated. There are living rooms to the N and S, whereas to the E of the court is a stable. There are three troughs of the Mampsis style. Like at Mampsis, the troughs were blocked with masonry in the Byzantine period, when the stable was made into a dwelling. Near the "stable house" is another building, in which, in addition to the living quarters were several shops facing a street.

3. The Byzantine Period. Agriculture formed the economic base of Sobata in the Late Roman and Byzantine periods. At its later phases Sobata extended over an area of 20 acres. Although the city was not fortified, the blind walls of the houses, courtyards and gardens, and the streets, which apparently could be closed by doors, afforded protection from potential enemies. The houses were not closely built, but had spacious courtyards. The excavators believe that there were gardens within the town. The streets are rather wide, 4–6 m, and at several intersections there are open squares. Some scholars believe that Sobata was an unplanned city of winding streets. While Sobata was not built according to the principles formulated in the Hellenistic and Roman worlds, there does appear to be a plan. Without impairing the free circulation in the town, the planners limited the number of streets opening into the desert. Thus there are a large number of blind alleys which lead to every part of the town.

There is no permanent source of water at Sobata, and therefore streets were planned as conduits to collect rainwater into the double pool and into the cisterns which abound in the houses. The streets of Byzantine Sobata therefore, seem to have followed the course of the former channels conveying rainwater to the pools, producing this mistaken conclusion of ill planning.

The large complex of the South Church, built apparently in the second half of the 4th century, is a simple continuation of the old town. It was built between the double pool on the W, and older houses on the S and E. This may explain the extremely small size of the atrium. In the same way it explains the irregularities in relation between the N and S halves of the basilica. About the same time that the South Church was being built, the North Church, too, was under construction, clearly as an extra-mural building. It was isolated enough to ensure solitude for the small monastic community, but not too far to separate it from the economic benefits which derive from its proximity to a town. In the course of the 5th and 6th centuries the town expanded, covering the entire area between the two churches. It was apparently then that the Central Church was built.

The builders at Sobata used three kinds of stone: Hard, crystalline limestone, which was preferred by Nabatean masons, was used for the construction of foundations and the lower courses of walls; a softer crystalline limestone was used for lintels, doorposts, and segments of arches; and to reduce weight, a soft, light, crumbling limestone or chalk was used for the construction of the upper parts of walls. Narrow openings were covered by lintels, and wider ones by vaults. Rooms were roofed over by arches springing either from engaged pilasters or directly out of the walls; these were then covered by slabs of limestone. Inner walls were covered with thick layers of plaster. Walls were consistently 0.60–0.70 m wide, and were made in the old Nabatean method. The exterior faces of the walls were built of ashlars, or of hammer dressed stones while the interior faces were built of coarsely dressed stones, which easily received the coats of plaster. Between the two faces was a fill of quarry waste and earth, ensuring a good measure of insulation. Outer walls were either completely blind, or provided with narrow slit windows placed high up on the wall. Cupboards were built of stone, but the shelves were regularly made of wood. The floors of rooms were usually paved with slabs of stone, but beaten earth floors are not uncommon. In the center of the house there is always a courtyard, in which is the mouth of a cistern. Rainwater was collected from the flat roofs, the courtyard, and often also from the streets, flowing in a channel built into the wall. In most houses steps were attached to the wall of the courtyard and led to the upper stories; these engaged steps replaced the more sophisticated Nabatean staircase tower.

The Colt Expedition published a reduced plan of the South Church with a meager description. Because of the restrictions imposed by the pool, the church has a narrow atrium, which takes the form of a narthex (in form, but apparently not in function). To reach the atrium one has to enter a vestibule. To the W of the vestibule there is a room, perhaps the prothesis, as referred to in the *Testamentum Domini.* A narrow door in the corner of the vestibule leads into the S aisle of the basilica, and another entrance communicates with the atrium, at which there are two monumental entrances to the nave and N aisle. The basilica is almost square (17.60 × 18.20 m), with a T-shaped bema, which extends very deep into the nave, and extremely shallow into the aisles. The rectangular base of the *ambo* is at its usual place in the Negeb, in the NW corner. At each side of the central apse are the lateral apses which are half the height of the central apse. Niches are built into the walls of the lateral apses. The nave was paved with slabs of marble, and the aisles with limestone slabs. A door in the wall of the N aisle communicates with a chapel, which has a rectangular bema and niche in the E wall. At the NW corner, from the chapel, as well as from the atrium, is a large baptistry. It is preceded by a small hall and by a portico of two columns and two attached pilasters. The cruciform font, made of one stone, is set in an apse at the E part of the chapel. To the E of the baptistry and N of the basilica is a building, apparently a small monastery, or the bishop's residence.

A close inspection of the basilica shows that the lateral apses and the central apse were not built at the same time, but the lateral ones are a later addition. An inspection of the walls to the E of the apses shows that the building was originally monoapsidal, with rectangular rooms at the side of the apse. The S and E walls of the basilica were supported by sloping taluses, to protect the building from collapse. A. Negev suggests the following structural history: (1) construction of the church in about 350–400 C.E.; (2) repairs (because of an earthquake in 502 or 503 C.E.) and addition of apses, which were necessary because of a change in the ritual connected with the veneration of martyrs; and (3) minor repairs in 640 C.E., after the Islamic conquest.

At some time a small mosque was built against the N wall of the baptistry. The excavators assumed that the Christian and Moslem communities lived side by side peacefully, but this is doubtful. An inscription found on the *mehrab* of the mosque is dated to the 8th–10th centuries C.E., a date corroborated also by the Early Arab pottery found at Sobata. It is more likely that the mosque was built after the desertion of Sobata by the Christians between 700 and 800 C.E.

Because of its location at the N outskirts of the town, some scholars were inclined to believe that the North Church was the latest of the churches of Sobata. The fact that the building is supported by a very massive glacis has been explained as a result of the conversion of the church into a strong fortress. This is, however, not the case.

S of the large ecclesiastical complex is a spacious partly paved court. A single rather narrow door leads into the atrium (21 × 15 m). A second door, in the opposite N wall opens to the farms and the desert. There are porticoes in the atrium, except on the S side, where there are three rooms. A stairwell at the NE part of the atrium led to a gallery and rooms on the upper story of the atrium building, and it perhaps also led to the gallery above the aisles. An opening to a cistern is in the W part of the atrium, and in the middle of the atrium there stands a column drum enclosed by a raised frame (2 × 2 m). This is probably the memorial of a stylite, who lived here before the construction of the church. It is not impossible that the same ascetic was sanctified after his death, and the place became a center of pilgrimage. At the S end of the E portico there is a small room, perhaps a prothesis. Originally the basilica was entered directly by three doors, but apparently after the earthquake, the columns were supported by ashlar casings, turning the E portico to some kind of narthex.

The basilica (19.50 × 12.15 m) has two rows of five columns each and two engaged pilasters. The floor and the walls of the basilica were faced with marble. The sanctuary consists of a T-shaped chancel, deep at the nave, and very shallow at the aisles. There are three apses, and in the side apses are semicircular niches with built in reliquaries.

Two doors at the W end of the S aisle lead into two chapels. The first chapel (15.50 × 4.30), abutting the S wall of the basilica, has an apse at its E end. The E part of the chapel is decorated with a mosaic of

geometric designs. An inscription at the W border reads: “This work has been completed under the most holy Bishop Thomas, under the charge of John, priest, and the most illustrious John, vicar, in the month of Daesius, in the 10th indiction year.” A. Negev dates this inscription to May 517 C.E., whereas R. Rosenthal-Heginbottom prefers a 607 C.E. date.

The second door in the S aisle leads into a small vestibulum and another chapel, at the E end of which is a cruciform baptismal font, made of one stone. A chancel separates the E from the W, larger part of the chapel. This later part, apparently unroofed, served as a burial ground for members of the clergy.

A. Negev dates the various phases of the North Church as follows: A monoapsidal basilica was built in the years 350–400 C.E. in which the relics of saints were venerated in the lateral rectangular rooms. This building suffered heavy damage in the earthquake of 502 or 503 C.E. Repairs began immediately, and the first stage, which consolidated the walls of the basilica, was completed in 605 C.E., as attested by an inscription (its find spot is not specified, but A. Negev believes that it must have come from the North Church):“With the help of God this work has been completed in the times of the most illustrious prioron (apparently *primi ordinis*, of the First Order) and in the times of Flavius John (son) of Stephan, the vicar, in the 3d indiction-year, on the 13th of the month of Hyperberetaius, in the year 400.” Thus the work was done under the auspices of the highest ecclesiastical and administrative authorities. The mosaic in the baptistry, culminating the work of rebuilding, was apparently laid in 517 C.E. The North Church survived the Moslem conquest, as attested by seven tombstones postdating 636 C.E. The North Church survived the Moslem conquest, as attested by seven tombstones postdating 636 C.E.

The Central Church was excavated by the Colt Expedition, but no plan and no description were published by them; it has been supplied by R. Rosenthal. The Central Church faces one of the main streets of Sobata, in the center of the new quarter of the town. From the street one may enter a small atrium, more of a portico of three columns. The basilica (13.65 × 17.53 m) has two rows of four columns and two engaged pilasters, and is paved with slabs of limestone. The T-shaped sanctuary is less deep than in the other two churches, but has three apses. A. Negev, following J. W. Crowfoot and others, believed that this was the original plan of the building, believing it to be one of only three churches in the Negeb to follow this plan from the beginning. However, S. Margalit found that the constructional history of this church follows that of the other two churches of Sobata. However, no dating material, no remains pertaining to saints, and no martyrs’ cult were found in this church.

In one of the rooms in the building adjacent to the North Church, and on the N and E outskirts of the town three winepresses were discovered. These were identified as tombs by T. Wiegand, and as bathhouses by the Colt Expedition, but their function as winepresses is now beyond doubt. They follow in every detail the description of similar installations at Oboda, except the winepress near the North Church lacks the compartments for storing baskets of grapes prior to pressing. A. Negev explains this difference as a result of the fact that it belonged to the Church, where the harvest grown by the monks was processed communally.

It is fitting to conclude the description of Sobata by quoting a chant which was found engraved at the entrance to the town:

(In faith like Abraham)
————————Isaac
(In) hope (like) Jacob
(In) humility (like) Moses
(In) glory (like) David
(In) wisdom (like) Solomon
(In) endurance (like) Job.

AVRAHAM NEGEV

SOCIOLOGY. Beginning in the 1970s biblical scholars began to recognize the role that the social sciences could play in the reconstruction and understanding of historical phenomena. This entry consists of two articles that survey the impact of social scientific (or, more loosely, "sociological") insights on scholarly understanding of biblical history. The first focuses on ancient Israel, and the second focuses on early Christianity.

SOCIOLOGY OF ANCIENT ISRAEL

Sociology of ancient Israel, or "biblical sociology," is an imprecise covering term for the following: (1) the practice of social scientific criticism of the Bible, which employs methods, data, and theories from the social sciences (anthropology, economics, political science, and sociology), in order to clarify the relationship between biblical literature and ancient society; (2) the study of the social organization of ancient Israel, in its larger or smaller units, either at a given moment in cross-section (synchronics) or over a course of time, which may expand into a full-scale social history (diachronics); and (3) the identification of patterns of social life within the Bible claimed to be prescriptive or exemplary in some way for contemporary religious or secular life.

There are differences among social scientific critics of the Bible as to what constitutes the field of study. "Social" phenomena may be viewed in a restricted manner as those patterned interactions among people distinguishable from "economic" and "political" phenomena. Alternatively, the social, economic, and political phenomena may be conceived as interconnected facets of a mode of political economy that shapes the forms and dynamics of collective human life. The resulting "societal mix" or "social ensemble" is marked by order and stability or by disorder and change, depending on the "balance" or "imbalance" in the conjunction of all the factors at work.

A. Method and Theory

Social scientific criticism has only recently been accorded status among the methodologies considered legitimate in biblical studies. The present status of social scientific criticism can best be appreciated by

grasping its checkered and erratic course of development. Methods, theories, and descriptive results of various social sciences have been applied to the Bible sporadically since the rise of higher criticism in the 19th century. These critical undertakings have differed greatly in depth and quality. Furthermore, the predominance in biblical studies of methods derived from the humanities—as well as the difficulties of mastering simultaneously both the biblical and the social scientific fields—has militated against the development of a sustained scholarly tradition and arena of discourse in which social scientific criticism could be evaluated and advanced.

The earliest social critical studies by scholars of the stature of J. Wellhausen and W. Robertson Smith employed large-scale (macro) theory from nascent anthropology to look for affinities between biblical pastoral nomadic society and the supposedly similar life of pre-Islamic Arabs. Whereas their pastoral nomadic conception of early Israel survived uncritically in biblical studies, the comparative method of these pioneers was generally abandoned or sharply curtailed when it was realized that the evolutionary categories of 19th-century anthropology were too unrefined in method and sweeping in claims to be reliable diagnostic instruments for analyzing ancient Israel.

In the first decades of the 20th century, sociological theory found its way into biblical studies in three major streams indebted to Max Weber, Émile Durkheim, and Karl Marx.

Weber himself wrote a major work on ancient Judaism (1952) which tried to reconstruct how the religious ideas and practices of covenant, ethical monotheism, and prophecy were taken up and transmitted in a particular historical shape through interaction with the economics, politics, and social organization of a marginal Palestinian people. Weber's mode was to posit "charismatic" religious eruptions which underwent "rationalizing" incorporation into religious institutions as an aspect of general social life. Weber's work has had far-reaching effects. It stimulated further analyses of biblical "ideal types," but in overshadowing the field, it also discouraged openness to other social scientific approaches.

Durkheimian social theory influenced the description of Israel's transition from tribal pastoral society to agrarian and commercial society propounded by A. Causse, who drew heavily on Durkheim's notion of "mechanical" solidarity in simpler societies vs. "organic" solidarity in societies with greater differentiation in the division of labor. In one or another form, this "evolutionary" account of Israel's acculturation to Canaan has been widely pervasive in biblical studies.

Marxist social theory has been less often overtly employed in biblical studies (a sketch of Israelite social and political history by M. Lurje [1927] notwithstanding). Nevertheless, Marxist theory was significantly present in the background to the extent that Weber and Durkheim themselves were seeking social understandings in debate with the Marxist tradition. Hostility and misunderstanding between Christians and Marxists, furthered by rigid dogmatism on both sides, delayed a fruitful scholarly use of Marxist social theory in biblical studies until very recent times.

Introduction of the academic study of sociology to the U.S. at the University of Chicago toward the end of the 19th century, coupled with the cultivation at that institution of process theology and the influence of the Protestant Social Gospel movement, encouraged sociocultural studies of the Hebrew Bible by W. Graham, C. McCown, and L. Wallis. Eclectic in method and weak in theory, this "Chicago School," with its religiously liberal orientation, declined in the face of Neo-Orthodoxy and the Biblical Theology Movement.

Form-critical studies, as launched by H. Gunkel, drew significantly on oral tradition and folklore studies, in the search for "the life settings" of biblical literary genres. Later form critics, lacking Gunkel's breadth of understanding and out of touch with the social sciences, came to restrict the life settings largely to cultic situations. The result was a mosaic of diverse, almost random, religious institutional contexts that did not cohere in any larger social structure. M. Noth's hypothesis that the premonarchic literary genres were rooted in a confederate religious structure (amphictyony) was a bold and inventive proposal that overstated and misconstrued the religious component in Israel's society. See AMPHICTYONY.

In spite of these spotty social scientific efforts and results, the nature of biblical literature made it difficult to neglect Israelite social phenomena entirely. Large amounts of potentially instructive social information were gathered from archaeology, historical and economic geography, and comparative

studies of ANE societies. These data were generally treated as background or introductory "realia," i.e., things that ought to be kept in mind as one studies the Bible. At points where specific offices and institutions are mentioned in the Bible, this trove of comparative social information was often helpful in illuminating the biblical references. For the most part, however, scholars had neither the interest nor the means to pursue the way these roles and structures interacted systemically and developmentally in the social whole. Scholars such as A. Alt and W. F. Albright, who strove for a more holistic and comprehensive understanding of Israelite society, were handicapped by insufficient knowledge of available social scientific tools.

A more intentional and sustained use of the social sciences by biblical scholars was initiated in the 1960s and 1970s due to a conjunction of contributing factors: the continuing stream of extrabiblical evidence about ancient societies that called for new frames of reference and interpretation, the enormous growth of social sciences as academic disciplines, social turmoil on a global scale that did not exempt the home societies of biblical scholars, and the rise of socially critical forms of theology, such as theology of hope in Europe, liberation theology in Latin America, and black and feminist theologies in North America.

Over the last two decades, social scientific criticism of the Hebrew Bible has developed along several fronts, characterized by great diversity in the types of social scientific approaches followed, in the biblical literary blocks attended to, and in the historical periods and social phenomena treated. Two broad currents of social description and theorizing can be identified as representative of contemporary work in the field.

Scholars working on the tribal origins of Israel and on the formation of the Israelite state (e.g., G. Mendenhall, N. Gottwald, M. Chaney, F. Frick, J. Flanagan, D. Hopkins, N. Lemche, K. Whitelam, R. Coote, et al.) have used both macro-sociological theory and anthropology, mixing structural-functional approaches with conflictual models. Often implicitly, and sometimes explicitly, these analytic tools have been Marxist in their recognition of class interests at work in early Israel's modes of production. To a large extent the social and religious forms of life in this origins period have been examined in close relation to the physical foundations of agrarian life in highland Canaan. Because the object of inquiry is how Israel began as "tribes" and how it then became a "state," the strategies of study have been processual and, therefore, concerned with social conflict and social change.

Scholars working on the prophetic and apocalyptic phases of the Hebrew Bible (e.g., R. Wilson, R. Carroll, T. Overholt, D. Petersen, H. Mottu, B. Long, B. Lang, P. Hanson, et al.) have been indebted largely to anthropology and social psychology, and have employed a chiefly structural-functional approach that has given only modest attention to the material conditions of life in which prophecy and apocalyptic operated. Where conflict is acknowledged, there is a tendency to treat it as a mechanism for perpetuating social order and as "a conflict over ideas" instead of a conflict deeply rooted in objective social relations involving emphatic differentials in wealth and power (Mottu and Coote are exceptions in this regard).

The differences in methods and theories among those studying "tribal-statist" Israel and those studying "prophetic-apocalyptic" Israel should not, however, be overdrawn. Their exact purport has yet to be adequately thought through and discussed among the scholars themselves. It is probable that different biblical subject matters, and different ways of framing what is sought, lend themselves more readily to one or another social scientific route of inquiry. For example, in examining the tribal and statist formations of early Israel one is necessarily addressing large social aggregates that underwent major changes. In contrast, it is possible, even if far from sufficient, to bracket prophets and apocalyptists as particular offices or functions detachable in some measure from their conflictual contexts.

In terms of biblical coverage, it is noteworthy that tribal Israel, the formation of the state, and the functions of prophets and apocalyptists have received the lion's share of social scientific attention. More slowly, the social contexts and functions of wisdom and law genres are being studied. This leaves large-scale social structure and social change in the later monarchy, in the exile, and in the restoration and ongoing diaspora rather meagerly studied to date. The result is that we possess a fairly full social

description and body of theory for Israel only up to the time of Solomon, while most of the following social structural history awaits in-depth delineation.

Complicating the task is the problematic relation between literary criticism in its newer forms and social scientific criticism. Some scholars view the two approaches as diametrically opposed, so that either one form of criticism must bow to the other or the two must be practiced without any reference to contribution to one another. If the self-contained discourse of the text is stressed to the utmost, it is argued that biblical texts have no historical or social reference. If the text is treated solely for explicit or "hard" social information, or simply as a spontaneous projection of society, then the aesthetic or symbolic integrity of the texts precisely as literature may be forfeited. Either extreme seems unsupportable, even unscientific, in dismissing the complicated interactions between literature and society, as form criticism already granted in principle and in method. Discrimination among the literary genres and of the ways they are connected to social reality—not only in their immediate settings but also in their modes of articulating social consciousness and social practice, however indirectly—will profit both the literary-critical and the social-scientific enterprises (see Gottwald 1985a).

Structuralism, because it had theoretical foundations both in literary criticism and in anthropology, seemed for a time to offer a promising way of bringing literature and society into concourse, as in the work of E. Leach dependent on Lévi-Strauss and that of D. Jobling indebted to A. Greimas. The "society" usually evoked in a structurally analyzed text, however, is schematic and connects poorly with the actual conflict-ridden biblical societies. Further developments in literary theory, both along deconstructionist and Althusserian Marxist lines, suggest ways to designate the fragile and oblique manner in which literature embodies social reality. Some of these new lines of literary-societal interaction are developed by D. Damrosch (1987), J. Rosenberg (1986), and the recent work of Jobling (1987).

The relation between "history" and "society" is another realm of contention in social scientific criticism. Biblical history has normally been presented as a critical assessment of the political and religious history recounted in the Bible, astutely supplemented by other sources from the ancient world. Biblical society is accordingly seen as something other than history, i.e., as the arena of patterned interpersonal behavior "left over" after politics and religion are separately considered. In practice, this inclines toward a "society" consisting of a miscellany of family and legal matters, and of customs and habits of daily life. Dropped from this micro-society of daily happenings are the power factors of politics, the production factors of the economy, and even the realm of religious belief and practice except when the connection is overtly made in the biblical texts.

The compartmentalization of lived human experience into separate categories such as "history," "society," "politics," "economics," "religion," etc. follows the fault lines of the breakup of the scientific study of humanity into discrete disciplines in the latter half of the 19th century. Strategic and tactical advantages gained for purposes of specialized study were overbalanced by a loss of the dynamic interaction among all the facets of socialized human existence. Thus, if we hope to understand biblical "society," it will not be through sociology and anthropology alone as circumscribed disciplines, but only through a joining of the spheres or domains of the public life as they pivot around the realities of power and wealth and are expressed and contested in production, in politics, and in religion.

These are the key questions: Who controls what is produced? Who can persuade or compel others to do what they want done and by what means? Whose ideas and interpretations of the common life prevail? What limits in production, politics, and ideology are set by the environment and by the preceding interplay of social forces as they impinge on the moment? This formulation, known in Marxist theory as "political economy," based on a historical material method, unites *in study* what is really united *in life* without neglecting the distinctiveness of each of the several facets of the social whole.

This means that we are to trace a history of Israel that includes the customary political and religious axes of its life, but which, in order to be complete and adequately representative of its real life conditions, must bring the politics and religion into articulation with the social field of production. In this way we can hope to identify how all the dimensions of the people's life are internally related one to another, both in

harmony and in contradiction, affecting one another and forming an ever-moving system that stabilizes and transforms itself in discernible ways that are not dismissible as random or quixotic.

What follows is a sketch of the social history of ancient Israel understood as the history of the production and reproduction of its economic, political, and ideological life from generation to generation. We shall call it a history of the political economy of ancient Israel. In saying "political economy" we emphasize both the political factor at work in economics and the economic factor at work in politics. We also recognize that the historical actors in the drama of political economy entertain particular ideas and values (religion, theology, ideology) which interact reciprocally with the vectors of political economy. This is not to contend that economics directly and spontaneously "causes" everything else in the public life. It is to say that economic production guided by certain power relationships profoundly *limits* and *shapes* everything that people think and do. To dismiss a political-economic analysis of ancient Israel because the theory and method of political economy were not known in biblical times is to commit a category confusion which, if logically followed, would forbid us any critical scientific study of the Bible whatsoever.

B. Social History and Political Economy

For analysis, we may divide the political economy into its two reciprocal poles of *economy* and *polity*.

Central to the structural history of Israel's economy was its dependence on the cultivation of cereals, vegetables, and fruits, supplemented by animal products, in a precarious environment subject to soil erosion and erratic rainfall. Agrarian productivity in the hill country required cooperative harboring and control of soil and water, as well as risk distribution by mixing diverse crops with animal husbandry. Mountainous terrain split much of the arable land into small regional ecologies worked by a village-based populace. Tools and household items were mostly locally crafted. Barter in and between villages circulated products not immediately consumed or held in storage against periodic drought.

Within the primary production unit of the village with its surrounding plots and pastures, the family was the basic residential and labor-organizing entity. In principle, this was most likely an "extended" family of two or more generations, but natural and historical disturbances tended to erode the size and viability of these residential and productive units. Larger groupings of "clans" or "protective associations," up to the level of the "tribe," served as labor cooperatives for major tasks such as terrace-building and harvesting and as "safety nets" to cushion the shock of adverse circumstances on families and villages. The paramountcy of kinship language in ancient Israel has often been taken as a stubborn survival from pastoral nomadic origins, but it is far more probable that the kinship signifiers in Israel were both a retention and deliberate heightening of arrangements typical of village agrarian communities in Canaan. In Israel, this adaptive kinship talk was a way of "mapping" newly emerging forms of political and religious bonding.

Decisive for the political pole in Israel's political economy was the dominance in the wider Canaanite environment of the state form of government. The state's military and ideological apparatuses were able to control the countryside sufficiently to tax the agrarian and pastoral surpluses of the villages through payments in kind and labor conscripted for public projects and for military service. "Surplus" in this instance does not mean of course what the peasants could truly afford to give, but simply what had not yet been consumed by them and was available for seizure by the state.

Faced with life-threatening deprivation, the taxed peasantry had little recourse but to turn to creditors who in turn exacted their "pound of flesh" from the hapless debtors. In this setting, the cities, small in size and population by modern standards, were chiefly administrative, military, and commercial centers, "bleeding" and "policing" the countryside. Trade between states in strategic goods and luxury items passed "over the heads" of the majority agrarian populace, financed by their labor but without benefit to them.

There was, however, a striking departure in Israel's polity that proved to be of immense importance in shaping the history of its political economy. Beginning as a stateless society and returning to the same status in exile, Israel nonetheless took on independent statehood in midcourse. When this political independence was lost, rather than return to the free tribal society it once was, Israel became a society

subject to other states who at best granted it a semiautonomous status. This means that although Israel arose in opposition to the state system, and in time survived apart from any particular state structure, its history and ethos were fashioned in intimate response to the commanding position of the state. In both native and foreign guises, the state intruded insistently upon the economy and ideology of the villages which constituted the heartland of Israel.

At a minimum, the concept of mode of production coordinates the *economic dimension* (who produces what, by what technical means, and with what organization of labor?) with the *political dimension* (among existing economic options, who determines what will be produced, who benefits from what is produced, and by what mechanisms?). For the full picture of the social formation, however, mode of production encompasses a *social dimension* (into what groupings do the producers fall according to occupation, class, status, etc., and how do these groupings show up in family structure and in juridical process?) and an *ideological dimension* (what ideas, beliefs, feelings, and judgments do the variously grouped producers entertain about themselves, their society, and the ultimate meaning of their existence?).

In a narrower sense, mode of production thus refers to the way human capacities and technology are socially organized for the labor necessary to meet basic human needs and to allocate what is produced. In a broader sense, mode of production includes the social ramifications of the labor process in class and status divisions, in political process, in family organization, and in juridical procedures. Equally, it includes the ideological ramifications of the labor process articulated in the ideas, sentiments, and symbols by which the socially organized laborers conceive the meaning of their common projects.

In ancient Israel we may distinguish a *communitarian mode of production* prior to the monarchy, a *tributary mode of production* from the monarchy into Hellenistic times, and a *slave mode of production* in the late Hellenistic-Roman period. The tributary mode of production divides into two phases: a *native tributary* phase when Israel enjoyed political independence and a *foreign tributary* phase when Israel was colonially subject to foreign powers. Alongside the dominant or commanding mode of production, other modes of production usually exist, either as remnants of former times or as forerunners of what is to come, so that a history of political economy has to take these "overlapping," often clashing, productive relations into account.

1. Tribal Israel: A Communitarian Mode of Production. Biblical and extrabiblical evidence alike suggest that Israelite society took form in 13th–12th century Canaan as an indigenous phenomenon. See ISRAEL, HISTORY OF (ARCHAEOLOGY AND THE ISRAELITE "CONQUEST"). This does not exclude that Israel incorporated people who had earlier or recently immigrated to Canaan. Furthermore, the evidence indicates that Israelite society was composed of a majority of cultivators of the soil who also practiced animal husbandry. This does not rule out inclusion of pastoral nomadic elements and groups who had been artisans, mercenaries, bureaucrats, and priests and whose skills were contributory to the new society.

As an economy, the new society was grounded in highland agriculture dependent on a mix of crops and herds nurtured by a scattered populace spread over broken terrain and encountering diversified ecological niches with particular subsistence demands. As a polity, the new society was able to practice tributary-free agricultural and pastoral production. This situation obtained for some two centuries because Israel was able to stay free of domination by other states and also to refrain from developing an Israelite state.

There are two ways of understanding this tributary-free political economy of early Israel. On the one hand, it can be argued that the declining Egyptian empire and Canaanite city-states lost their control of the highlands in Canaan so that Israel, without great effort on its part, filled the vacuum. Later, again with little conscious effort or intent one way or the other, Israel itself became a state when someone was finally able to reestablish centralized control. On this way of reading the situation, Israel's tributary-free mode of production and reprieve from state dominion was an historical accident, a "neutral" happenstance, which was soon erased by the rise of the Davidic state. On the other hand, it can be claimed that conscious and deliberate effort by Israelites contributed to the Egyptian-Canaanite loss of power and to the development of highland networks and coalitions that systemically attempted to provide for their common needs without recourse to a state structure. When Israel did resort to monarchy, communitarian forces resisted

its encroachment, limited its most arbitrary forms, and weakened its capacity to override local custom and habits of self-rule. On this way of reading the situation, Israel's tributary-free mode of production was intentional and even social revolutionary in that it introduced and sustained a new mode of production in Canaan.

Overall, the latter understanding seems the more convincing since it does fuller justice to the admittedly equivocal biblical sources, better explains the two-century-long tenacity of free agrarianism in Israel, accounts for the fierce contest over the adoption and molding of Israelite royal institutions, and illuminates the stubborn survival of communitarian sentiments, practices, and movements in later Israel.

The social correlate of this tributary-free political economy was a strong family and village-based mode of life in which customary law mandated mutual aid. Landholdings passed in perpetuity from generation to generation unencumbered by tax or debt, thereby assuring every Israelite a means of livelihood. This is not to posit an "idyllic," perfectly just society of absolute equals, but only to assert that the social compact among Israelites strove to establish and defend this form of life against incursions from foreign states and to prevent the rise of a tribute-exacting and debt-dispensing elite within Israel itself. It must be recognized that this was not a mere nostalgic "ideal" or religious "vision" but a concrete and practical life assertion by free agrarians who benefited from direct use of their own surplus and who valued their new-found dignity and freedom jointly as a people.

The religion of Yahweh was the commanding ideology of this communitarian political economy. In the absence of state controls over public life, the beliefs and practices of the new religion were critical incentives and binding ingredients in molding Israelite culture and morale. The religion worked symbiotically with the economic and social interests and goals of the people. The conception of early Israel as an intertribal league with both religious and secular institutional effects is no doubt broadly correct, although the long-popular notion that Israel was an "amphictyony," analogous to Greek religious leagues, assumes too much centralization of power and a too-schematic view of the religion unilaterally "imprinting" itself on the society.

Fortunately, historical anthropology identifies a rich array of confederating sociopolitical forms by which "tribal" peoples have cooperated to meet their fundamental requirements in the absence of a state, indeed often in opposition to encroaching foreign state polities. The confederating devices in Israel probably advanced slowly in the face of active resistance and foot-dragging lethargy. They did not easily win exclusive allegiance to Yahweh among all Israelites. They did not prevent civil strife in all cases. These mechanisms worked sufficiently, however, to provide a skeletal structure of self-defense, mutual aid, and cultural-religious identity by dint of which Israel grew and prospered.

2. Independent Monarchy: A Native Tributary Mode of Production. With considerable success, the communitarian political economy of tribal Israel had protected the diverse localized interests of its members while providing societal unity at critical points where internal disputes, foreign enemies, demoralization from hard conditions of life, and selfish power grabs had to be faced and overcome. These contradictory aims of Israelite society were not easily met. Stresses and strains increased within and without.

With the coming of the Philistines, the Israelites faced a more determined and efficient enemy. Within its own ranks, certain of Israel's landed families had prospered beyond others, and laxity in the observance of customary law, even resort to indebtedness, began to infiltrate society. Virtually all Israelites conceded the need for temporary centralization of military power to defeat the Philistines. Those who had grown more prosperous within Israel were inclined, however, to see a permanent Israelite state as the way to further their interests. Eventually, many leading circles gave their support to a native tributary political economy in which an Israelite elite would tax and indebt their own people. In short, a combination of external and internal factors tipped the scales toward the course to statehood.

Through foreign conquests and through taxation of formerly non-Israelite regions of Canaan brought under his rule, David seems to have postponed the exaction of tribute from the old Israelite populace. Solomon, however, soon converted Israel into a tributary political economy, and this pattern of state taxation of produce and labor continued down to the eclipse of Israelite statehood. To be sure, Jeroboam's

N kingdom may have lifted or relaxed the burden for a time, and no doubt the amounts of tribute siphoned off the land varied considerably from period to period in both kingdoms.

Surplus labor value was taken from the peasants in two cycles of extraction—a *tax* cycle and a *debt* cycle—that jointly constituted a mounting, lethal "one-two" punch, striking catastrophically at their viability as producers. The first cycle of extraction of labor value took the form of state taxation in kind and conscripted labor. These measures skewed the mix of crops and weakened animal husbandry, signaling a pronounced decline of the peasantry, especially when exacerbated by drought and warfare and, increasingly, by the foreign exaction of tribute from the Israelite kingdoms. Progressive peasant impoverishment led directly to the second cycle of extraction of surplus labor value in the form of credit in kind extended to peasants at onerous interest rates by state functionaries and their client landholders and merchants. The consequence of this credit scheme was that large numbers of cultivators fell under obligations as debtors which tended to become perpetual and irreversible.

Distinctive of the tributary mode of production is that there is little or no private property as such, since the peasants have "use-ownership" of the land they live on and till, and the state's "land charter" is a matter of habitual entitlement to taxes based on long convention and backed up by religious legitimation and a monopoly of force. Nonetheless, even if not properly legal, virtual private property arose as creditors were able to take over rights to disposition of land that their debtors could not prevent because the old customary communitarian laws were no longer consistently enforced by courts that fell subject to bribery.

It is this state-initiated and state-condoned double system of incapacitation of the peasantry that the prophets rail against, but their "railing" was not a social or ideological isolate. The prophets stood within social sectors of the community who suffered from this massive shift in the production and allocation of goods necessary to life, and this is altogether true even if some of the prophets were from advantaged classes, since such social protests are often voiced by "intellectuals" who side with the aggrieved. It is also clear that the ideological basis for the prophetic protest was solidly rooted in the premonarchic communitarian political economy. Increasingly overriden and subordinated by a tributary political economy, this communitarian mode still survived locally wherever possible, since the state lacked technical and administrative means to control the countryside totally.

The cumulative devastation of the credit-debt system developed slowly and insidiously over decades and centuries. Probably much of the sardonic rhetoric of the prophets, not to mention the moral earnestness and florid warnings of the Elohist and Deuteronomist sources of the Pentateuch, stems from the ideological reality that this indebtedness system, given the prior state tax burden on peasants, could be given the appearance of a benign and friendly "helping hand." The debt-entailment of lands and persons may actually have been accorded an aura of legitimacy by means of an ideological fiction, and possibly by a legal fiction as well. The creditors could no doubt represent themselves as holding the inalienable land of debtors in "custodianship" and thereby "protecting" the patrimony of the peasants.

An unvarnished look at the political economy at it blossomed under the monarchy reveals nonetheless that the double impact of state tax and state-permitted indebtedness allowed a concentration of wealth among a small elite of state functionaries and those they favored. As Assyria and Neo-Babylonia exacted ever heavier tribute and indemnity from Israel and Judah, these additional costs were passed along to the despoiled cultivators who had to bear the compounded burdens of foreign and domestic exploitation of their labor. To call this credit-debt cycle of surplus extraction "rent capitalism" (Lang 1983:114–27) is misleading, since the term implies legalized private property and misses the close complicity between taxation and indebtedness, thereby overstating the enterpreneurial freedom of the creditors in a situation of low-level technology and political restriction on "capital" ventures.

Reform measures, such as those articulated in the Covenant Code (Exodus 20:22–23:19) and in the Book of Deuteronomy (chaps. 12–26), represented periodic attempts by coalitions of government leaders, wealthy landholders, lower priests, prophets, and groups of taxed and indebted peasants to correct abuses and close the spreading gulf between exploiters and exploited. Royal theology itself, as articulated in the Psalms and in some of the prophetic writings, promised justice and righteousness from the king. In truth,

however, the objective realities for supporting a thriving kingdom in the ANE worked decidedly against the grain of this ideological assurance of royal justice. The reforms, limited in depth and duration, did not fundamentally change the monarchic political economy. Yet, together with the texts of prophecy and wisdom, they do exhibit the tenacity of communitarian values and movements that built communities of solidarity and resistance to the native tributary mode of production.

3. Colonial Israel (1):A Foreign Tributary Mode of Production. In its colonial status, both among Jews who remained in Palestine and those who fled or were deported, Israel drew on communitarian values and practices to survive as a politically disenfranchised and enfeebled people. These communitarian strategies were taken up in various ways both by the peasant underclasses and the ousted leaders and upperclasses of the former Israelite states, and they received religious symbolic coding in the edited Pentateuchal sources and in the exilic prophets.

Our knowledge of the class conditions of Jews in Palestine and in exile is limited. It is to be expected that the contradictions wracking both groups were sharp and painful. It will have been chiefly the peasantry who remained on the land in Judah, but the fact that they were free of their native overlords did not necessarily, or even probably, mean that they became autonomous producers. Doubtless the Babylonians exercised their rule by enforcing some version of the tributary mode of production (cf. Lamentations 5), although how exacting their dominion was compared to the era of Judahite political independence has scarcely been considered by historiographers of the period. Possibly, as Alt thought, the Samaritan elite extended its control into Judah with Babylonian permission. To the degree that the Babylonians neglected the province or region of Judah, the Palestinian peasantry may have had times of respite from heavy tribute. On the other hand, the physical hardships of the people, together with the grave damages inflicted on the agrarian base of the Judahite economy during the collapse of the kingdom, probably left the populace at a low subsistence level in which periods of "freedom" from tribute may have made slight difference to their depressed condition.

As for the deported populace of Judah, it is clearly reported in the Bible that they were drawn from the upperclasses in government service. Their situation was that of a "declassed" former elite who retained their self-image and skills, but did so in straitened circumstances in which they chose, in effect, to adopt some of the survival strategies familiar to the communitarian peasantry who had been their subjects. It appears that many of these exiles were eventually drawn into Babylonian and Persian government service and held expectations of returning to Palestine at the head of a new regime. The clash between Palestinian Jews who remained in Judah and expatriates who returned after decades abroad seems to underlie much of the acute conflict in postexilic Judah. This conflict included tensions between Jews and Samaritans, rivalries over who would constitute the legitimate priesthood, and—of growing importance to "the people of the Book"—struggles over who would determine the shape of the national heritage which eventually found formulation in the canon of the Hebrew Bible.

As a restored community in Palestine and as permanently dispersed enclaves abroad, Israelites fell under a foreign tributary mode of production. By allowing home rule among Palestinian Jews, the Persian tribute-takers granted the operation of a native tributary mode of production headed by a Jewish elite. The beneficiaries of this native tributary apparatus, functioning through the temple economy, fought stubborn battles with communitarian forces that created shifting alliances in subsequent centuries, extending on into the Hellenistic and Roman periods. It is evident that it was the heirs of the old Judahite elite, restored from Babylon by the Persians, who gained the upper hand in Palestine, although they could not do so without coming to some terms with the indigenous Jewish populace that had never left Palestine.

Taxes and loans at interest were reintroduced and, in spite of the shrewd reforms of Nehemiah (which have been justly compared with Solon's reforms in Athens), the tax and debt burden mounted under the later Ptolemies and reached devastating levels under Rome. In Maccabean times, a broad nationalist coalition of communitarian and tributary Jewish sectors managed to break free of the Seleucid version of the tributary mode of production, in which slavery was already coming to the fore. As it turned out, however, the communitarian elements in the Maccabean uprising were suppressed by Hasmonean Jewish kings who retained a native tributary political economy closely resembling the exploitative structure and

cultural style of other Hellenistic states. The new wealth generated by the conquests and commerce of the Hasmoneans went to the court and to large merchants and landholders, while Jewish peasants were no better off than they had been under Persian and Ptolemaic–Seleucid rule.

How was the emergence of the Hebrew Bible as Scripture connected with this unrelenting struggle over political economy? The canonization of Torah and Prophets in postexilic times cannot be understood apart from the triangular contest among foreign tributary mode of production, native tributary mode of production, and strivings toward a renewed communitarian mode of production. The canonization process reflected and fortified cultic and ethical purity as a way for all Jews to resist the foreign tributary rule by means of a united nationalist front.

The leading community forces pushing for canonization were, however, supporters and recipients of the benefits of the native tributary apparatus oriented around the temple. This restored Jewish leadership did not wish to jeopardize its privileged position by encouraging or allowing Jewish uprisings aimed at restoring communitarian structures internally and/or at gaining independence from Persia. By contrast, communitarians hoped for an eventual overthrow of Persian dominion, and may have occasionally joined out-of-power native tributary sympathizers in plotting rebellion. They also hoped for the elimination, or at least the sharp limitation, of the Jewish elites and their tributary burdens on the populace.

In this climate of political economy, the Torah was a compromise text. On the one side, Torah was read by the restored Jewish leadership primarily as a document affirming the status quo, for it enshrined the "finished" record of God's past deeds culminating in restored Jerusalem. Samaritan Jews, apparently lacking a vigorous communitarian constituency, were content to restrict Scripture solely to the Torah as "a closed book," as in fact did the later Sadducean Jewish elite to the very end of their power. On the other side, Judahite communitarians not only compelled inclusion within the Torah of Deuteronomy's anticipations of new apostasies and new deliverances, but they also championed the collection of the Prophets whose warnings and promises they viewed as addressing the socially and morally problematic present. Torah and Prophets together were read by communitarians as "open-ended" history with yet unwritten chapters.

The struggle over canonization paralleled and was entwined with the contest over control of production (who would extract what and how much from who, or indeed whether extraction in all forms could be ended). The canon was ideologically "porous" or "ambiguous" in that it could be read as approving different forms of political economy depending on which segments of the writings were emphasized and given priority and on how the old texts were construed as normative or inspirational for new situations.

Postexilic Judaism, therefore, displayed a tangle of conflicting and contradictory practices and ideologies along the spectrum of tributary vs. communitarian modes of production, and along the spectrum of imperial accommodationist vs. national liberationist political stances. It is not surprising—and certainly not merely the result of literary or religious confusion—that the Hebrew Bible should reflect these conflicts and contradictions in acute form. This is so because, while the tributary mode of production massively prevailed, it could only do so by incorporating considerable elements of communitarian ideology, and in lesser degree allowing communitarian practices that did not jeopardize the overall dominance of the tributary mechanisms.

4. Colonial Israel (2):A Slave-Based Mode of Production. The two-fold process of surplus extraction typifying the tributary mode of production during the monarchy, as also under foreign dominion during exile and restoration, continued on into the Roman era, but with a vengeance exacerbated by the Roman slave mode of production. To be sure, the slave mode of production was not operative in Palestine in its "classic" form. Slaves worked some of the large estates in Galilee and helped build Herod's monumental works, including the Temple, but slavery did not account for more than a fraction of the total production in Palestine which was carried on mainly by peasants subject to tributary payments to Roman and native elites.

Although slavery was not as fully represented in Roman Palestine as elsewhere in the empire, the very capacity of Rome to rule over the Jews with overwhelming force and to succeed in crushing two major Jewish uprisings in the 1st and 2d centuries C.E. was directly attributable to the productivity of its slave-

based political enemy. While formally free but land-tied peasants and hired laborers did a majority of productive work in the Roman Empire, it was the labor-intensive work of slaves in agriculture, industry, and commerce that built up the critical mass of taxable wealth by means of which Rome was able to extend its conquest and control so thoroughly over such vast territories.

In Palestine, Rome laid heavy exactions on the Jewish populace, some of which were handled through tax-farming. The presence of Roman private property in parts of Palestine probably spurred Jewish creditors into more onerous debt exactions from the Jewish peasantry. The primary exaction of surplus, however, was channeled through the temple economy by which Sadducean high priests and their lay associates collected taxes for themselves and for the Romans. Large sectors of the Judean economy were dependent for livelihood on services rendered to the temple.

Apart from the small but powerful Sadducean stratum, most Jews detested Rome and wished to be free of the foreign slave mode of production, but their readiness to resist or to revolt against Rome varied with the degree that they felt the pressure of tax and debt in keeping with class position. The Pharisaic movement seems to have been composed mostly of small artisans and shopkeepers who were not severely hurt by the Roman and Sadducean complicity in surplus extraction. It was the peasants and wage laborers who bore the brunt of the extraction policies, and they were restive during the first half of the century and openly revolutionary by the 60s.

The stance of Jesus and his first followers vis-à-vis the modes of production is clouded by meager and skewed sources and by a marked tendency among scholars to "spiritualize" Christian origins. It is entirely possible, however, to locate Jesus and his movement with approximate accuracy in the field of political economy. Jesus led a movement among the heavily taxed and indebted peasantry of Palestine that went on to directly challenge the temple economy and thus the very core of the native tributary mode of production.

It is, moreover, a major conceptual error to focus exclusively on the issue of the violence or nonviolence of Jesus' methods, as if the determination of his methods could settle the question of how "political" he was in taking on the temple economy. As the executioners of Jesus recognized, the vigor and directness of his words and deeds were not merely the concern of a few disgruntled Galilean sectarians, since many Jews had similar disdain for the tax and debt burdens which the temple economy fostered, instrumentalized, and accorded religious sanction. There was understandable reason for Jewish and Roman elites to fear the provocative potential of Jesus to ignite disturbances well beyond the immediate circle of his followers. There is little doubt that the content of his teachings and the thrust of his strategy for confronting the Jewish authorities put Jesus and his followers on the side of communitarian forces. It is not even necessary to argue conspiracy or collaboration between Jesus and other communitarian rebels, such as the Zealots, to see that the Jesus movement was genuinely threatening to the continuation of the native tributary mode of production in the short run and to the Roman slave mode of production in the long run.

The outbreak of the Jewish war against Rome cannot be explained solely, or even primarily, as the work of a small conspiratorial Zealot party. Such an organized party scarcely existed prior to the uprising, which erupted as a widespread popular rebellion whose leadership the Zealots were eventually able to seize. See ZEALOTS. In fact, the broad revolutionary forces included two factions or tendencies, much as in the Maccabean uprising: (1) those who wanted to overthrow the Roman dominion and to retain the tributary mode of production in native form, purged of its abusive Sadducean monopoly; and (2) those who wanted to abolish the native tributary political economy altogether by rescinding taxes and debts through a restoration of some form of communitarian mode of production. The revolt against Rome did not achieve sufficient consolidation for the contest between the tributary and communitarian Jewish forces to surface fully and be fought out to a conclusion.

The upshot of the war against Rome was the destruction of the native tributary mode of production, not however by the restoration of a communitarian mode of production, but by the triumph of the Roman slave mode of production and the forced retreat of Jews into small survival enclaves wherein the Rabbinic type of Judaism was cultivated.

C. Normative Social Hermeneutics

Does the Hebrew Bible prescribe or exemplify social forms and behaviors that Jews and Christians should follow in their own lives and possibly commend to society in general? This complex question involves theology and ethics and has been given a variety of richly nuanced answers depending on the combination of tradition, reason, experience, and social location through which the Bible is read. We shall identify some of the major modes of coping with this issue (see also Birch and Rasmussen 1989) and comment briefly on the shape of biblical social hermeneutics that accords best with the foregoing analysis of biblical political economy.

1. Modes of Social Hermeneutics. First, the most straightforward mode is to claim to obey the biblical social prescriptions in a literal manner, which has been typical of certain orthodox and sectarian groups in their attempts to maintain a biblical manner of life. This has involved such behavior as refusal to practice usury or to bear arms, common sharing of property, regularity in almsgiving and other acts of charity, etc. The assumption of this mode is that the Bible is in part a rule book and is more or less self-consistent in the social patterns it commands. To be sure, the determination of whether particular biblical social behaviors are descriptive or prescriptive, in some or all circumstances, is a matter of community exegesis. Moreover, the biblical social prescriptions are regarded as realizable in contemporary society. In the end, adherents of this position are necessarily arbitrary in selecting certain biblical prescriptions to be observed while disregarding others. Prescriptivists may also be more or less reactionary or progressive in terms of the larger societal norms and practices.

Second, the more common mode in social hermeneutics is to aim at embodying biblical principles in contemporary structures and circumstances that are recognized to be different, in one respect or another, from conditions in biblical times. The principles held to be central to biblical society and worthy of emulation characteristically include one or more of the following: "love," "justice," "equality," "freedom," "law and order," "respect for persons," "right to property," "right of privacy," "entitlement to basic subsistence," and the like. Proponents of a principle-oriented approach are usually fully imbued with and atuned to their own culture and society. They contend that the best way to employ their biblical social heritage is not through invoking selective prescriptions from the Bible but through seeking to incarnate its major social values.

Specification of the normative biblical principles and values is a matter of dispute and the precise way of "applying" or "translating" them to current society is extremely variable. Jews and Christians of this persuasion have often been liberal or radical in their social orientations, but others of a conservative social orientation have adopted the same mode, except that they differ in what they judge to be the leading biblical principles.

Third, more subtle is the mode of historical analogy in which the crucial problematics of particular biblical situations are viewed as similar to the problematics facing present society. Given this correspondence, we may learn how to interpret our situation more sensitively and act with fuller ethical resources if we attend to the structural and attitudinal "clues" available in the related biblical contexts. The prophetic and apocalyptic writings are frequently interpreted in historical analogical manner, as are also the Israelite situations of exodus and exile. This approach may attend to particular biblical social practices in the context of perceived principles (see the first and second modes discussed above), but the attempt is to view biblical practices and principles in a social context that has a structural affinity with our own social context.

2. Social Hermeneutics and Political Economy. The history of the political economy of ancient Israel has direct bearing on biblical social hermeneutics, since it alters our perspective on all the modes of appropriating biblical social data and directives. In any act of biblical appropriation, we are dealing with *two dynamic horizons:* the process of the production and reproduction of life necessities, power arrangements, and prevailing ideas both *in the biblical world* and *in our world.* The continuities and discontinuities between these two worlds must be kept in mind throughout the hermeneutical process.

Because the communitarian and tributary modes of production were precapitalist modes, whereas our modes of production are capitalist or socialist, there can be no simple or direct transplant of biblical social

practices into our situation. If we imitate a biblical social practice, it will have a different structure and function for us than it had in its original setting. If we seek to live out a biblical principle, it will have to find material contents and a manner of operation that is congruent with the current prevailing mode of production and social formation.

Moreover, because different modes of production were in conflict in biblical times, complicated by struggles over whether the mode of production would be controlled by natives or foreigners, there are conflicting social paradigms and practices in the Bible. Similarly, modes of production are in conflict today, and the capitalist mode in which most biblical scholarship has been carried on to date, is itself riddled with contradictions. Accordingly, the appropriation of biblical social practices, principles, and analogies will necessarily be *selective* in the choice of authoritative biblical data and *controversial* in application, precisely because the social and ethical stances of interpreters are always challengeable from another perspective, as were the stances of biblical writers.

The question of which social structures and behaviors were the "right" ones in biblical times and which are the "right" ones for us will always remain a matter of dispute. To determine "rightness" in these contexts necessitates critical social ethical judgment. Such judgment is developed within the discourse and practice of the various communities that constitute church and society, and in which many factors such as class, race, gender, and religion are at play. There simply is no "neutral" or "objective" biblical social ethic. But the "lesson" derivable from this reality is not sheer ethical relativism and cynicism but informed moral agency by a "responding" self in a "responding" society.

All of the above interpenetrating factors in a normative social hermeneutics are well illustrated by attempts to read the role and status of women in biblical society in a manner that will be supportive of feminist aspirations. See also FEMINIST HERMENEUTICS. Both the biblical and the contemporary poles of feminist concerns call for social critical judgment. Biblical women experienced restrictions and exclusions from public life typical of patriarchal societies. Nevertheless, when communitarian tendencies were strongest in Israel—as in the tribal period and in the Jesus movement—women participated more freely and on a par with men in public activities. There are biblical texts, such as the Song of Songs and the synoptic teaching of Jesus, which exhibit a strong thrust toward overcoming limiting and demeaning social and cultural barriers between the sexes.

This biblical "mixed record" must be interpreted in terms of the social historical possibilities for the advancement of women under the ancient modes of production and in the light of new possibilities opened up by current modes of production. Biblical ambiguity about women must also be interpreted from the perspective of a hermeneutic that is clear about the criteria for human worth and performance that undergird the feminist life path. This same hermeneutical grid of factors will be operative for the struggles of all marginalized peoples.

Consequently, the point of political economy for social hermeneutics is that our evaluation and appropriation of the biblical texts is a complex critical judgment that resonates with the complex critical judgment also exercised by biblical moral agents. Biblical religion was intimately connected to political economy and always entailed one or another inclination or option toward political economy. The notion of religious "neutrality" toward economics, politics, and society is invalid insofar as the Bible is claimed to support that position. In fact, adherents of biblical religion were active agents in altering modes of production. Our discovery of this truth about our biblical ancestors presents us with ample precedent as Jews and Christians. In short, we are entirely justified on biblical grounds to evaluate and shape current political economy along lines that appear to us valid on human and religious grounds and at the same time are reasonably attainable within the limits of the political-economic present.

Granted that the Bible does not "prescribe" any single political economy, and that its principles are protean and abstract when lifted from their historical struggle matrix. Nevertheless, the Bible does exemplify the centrality of political economy as the arena in which religious claims and aspirations prosper or decline to the degree that they truly engage the basic current issues of our constantly created and re-created common life. Political economy shows emphatically that we are creatures materially *limited* by nature and history. But just as decisively, it demonstrates that we are materially *innovative*

creatures who, in choosing concretely and substantively from the options at hand, interact afresh with nature and with our fellow humans as we fashion that portion of human history which is ours alone to enact.

SOCIOLOGY OF EARLY CHRISTIANITY

An investigation of the salient issues in a "sociological study" of the NT and early Christianity. This investigation begins with a general statement of the issues and how they relate to previous studies of early Christianity, including those with a more "theological" perspective. Ongoing methodological debates in the human sciences are discussed to shed light on analogous issues confronting students of the sociology of early Christianity. Finally, a review of seminal works in the field describes the range of ways that scholars of Christian origins have addressed these methodological issues.

A. Introduction

During the middle decades of this century, the nature of the NT texts and the aims of exegesis were construed in various ways. For example, participants in the "biblical theology" movement regarded the biblical texts as genuine theological discourse, which was, however, expressed in the time- and culture-conditioned thought forms of the ancient (especially Hebraic) world. The exegete's task was to discern and describe these truth claims so as to show their relevance for 20th century preaching and theological discourse. As a second example, R. Bultmann (1951–55) treated the NT texts as the working out in specific historical situations of the self-understanding(s) that emerged from a faithful response to the kerygma. The interpreter's task was to identify and explicate in philosophical terms the idealistic objects of reference in a given passage, stripped of the 1st century mythology in which they were conceptualized. Despite their differences, these two approaches shared the conviction that the significant content of the NT consists of *theological statements,* and that the exegete's task is to engage in *theological* interpretation.

Advocates of the move that began in the early 1970s to engage in "sociological study" of the NT and early Christianity insist that such conceptions of the NT and of the exegete's task tend to obscure the views and experiences of the vast majority of early Christians, who may not have shared the (elite) writers' views. Second, such conceptions of the NT and of exegesis have encouraged the assumption that theological questions and categories relevant in the 20th century Western world were relevant also in the 1st century Mediterranean environment. Such an assumption of the commensurability of thought forms across centuries and cultures is most likely to occur whenever beliefs are abstracted from what L. Keck (1974:439) has called "the hurly burly of early Christian life."

Advocates of "sociological study" assert that the NT texts are not collections of truth claims which, though expressed in time-conditioned forms, nevertheless point to an unchanging and definable reality; nor are they mythological expressions of encounters with the kerygma, the divine personal address. Rather, the NT texts are records of dynamic social interchange among persons who lived in specific communities at particular times and places. Theological reflection was certainly part of that ancient social interchange, and should be attended to: "sociological study" of the NT texts is not necessarily antitheological. But those who engage in such study contend that the "meaning" of theological (and nontheological) statements in the NT can only be recovered when they are seen to function within specific cultural and linguistic contexts. Patterns of belief influenced patterns of life *and vice versa;* only when viewed as part of a dialectical process can either be fully understood.

Many of the concerns and emphases of current sociological research on the NT and early Christianity have precedents in the work of earlier generations of scholars. Members of the history of religions school, for example, sought to discover connections between NT beliefs and religious practices and those of the

larger religious environment. But, with significant exceptions, focus was on identifying genetic relationships in the ethereal realm of ideas, rather than on seeing how those ideas affected and were affected by the social practices of particular communities of people. As a second example, Shirley Jackson Case and Shailer Mathews of "the Chicago School" sought to explain the social origins of Christianity. Overall the stated aims and presuppositions of Case and Mathews sound remarkably contemporary (see Keck 1974:436–39). But their studies suffered from a lack of sophisticated theoretical perspectives: both sociological perspectives and historical-critical perspectives for the analysis of biblical literature (see Schütz 1982:5–7; here "theoretical perspective" may be defined as a broadly encompassing way or "style" of theorizing, such as the functionalist perspective in sociology/anthropology, or the form-critical perspective in Gospel research [Elliott 1986:9–10]). As a third example, form critics claimed to emphasize the social formation of NT (especially Gospel) traditions. But various factors, such as the lure of dialectical theology and the disparity between the span of centuries presupposed by OT form criticism and of decades presupposed by NT form criticism, prevented the NT form critics from living up to their avowed sociological objectives (Schütz 1982:8–10).

In the United States, the renewal of widespread interest in social questions may be conveniently dated to 1973. In that year a decision was made to form a working group sponsored by the American Academy of Religion and Society of Biblical Literature, for the purpose of exploring "the social world of early Christianity." The group, chaired by Wayne A. Meeks and Leander E. Keck, chose to focus on the task of describing the "social world" of Christianity in Antioch-on-the-Orontes from its beginning until the 4th century (see Meeks and Wilken 1978). The term "social world" in the group's self-designation reflected the influence on many members of symbolic anthropology and of the "sociology of knowledge" as developed by Peter L. Berger and Thomas Luckmann (1966). Berger and Luckmann contend that humans are constantly engaged in the construction and maintenance of "social worlds," which provide institutions, structures, and patterns for human life and interaction.

In the years since the formation of the "social world" group, scholars interested in the new agenda have diverged on the question of the role that social scientific goals and methods ought to play in their work. Often scholars have operated as if there were two distinct approaches to the study of early Christianity: the "social historical" approach, and the "sociological" or "social scientific" approach. In its most pointed form, the former refrains from using sociological methods, confining attention instead to more traditional historiographic questions about the social background and practices of the early Christians. In contrast, the approach labeled "sociological" or "social scientific" seeks "to complement a conventional historical and exegetical analysis of the Bible and its environment with an orientation whose questions and objectives, modes of analysis and processes of explanation are guided and informed by the perspectives, methods, and research of the social scientist" (Elliott 1985:329; see also Elliott 1986; Malina 1986b). But in practice, the work of relatively few scholars has matched either of these "ideal types." Rather, many have held that the most promising approach is one that continues to employ old methods and questions, but that is *also* informed by the questions social scientists ask and the models they employ.

Against a thoroughgoing sociological approach it has been objected that the relevant sources are too sparse and fragmentary to support the use of sociological models or the drawing of larger patterns; that sociological analysis retrojects modern Western mental constructs and concerns onto 1st century society; and that sociological analysis both reduces theological statements to reflexive expressions of social forces, and unjustifiably minimizes the historical importance of the creative initiative and intention of individual leaders. Conversely, advocates of the social scientific perspective have objected that works of social history/description are typically intuitive and ethnocentric, and that they are rendered obscure by authors' tendency not to make theoretical presuppositions explicit and open to inspection. Bruce J. Malina (1986a), John H. Elliott (1985, 1986), and other advocates of rigorous "social scientific analysis" contend that the investigator's perception, organization, and interpretation of data is *inescapably* governed by theoretical models. (Here "model" may be defined as "an abstract, simplified representation of some real world object, event, or interaction constructed for the purpose of understanding, control, or prediction" [Malina 1982:231; cf. Elliott 1986]). But, the scholars claim, whereas social scientists carefully describe the

models employed, scholars of early Christianity who eschew social scientific theory leave their models vague and implicit.

The debate about the role that social scientific methods and models should play in the study of Christian origins intersects with an ongoing discussion among scholars across the human sciences. This discussion concerns an interrelated set of epistemological problems of objectivism versus relativism (see Bernstein 1983; Stowers 1985; Marcus and Fischer 1986). Though the epicenter of the current debate is the philosophy of science (it was triggered especially by Kuhn 1970; see Bernstein 1983), anthropologists have for years confronted analogous theoretical problems entailed by the task of understanding and explicating the symbolic discourse of other peoples. An overview of the salient issues in the interdisciplinary discussion (especially as it pertains to anthropology) may help to clarify the related debate among scholars of early Christianity.

B. Problems in Social Inquiry

1. Humanistic Discipline or Science? Sociologist Bryan R. Wilson notes that early social theorists, including Comte, Hobhouse, Durkheim, and Marx sought to discover a "rational ethic" or "patterns of social regulation" that "utilized the findings of scientific social enquiry, which some of them saw as convergent with the laws of history itself" (Wilson 1979:vii; cf. Evans-Pritchard 1962:140). Max Weber was one of the first social theorists to show an awareness of the limitations of rational procedures and understanding in social inquiry. In the period since Weber, social scientists have debated both the nature of their subject matter and the investigative procedures that they should use. These two issues are related. Social scientists who assume that social groups follow laws or law-like patterns have correspondingly insisted that such groups be investigated scientifically, using procedures of hypothesis or model formulation and testing analogous to procedures employed by the natural scientist. Repeated cycles of testing a hypothesis or model against the data and revising it in light of empirical test results are thought to enable the researcher to verify the facts of the situation and to guarantee that the model is free from formulator bias.

On the other hand, a small but significant number of social scientists have held that the subjects they study—the astoundingly diverse societies and cultures of humankind—do not permit the rigorously controlled procedure, analytic classification, and nomothetic interests of the natural sciences. Human social discourse is always expressed in symbolic forms (including language, ritual, myth, and other cultural patterns) whose meaning is relative to a *particular* set of social and cultural circumstances. This relativity of symbolic meaning, as well as the condensed, multivalent quality of symbolic forms, resist the abstractions of the scientist. Moreover, it is argued, the social scientists' guarantee of the "objectivity" or "scientific validity" of their results is an illusion. Research results are inevitably biased, because they are controlled by the questions generating the data to be analyzed. Such bias is characteristic not only of open-ended, inductive methodologies, but also of rigorously empirical ones: by the use of standardized questions and variables, the social scientist's hypothesis or model sifts and shapes the sorts of data deemed admissible. Indeed, cultural bias is said actually to be *built into* the hypothetico-deductive method.

a. The Functionalist Perspective. How have these issues been viewed from various perspectives in anthropology? Many operating from the theoretical perspective of *functionalism* have argued vigorously for the scientific status of their enterprise. The functionalist mode of analysis was developed by Talcott Parsons and his students in sociology, and by Bronislaw Malinowski and A. R. Radcliffe-Brown in anthropology, though the roots of such analysis go back to H. Spencer, E. Durkheim, and T. Veblen. Strict functionalism has come under serious critique (see Penner 1971; Stowers 1985:152–58), but the perspective continues to be influential in modified forms. As originally developed, functionalism is not a narrow model with limited applications, but a general theoretical perspective on human interaction, capable of explaining diverse social phenomena. Social groups are regarded as organisms (much like living organisms) whose natural state is one of equilibrium. Cultural phenomena—ranging from venerable institutions, to kinship structures, to beliefs in witchcraft—can be analyzed to determine their "function"; i.e., their contribution to the smooth and proper functioning of the social system. The method is

"holistic":explanation of any single component of the system must demonstrate how that part interacts with the other components of the system. In strict functionalism, social organisms (like their natural counterparts) are assumed to follow laws or law-like patterns. Moreover, like living organisms, social systems are thought to have certain "needs" (e.g., the need to overcome tensions) which must be met if the system is to endure; a presupposition of analysis is that these needs are often satisfied by practices or institutions that are manifestly intended to serve a different purpose altogether.

Complaints about functionalism were voiced as early as 1950 by anthropologist E. E. Evans-Pritchard (1962)—whose own work, ironically, helped to establish functionalism as a viable working method. In a controversial lecture that has been dubbed "the Humanist Manifesto," Evans-Pritchard lamented the positivist bent of many social scientists of his day. Evans-Pritchard was convinced that human societies are not natural systems that follow scientific laws, capable of being discovered and tested. Rather, societies are moral or symbolic systems in which patterns can be "discovered"—or, better, "imaginatively constructed"—by the observer. Anthropology "is interested in design rather than in process," and "seeks patterns and not scientific laws, and interprets rather than explains." Hence, Evans-Pritchard contended, anthropology should be regarded as one of the humanities, akin to historiography rather than to natural science.

b. The Cognitive Perspective. In the late 1950s and the 1960s there emerged the subdiscipline of anthropology known as *cognitive anthropology*, because its practitioners try to map out the cognitive realm or worldview of a particular people (see Colby et al. 1981; Holland and Quinn 1987, esp. pp. 4–6). One impetus behind this new theoretical perspective was its originators' conviction that use of western analytic categories to describe and explain alien peoples inadvertently imposed those modern conceptions onto the data, resulting in ethnocentric interpretations. The cognitive anthropologists strive to correct this problem through careful elicitation of "the native's point of view." The use of native categories in explanation is called "emic" analysis, in contrast to "etic" analysis, which utilizes the investigator's own analytic categories (both terms are derived from a linguistic model; compare "phonemic" and "phonetic" [see Feleppa 1986]). A second impetus behind the development of cognitive anthropology was its inventors' dissatisfaction with the vagueness and imprecision said to characterize ethnographic work. Cognitive anthropologists have maintained that elicitation of native thought forms, done according to formal analytical procedures that can be replicated and tested by others, will permit unbiased (emic) understanding of alien cultures. At least in the earlier stages of the subdiscipline, the ultimate goal was to use the results of this finely tuned emic analysis in cross-cultural comparison, done according to overarching etic, culturally-neutral frameworks.

The insistence of cognitive anthropologists on recovering "the native's point of view" has had a widely pervasive influence on the contemporary discussion in anthropology (see Feleppa 1986). Moreover, the cognitive anthropologists' confidence with regard to the feasibility of genuinely scientific, unbiased investigation of other cultures has served as a catalyst in the present debate, provoking vehement and incisive opposition from some quarters. Clifford Geertz (1973:11), for example, has described cognitive anthropology as the marriage of "extreme subjectivism" to "extreme formalism." Marcus and Fischer (1986:29) suggest that "cognitive anthropology's hopes for objective grids came to be seen as just one set of cultural constructions among others; its frameworks were not at all culturally neutral, but were shot through with the analyst's own cultural categories and assumptions, thus vitiating the project." The latter assessment is relevant for scholars of Christian origins, who are presently debating whether or not overarching analytic frameworks (such as the "group and grid" scheme of Mary Douglas [1973; see also Malina 1986b]) can enable the investigator to escape the clutches of ethnocentrism (see Garrett 1988).

c. The Symbolic Perspective. Anthropologists who adopt the *symbolic* theoretical perspective (a designation that actually encompasses a range of perspectives and methods, including the work of both M. Douglas and C. Geertz) have been divided about the appropriateness of claiming "scientific" status for their work. The roots of symbolic analysis go back to psychoanalysis on the one hand, and the sociology of knowledge (especially as prefigured in the work of Durkheim) on the other (see Colby et al. 1981:424). According to adherents of the symbolic perspective, cultural systems are best understood through the

analysis of symbols and their power to constitute reality. Hence, the task of the observer is to interpret action (i.e., meaningful behavior) by searching out the symbolic forms (e.g., ritual or myth) in which such action is expressed and viewing them holistically within their social and cultural context. Symbolic anthropologists assume that the symbolic elements of the focal events of social life are richly "condensed" or "overdetermined." Like dream symbols in Freudian analysis, social symbols reach out "by multiple strands of association into many diverse domains, levels, and corners of cultural experience" (Colby et al. 1981:432).

The assumption that symbolic meaning is multivalent leaves wide room for the subjectivity of the researcher to enter into play. This element of subjectivity has been evaluated differently by various persons both inside and outside of the symbolic camp. "Interpretive" anthropologists (i.e., a subgroup of symbolic anthropologists, whose number includes Geertz and others with similar agendas, all of whom reject the goals and methods of positivist social scientists) have argued that subjectivity is to be neither denied nor feared. As J. L. Peacock (1986:90) notes, the aim is to produce an interpretation that has been filtered through the interpreter's own experience and worldview, but that is nevertheless "focused sharply and precisely on the world of the native." But this indeterminateness of findings is intolerable to anthropologists of a more positivist bent: "there is no assurance that the [symbolic] analyst is not simply inventing some structure that has at best only a minimal or conditional validity" (Colby et al. 1981:432; cf. Shankman 1984).

The classic method for accomplishing the task of symbolic interpretation is the "ethnographic" method: the researcher immerses herself or himself in the life of the people being studied, seeks to learn the people's language and customs, and attempts to describe patterns of symbolization and social structure only after an extended period of exposure to them (see Peacock 1986:48–91; Marcus and Fischer 1986:17–44). In theory, neither the symbolic theoretical perspective nor the ethnographic method is incompatible with "scientific" procedure. For example, an ethnographer seeking to explain why members of a particular social group regularly fall into a state of mass trance could begin with a carefully formulated hypothesis relating this type of symbolic action to other set features of the social and cultural system, then test the hypothesis against empirical data generated in the field. But in practice many ethnographers—especially the interpretivists—find that the multi-layered character of the generated data ("thick with meanings") serves only to reveal the inadequacy or inappropriateness of a rigorous model-testing approach.

The objections of their critics (e.g., Shankman 1984) notwithstanding, Geertz and other interpretivists typically exhibit a high degree of self-critical awareness with regard to methods and procedure (see Marcus and Fischer, 1986). Interpretivists have chosen deliberately to follow an inductive-investigative method, and to reflect thoughtfully on the possibilities and limitations of discursive narrative as the medium in which to explicate an alien culture. Such procedural choices ought not to be taken for granted by scholars interested in social aspects of early Christianity. Elliott is correct that exegetes and historians must make intentional and well-documented decisions about their methodological perspectives. But such explicitness does not necessitate that one adopt a model-testing approach. To insist otherwise is to be more scientific than the social scientists, who—as seen above—disagree about the role that the hypothetico-deductive method ought to play in their analysis. The scholar of Christian origins may well decide that the very nature of human "meaning"—rooted inextricably in the concrete and rich details of a given time and place—makes the inductive but focused procedure of the interpretivist a more appropriate exemplar of method than is the empirical procedure of natural scientists.

2. Social Objectivity and the Problem of Incommensurability. To what extent is genuine translation of the terms, concepts, or modes of being of an alien culture into the interpreter's own language and modes of thought possible? Are there spheres of social or verbal discourse that *cannot* be understood aright when they are abstracted from their particular cultural framework—as is necessitated by the very act of translation? Discussion of this issue has often centered on the question of *rationality,* because it is the "nonrational" acts of another people (with so-called magical acts being the case *par excellence*) that pose the most serious problems of cross-cultural translation, and that thereby threaten to cast doubt on the

validity of the whole translation enterprise. Are the apparently nonrational practices and beliefs of other peoples to be assessed and described by measuring them against the analytic categories of our own modern western discourse (e.g., "magic," "science," or "religion")? This was the procedure followed early in the century by James Frazer, who concluded that "magic" was a kind of primitive rational science, but based on false premises. Alternately, are such practices and beliefs to be explained in terms of their ultimate contribution to the stable functioning of the social system, thereby making it unnecessary to attend to "the native's point of view"? This is the approach followed by those adopting a functionalist model of society. But critics have argued that both approaches are distorting. They treat the phenomena at too high a level of abstraction, and so obscure the possibility that the observed "nonrational" behavior actually follows "rules for rationality" that are *incommensurable* with the rules of the observer. Rather than measuring a people's symbolic forms against our own analytic categories, it is argued that the investigator must strive to utilize categories corresponding as closely as possible to ones used by the subjects themselves.

The "problem of incommensurability," then, may be stated as follows: any procedure which abstracts symbolic forms from their cultural context for purposes of comparison runs the danger of obscuring meaning and causing distortion, since the symbolic forms employed by the subjects may be incommensurable with categories derived from another culture. The greater is one's conviction that there are "cultural universals"—that social structures and codes of meaning follow law-like patterns, despite the variety of "superficial" cultural differences from one time and place to the next—the less acute will the "problem of incommensurability" seem to be. Conversely, the stronger is one's conviction that the "meaning" of social and verbal discourse is inextricably rooted in the *specific details of a particular culture,* the more acute the problem of incommensurability will appear to become.

Certainly all translation and interpretation involve abstraction: i.e., the overlooking of specific cultural detail so as to express a quality or property separate from the person or thing possessing it. But methods which employ extensive cross-cultural comparison, or which aim to explain social phenomena in the observers' own analytic (etic) categories must abstract the data from their cultural and social context to a much higher degree than do those approaches which seek to employ the views and intentions of the subjects (emic analysis). On the other hand, one cannot explicate the discourse of another culture without *any* reference to the observers' own (etic) categories, since to do so would be "not to explain anthropologically but to become completely assimilated socially" (Wilson 1979:xvii; see the discussion of the "intentionalist" position in Stowers 1985). Consequently, many anthropologists hold that the best strategy is one that deploys emic and etic categories together. The use of emic and etic categories conjoined is said to permit the investigator best to comprehend what alien peoples think they are doing and why they think they are doing it (on the possibilities and limits of such an approach, see Feleppa 1986). According to Geertz (1983:69), the interpreter achieves such a conjunction of emic (or "experience-near") and etic (or "experience-distant") categories by engaging in

> … a continuous dialectical tacking between the most local of local detail and the most global of global structure in such a way as to bring both into simultaneous view … Hopping back and forth between the whole conceived through the parts that actualize it and the parts conceived through the whole that motivates them, we seek to turn them, by a sort of intellectual perpetual motion, into explications of one another.

This sort of dual focus on the subject of study does not exclude the possibility of cross-cultural comparison. But the investigator is acutely aware of the danger of making easy cross-cultural equations, inasmuch as the abstraction required to do so introduces the problem of incommensurability.

It may be concluded, then, that investigative procedures that systematically compare early Christianity with models based on culturally-distant social groups will encounter the problem of incommensurability in heightened form: in order to make such comparisons work, both early Christianity and the movement (or "model") to which it is being compared must be treated at a high level of abstraction, which increases the risk that distortion of meaning will occur. As Stanley Stowers (1985:151) has pointed out, the recent trend in the study of early Christianity has been simply to assume commensurability between the 20th

century societies upon which social scientific models are based and the societies of the ancient Greco-Roman world. Stowers writes,

> The debate in the philosophy of science, and a parallel debate in the philosophy of history, should warn us to be skeptical about the applicability of modern models to antiquity and suggest that self-knowledge of our own social and conceptual worlds is essential to critical historical work. Most social scientific schemes of description and explanation embody peculiarly modern assumptions about values, beliefs, and social structures. The historian must be able to analyze and evaluate theories and methods thoroughly enough to discern when fundamental assumptions will produce distortion if applied to antiquity.

Stowers' sage cautions ought not to be taken as warrant for abandoning all use of social scientific perspectives and models in the study of early Christianity. Such perspectives and models have already suggested new and productive lines of inquiry and explanation, as attested by the following review of seminal works in the field; this cross-disciplinary enrichment should and will continue. It is, however, increasingly urgent that scholars of Christian origins engage in sustained reflection on the philosophical implications of the perspectives and models that they choose to employ.

C. Review of Seminal Works

The only way to gain a sense of the breadth of topics covered and methods used in recent studies of social dimensions of early Christian life and literature is to examine several of those works. The studies are so diverse as to defy easy comparison or categorization. The following (necessarily selective) sketch of seminal works observes the standard distinction between "social history" and "sociology" or "social science," while acknowledging the imprecision of that dichotomy.

1. "Social Historical" Studies.a. Malherbe. In his book *Social Aspects of Early Christianity* (1983; 1st ed. 1977), A. J. Malherbe advocates close scrutiny of the written sources of early Christianity, especially the NT, so as to become sensitive to their social dimensions. Malherbe suggests that the relationship between a given document and the community with which it was associated may have been complex; one cannot take it for granted that documents were always *products of* communities. Consequently, Malherbe counsels against premature efforts to draw analogies with non-Christian movements, or to apply sociological theory to the pertinent data. Rather, one must begin by examining the character and intention of the documents "in order to discern how they functioned in relation to the communities with which they were associated" (20). Malherbe discusses a range of topics pertaining to the social dimension of early Christian life and literature, including the social function of 1 Thessalonians, the social and educational level of members of the early movement, and features and associated problems of house churches. Malherbe concentrates his efforts on describing and evaluating relevant scholarship (including works written prior to the current renewal of interest in social topics; e.g., Deissmann 1965; Judge 1960a, 1960b), and on suggesting productive avenues for future research. Malherbe's stress on understanding the unique and particular elements of the NT writings and his reluctance to proceed too quickly to "theoretical description or explanations" of communities (insisting that they first be understood from within) keep his work firmly within the confines of "social history." The point is worth noting, because Malherbe does occasionally refer to his work as "sociological" analysis—a usage that has elicited criticism from reviewers, and that may mislead the casual reader. Some have found Malherbe's constraints on genuine sociological analysis to be overly cautious. But these cautions ought to be taken seriously—even if they are ultimately rejected—inasmuch as they grow out of a rich knowledge of the nuances and complexities of life and literature in the Greco-Roman world.

b. Grant. In *Early Christianity and Society* (1977), Robert M. Grant addresses topics which he supposed might appeal to persons whose interests extend beyond esoteric points of theology and exegesis and into matters of "everyday Christian practicality." Grant explores seven different topics (Christian population; relationship to the monarchy; taxation; occupations; private property; almsgiving; and temples, churches and endowments), covering the time span from the 1st to the middle of the 4th century. Grant's attempt to study early Christianity in relation to its social environment is clearly and deliberately that of a historian and not of a sociologist, but several times Grant borders on sociological analysis: for

example, when he discusses the possible relationship between millenarianism and the rejection of private property (chap. 5), or when he treats the "triumph of Christianity" as an "economic matter" (chap. 7). There are methodological problems with the work: Grant never worries about how the upper-crust bias of his literary sources may distort the picture of everyday life for those in the lower echelons of society. Moreover, in the opinion of J. Gager (1979:177), Grant's choice and treatment of topics is reflective more of his own social location than of the situation of early Christians. Given these limitations, Grant's work is valuable for its focus on social, "mundane" aspects of Christian life seldom attended to in histories of the early church.

c. Hock. The 1980 treatment of Paul's trade as "tentmaker," by Ronald F. Hock *(The Social Context of Paul's Ministry)* can also be characterized as a work of social history. Hock makes no use of methods or insights from the social sciences, but does endeavor to place Paul within a particular social and cultural milieu. Hock illuminates Paul's references to his manual labor by discussing the trade of tentmaking or leatherworking as it is known from contemporary sources, the experiences that would likely have arisen from tentmaking as a way of life, and contemporary attitudes held by different groups of persons (including rabbis and philosophers) toward manual labor. Hock uses his findings to illuminate the nature of the Corinthian controversy over Paul's refusal to accept their financial support. He concludes that "far from being at the periphery of his life, Paul's tentmaking was actually central to it" (67). By "placing Paul in the workshop," Hock succeeds not only in elucidating specific material and cultural ties that bound the apostle to a particular time and place, but also in casting light on other aspects of Paul's ministry and relationships with his communities.

2. "Social Scientific" Studies.a. Theissen. In *Sociology of Early Palestinian Christianity* (1978), G. Theissen seeks to determine how "the Jesus movement" contributed to the resolution of the disruptive tensions caused by Roman rule in 1st-century Palestine. The governing sociological perspective is functionalism: societies in general are regarded as entities whose "basic aims" include achieving the integration of their members and overcoming conflicts through change (2). The analysis is broken down into three parts. In Part One ("Analysis of Roles"), Theissen (apparently following M. Weber 1963:60–62) describes three standardized patterns of behavior in the Jesus movement: the "wandering charismatics," who abandoned family, possessions, and self-pride in order to follow Jesus; the "sympathizers in the local communities," who subjected themselves to the authority of the wandering charismatics and provided physical sustenance to itinerants who passed through their towns; and the "Son of Man," who was central to discipleship for members of each of the other two groups. In Part Two ("Analysis of Factors"), Theissen studies the history, nature, and extent of societal conditions that may have caused the movement to take the shape it did. In Part Three ("Analysis of Function"), relying heavily on psychoanalytic concepts, Theissen explains how the Jesus movement "articulated an answer" to the deep-seated crisis in Palestinian society: Parables, incidents, and sayings in the NT reveal how the earliest Christians "diverted, transferred, projected, transformed, and symbolized" the aggressions resulting from societal tensions (110). But, Theissen concludes, despite the Jesus movement's ability to overcome aggression, for various reasons it was rejected by Palestinian society. On the other hand, it flourished (albeit in changed form) in the more peaceful Hellenistic lands (on the latter point, see Theissen's important articles on Paul, several of which are collected in Theissen 1982).

Theissen's functionalist perspective has profoundly shaped his explanation of the Jesus movement, dictating that he view the movement as one among several of Palestinian society's efforts to overcome tensions within itself. As in classic functionalism, Theissen's explanation is given entirely in etic categories: the movement is analyzed in terms of its *latent functions*, rather than in terms of the *manifest functions* or *intentions* of the individuals who were its members. "Society" is described in language appropriate only to thinking persons: it has "aims," "needs," "concerns." Moreover, the movement's response to aggression is characterized using psychoanalytic constructs, which are inappropriate to describe social (as opposed to individual psychological) phenomena. Thus, as a full explanation of the emergence and ultimate fate of "the Jesus movement," Theissen's work is inadequate. Nonetheless it is,

by wide consensus, a creative—indeed ingenious—piece of work, which has opened up new lines of scholarly inquiry (for more detailed critique, see Elliott 1986:10–11).

b. Elliott. In *A Home for the Homeless* (1983), John H. Elliott engages in "sociological exegesis" of 1 Peter. He notes that he does not abandon traditional literary, theological, and historical questions, but insists (8) that these cannot be answered satisfactorily for a particular text unless one also makes "determination of the sum of its features which make it a vehicle of social interaction and an instrument of social as well as literary and theological consequences." Elliott rejects the traditional "heaven-is-my-home" reading of 1 Peter, arguing vigorously that the terms *paroikos* ("resident alien"; 1 Pet 2:11) and *parepidēmos* ("visiting stranger"; 1 Pet 1:1; 2:11) designated the actual political and social condition of the addressees. Measuring these recipients against Bryan Wilson's typology of sects (Wilson 1961), Elliott argues that the addressees must have constituted a "conversionist sect." By definition such groups exist in tension with the world, and seek to maintain this tension in characteristic ways, which Elliott demonstrates to be exhibited in 1 Peter. Using these insights, and armed also with observations on "the functions of social conflict," Elliott sheds new light on the letter's references to conflict with society. He summarizes (118):

> … the strategy of 1 Peter was not to provide ways of eliminating or avoiding social tension but of accentuating the struggle and presenting it as something which could bring about positive results. This strategy was not to encourage withdrawal or escape of "world-alienated pilgrims" from society or, even less, from the earth. Nor was it to urge cultural assimilation or accommodation. It was rather to encourage the recipients to hold their ground, stand fast, and resist, and to equip them for that task by reassuring them of their distinctive union with God, with Jesus Christ, and with each other.

Elliott subsequently examines the significance and function of "the household" in the socioreligious strategy of 1 Peter, concluding that the "household code" in the letter serves to reinforce the distinctive communal identity of the recipients.

Elliott insists that the recipients of the letter must have belonged to the social category of "resident aliens" prior to their conversion. As others have noted, for several reasons Elliott is not entirely persuasive at this fundamental point; one reason is that he does not give adequate warrant for dismissing the theological overtones of the terms in question (whose OT and NT usage he reviews thoroughly). In any case, Elliott's supposition that one must choose *either* a sociological reading *or* a metaphorical reading raises interesting questions concerning the relationship between these respective usages of a whole variety of terms (e.g., "slave of Christ"). How does the sociological usage of a term affect the metaphorical usage and vice versa, at the level of the audience's reception as well as at the more obvious level of authorial intention?

The application of Wilson's sect-typology raises questions concerning incommensurability: can one assume that the modern western categories used to describe modern Christian sects are commensurable with the patterns of social and symbolic discourse that characterized a group in 1st-century Asia Minor? The question will be answered differently by different readers; in any case, the model's heuristic power to provide a new angle of vision on the conflict in which the addressees were engaged seems to justify its use. More serious are the complications arising from Elliott's application of studies on the functions of social conflict. A common criticism of functionalism is that it commits a *teleological fallacy*, inasmuch as it explains the *purpose* of social structures by reference to their *results* (see Stowers 1985:154–56). Elliott apparently does not wish to fall victim to this fallacy; nor, it seems, does he wish to speculate on how the letter actually functioned in the designated communities once it was received (since we have no way to know this). But, perhaps in the effort to avoid these pitfalls, he has repeatedly ascribed complex and subtle—indeed, Machiavellian—strategical motives to the author(s) of the document. These motives are often expressed in 20th-century terms (see, e.g., 115), and at one point (119) a reference to the contrast between the "implicit" sociological concerns versus the "explicit" theological phrasing of the letter sounds suspiciously like a disguised version of "latent" versus "manifest" functions. Elliott does not give adequate weight to considering how *the author(s) themselves* might have understood (in their own terms) their intentions in writing the letter.

In spite of these weaknesses, many of Elliott's main points about how to read the letter withstand close scrutiny. It is an innovative and interesting piece of work.

c. Meeks. Wayne A. Meeks describes his 1983 book, *The First Urban Christians*, as a work of "social history" (ix; cf. 74), but the work pushes the boundaries of that category as it has typically been conceived. The book is a study of "the world of ordinary Christians" in the Pauline churches of the 1st century. Meeks does address traditional social historical issues, such as the urban environment of Pauline Christianity, and the social level of the members of the Pauline churches. But he also addresses questions more commonly associated with the work of the sociologist or anthropologist, concerning, for example, the social structure of the Pauline churches, the way they governed themselves, the types of rituals in which they engaged, and the correlations between stated beliefs and social forms. Moreover, Meeks makes use of various social scientific models in his analysis. The models are used as heuristic devices, to prompt questions and highlight possible connections among the data. Meeks writes (5):

> In this study the use of theory will be suggestive, rather than generative in the manner of experimental sciences. As Max Weber long ago pointed out, historical hypotheses do not admit of verification in the manner of scientific laws, and the controlled experiment is inevitably a misleading model for historical inquiry.

This posture vis-à-vis the social sciences has generated criticism from scholars at both ends of the social science-versus-social history spectrum: representatives of the one end argue that Meeks has not gone far enough in his appropriation of social scientific methods (Malina 1985; Elliott 1985), while representatives of the other end maintain that he has stepped over the line, failing to take adequate account of the participants' intentions, motives, and purposes (Stowers 1985:168–76). The difference in scholarly reactions is worth examining more closely. Malina and Elliott appear to have reacted against Meeks' claim that his work is not organized by any overarching social scientific theory. Rather, Meeks contends, his application of social science is "eclectic." He writes (6), "I take my theory piecemeal, as needed, where it fits." Stowers, on the other hand, appears to have reacted against Meeks' additional comment (7) that his position might be termed a "moderate functionalist" one. Stowers feels that Meeks has fallen into the trap that snares so many functionalists, by neglecting the beliefs and concepts of the people he is studying. But this last assessment is surely debatable: what Meeks seems to mean by his use of the term "moderate functionalist" is little different than what interpretive anthropologists mean by the term "holistic" (e.g., Marcus and Fischer 1986:23:"The essence of holistic representation in modern ethnography has not been to produce a catalog or an encyclopedia … but to contextualize elements of culture and to make systematic connections among them").

Meeks' explicit description of his organizing framework as atheoretical is somewhat misleading, for he does also compare his perspective to that of an interpretive ethnographer (6; cf. 7):

> Our case is analogous to Clifford Geertz's description of the social anthropologists's task as an ethnographer, a describer of culture. The description is interpretative. What it interprets is the "flow of discourse," from which it tries "to rescue the 'said' … from its perishing occasions and fix it in perusable terms" [quoting Geertz 1973:20–21].

Meeks' goals of depicting the world of ordinary 1st-century Christians, and of viewing holistically the associations of salient symbols and metaphors as they occur in contexts of performance (ritual and myth) are consistent with the aims of the interpretive perspective in anthropology.

However one adjudges Meeks' use of the social sciences, it is the firm social-historical footing of the work that gives it such cumulative power to persuade. Like the ethnographer's reports on the conditions of fieldwork and everyday life, the work's considerable exegetical and historical detail gives the reader the sense that Meeks really "was there." His reading of the sociological and anthropological literature has enabled him to ask new questions, which the ancient sources are able to answer, at least provisionally, a surprising number of times. Meeks' book, like the best interpretive ethnographies, presents us with a vision that is focused sharply and precisely on the group under study, but that is nonetheless uniquely the author's own.

d. Petersen. In his 1985 publication, *Rediscovering Paul,* Norman Petersen brings insights from interpretive anthropology, the sociology of knowledge, and literary criticism to bear on Paul's letter to Philemon. Petersen had noticed that both narrative worlds and social worlds consist of "symbolic forms" and "social relationships." How, then, do narrative worlds relate to social worlds and vice versa? To what extent is it legitimate to speak of the "sociology" of a narrative world? In an illuminating introduction, Petersen addresses these and related questions. He argues that the term "narrative world" is quite appropriate for analyzing letters, even though they might not seem to have any "narrative":like stories, they are characterized by plot, point of view, and closure. Letters *imply* a narrative, which can be teased out and restated, with some effort but also substantial gain—a feat that Petersen demonstrates in chap. 1. In chap. 2, Petersen turns to examine Philemon, seeking to "view the actions of the actors in the story as social relations," and to "determine from these relations the sociological structures underlying them" (31). In chap. 3, he studies "the overarching symbolic universe that provides meaning to and motivation for the actors' behavior." A summary and conclusion follow.

The "sociology of knowledge" (Berger and Luckmann 1966), from which the term "symbolic universe" derives, has influenced many who are interested in social aspects of early Christianity. A "symbolic universe" is an "overarching universe of meaning" that gives stability to the social world, ensuring that the latter continues to seem not merely reasonable but *inevitable* to its inhabitants. Petersen's case for the compatibility of the sociology-of-knowledge perspective and Geertz's interpretive one is sound, inasmuch as the perspectives overlap considerably and share common intellectual ancestors, including Weber, Durkheim, and Alfred Schutz. Petersen's further addition of literary critical categories and methods to his interpretive kit is also philosophically defensible; Geertz himself has stressed the analogies between cultures and "texts" as objects of study. For Petersen, the final combination is powerful in its ability to summon—but also subtly to differentiate among—the various contexts (narrative, historical, social, and symbolic/theological) from which the text derives meaning. The method enables one better to see how the meaning(s) of the text affected and were affected by the "everyday reality" in which the author and first readers lived. To be sure, Petersen could have provided considerably more concrete detail about "everyday reality" as it pertained to the letter of Philemon (e.g., by incorporating a discussion of master–slave relations in 1st century Asia Minor). But in general his results are impressive, and his method holds promise for the analysis of other NT and ancient Christian documents.

e. Malina and Neyrey. Bruce J. Malina and Jerome H. Neyrey have been among the most outspoken advocates of an approach to NT studies that incorporates the scientific method of model formulation and testing. In their joint book, *Calling Jesus Names* (1988), they put their preaching into practice in an examination of the gospel of Matthew (especially chaps. 12 and 26–27). Christological investigation done "from the side," the authors contend (135), differs from more traditional christological investigation in that it "is as interested in the process whereby Jesus was evaluated as in the formulae or labels resulting from the process." In order to illuminate the "name-calling" or "labelling" process by which Jesus' contemporaries evaluated him, the authors utilize models of witchcraft and labelling/deviance theory. They suggest that this approach offers "… accurate, plausible and testable scenarios for understanding aspects of conflict in isolated detail and as coherent patterns of behavior" (138).

The model for explicating witchcraft accusations is that of M. Douglas (1973; elaborated in Malina 1986b), which hypothesizes that certain characteristics of the worldview of any given social group (attitudes toward purity, ritual, body, etc.) are correlated in a consistent and predictable fashion with two sociological variables, corresponding to the group's internal and external lines of demarcation. Witchcraft societies—i.e., social groups whose members are prone to make witchcraft accusations—are classified as strong on the variable known as "group" (= "a high degree of pressure to conform to societal norms") and low on the variable known as "grid" (= "a poor degree of fit and match between individual experiences and stated societal patterns of perception and experience"). In chap. 1, Malina and Neyrey use the categories provided by the group/grid model to analyze the conflictual social dynamics of the community reflected in the Q-stratum of Matthew, focusing especially on Matt 12:22–32. In chap. 2, the same segment of Matthew is examined in the light of labelling and deviance theory (derived from American

sociological work). Chaps. 3 and 4 apply first labelling theory, then prominence theory to the account of Jesus' trial in Matthew 26–27. In each chapter the procedure is the same: the model is laid out in considerable detail, then "tested" against the data from Matthew so as to illuminate the dynamic process of name-calling in which Jesus and his contemporaries were engaged.

One of the authors' primary goals in adopting the model-testing approach is to avoid ethnocentric readings of the biblical texts. Malina and Neyrey argue that the meanings of the words of a given text are rooted in the social structures (= patterned social relations) of the group that produced the text. Most 20th-century readers are accustomed to different social structures and their related cultural codes, and so bring the wrong set of assumptions to the page. Only the interpreter who is equipped with a cross-cultural model that takes the peculiarities of 1st-century Mediterranean culture into account will be able to discern the intended meanings of the text. The witchcraft and conflict models, together with a chart comparing United States values with "the Mediterranean view" (apparently based on social scientific studies of the 20th century Mediterranean world) are proffered as a kind of algorithm for the translation of the words of Matthew 12 and 26–27 into 1st-century meanings. The models and the meanings that Malina and Neyrey present are phrased in highly abstract, etic terms, though the authors insist (137–38) that they have tried to balance the etic emphasis by phrasing their comments "in terms of Mediterranean culture and categories."

It is dubious whether (as the authors claim: xiv, xv) the meanings derived with the use of the given models correspond to the meanings "familiar to the original audience of those texts" (xiv; cf. xv, 136, 143). The authors' interpretations are phrased in 20th-century social scientific categories ("witchcraft," "labelling," "deviance," "prominence," etc.) that are incommensurable with the customary categories of the 1st century. Malina and Neyrey, who apparently are aware of the problem of incommensurability, argue that the redundance of results produced by the several different models demonstrates the models' appropriateness for 1st-century society (65–67), and that the authors' references to "Mediterranean culture and categories" counteract any inherent bias of the models. But the consistency of results produced by the various models does not alleviate the problem, since *all* of the models use exclusively etic categories. Moreover, it is far from evident that generalizations about 20th-century Mediterranean society can be depended upon to transport one's reading faculties into the 1st-century world.

Malina and Neyrey claim that their explanatory constructs are "accurate, plausible, and testable." But what does this claim mean? In the natural sciences, the acid test of a model or hypothesis is whether it can *predict data.* The prediction-criterion is inappropriate to models designed for historical research (cf. the authors' [143] cautious assessment of the possibility of "retrodiction"). "Testable" in the usage of Malina and Neyrey apparently means that they or their readers can assess whether the categories and processes described by the model seem to correspond to ones identified in Matthew. But neither ethnocentrism nor subjectivity has been eliminated from the research procedure: the former is built into the etic categories of the model, and the latter affects the authors' interpretive decisions about how to apply the model to the text.

In sum, Malina and Neyrey do not escape the problem of ethnocentrism, nor do they enable us to read the texts "in terms of the meanings familiar to the original audience of those texts" (xiv). To accomplish the latter, the authors would have had to incorporate 1st-century concepts and categories into their analysis in a much more thoroughgoing fashion. Despite these flaws, Malina and Neyrey's work is valuable. It compels us to see that the proper task of "christology" consists not in the laying out of so many "titles" like Lepidoptera, but in examining the hard give-and-take of persons in conflict. Moreover, Malina and Neyrey challenge us to examine our own presuppositions, and to state these as forthrightly as they themselves have done. Both of these accomplishments are to be applauded.

D. Conclusion

The variety of topics which could be addressed by scholars interested in sociological or social historical study of the NT is difficult to specify, because opinions on key methodological questions diverge so widely. As was demonstrated in the foregoing review of seminal works, scholars' positions on methodological issues, such as the use of sociological models and the problem of incommensurability, govern their perception both of the topics needing attention and of the procedures appropriate to such

tasks. Many of the topics addressed in more traditional historical analyses (e.g., Christianity's transition from an isolated sect to a widely dispersed and influential movement, or the formation and organization of the Pauline churches) have already proven amenable to the probing of scholars who are attentive to social dynamics and willing to be informed by sociological theory. Presumably the fund of traditional historical topics will continue to fuel such research in the future. Moreover, there are a variety of methodological problems calling for both sustained theoretical reflection and test-case analyses: for example, the relationship between social reality and various metaphors used by early Christians (e.g., familial or household language used to describe the church, or slave-terminology used to describe discipleship [see Martin 1988]); or as a second example, the interface between sociological study and various forms of literary criticism, including reader response theory (see Petersen 1985; Martin 1988; Garrett 1989:5–9). Doubtless other topics needing attention will surface as scholars become more familiar with the patterns of everyday life in antiquity, and with the driving questions and concerns of sociologists and anthropologists.

There is no question that diversity is the hallmark of the "sociology of early Christianity" at the present time. The role that the social sciences ought to play in such analysis is currently being debated in the academy, and new approaches are being tested in articles, monographs, and dissertations. The new (or renewed) effort of scholars to take seriously the social dimensions of early Christian life and literature has already borne fruit, and there is promise of more to come. But the plant must be pruned and nurtured. Careful methodological reflection and self-critical analysis are essential to its continued growth.

SOCOH (PERSON) [Heb *śôkô* (שׂוֹכוֹ)]. One of the descendants of Judah (1 Chr 4:18). He is probably the eponymous ancestor of the town of Socoh located in the hill country of Judah. See SOCOH (PLACE) #2.

H. DARRELL LANCE

SOCOH (PLACE) [Heb *śôkōh* (שׂוֹכֹה)]. **1.** A town in the Shephelah. Josh 15:35 locates it in the second district of Judah near Jarmuth, Adullam, and Azekah. The confrontation between the Israelites and the Philistines which ended with the death of Goliath took place in the Valley of Elah between Azekah and Socoh (1 Sam 17:1). A Socoh occurs in the list of cities said to be fortified by Rehoboam (2 Chr 11:6–10), and it is generally assumed that the Shephelah Socoh is meant. However, the Socoh of the hill country (see below) cannot be ruled out. The Shephelah Socoh is certainly the site referred to in 2 Chr 28:18 which lists a group of cities lost to the Philistines before or in the time of Ahaz.

These references to a Socoh in the Shephelah fit the site of Kh. ʿAbbad (M.R. 147121) located near where the Elah valley opens into the rolling coastal plain. Although the site has not yet been excavated, surface survey has produced pottery of the expected horizon. Furthermore, a short distance to the E, the ancient name is preserved at Kh. Shuweikeh, and Eusebius knew the two sites as a double village, collectively called "Socoth," the plural of Socoh.

2. A town in Judah in the S hill country, it is mentioned only in Josh 15:48 (unless it is the Socoh fortified by Rehoboam [2 Chr 11:7]). It is located in the fifth district of Judah near Debir and Eshtemoh and is generally identified as Kh. Shuweikeh (M.R. 150090), an unexcavated site about 17 km SW of Hebron.

3. A town in the territory of Israel, cited as the center of Solomon's third district (1 Kgs 4:10). Although this is its only biblical reference, it is apparently mentioned in inscriptions of Thutmose III, Amenhotep II, and Shishak. It is generally located at *Shuweiket er-Ras* (M.R. 153194) about 3 km N of modern Tulkarm, near the opening of the strategic pass leading to Shechem.

4. One of the place names on the royal-stamp jar handles, usually identified with Socoh #1. However, this is by no means certain, especially since no examples of Socoh stamps have been found among the *lmlk* handles picked up at Kh. ʿAbbad.

SOCRATES. Socrates, the son of Sophroniscus and Phainarete, was born in 470/69 B.C.E. in the Attic demos of Alopeke and was executed in Athens by a potion of hemlock in 399 B.C.E. His radical critique of the Sophists, among whom he began his philosophical career, resulted in a thoroughgoing transformation of Greek philosophy. Socrates' defense before the Athenian court was immortalized by Plato in his *Apology of Socrates* which became the literary model of many analogous defenses in the future. The reconstruction of Socrates' philosophy is still controversial, since he did not leave any writings. The problems of the historical Jesus and the historical Socrates are similar in many ways and require similar methods. Although mentioned by name only later in early Christian literature (Harnack 1904; Döring 1979), the influence of the Socratic tradition is detectable as early as in the NT. There are surprising parallels between some sayings of Jesus and those of Socrates (Hommel 1984). Socrates' defense influenced Paul's defense strategies in his letters (Betz 1972; *Galatians* Hermeneia) as well as the presentations of the apostles in Acts (Acts 5:29; 17:16–34).

SODI (PERSON) [Heb *sôdî* (סוֹדִי)]. The name Sodi, according to Noth (*IPN*, 152), is a short form of a longer name which may have had Babylonian origins. The *î* ending is either a personal pronoun ("my confidence") or a hypocoristic ending ("[Yahweh is] a confidant"). The personal name Sodi is found only in Num 13:10. Sodi is the father of Gaddiel, who represented the tribe of Zebulun among the twelve men Moses sent from the wilderness of Paran (Num 12:16) to spy out the land of Canaan.
JON PAULIEN

SODOM AND GOMORRAH (PLACES) [Heb *sĕdōm* (סְדֹם); *ʿămōrâ* (עֲמֹרָה)]. Two legendary cities from prehistoric Israel in the neighborhood of the Dead Sea, mentioned in the Bible and in ancient Jewish literature. The meaning of the names Sodom and Gomorrah is as uncertain as their location. The names are explained according to etymological derivation: Sodom as "field," "burning," "enclosed space"; Gomorrah as "flooded place," "indentation," or the like. Lately, more caution has been exercised in determining the meaning of the names, even though they are often thought to retain some of the elements contained in the sagas.

A. Biblical References to the Cities

In the Hebrew Bible as well as in the NT, Sodom and Gomorrah are occasionally mentioned in the same breath. But, apart from these cases, Sodom figures far more prominently than Gomorrah. In the Hebrew Bible, Gomorrah occurs jointly with Sodom in only 19 times out of the 39 times the latter is mentioned (Gen 10:19; 13:10; 14:2, 8, 10, 11; 18:20; 19:24, 28; Deut 29:22; 32:32; Isa 1:9, 10; 13:19; Jer 23:14; 49:18; 50:40; Amos 4:11; Zeph 2:9). In the NT the combination is even less frequent (Matt 10:15; Rom 9:29; 2 Pet 2:6; Jude 7). Sodom occurs by itself in the Hebrew Bible in Gen 13:12, 13; 14:12, 17, 21, 22; 18:16, 22, 26; 19:1 (twice), 4; Isa 3:9 (conjecture 1:7); Ezek 16:46, 48, 49, 53, 55, 56; and Lam 4:6. In the NT Sodom is mentioned by itself in Matt 11:23, 24; Luke 10:12; 17:19; and Rev 11:8.

According to an old tradition, Sodom and Gomorrah, together with three other cities (Admah, Zeboiim, and Zoar), formed a so-called Pentapolis, already indicated as such in Wis 10:6. This name derives from Gen 14:2, 8, the only passage in the Bible where all five cities are mentioned in conjunction. Apart from the latter verses, only Gen 10:19 (conjecture 19:25); Deut 29:22; and Hos 11:8 have Admah and Zeboiim. Zoar (according to Gen 14:2, 8 previously called Bela) occurs in Gen 13:10; 19:22f., 30 (twice); Deut 34:3; Isa 15:5; and Jer 48:34 (conj. 48:4). From this survey it appears that Sodom occupied a central place in the tradition, if a Pentapolis ever existed at all. The central role of Sodom is even more certain if, in the "table of nations" of Genesis 10, Admah and Zeboiim can be seen as an editorial addition to Sodom and Gomorrah, and if Deut 29:22 [—Eng 23] can be dated to the exile. Hos 11:8, where Admah and Zeboiim occur together, stands in a N Israelite context, which may justify the conclusion that Sodom (and Gomorrah) played a role in Judean circles, and Admah and Zeboiim in N Israelite circles. Apparently, therefore, a variety of traditions existed of an event that had catastrophic consequences and that, in the message of the Bible as well as in extrabiblical literature, has become a classic example of particular sins, condemnations, and judgments.

1. In Genesis. When one considers the traditions about Sodom (and the other cities) in the Hebrew Bible, one is struck by the difference between the function of Sodom in Genesis 14 and that in the other chapters in Genesis which feature Sodom. Genesis 14 is a construction of various genres dating from the postexilic period. Broadly speaking, it contains a report on a campaign (vv 1–11), a narrative about a liberation which is reminiscent of similar tales from the time of Judges (vv 12–17, 21–24), and the Melchizedek episode (vv 18–20). In this chapter, Sodom does not stand in the bad repute it has in the rest of the Hebrew Bible. Although in the first part (vv 1, 2, 8, 9) the lists name five cities and five kings, from v 12 onwards only Sodom and its king play a role. The focus on Sodom is due to the fact that Abraham's nephew Lot lived in this city and was taken prisoner by the four kings from the E. As to the location of Sodom, mention is made of the "Valley of Siddim" that was "full of tar pits" (v 10). But these names leave us in the dark historically as well as geographically. The former name may also be interpreted as "Valley of the Demons."

Quite different is the picture of Sodom given in the other passages in Genesis. The so-called Table of Nations in Genesis 10 (v 19) adds, as we have seen, only secondarily the names of Admah and Zeboiim to those of Sodom and Gomorrah. Genesis 13 relates the separation of Lot and Abraham. In this story, attributed to J, additions from P occur. One of these additions reports that Lot saw that "the Jordan Valley was well watered everywhere like the Garden of the Lord or like the land of Egypt, in the direction of Zoar. This was before the Lord had destroyed the cities of Sodom and Gomorrah" (v 10). The statement in v 12, that Lot settled down in the valley "as far as Sodom" (which suggests that Sodom lay outside Canaan) is, in Genesis 18 and 19, followed by the story about the "wickedness" (already announced in Gen 13:13) of the "men of Sodom," labeled as "great sinners against the Lord." They are held up as an example, illustrative of the way God's justice works.

Analysis of chaps. 18 and 19 shows that the role played by the people of Sodom (and Gomorrah) originates in an independent tradition that was only secondarily linked to the Abraham stories. This tradition initially was of a strictly local nature and originated in the environs of the Dead Sea. The lament over Sodom's wickedness constrains God to intervene; and notwithstanding Abraham's theological reflection whether God is really willing to destroy the righteous along with the godless, the sentence is

executed in Genesis 19. This chapter is reminiscent of the flood stories. The transgressions of Sodom's inhabitants mainly consist in sexual debauchery, human hubris, and violation of (the law of) hospitality. No one in Sodom was exempt from this sin (19:4). The destruction of Sodom and the other cities was effectuated by means of a "rain of brimstone and fire from the Lord out of heaven" (v 24). It is striking that this story, unlike others (Deut 29:22; Isa 13:19; Jer 50:40; Amos 4:11), does not emphasize the "reversal" of Sodom and Gomorrah. This means that elsewhere in the Hebrew Bible the authors introduced changes in the tradition they had in common with Genesis 19, in the process each time also typifying the "sin of Sodom" in a different way. At the end of Genesis 19, Abraham makes his appearance again. It is said that he surveys the whole valley and that he saw smoke rising from the land, "like smoke from a huge furnace" (v 28).

2. In Ezekiel 16. In Ezekiel 16 only Sodom (together with Samaria) is mentioned in an expressive discourse in which Jerusalem is put on the scene as a perfidious woman (vv 44–58). In particular the alleged parallelism with Sodom is humiliating for Jerusalem. Sodom's sin is indicated by references to its "pride," "plenty of bread," and "untroubled tranquility." The city's people lived a life of ease without offering any helping hand to the needy and the poor. It is possible that the understanding of the "sins" of Sodom found in Ezekiel 16, here typified differently from those in Genesis 19, are based upon an alternative Sodom-tradition or that the tradition was simply given a different explanation. The turn in vv 53–55 comes as a surprise. The fortune of Sodom "and her daughters" changes for the better, because Jerusalem's rehabilitation has been secured. Verse 56 shows clearly that Sodom (and its "shame") was once a popular byword and in due course came to act as a deterrent in the mouth of the prophets.

3. Other References. In the rest of the Hebrew Bible, Sodom and Gomorrah occur especially in Deuteronomy and in the judgment speeches of the prophets. These cities (once mentioned together with Admah and Zeboiim; Deut 29:23) stand for "the whole land brimstone and salt, and a burn-out waste, unsown, and growing nothing." In Deut 32:32, 33 it is stated that the vine of the enemies stems from the vine-tendrils of Sodom and from the fields of Gomorrah; indeed, that their grapes are poisonous, their berries bitter, their wine venom of snakes. These words have often been taken as reminiscent of the "Sodom apples." (Already in Wis 10:7 mention is made of "plants that bear fruit prematurely"; cf. Josephus, *JW* 4:484f. Over two centuries ago, the Swedish research worker F. Hasselquist has described these fruits on his journey to Palestine in the years 1749–1752. In his opinion they were the fruits that had been wasp-stung and were covered with dust and ashes, *fructus Solani Melongenae;* others: *Calotropis Procera.*)

We have already noted that the prophets compared the proverbial iniquity of Sodom and Gomorrah with the "reversal" of these cities. In Amos 4:11; Isa 13:19; and Jer 50:40 the longer formula is found: "as when God overthrew Sodom and Gomorrah." By means of this formula the judgment of God (or the gods) over these cities in prehistory is called to mind (this is the only time that Amos uses *ʾĕlōhîm* in the absolute sense). A shorter formula is to be found in Deut 29:22; Jer 49:18; and Isa 1:7. Also in the other prophetic verses mentioned above Sodom and Gomorrah occur in comparisons, with the purpose of holding up as instructive examples to Israel and its leaders the atrocities committed by the inhabitants of these cities (cf. e.g., Isa 3:9: "partiality witnesses"; Jer 23:24: "horrible things: commit adultery, walk in lies, strengthen the hands of evildoers"). Destruction of countries and peoples is likewise often announced "like Sodom and Gomorrah with their inhabitants" (Jer 49:18; 50:40; Amos 4:11; Zeph 2:9). So the "reversal" of Sodom and Gomorrah has become a classic instance of the punishment for violating the covenant with God.

In the N part of the realm it was not so much the tradition of the annihilation of Sodom and Gomorrah that was widely known, but rather the destruction of Admah and Zeboiim (Hos 11:8). In the course of time, the latter cities were combined into one tradition along with Sodom and Gomorrah, and located on the coast of the Dead Sea. This leads us to the question of the exact location of the cities.

B. Location of the Cities

Usually it is thought that these cities were situated on the S coast of the Dead Sea, but there is no agreement in the biblical record concerning their exact position. According to Gen 19:20–23 there is a

tradition that, before Sodom was destroyed, Lot was allowed to flee with his family to Zoar, since the hills were too far away to be reached in time. Since Zoar is mentioned in the same breath with the other cities (Gen 14:2), it has been assumed that the city concerned had to be Zoara, a Hellenistic–Byzantine city on the border of the *ghor es-safijeh*, already found on the map of Madaba dated from the 6th century. However, not only is the topography in the Hebrew Bible extremely vague, but often the location is also determined by popular etymology. Therefore, it was possible to look for the Pentapolis also on the N coast of the Dead Sea *(el-ghor)*, in the vicinity of the outlet of the Jordan River into that sea. One might find support for this supposition in Gen 13:10–12, where mention is made of the "Plain of the Jordan" (cf. Gen 19:17, 25, 28, 29; Deut 34:3; 2 Sam 18:23; 1 Kgs 7:46; Neh 3:22; 12:28; 2 Chr 4:17). On the other hand, however, the "bitumen pits" in "the valley of Siddim" (Gen 14:10) have been localized in the shallow S part of the Dead Sea.

1. In Classical Antiquity. As early as in classical antiquity the reports on the site of the cities were ambiguous. Strabo (*Geog.* 16.2.44) assumes a situation in the environs of *Moasada* (= Masada) on the SW side of the Dead Sea, and he even speaks of thirteen destroyed or submerged cities of which Sodom was the metropolis. Also Eusebius in his *Onomasticon* (42.1–5), identifying Bala (Gen 14:2) with Zoar, has a S localization in mind. When dealing with Josh 18:19 (*Onom.* 11.4–5), he remarks that the "Salt Sea" is also called Dead Sea or *Asphaltites.* The latter name already occurs in Pliny the Elder (*HN* 5.72); Diodorus (*Bibl. Hist.* 19.98); frequently in Josephus (*Ant* 1:174; 4:85; 9:7, etc.); as well as in other classical authors. Hieronymus agrees with Eusebius, and records the flooding of the cities (at Zeph 2:9 in *PL* 25, 1363–64). This hypothesis has been adopted by many latter Christian writers (e.g., Orosius and Claudius Marius Victor), but equally in the rabbinic traditions the "flood hypothesis" is repeatedly mentioned (*Gen. Rab.* 47; *Midr.* Gadol, etc.). The "Pilgrim of Piacenza," Antoninus Placentinus (6th century C.E.), however, looked for Sodom and Gomorrah on the N side of the Dead Sea (Antonini Placentini Itinerarium, CChr.SL 175, 134.137.140.142), as did, perhaps, Theodosius before him (CChr.SL 175,122). Earlier information on the topography of the Pentapolis, already given by Tacitus (*Hist.* 5.7); Pliny (*HN* 5.71ff.) and Solinus, are very vague and secondhand.

2. Recourse to Geological Phenomena. In order to substantiate the location of the Pentapolis in or near the S part of the Dead Sea, recourse has often been taken to geological phenomena. One writer has suggested an earthquake, not necessarily with volcanic eruptions, at the beginning of the alluvial or postglacial period (Blanckenhorn). Sometimes an earthquake is dated more precisely, for instance around 1600 B.C., when also the Cretan palaces and cities were destroyed, as were Ugarit and Alalakh VII (Cornelius 1960; Ahituv *EncBib* 5:998–1002). If this theory is correct, the latter earthquake, unlike the former, was not tectonic but volcanic, producing an effect over a wide area around the Dead Sea.

3. Archaeology. Since the middle of the 19th century, efforts have been made to determine the topography of the Pentapolis on the basis of archaeology. Clermont-Ganneau (1888:162) was of the opinion that the Gebel Usdum, until the present day situated SW of the Dead Sea, was the exact place. Since the 1930s the excavations of Tuleilat Ghassul by Mallon, Köppel, and Neuville have focused the attention of many researchers on a N site near the mouth of the Jordan river. W. F. Albright, on the other hand, starting from the excavation of Bab edh-Dra‹ SE of the Dead Sea, argued that Sodom and Gomorrah, now submerged, must have been located on the Sel en-Numeira and the Sel-‹Esal respectively. The excavations by P. W. Lapp (between 1965 and 1967) in Bab edh-Dra‹ and those by W. E. Rast and R. T. Schaub (since 1973) in the whole of the S *ghor* did indeed show traces of habitation in the early Iron Age which one might suppose were the prehistoric cities. But it is highly uncertain, if not improbable, that the vanished cities of the Pentapolis will ever be recovered. In the first place because, as Gunkel (*Genesis* HKAT, 214–15) has already demonstrated, legends of the destruction of cities or regions tend to be based on a widespread saga motif (cf., e.g., the Phrygian popular saga of Baucis and Philemon); and, secondly, because such sagas are easily linked to places that, by the very nature of their wilderness and desolation, are a fertile soil for the imagination. Still, on the whole it is by no means impossible that a big catastrophe in prehistoric times did live on in the memory of the peoples (e.g., Moabites or Edomites) living around

the Dead Sea, and that later on the essential features of the tradition (with variation in names and other details) were taken over by the Israelites.

C. References Outside the Hebrew Bible

Occasionally, it has been thought that the literature from the world surrounding Israel might provide indications for the existence of the cities. In the Ugaritic texts *sdmy* occurs once (KTU 4.244:13), but this *gentillicium* cannot be identified with the biblical Sodom. Nor do the Ebla tablets give any clue as to the existence of the cities, although prominent scholars initially thought they did.

In the apocryphal and pseudepigraphical literature Sodom (sometimes along with Gomorrah) is often mentioned or hinted at (*3 Macc* 2:5; Sir 16:7; *T. Ab.* 6:13; *Gk. Apoc. Ezra* 2:19; 7:12, etc.). The inhabitants of Sodom are held up as a warning, but now and then "extenuating circumstances" are adduced in their favor (e.g., Wis 19:13–17). Also in *Jubilees* the fate of Sodom is brought up (13:17, 22ff.; 16:5–6, etc.). The impurity of the Sodomites consisted mainly in fornication. Exemplary, likewise, is the "burning, consuming fire." Also, in the *Testaments of the Twelve Patriarchs,* Sodom is often mentioned (*T. Levi* 14:6 [with Gomorrah]; *T. Naph.* 3:4; 4:1; *T. Ash.* 7:1; *T. Benj.* 9:1). It is remarkable that, in connection with "fornication," the "reversal of the order of nature" is also mentioned. In the literature of Qumran Sodom and Gomorrah play a role only in 1QapGen, the so-called *Genesis Apocryphon* (21:5ff.; 21:23–22:25).

Josephus pays attention to Sodom and Gomorrah in particular when he retells the biblical history of Genesis (*Ant* 1:170–206). He has elaborations which also occur in the later rabbinical literature. The people of Sodom pride themselves on their power and wealth, they brutalize outside people, and are ungodly. This induces God to ruin their country, so that ever since no plants or fruits could grow.

Philo, in his allegorical explanation, interprets the word Sodom as "blinding" or "making barren," and Gomorrah as "measure" (*Somn* 2:192; cf. *Congr* 109 and 92). In the beginning, the soil of Sodom was fertile, and the king as well as the people were virtuous (*Abr* 227). But when they had become supersaturated with earthly goods, they grew arrogant, threw off the yoke, and seized their lords (*Abr* 228). In Philo's allegory the cities of the Pentapolis are the five senses (*Congr* 92). Other texts featuring Sodom should, according to Philo, equally be interpreted allegorically. And over and over again Sodom is called "infertile (soil) for wisdom" and "blind to reason." Occasionally he remarks on what can be seen of Sodom and Gomorrah up to the present (e.g., *Abr* 140f.).

The tenor already present in the apocryphal and pseudepigraphical literature as well as in Josephus and Philo is continued in the later rabbinical literature: Sodom and Gomorrah were characterized by their violation of (the law of) hospitality, by sins of fornication, and by the reversal of the order of nature. It is on these counts that the sins of Sodom became manifest and God's justice was summoned. An example of this is given in *Targum Pseudo-Jonathan* to Gen 18:20, 21. In the translation of these verses, which are supplemented with midrash, it is stated that the wailing over Sodom and Gomorrah (cities that suppressed the poor and ordered that whoever gave bread to the needy should be burned) was so loud that God had no choice but to intervene. God heard the cries of the girl Peletit (there are other names of the girl in other rabbinical traditions), who had taken bread in a jug to a poor man. She was found out, whereupon she was smeared with honey and put on the top of a wall, thus attracting bees that devoured her. This version occurs in several places in the rabbinical literature. In one place in the Babylonian Talmud (*Sanh.* 109a and b) the "reversed" world of the people of Sodom is even exposed in a way bordering on sad humor. Their laws, e.g., were calculated to do injury to the poor and the needy (Ginzberg 1968:245–50). One should bear in mind that the rabbinic literature is concerned with additions to and alterations of the old tradition.

As is to be expected, Sodom and Gomorrah are mentioned rather frequently in the NT against the background of the old Israelite and rabbinic tradition. Also the imagery of the cosmic annihilation (e.g., Luke 17:25–30; 2 Pet 2:6, 7) and of a sulphur-like sea of fire (Rev 19:20; 20:10, etc.) will have originated in consequence of the punishment of Sodom and the desolate spectacle provided by the surroundings of the Dead Sea. Essentially, these descriptions answer to what in the Synoptic Gospels is depicted as "the fires of hell" (*hē geenna (tou) puros;* Matt 5:22; 18:9; cf. *2 Clem.* 5:4). Admittedly the gospels do

emphasize the sins of Sodom, yet it is stated that this city will fare better than a great many other Israelite towns on the day of the Lord (Matt 10:15; 11:23, 24; etc.). Here, again, Sodom and the other cities of the Pentapolis are held up as a deterrent example of fornication and of the suffering in "the eternal fire" (Jude 7). The fire of the judgment depicted in Gen 19:24, 25 continues burning as a subterranean hellfire, as late Jewish conception has it. For further discussion see BKAT commentaries on Genesis and Ezekiel.

SODOM, SEA OF (PLACE) [Lat *Sodomitus*]. See SALT SEA (PLACE).

SOJOURNER [Heb *gēr* (גֵּר)*;* Gk *paroikos* (παροικος)]. A foreigner who is traveling through a land or one who has taken up residence in that land. The key is that the sojourner has no familial or tribal affiliation with those among whom he or she is traveling or living.

The Hebrew word derives from the root *gwr.* It is a common Afrasian root which appears in Egyptian and in the Semitic languages Phoenician, Ugaritic, Old South Arabic and Aramaic as well as Hebrew. In all of these languages, the meaning is generally agreed upon. The nominal form of the root applies to someone who is not native to the area, and the verbal form means "to travel," "to sojourn," or "to stay in a foreign territory." However, there is some variation in the way lexicographers have tried to capture the meaning of *gēr,* and suggestions have included "sojourner," "foreign resident," "stranger," "foreigner," "immigrant," "client," and "resident alien." Sojourner is used most often because it conveys the idea that the individual is not a permanent member of the community in which he or she lives. The term client is frequently employed to indicate that the individual does not have full rights within a community and thus is dependent on a patron for protection.

The understanding of *gēr* has been informed by some of the nonbiblical inscriptions which have been discovered. In the Mesha Inscription, or Moabite Stone, there is a line which lists, "7,000 men and *grn* and women *grt* and female slaves" among those who were killed by Mesha in his attack upon Israel. It is

clear that *grn* (a masc. pl. noun) refers to male "foreigners" and *grt* (fem. pl.) refers to female "foreigners," who live among the Israelites, and that these "foreigners" are seen as being in a class distinct from men and slaves in Israel. The noun *gr* (vocalized *gēr*) is a frequently encountered element of Phoenician theophoric names. Thus the name *grmlqrt* (Benz 1972:104, 298–99) probably means "client" or "protege" of Melqart (a Tyrian divinity). Finally, a Phoenician text lists various people, such as builders, servants, and stone masons, who must be paid for their work at the temple at Kition in Cyprus (CIS I 86). Included in this list of people are *grm*, which, if derived from *gwr*, would suggest that a foreigner works at the temple. However, some scholars have argued that because the term *grm* is in association with *klb*, dog, which could refer to a male prostitute or pederast, *grm* should be understood to refer to female prostitutes. Nevertheless, such an interpretation does not preclude the possibility that such a person was a foreigner.

In biblical texts the term *gēr* is used in two basic ways: to describe the experiences of the Israelites themselves when they are living among foreigners; and to describe those non-Israelites who live among the Israelites. However, this distinction becomes confused when the claim is made that the Levites are *gērîm* (sojourners) among the Israelites. In all of these cases, there are certain expectations of both the native population and the sojourners.

In a number of places, Israelites are said to sojourn in a land. Abraham, because of a famine in Palestine, sojourned in Egypt (Gen 12:10), and, in one version of the "sister–wife" story, Abraham sojourns in Gerar (Gen 20:1). Apparently Lot's criticism of the men of Sodom is seen as a violation of his role as sojourner (Gen 19:6–9). It appears that because of his status as sojourner, Abraham must make a specific request for permission to purchase land from the Hittites in Canaan in order to have a place to bury Sarah (Gen 23:4). In another version of the "sister–wife" story, Isaac is a sojourner in Gerar and is protected by Abimelech (Gen 26:3, 11). Gen 32:4 indicates that Isaac sojourned with Laban; Gen 36:6–7 tells of Jacob and Esau sojourning in the Canaan; and Gen 47:4 reports that Joseph and his brothers requested permission of the Pharaoh to sojourn in the land of Goshen. When the Israelites finally settled in Canaan, it was in the land of their sojourning, which God had promised to them (Gen 17:7; Exod 6:4). This understanding of the Patriarchs as sojourners is also found outside of the Pentateuch (cf. Ps 39:13—Eng 39:12; 105:12; 1 Chr 29:15).

Other people besides the patriarchs are labeled as sojourners. Moses called his son, born to him and Zipporah, his Midianite wife, Gershom, for "I [Moses] have sojourned in a foreign land" (Exod 2:22). The explanation of the name "Gershom" is thus "sojourned *(gēr)* there *(šām).*" When Elijah calls upon God to revive the dead son of the woman from Zarephath, he mentions that he has sojourned with the widow (1 Kgs 17:20). The Bethlehemite Elimelech, husband of Naomi, sojourns in the land of Moab (Ruth 1:1). After the prophecy of Azariah, Asa, king of Judas, institutes a reform in which he gathers the people to Jerusalem, including the people from "Ephraim, Manasseh and Simeon who were sojourning with them" (2 Chr 15:9). Finally, in the biblical version (Ezra 6:2–5) of Cyrus' decree freeing the exiles, the people who lived in Babylon are said to sojourn there (Ezra 1:4). In all of these instances, we see Israelites who are sojourning in a foreign land.

The second way in which "sojourn" is employed is to describe foreigners who live among the Israelites. Often these foreigners are subject to the same laws as the Israelites (Exod 12:49; Num 15:16). Thus, the sojourner shall observe the day of atonement (Lev 16:29) and Passover (Num 9:14); shall refrain from consuming blood (Lev 17:10); shall not blaspheme the name of Yahweh (Lev 24:16); shall observe the statutes relative to the ashes of the red heifer (Lev 19:10); and shall receive equal treatment under the law (Deut 24:14). Only occasionally is there a law which makes a distinction between Israelite and sojourner (cf. Deut 14:21). The reason given for this equal treatment is that Israel was once a sojourner in the land of Egypt (Exod 23:9; Lev 19:33–34; Deut 10:19; 16:9–12).

While equal treatment for the sojourner is the norm, it is clear that the sojourner does not enjoy the same social status as that of the Israelite. This realization emerges initially when one sees the way in which the sojourner has to be singled out in biblical legislation. The sojourner is not a full member of Israelite society but someone of different and lower status. The same perspective appears when one looks at the

reference to the sojourner in the Ten Commandments (Exod 20:10). The sojourner is listed after sons, daughters, servants, and cattle. This secondary status can be seen in that the most frequent context in which the "foreigners" are mentioned includes mention of widows, orphans, and the poor (Lev 23:22; Deut 10:18; 24:17, 19; Jer 7:6; 22:3; Ezek 22:7, 29; Zech 7:10; Ps 94:6; 146:9). Widows, orphans, and the poor are to receive special consideration by the Israelites because of their lack of means of support, and so too are the sojourners.

One group which is often mentioned with widows, orphans, and the poor, along with the sojourners, is the Levites. This association has raised the question of the status of the Levites and has often led to the argument that the Levites are sojourners. In part this argument depends on the material in Judges 17, where the Levite is said to "sojourn" (Judg 17:7, 8, 9). In addition, the dispersal of the tribe of Levi (Gen 49:5–7) and the lack of tribal allotment (Josh 13:14) are used to buttress this argument. However, although Levites are said to sojourn (Deut 18:6; Judg 17:7, 8, 9; 19:1), and are placed in a list with widows, orphans, and the poor (Deut 14:29; 16:11, 14; 26:11, 12, 13), they are never called sojourners. Indeed, usually sojourners and Levites are listed as distinct groups (Deut 14:29; 16:11, 14; 26:12, 13). In a difficult text, the *gēr* and others stand before the Levitical priests (Josh 8:33). Thus, it is clear that one cannot simply equate Levites and sojourners. Rather they are listed together by the Deuteronomistic Historian because he sees both groups, as well as the widow and orphans, as landless persons, a sociological status which qualifies them for specific assistance from the larger population.

So, like the widow and the orphan, the sojourner is in a distinct social class, part of a group which requires special care and protection. The Israelites are expected to provide this care and protection for these foreigners who live among them, because they too were once foreigners sojourning in a strange land. As is stated in Leviticus 19:34, "The stranger who sojourns with you shall be to you as the native among you, and you shall love him as yourself, for you were strangers in the land of Egypt: I am Yahweh your God."

In the NT (and in the LXX) the Greek word *paroikos* is used to translate the Hebrew *gēr* and to convey the idea of a sojourner or resident alien. It appears only four times in the NT. In Stephen's speech in Acts 7, he uses the word to refer to Abraham's time as a sojourner (v 6) and Moses' sojourning in Midian (v 29). In Ephesians 2:19 the writer states that those who join the "household of God" will no longer be sojourners. In 1 Peter 2:11 the writer beseeches the sojourners "to abstain from the passions of the flesh." These usages are consistent with those of the Hebrew Bible which see *gēr* as a sojourner in a foreign land.

L. Summary

———

A. Filiation, Names, and Family

Solomon was the tenth of David's seventeen (2 Sam 3:2–6; 5:14–16) or nineteen sons (1 Chr 3:1–8; cf. 14:4–7). He was either born of Bathsheba daughter of Eliam (2 Sam 11:3) as her second son (12:18, 24) or born of Bathshua daughter of Ammiel as her fourth son (1 Chr 3:5) in Jerusalem.

David named him Solomon (2 Sam 12:24; according to *qerê,* Syr., *Tg. Jon.,* the mother named him), while by Yahweh's revelation through Nathan the prophet he was called Jedidiah, "Beloved one of Yahweh" (12:25). The explanation of the name *šĕlōmōh* is given in 1 Chr 22:9 that Yahweh "will give *šālôm* (peace) and quiet to Israel in his days." However, modern scholars explain the significance of the name as a "replacement" (from *šillem* "make compensation") for a lost sibling. This explanation seems suitable for the story about Solomon's birth (2 Sam 12:14–24). In that case, it is impossible to accept the view that the name Solomon was the throne name. It appears that the episode about the name "Jedidiah" originated in an attempt to show that Solomon had received his divine election for future kingship in his youth (cf. Akk *migir ilāni rabûti,* "beloved one of the great gods," a Mesopotamian royal epithet).

It is reported that Solomon had 700 wives and 300 concubines (1 Kgs 11:3). Although the figure is clearly legendary, he doubtless had a large harem. He had a reputation as a "lover of many women," especially foreigners (11:1; cf. Cant 1:1; 6:8). However, out of Solomon's many women, no proper name is transmitted except Naamah the Ammonitess, who was the mother of Rehoboam, Solomon's successor (1 Kgs 14:21, 31). In addition, Solomon's two daughters are known by name, Taphath (4:11) and Basemath (4:15), both of them were married to district prefects of the king.

B. Chronology

It is a difficult task to establish the chronology of Solomon's reign, since all the chronological notes on his deeds give nothing but typological figures: his 40-year reign, as the case of David, signifies a generation (1 Kgs 11:42; 2 Chr 9:30). Similarly, his fourth regnal year in which he laid the foundation of the Temple, which was also 480 years after the Exodus; the 20-year period for the duration of his building projects of the Temple and the palace; and the 7 years devoted to the building of the Temple (1 Kgs 6:1, 37–38; 7:1; 9:10; 2 Chr 3:2; 8:1) are all symbolical figures. Moreover, Solomon's age at accession is lacking in his chronological notes.

Accordingly, the chronology of Solomon's reign is a matter of conjecture on the basis of circumstantial evidence. Judging from his passive role in the narrative about the struggles for the kingship in 1 Kings 1, we may assume that Solomon was under adult age at the time of his accession (cf. 1 Kgs 3:7; 1 Chr 22:5; 29:1). At the same time, the report on his successor's age of 41 at accession (1 Kgs 14:21; 2 Chr 12:13), coupled with the abundance of Solomon's deeds suggest that he had a lengthy reign of about a generation. In addition, the synchronisms of Solomon with Hiram of Tyre (1 Kgs 5:15–26—Eng 5:1–12; 9:10–14; 2 Chr 2:3–16) and with Shishak of Egypt (1 Kgs 11:40), together with the absolute date of the division of the United Kingdom calculated by chronological notes in the biblical sources, lead scholars to assume the beginning of Solomon's reign around 970–960 and its end around 930–920 B.C.

C. Sources

Neither the name Solomon nor allusion to his reign has yet been found in any contemporary extrabiblical source. Therefore, we have to rely solely on the pertinent biblical sources for reconstruction of the period of Solomon. Some parts in 2 Samuel and 1 Kings 1–11 are available for the principal source, while 1 Chr 22:5–23:1; 1 Chr 28:1–2 Chr 9:31 should be treated as secondary. Some wisdom literature, like the books of Proverbs, Ecclesiastes, and Canticles, are also associated with Solomon, but the associations (except some parts of Proverbs) seem legendary.

As is widely accepted, the books of Samuel and Kings form part of the Deuteronomistic History (DH) which was finally redacted in the Babylonian exile. The editorial work of the DH observed in the biblical sources for the reign of Solomon focuses upon the Temple and Solomon as its builder. According to the editorial design, Solomon's reign is idealized as the Golden Age in the history of Israel, and Solomon himself is described as an extremely wise, extraordinarily wealthy, and supremely powerful monarch. This idealization of Solomon and his reign is rooted in the view that the builder of the Temple and his age must have been blessed by God with every sort of blessing, in contrast with the miseries in the exile after the Temple had been destroyed. Moreover, the structure of the literary complex in 1 Kings 3–11 is constructed by arranging the report on the building of the Temple and matters directly connected with it (1 Kgs 5:15–9:25) at the center between the accounts about the establishment of his rule as preparations for the building work (3:1–5:14) and the narratives about the prosperity of his kingdom as a consequence of the Temple building (9:26–10:29). Chap. 11, in which Solomon's apostasy and his troubles are told, is added as an explanation of the division of the kingdom after his death (based on the Deuteronomistic theory of retribution).

In compiling the literary complex about Solomon and his reign, the DH derived its materials from many sources; unfortunately, these sources can no longer be identified with certainty by their original form. However, scholars have attempted to distinguish them by contents, styles, and other criteria. They are, among others, the Succession Narrative, which consists of most of 2 Samuel and 1 Kings 1–2; official archives of the royal court, e.g., the lists of Solomon's high officials and of the twelve district prefects (1 Kgs 4:1–19); Temple archives, e.g., the description of the architectural structure of the Temple and its furnishings (6:2–36; 7:15–50); folk legends, like the tale about Solomon's arbitration (3:16–28) and story of the visit of the queen of Sheba (10:1–10, 13); a prophetic legend centering upon Ahijah (11:26–40); and "the book of the acts of Solomon" (11:41), perhaps a collection of annalistic accounts, anecdotes, and legends about Solomon.

There is a difference of opinions about the prospects for extracting historical information for the reign of Solomon from the biblical sources. Skeptical views are based mainly on the supposition that editorial distortions are prevalent throughout the DH. However, it is plausible to assume that, the stereotyped words of exhortation, judgment, or editorial modification aside, there is in principle no fabrication in the DH, since the main task of this historian was a compilation of materials from various sources transmitted from previous generations. In any case, before branding it as unhistorical, we must carefully scrutinize all information in the biblical sources. This rule should be applied also to information from the books of Chronicles where the modification, exaggeration, or tendentious treatment of historical events are more noticeable.

D. Solomon's Succession

Thanks to the epilogue to the Succession Narrative (1 Kings 1–2), we are informed in detail on the course of events about Solomon's accession to the Davidic throne and his consolidation of the kingship. This narrative has long been appreciated as one of the earliest historical works in the Bible, but yet doubt on its historicity is expressed in many recent studies (see Whybray 1968; Rost 1982). However, by recognizing its literary genre as the category "royal historical writings of an apologetic nature" in the ANE, we may prove that the narrative is basically historical, despite all the descriptions colored by a tendency for the Solomonic apology.

When David became senile (1:1) without designating his successor explicitly, the leading courtiers were divided into two parties revolving about the two rivals for the royal throne. The first candidate was Adonijah the son of Haggith, who was the fourth son but the surviving eldest prince after the death of Amnon and Absalom. He was expected to be David's successor by the general public (2:15) and was supported by Joab, commander-in-chief of the army, and Abiathar the priest (1:7). A rival candidate was Solomon the son of Bathsheba, who was backed by Zadok the priest, Nathan the prophet, Benaiah, the leader of the royal bodyguard called the Cherethites and the Pelethites, and David's heroes (1:8). Except Benaiah and David's heroes who had followed David as members of his bodyguard called the thirty (2 Sam 23:8–39; 1 Chr 11:11–47) since the days of his wandering in the wilderness (1 Sam 22:1–2; 1 Chr

12:8, 16), Bathsheba, Zadok, and Nathan appeared for the first time after David transferred his capital from Hebron to Jerusalem. By contrast, Adonijah and his supporters were those who had held positions at the court already in the days of David's reign at Hebron. In addition, the fact that the members of these rival parties were opposed to each other in contesting for the same positions shows that the conflict was caused by the newcomers' challenge to the old authority. The tendency to posit here a conflict between the Yahwism from Hebron and the Jebusite-Canaanite religion from Jerusalem is a hypothesis based on unproved evidence.

The narrative in 1 Kings 1 gives us the impression that Adonijah ascended the throne at the feast at En-rogel without David's consent. A scrutiny of the text makes it clear, however, that Adonijah had no intention to raise the standard of a rebellion. Because David's remaining days were numbered and Adonijah was expected by the people to succeed David, he had no reason to be in a hurry to usurp the throne. It is more plausible that the feast at En-rogel was a demonstration of his intention to gain the crown after the demise of David. The portrayal of Adonijah as a second Absalom in vv 5–6 obviously stemmed from the inimical viewpoint of the party opposing Adonijah. It was Nathan who fabricated a rebellion on the part of Adonijah to furnish a pretext for extracting from David the designation of Solomon as his successor. Indeed, by taking advantage of the dotage of David, Nathan succeeded in convincing David that he had once pledged himself to designate Solomon as his successor (vv 13, 17, 30). Thus, Solomon's faction secured his designation as David's successor by a court intrigue outmaneuvering Adonijah's party at the last moment.

When Solomon sat upon the royal throne after coming up from the coronation rite at Gihon, the courtiers came to congratulate David and said: "May your God make the name of Solomon more famous than yours, and make his throne greater than your throne" (v 47; cf. v 37). The implication of the words is twofold: on the one hand, an explicit congratulation to the growth of the Davidic dynasty; on the other, an implicit wish that the reign of Solomon may literally surpass that of David. We may regard these words as an expression of the Solomonic legitimation including criticism against the regime of David which had long been deteriorated by the *de facto* usurpation of Joab.

Since Solomon ascended the throne during David's lifetime (1:32–40), there had been several years, perhaps three years (cf. 6:1, 37; 2 Chr 3:2), of co-regency with David before Solomon became the sole sovereign (see Ball 1977). The main purpose of the co-regency was to protect young Solomon against Adonijah and his supporters who still remained intact after being defeated at the struggle for the royal throne. Accordingly, the demise of David brought Solomon's regime to a crisis. Taking advantage of this critical moment, Adonijah shrewdly attempted to regain a footing for a plot of rollback against Solomon's kingship by requesting Abishag the Shunammite for his wife (1 Kgs 2:13–18). As a nurse of King David (1:1–4), she was certainly regarded as a member of David's harem which Solomon had appropriated as proof of his royal legitimacy. When hearing of Adonijah's request, Solomon quickly took strong action against Adonijah and his supporters. He had Benaiah execute both Adonijah and Joab, and he banished Abiathar from Jerusalem to Anathoth (2:19–34). Finally, Solomon also succeeded in eliminating Shimei a Saulide, the archenemy of the House of David (cf. 2 Sam 16:5–13; 19:16–23; 1 Kgs 2:8–9) by entrapping him (2:36–46a). Thus, purging all his opponents, Solomon firmly established his kingdom (2:46b). Some scholars believe that the narrative about Solomon's purge of his enemies stemmed from anti-Solomonic circles. It is more likely, however, that it tells about Solomon's quick decision and wisdom as well as his political achievement in a matter left unfinished by David.

E. Divine Approval of Solomon's Kingship

Royal lineage and divine election served as the fundamental elements for the legitimation of kingship in the ANE. As to the first element, the epilogue to the Succession Narrative in 1 Kings 1–2 emphatically tells that Solomon was designated as royal successor by David himself (1:35) and sat upon his father's throne (1:30, 35, 48; 2:12, 24), while mention is made about Solomon's divine approval only a few times in an indirect way (1:36–37, 48; 2:15). By contrast, the divine authentication of Solomon's kingship is the main subject of the account on a divine revelation to Solomon in his dream at Gibeon (3:4–15; cf. 2 Chr 1:3–13) where he received the divine assurance of wisdom to govern the people, although this account

also includes a passage to legitimatize Solomon's kingship on the basis of the dynastic principle expressed by the words of the Davidic covenant (1 Kgs 3:6–7; 2 Chr 1:8–9).

It has been suggested that this episode was composed after a literary genre called the Egyptian *Königsnovelle,* which was a literary form to underline the greatness of royal innovations. In addition, a divine revelation to a king in a dream while he slept at a sanctuary was a common theme in the ancient world (see Seow 1984). Nevertheless, unlike the passage about Yahweh's second revelation to Solomon, which consists of typical words and phraseologies of a Deuteronomistic exhortation and admonition (1 Kgs 9:1–9), there is no reason to doubt that the Gibeon episode furnishes information on the historical situation in the days of Solomon.

That Gibeon, identified with el-Jib (5.5 miles NW of Jerusalem), was an important religious center during the reign of David is testified in the narrative about the Gibeonite ritual execution of the descendants of Saul with David's approval "at Gibeon on the mountain of Yahweh" (2 Sam 21:1–14). The narrative suggests that David also "sought the face of Yahweh" (21:1) at Gibeon. At the same time, from the narrative we learn that the Gibeonites still remained as a distinct enclave as the descendants of the Hivites bound with Israel by a treaty in the days of Joshua (Josh 9:3–27). It is possible to assume, therefore, that David chose the high place in Gibeon as a royal sanctuary before building an altar at the threshing of Araunah (2 Sam 24:25), by taking advantage of the Gibeonite neutral position toward the tribes of Israel. The similar consideration was instrumental in his choice of Jerusalem for his capital.

According to the Chronicler, the tent of meeting (2 Chr 1:3, 5–6, 13), or the tabernacle and the altar of burnt offering (1 Chr 16:39; 21:29) was at the high place in Gibeon at that time. Though secondary, these Chronicler's traditions seem reminiscent of the high place in Gibeon which still served as a royal sanctuary in the early reign of Solomon.

F. Administration

Solomon inherited the government which David had organized after the administrative example of Canaanite city-states, and developed it into a larger and more complicated institution. The development is observed in three lists of the high officials of David and Solomon preserved in the biblical sources. It is likely that the first list (2 Sam 8:15–18; 1 Chr 18:14–17) came from the days when David had consolidated his kingdom after defeating his domestic and foreign enemies, the second (2 Sam 20:23–26) likely came from his later years, while the third (1 Kgs 4:1–6) stemmed from the latter half of Solomon's reign. The following synopsis (Table 1) is made after solving textual problems. The names of the officials are placed in the order in the Solomonic list. (The sign * in the first column indicates that the office is lacking in the Solomonic list, while the numerals in the third and fourth columns represent the order in the respective lists.)

Officials	1 Kgs 4:1–6	2 Sam 20:23–26	2 Sam 8:15–18
The king	Solomon	—	David
1) The priest	Azariah the son of Zadok	—	—
2) Secretaries	Elihoreph and Ahijah the sons of Shisha	5) Sheva	4) Seraiah
3) Herald	Jehoshaphat	4) Jehoshaphat the son of Ahilud	2) Jehoshaphat the son of Ahilud
4) Over the army	Benaiah the son of Jehoiada	1) Joab	1) Joab the son of Zeruiah
* Priests	(Zadok and Abiathar)	6) Zadok and Abiathar	3) Zadok and Abiathar
		7) Ira the Jairite	6) David's sons
* Over the Cherethites and Pelethites	—	2) Benaiah the son of Jehoiada	5) Benaiah the son of Jehoiada
5) Over the Prefects	Azariah the son of Nathan	—	—
6) Priests and king's friend	Zabud the son of Nathan	—	—

7) Over the palace	Ahishar	—	—
8) Over the levy	Adoniram the son of Abda	3) Adoram	—

In comparison with the Davidic lists, the following four changes are striking in the Solomonic list. (1) The first position among the officials was held by the priest in the Solomonic list, while in the Davidic lists it was held by "one who is over the army." (2) The priest was set up instead of several priests, suggesting the establishment of the office of the chief priest. (3) Along with the addition of an extra secretary, three officials (i.e., "one who is over the prefects," "king's friend," and "one who is over the palace") were newly appointed. (There had already been a king's friend under David [2 Sam 15:37; 1 Chr 27:33], but he was not included in the lists of high officials.) (4) The office of "one who is over the Cherethites and Pelethites" was abolished. These changes indicate that the importance moved from the army to the palace with the Temple, which was expanded as the administrative center of a large kingdom. From the patronymics of the officials we may also learn that members of several important families occupied the central offices in the court of Solomon (see also Mettinger 1971).

The Solomonic kingdom was divided into twelve administrative districts and the land of Judah, each of which was governed under a prefect (1 Kgs 4:7–19). Azariah the son of Nathan, one of the high officials of Solomon, presided over the prefects (4:5). The names of the twelve prefects together with the extent of their respective districts are listed in 1 Kgs 4:8–19. Although there are many uncertainties concerning the geographical names in the list, the general structure of the administrative districts is clear enough. The name of the 1st district, the hill country of Ephraim, is not tribal but geographical, encompassing both the tribal area of Ephraim and the main part of Manasseh (i.e., the greater part of the tribal inheritance of the house of Joseph). The 2d to the 7th districts are named after towns, while the 8th to the 11th bear tribal names. If we read "Gad" instead of "Gilead" according to the LXX, the name of the 12th district is also tribal. It has thus become clear that the traditional tribal system was retained in the peripheral areas, while the central hill country was reorganized, and the former Canaanite territories, which had been annexed to the kingdoms of Israel and Judah in the days of David, were organized as districts named after towns.

Because the biblical source tells us that each prefect had to provide food for the king and his household for one month in the year (1 Kgs 4:7; 5:7—Eng 4:27), it is likely that the purpose of the system of the 12 districts was to improve the administrative tasks of tax collection. The fact that Judah is not included in the system would show that it enjoyed the privilege of tax exemption. By contrast, it is possible that in reorganizing the central hill country Solomon tried to neutralize the influence of the house of Joseph over the tribes of Israel.

Already David had appointed Adoram as official "over the levy" at the end of his reign (2 Sam 20:24). The pagan theophoric element Adad in his name suggests that he was a man of Canaanite origin. It appears that David established the institution of forced labor after a Canaanite model and imposed the levy upon the Canaanite population whom he had incorporated into his kingdom (cf. Judg 1:27–35; 2 Sam 12:31). We might also assume that David had Joab take a census (24:1–9; 1 Chr 21:1–6) in preparation for the levy to which the Israelites also would be subjected, although there is no certain evidence for it.

Under Solomon, however, not only the remnants of the pre-Israelite population (1 Kgs 9:20–21; 2 Chr 8:7–8) but also the people of Israel were subjected to the levy (1 Kgs 5:27—Eng 5:13). Despite a passage telling that the forced labor was not imposed upon the Israelites (1 Kgs 9:22; 2 Chr 8:9), all the other sources attest to the harshness of heavy burden which the people of Israel had to bear in the days of Solomon. According to an account, Solomon raised 30,000 men for a levy of forced labor in Lebanon, and Adoniram was in charge of the levy (5:27–28—Eng 5:13–14). Besides, he had 70,000 burden-bearers, 80,000 hewers of stone, and 3,300 chief officers who were over the work (5:29—Eng 5:15–16). According to another, there were 550 chief officers who had charge of the people who carried on the work (9:23; but 250 chief officers according to 2 Chr 8:10).

Solomon's policy of imposing forced labor on the N tribes eventually became a major source of the disruption of the United Kingdom. Jeroboam ben Nebat, who had been given charge over all the forced labor of the house of Joseph by Solomon, became a leader of rebellion against Solomon; after it failed, he

sought refuge with Shishak king of Egypt (1 Kgs 11:26–28, 40). Although the cause of the rebellion is not told explicitly, there is little doubt that Jeroboam was supported by the N tribes who felt they could no longer bear the Solomonic levy of forced labor. After Solomon's death the N tribes negotiated with Rehoboam the son of Solomon about alleviation of the heavy burden of forced labor. When the negotiations were broken off, they declared independence from the Davidic rule, killed Adoram, taskmaker over the levy sent by Rehoboam, and made Jeroboam king over all Israel (12:1–20).

G. Diplomacy and Trade

As to the extent of Solomon's kingdom, we have contradictory reports. According to the "official" claim, "Solomon ruled over all the kingdoms from the Euphrates to the land of the Philistines and to the border of Egypt; they brought tribute and served Solomon all the days of his life" (1 Kgs 5:1—Eng 4:21; cf. 5:4—Eng 4:24; also 8:65). According to the other traditions, however, both Hadad the Edomite and Rezon of Damascus became adversaries to Solomon, presumably in the early days of his reign (11:14–25). Moreover, no biblical source tells about Solomon's conquest of Philistine Gath, which kept its independence in the early years of Solomon (2:39–41). It is also clear that Hiram king of Tyre always held the superior position in his relations with Solomon (5:15–26—Eng 5:1–12; 9:11–14). Evidently, these sober traditions are more historical than the hyperbolical claim on the huge extent of Solomon's kingdom. It appears that Solomon's actual dominion was confined to the traditional Israelite homeland in W Palestine, i.e., "from Dan to Beersheba" (5:5—Eng 4:25), the bulk of the N Transjordan, and the route to Ezion-geber on the Gulf of Elath (9:26).

Nevertheless, it is not easy to dismiss the hyperbolical claim as a completely groundless statement. It is possible to find in it an "official" explanation of the historical situation. Indeed, there is reason to believe that Solomon was one of the most influential rulers in Syria-Palestine in those days. The biblical sources refer to his far-flung diplomatic connections, extensive involvement with international trade, and his powerful army and strong defense system. Under these circumstances, it is not surprising that the regime of Solomon considered all the kingdoms W of the Euphrates as the countries under his influence, though the claim was widely different from the reality.

In connection with Solomon's marriage to the daughter of Pharaoh king of Egypt (3:1; 7:8; 9:24), mention is made about the Pharaoh's campaign against Gezer and its cession as the dowry of his daughter (9:16). This Pharaoh is generally regarded as Siamun, the penultimate king of Dyn. 21 who was also the patron of Hadad of Edom (11:18–22; see Green 1978). It is assumed that the Pharaoh invaded Philistia to regain the Egyptian control over the Via Maris in the early days of Solomon's reign by taking advantage of the weakness of the Davidic rule caused by the demise of David and the death of Joab (cf. 11:21). Encountering the military strength of Solomon, however, the Pharaoh negotiated for a peace treaty, which was cemented by the marriage of his daughter to Solomon. If this reconstruction is acceptable, Solomon's marriage to the daughter of Pharaoh should be considered as a great success of Solomon's diplomacy. Likewise, his marriages to many foreign women, including Moabite, Ammonite, Edomite, Sidonian, and Hittite women (11:1), should be regarded as political. Peace treaties cemented by these marriages, together with a tight defense system, enabled Solomon to secure the borders of his kingdom (cf. 5:4–5—Eng 4:24–25).

The biblical source explicitly refers to a treaty which Solomon made with Hiram king of Tyre (5:26—Eng 5:12). Indeed, Solomon had close relations with the Phoenician monarch in many enterprises. First of all, Hiram provided Solomon with important building materials for the Temple and royal palace in Jerusalem, such as timber of cedar and cypress from Lebanon and gold (5:22–24—Eng 5:8–10; 9:11), together with Phoenician craftsmen (5:20, 23, 32 [—Eng 5:6, 9, 18]; 7:13–14). In turn, Solomon defrayed the expense of these materials and the craftsmen's wages by an annual delivery to Hiram of wheat and oil (5:25—Eng 5:11). By the completion of the buildings after twenty years, however, the trade between Solomon and Hiram became out of balance and the former had to cede to the latter twenty villages in the land of Galilee, called the land of Cabul, probably situated in a region SE of Acco (9:10–14). The Chronicler, who understood the situation the other way around, tells us that Hiram gave cities to Solomon (2 Chr 8:2). But this view hardly seems historical.

Another cooperative effort between Solomon and Hiram was a shipping venture. Solomon built a fleet of ships (later called a fleet of ships of Tarshish) at Ezion-geber on the Gulf of Elath, probably with the help of Phoenician shipbuilders. The ships were manned by Hiram's sailors and Solomon's crews together and were sent to Ophir with Hiram's own fleet to bring back gold, silver, almug wood, precious stones, ivory, apes, and peacocks (1 Kgs 9:26–28; 10:11, 22). Ophir is sought in S Arabia or E Africa. In exchange for providing Hiram with access to the Red Sea, Solomon succeeded in opening seafaring trade to Ophir.

Before Solomon got into the Red Sea trade in cooperation with Hiram, the Egyptians and the S Arabians had held a monopoly on it. Against this background, we may understand the significance of the visit of the queen of Sheba in the extreme S of Arabia to Jerusalem (10:1–10, 13). Although the present story is strongly colored by later legendary elaborations, her visit should be regarded as a trade mission of the S Arabians who became unable to ignore Solomon's control over an important caravan route through Transjordan as well as his naval enterprise in the Red Sea. A reference to "all the kings of Arabia" who were under impost to Solomon (10:15, reading after 2 Chr 9:14) suggests that the visit of the queen of Sheba represents one of the trade relations of Solomon with the Arabians.

Indeed, Solomon controlled two main international routes: the Via Maris, a route passing through the coastal plain and the Jezreel valley connecting Egypt and Damascus; and the King's highway, a route passing through the hill country of Transjordan connecting Elath on the Red Sea and Damascus. It is very probable, therefore, that Solomon made revenue from transit duties imposed on commercial traffic through his kingdom, and the biblical sources in 1 Kgs 10:15 (cf. 2 Chr 9:14) seem to testify to it, though the text requires some emendations. In addition, we are told that Solomon's merchants imported horses from Egypt and Que (i.e., Cilicia in the SE of Anatolia), and chariots from Egypt; then, they exported these horses and chariots to Hittite and Aramean kings (1 Kgs 10:28–29). These trading activities were typically Solomonic in taking advantage of the geographical position of his kingdom between Egypt to the S on the one hand and Syria, Anatolia, and Mesopotamia to the N on the other.

All the figures and descriptions in the accounts of Solomon's mercantile activities and his revenue and wealth should be fabulously exaggerated (e.g., 10:10, 12, 14, 21). Evidently, these accounts were not composed with the intention of making a historical report on Solomon's financial matters. Their aim was to enhance his prosperity under the divine blessings. Nevertheless, we can hardly reject the substantial historicity comprised in them.

H. Building Enterprises

It appears that a great part of Solomon's revenue made by every possible method was spent for his building enterprises which were too grandiose to be undertaken within the limit of his resources. Despite his people's resentment (see above), Solomon had to impose forced labor to carry out his building plan. Still he was unable to cover the deficit suffered from the building expenses without cession of part of his territory at the end of twenty years of his building activities. However, it is important to realize that Solomon had good reasons for his extensive building projects.

These building enterprises can be classified into two categories: defense constructions at strategic points in his kingdom, and the great citadel complex of Jerusalem (including the royal palace and the Temple). They were constructions vital to governing a kingdom stretching over such a vast area of Palestine, the N Transjordan, and part of Syria. According to biblical sources, Solomon had 1,400 chariots, 12,000 horsemen (10:26) and 40,000 stalls of horses for his chariotry (5:6—Eng 4:26). Although the last figure is evidently an exaggeration (cf. 4,000 stalls in 2 Chr 9:25), the account of Solomon's chariot force is acceptable as historical in view of 2,000 chariots put into the field at Qarqar against the Assyrians by Ahab king of Israel about a century later.

This large force was stationed at Jerusalem (1 Kgs 10:26) as well as at garrison towns located at strategic points such as Hazor, Megiddo, Gezer, Beth-horon the lower, Baalath, and Tamar in the wilderness in the land of Judah (9:15, 17–18). Solomon also built store-cities as arms depots and supply centers for the army (9:19). In fact, archaeological excavations give evidence for Solomonic fortifications at Hazor (stratum X), Megiddo (stratum VA–IVB) and Gezer (stratum VIII) constructed to a uniform plan

(Yadin 1958). Moreover, it is told that Solomon built "the Millo and the wall of Jerusalem" (9:15). Although there are still differing views about the exact meaning of the term Millo, it is clear that this passage tells about Solomon's fortification works of Jerusalem (cf. 11:27).

Undoubtedly, the most important construction among buildings which Solomon made was the citadel complex of Jerusalem, which consisted of the royal palace and the Temple. As to the biblical sources about these construction works, it is striking that the construction of the Temple and its furnishings are described in detail (6:2–38; 7:13–51), whereas the description of the structure of the palace is disproportionately laconic (7:1–12). However, the comparison between the dimensions of the royal palace (e.g. 100 by 50 cubits on the ground plan of the House of the Forest of Lebanon [7:2]) and those of the Temple (60 by 20 cubits on the ground plan [6:2]) shows that the latter was actually an adjunct building to the former. In spite of this structure, however, it is improper to regard the Temple as a mere royal chapel attached to the palace, since both the biblical and extrabiblical sources, together with archaeological findings, testify to the fact that a temple in a palace-complex like the Solomonic Temple functioned as "the royal sanctuary as well as a temple of the kingdom" (cf. Amos 7:13).

Solomon spent 20 years building the citadel complex of Jerusalem (1 Kgs 9:10):seven years building the Temple (6:38) and thirteen years constructing the palace (7:1). On the palace, the biblical sources give us scarcely any information except the simple structural features of the House of the Forest of Lebanon, the Hall of Pillars, the Hall of Throne, i.e., the Hall of Judgment, the dwelling quarters, the palace for Pharaoh's daughter, and their stonework (7:2–12). Besides, there are some fragmentary notes on shields, vessels, and the throne in the palace (10:16–21).

In contrast, we are informed in detail on the construction of the Temple and its furnishings, including the structural features, the interior fittings and decorations, the cherubim, the inner court, the pillars of Jachin and Boaz, the bronze sea, the wheeled stands and their bases, gold vessels, and so forth (6:2–10, 15–36; 7:15–50). Strangely enough, however, these descriptions deal solely with measurements of the buildings and their furnishings, with materials and technique used, but they hardly furnish us with a general information on the Temple such as its orientation or general appearance. The structure of the Temple and its locations adjoining the royal palace show that Solomon built the Temple following the tradition of the Canaanite-Phoenician temples in the end of the 2d millennium and the beginning of the 1st millennium B.C., which have been uncovered in various places in Syria-Palestine. This fact agrees with the biblical sources which confirm that Phoenician builders and a craftsman from Tyre called Hiram played the central role in the construction of the Temple. See also TEMPLE, JERUSALEM.

I. Zion Theology and the State Cult

The construction of the Temple on Mount Zion in Jerusalem was one of the most important achievements which Solomon accomplished. It led to decisive consequences in later developments of the Israelite traditions. Like all the other institutions which Solomon established, there were David's preparations also for the Temple building. Although the Chronicler's detailed descriptions about the theme (1 Chronicles 22–29) seem legendary rather than historical, we have no reason to doubt that David made some of the fundamental preparations in his last years. For instance, his purchase of Araunah's threshing floor and the building of an altar there (2 Sam 24:18–25) were doubtless related to the Temple building.

In addition to the physical preparations, David prepared the religio-political conditions for the construction of the Temple. Indeed, the Temple of Solomon is to be regarded as the consummation of the policy which David had undertaken to establish the rule of the House of David over the united kingdom by concentrating the national traditions of Israel in Jerusalem, the permanent residence of the dynasty of David. Before David conquered it, Jerusalem had been alien to the Israelite traditions (5:6–9). However, when choosing Jerusalem as his new capital, David attempted to furnish it with a legitimate position in the ancient traditions of Israel. For David, who came from Judah, it was absolutely necessary to legitimatize his rule over the N tribes of Israel. Out of this effort, among others, he transferred the Ark, which had been the symbol of the tribal confederation of Israel centering around the temple of Shiloh in the premonarchical period (1 Sam 3:3; 4:3–7:2), to the City of David (2 Sam 6:1–9). David also attempted

to build a temple in Jerusalem to house the Ark, but he was told through Nathan the prophet that Yahweh rejected that plan. David could not but content himself with a divine revelation that his son would build the Temple. At the same time, David was promised by Yahweh to establish the House of David as an eternal dynasty over Israel (7:1–16). This divine promise became the nucleus of the covenant of David.

As Solomon built the Temple, therefore, it was regarded as the fulfillment of the Davidic covenant. Moreover, the very existence of the Temple was interpreted as evidence of Yahweh's election of Jerusalem/Zion as his sole abode among the tribes of Israel (8:16; 2 Chr 6:6). Evidently, both elections were inseparably interrelated. The election of David was materialized by the election of Jerusalem/Zion, the election of Jerusalem/Zion could stand so long as the election of David was valid. In addition, in bringing the Ark from the city of David and placing it in the holy of holies in the Temple (1 Kgs 8:1–8), Solomon changed this war palladium of the militia of Israel and Judah (2 Sam 11:11) into the symbol of the covenant of Sinai. In so doing, he succeeded in associating the Davidic covenant with the Sinaitic covenant (1 Kgs 8:21). Admittedly, it is widely recognized that all these passages are Deuteronomistic. Still there is no reason to doubt that the Zion theology which crystallized around the doctrine of the joint election of the House of David and of Jerusalem/Zion stemmed from the days of Solomon as part of the ideology of the Judean dynasty ruling over Israel.

Another Solomonic innovation is the establishment of the position of the king presiding over the state cult. When Saul, the first king of Israel, offered burnt offerings, this royal conduct was condemned by Samuel as the encroachment of the latter's sacerdotal authority (1 Sam 13:8–15). But David was no longer accused for his burnt offerings and peace offerings which he offered after the transfer of the Ark to the city of David (2 Sam 6:17–18). However, divine messages were generally communicated to him through prophets like Nathan (7:1–17; 12:1–15, 24–25) or Gad (24:10–25). Finally, not only did Solomon always have direct communications with God (1 Kgs 3:5–14; 6:11–13; 9:1–9; 11:9–13), he also acted as a priest (3:4, 15; 8:14–66). This development would show that there was an increase of royal authority over the sacerdotal prerogatives in the early monarchies in Israel, and it was brought to finality in the establishment of the state cult under Solomon. The absolute authority of Solomon originated in the ownership of the House of David over the Temple on the basis of the facts that the ground on which the Temple stood was the possession of the House of David, and its founder was Solomon.

J. Solomon's Wisdom

Alongside his great wealth, Solomon's legendary wisdom is specially remembered in the biblical sources as well as in later traditions. His sapiential activities in the biblical sources may be classified under the following three categories: administrative wisdom, encyclopedic and gnomic wisdom, and riddles. How Solomon was endowed with administrative wisdom in the very beginning of his reign is told in the narrative about the divine revelation communicated to him in the dream at Gibeon (1 Kgs 3:4–15). It has been proposed that this story was composed after an Egyptian literary type called *Königsnovelle*, one of whose main themes is to underline the greatness of royal innovations. Indeed, the narrative serves as a suitable introduction to the reign of a monarch like Solomon who made many innovations. Evidently, the construction of the Temple is regarded as his greatest innovation in the literary complex in 1 Kings 3–11. However, an episode which directly follows the divine promise of the sapiential endowments recounts Solomon's shrewd arbitration as an illustration of his administrative-juridical wisdom (3:16–28). The theme of the story is very popular in folktales from various countries of the world. It is likely, therefore, that the story about Solomon's administrative-juridical wisdom stemmed from the neighboring nations of Israel.

The international influence is more obvious in the encyclopedic and gnomic wisdom of Solomon (5:9–14—Eng 4:29–34). It is praised as the wisdom surpassing the wisdom of all the other wisemen in the world. In other words, Solomon's wisdom in this sphere was essentially international. In fact, gnomic sayings in the classified lists of natural phenomena are found in Mesopotamia and Egypt. Moreover, it has been assumed that a large part of the proverbial collections attributed to Solomon (Prov 1:1; 10:1; 25:1) was composed on Canaanite, Egyptian, or Mesopotamian models. Likewise, Solomon's supreme skill in

riddles was also international in its nature. It was revealed in his answers to the questions asked by the queen of Sheba visiting him in Jerusalem with an international trade mission (1 Kgs 10:1–10, 13).

It is most probable that the narratives about Solomon's wisdom were composed with the intention of enhancing his fitness as a just ruler as well as exalting his international prestige (3:28; 4:34; 10:23–24). It is not surprising, therefore, that they are colored with fabulous exaggerations and legendary elaborations, which are sometimes interpreted as evidence for the later origin of the narratives. It is not easy, however, to find any other period in the history of ancient Israel than the Solomonic era, in which such a strong stimulus was given to develop sapiential activities through the establishment of a well-organized royal court and its close contacts with the international world. G. von Rad assumed that there was a "Solomonic enlightenment" as the blossoming of intellectual creativities in breaking free from the ancient patriarchal code of living. Indeed, Solomon's wisdom is specially mentioned, alongside his deeds, in the reference to the book of the acts of Solomon (11:41). It is very likely that Solomon's wisdom represented the spirit of his age.

K. Society

The transformation of the Israelite society, which began with the establishment of the monarchy, was in full swing in the days of Solomon. The traditional autonomy of each tribe was broken down by establishing administrative districts governed under prefects appointed by the central authority of the king (1 Kgs 4:7–19). Although the tribal names were retained in the peripheral districts, it is clear that these districts no longer enjoyed tribal autonomy so long as they were ruled by royal prefects. In fact, each district was charged with a duty to provide food for the royal court and barley and straw for the horses of the king. These provisions and other taxes were distributed by the king to his "servants" as their salary. The servants of the king formed a new class of people dependent on the monarchy. They were professional soldiers, administrative officials, household staff, merchants, artisans, etc. In addition, it is assumed that the Levites were also integrated into the royal administration in the last year of David to administer the "cities of the Levites" (Josh 21:1–42; 1 Chr 6:39–66), the fortified cities in the border districts of the kingdom (1 Chr 26:30–32). In any case, the development of a social stratum composed of the servants of the king facilitated the centralization of the royal government under Solomon by disrupting the traditional system of the tribal society of Israel.

In the above development in Israelite society towns played an important role as the local centers of the royal administration. As such, the biblical sources refer to towns of a prefectural seat (1 Kgs 4:9–14), garrison towns and store-cities (9:15, 17–19; 10:26), and the cities of the Levites (Josh 21:1–42; 1 Chr 6:39–66). Since the servants of the king mostly lived in towns, the urban population must have increased rapidly. At the same time, it seems, the elders of the town, who had served as the institution of the traditional self-government in the premonarchical period, were integrated into the municipality governed by the officials appointed by the king (cf. 1 Kgs 21:8, 11; 2 Kgs 10:1, 5).

Another characteristic feature of the society under Solomon is found in a mass assimilation of foreign elements into the Israelite society. Since the days of David many foreigners had been employed by the royal court, e.g., mercenaries like the Cherethites, the Pelethites, and the Gittites (2 Sam 15:18, etc.), an official like Adoram or Adoniram (20:24; 1 Kgs 4:6), or an artisan like Hiram (7:13). The biblical sources also tell us that the Canaanite towns and their indigenous population were ultimately incorporated into Israel under Solomon (4:9–13; 9:20–21; cf. Judg 1:27–35). Besides, the Israelites had close relations with the neighboring peoples through intensive mercantile activities. As a result, apart from Solomon's political marriages with alien women, intermarriages took place also among the ordinary people (1 Kgs 7:14). Under these circumstances, the toleration of foreign cults and religious syncretism prevailed in the days of Solomon (11:4–5, 7–8).

After the death of Solomon, the N tribes held the popular assembly at Shechem and demanded that Rehoboam, Solomon's successor, alleviate the heavy taxes and *corvée* imposed by Solomon. When Rehoboam refused, the people rejected the rule of the House of David and elevated Jeroboam ben Nebat to the king of Israel (12:1–20). This political development clearly shows that, despite the centralization of the administrative power and the disruption of the traditional tribal society in the days of Solomon, the

Israelite tribes retained the tradition of self-government. At the same time, apart from the Deuteronomistic censure (11:2–13), the important role played by Ahijah the Shilonite in the schism of the United Kingdom suggests that there was a circle which was antagonistic toward the religious tolerance and syncretism in Solomonic society.

L. Summary

Solomon inherited from David the United Kingdom of Israel, which David had established by the personal union of the kingdoms of Judah and Israel, with a vast area of conquered lands stretching over the bulk of Palestine and part of Syria. This was a great inheritance not easy to maintain, but Solomon successfully executed the difficult task. As to domestic issues, he accomplished, among others, the following five matters which had been prepared but left unfinished by David: (1) the consolidation of the kingship through a thorough purge of political enemies; (2) the development of the administrative organization; (3) the Temple building with the construction of the royal palace; (4) the crystallization of Zion theology around the doctrine of Yahweh's joint election of the House of David and of Jerusalem/Zion; and (5) the reinforcement of the defense system.

As to the relationship with the neighboring countries, Solomon gave up the expansionism of David and held peaceful relations with them through diplomacy and trade. Except for a problematic report on the conquest of Hamath-zobah (2 Chr 8:2), we have no information on any military campaign of Solomon. On the contrary, he lost the S territory in Edom and retreated in the N border before Damascus. Nevertheless, we should not underestimate the strength of the military power and the defense system which he maintained. It was strong enough to have a showdown with the invading army of Pharaoh.

By taking advantage of the geographical position, Solomon shrewdly increased the revenue not only by collecting toll from caravans passing through his kingdom but also by launching international trade. His active operations in diplomacy and trade made in wealthy and raised his prestige in the international community. As a result, Jerusalem became one of the important centers into which various information and technology came from every corner of the world. Under the stimulus of foreign cultures the royal court served as the center of intellectual creativity. The legendary tradition of Solomon's fabulous wisdom must have stemmed from the Solomonic court with its international surroundings.

In short, the kingdoms of Judah and Israel enjoyed prosperity and peaceful life in the days of Solomon. However, this was not without malcontents, especially among the N tribes. The zealots of Yahwism condemned the religious tolerance and syncretism in the Solomonic society. The traditionalists refused to accept the Zion theology, which was formed as the ideology of the Judean dynasty ruling over Israel. Above all, the N tribes were so discontented with the heavy tax and forced labor, imposed with a bias favoring Judah, that they revolted under the leadership of Jeroboam ben Nebat. Solomon suppressed the revolt, but this problem became the direct cause of the division of the kingdom immediately after his death. He hardly succeeded in bequeathing the Davidic rule over Israel which he had inherited from David. But this sober reality faded away in later traditions in which "Solomon in all his glory" (Matt 6:29) remained as his formal portrait.

TOMOO ISHIDA

SOLOMON'S PORTICO (PLACE) [Gk *stoa (tou) Solomōn (t)os* (στοα του Σολομωντος)]. A colonnade which made up part of the temple complex built by Herod in Jerusalem. This colonnade like the others that surrounded the temple precinct, provided a meeting place for individuals to discuss Scripture preceding and following the observation of religious rituals. Jesus' disciples gathered at this location and the early Jerusalem church also met there (John 10:23; Acts 3:11; 5:12). It was located on the E side of the temple complex overlooking the Kidron Valley (Josephus *Ant* 20.9.7). According to the tradition reported by Josephus, Solomon's temple utilized a covered area supported by a platform (*JW* 5.5.1; *Ant* 8.3.9). The location described as Solomon's portico in the NT was certainly designed by Herod's architects. This colonnade was reportedly double columned and spanned 49 feet. The columns were 38 feet tall monoliths of white marble and supported cedar-paneled ceilings. This impressive structure however was overshadowed by the Royal Colonnade at the S end of the temple precinct. No extant remains of Solomon's Portico are preserved in situ except for the platform on which it was founded. See also TEMPLE, JERUSALEM.

ROBERT W. SMITH

SOLOMON'S SERVANTS. A phrase that refers to two distinct groups. In the broadest sense it refers to all those who were members of Solomon's imperial household and bureaucracy (1 Kgs 4:1–19). The Hebrew word *ʿebed* refers both to servants and to slaves. Servants, as a broad category, could include anyone from kitchen help to the vizier.

Slavery was common in the Near East during the biblical period. See SLAVERY (ANE). Mendelsohn, in his basic study of state slavery in Israel (1942), asserts that there were three categories of slaves: domestic servants, whose presence and relationship to the community is attested in the laws on slavery in

the Torah (Exodus 21; Deuteronomy 15; Leviticus 25); temple slaves *(netînîm);* and state slaves (Heb *mas ʿôbēd*). See NETHINIM; SLAVERY (OT). These latter consisted primarily of foreign captives of war. There is ample evidence of the existence of such a group (1 Kgs 9:27; 2 Chr 8:18; 9:10). The Ophir fleet was operated by Solomon's servants. In 1 Kgs 9:15–21 the public works projects of Solomon were probably carried out by state slaves.

Israelites were employed in some of Solomon's projects (1 Kgs 5:27). Apparently David also used corvée labor (2 Sam 20:24). The census of David (2 Samuel 24) was aimed at both taxation and corvée labor. Corvée became a burning issue in the breakup of the two kingdoms after Solomon's death.

The Hebrew term *mas ʿôbēd* is eventually replaced by *ʿabdê šelômô,* "servants of Solomon"; in Mendelsohn's view, Solomon was the instigator of this form of slavery, employing these foreign prisoners in the great mining operations in the Arabah. The term later comes to mean state slaves in general.

But after the destruction of the southern kingdom and the Exile, the returnees had no royal establishment to engage in great public works projects and no body of persons who could be used at will for the service of the state.

The texts in Ezra, Nehemiah, and Chronicles refer to the "children of the Servants of Solomon" (Ezra 2:43–58; Neh 7:46–60; 11:3; 2 Chr 8:18; 9:10). These are associated with the priests, Levites, and Nethinim in the lists. They are always listed last, giving the impression of a class distinctly lower than the others. The period after the Exile was marked by a process of "sacralization," as a result of which the priesthood becomes more exclusive and more exalted; the Levites and lesser religious orders absorb many of the functions formerly performed by lay folk (Cody 1969:184–92). The former state slaves thus merged with the older category of temple slaves, and all these were absorbed into the ranks of the "lower clergy" of the restored temple.

JOSEPH P. HEALEY

SOLOMON, ODES OF. Sometime around 100 C.E. a Christian, heavily influenced by Jewish thought, especially similar to that found in the Jewish apocalypses and within some of the Dead Sea Scrolls, composed 42 odes. He may even have dedicated them to Solomon. The 11th ode was found among the Bodmer Papyri in a 3d-century Gk manuscript (no. 11). Five were translated into Coptic in the 4th century and used to illustrate the *Pistis Sophia* (*Odes Sol.* 1, 5, 6, 22, and 25). Also in the 4th century Ode 19 was quoted by Lactantius (*Div. Inst.* 4.12.3). In the 10th century a scribe copied the *Odes* in Syriac, but only *Odes Sol.* 17:7–42:20 are preserved (British Museum ms Add. 14538). In the 15th century another scribe copied them into Syriac, but again the beginning is lost (John Rylands Library Cod. Syr. 9 contains only *Odes Sol.* 3:1b–42:20).

In 1812 the *Odes of Solomon* were discovered by a Danish bishop, F. Münter, in the *Pistis Sophia.* In 1909 they were detected by J. Rendel Harris in a manuscript on his shelves; he published the *editio princeps* the same year. In 1912 they were observed by F. C. Burkitt in a manuscript in the British Museum.

During the first decade after the *editio princeps* there was a flurry of scholarly publications. The consensus was that the *Odes* were very early. Harris contended that they were a hymnbook of the 1st-century Church. J. H. Bernard claimed they were written in the last half of the 2d century. A. Harnack was convinced that the *Odes* were a Jewish psalter that had been redacted by a Christian. He heavily influenced R. Bultmann who claimed that the *Odes* antedate and help us understand the origins of the gospel according to John.

Since the 1960s scholars have once again been attracted to the *Odes of Solomon.* Many scholars, like K. Rudolph, contend that they are a 2d-century gnostic work. M. Testuz argued that the author was an Essene who lived sometime in the 1st century C.E. J. Carmignac was convinced that they were composed by a

Christian who had been a Qumran Essene; and there is ample reason to take seriously that possibility. While some scholars think the *Odes* were composed in Greek (M. Philonenko, A. F. J. Klijn), Syriac specialists such as A. Vööbus, J. A. Emerton, J. H. Charlesworth, and L. Abramowski, have argued that they were composed in Syriac.

The date of the *Odes* has caused considerable interest. H. J. Drijvers contends that they are as late as the 3d century. L. Abramowski places them in the latter half of the 2d century. B. McNeil argued that they are contemporaneous with *4 Ezra*, the *Shepherd of Hermas*, Polycarp, and Valentinus (ca. 100 C.E.. Most scholars date them sometime around the middle of the 2d century, but if they are heavily influenced by Jewish apocalyptic thought and especially the ideas in the Dead Sea Scrolls, a date long after 100 is unlikely. H. Chadwick, Emerton, Charlesworth, and many other scholars, are convinced that they must not be labelled "gnostic," and therefore should not be dated to the late 2d or 3d century.

Scholars tend to agree that the *Odes* and the gospel of John are related, but the explanation of the relationship has not won a strong consensus. Most specialists who have published a detailed comparison conclude that the *Odes* are earlier or contemporaneous with the gospel of John (Charlesworth and Culpepper); and M. Lattke is correct in pointing out the extreme importance of the *Odes* for studying the origins of the documents in the NT. Bernard introduced the claim that the *Odes* were composed by a Christian for baptismal services; and as R. Murray has shown there is reason to take seriously a modified form of that hypothesis. The *Odes* are certainly Christian; and as Emerton states, the author was probably "a Jewish Christian" (that is a Christian who was a convert from Judaism).

Although the author never quotes from the OT, he probably knew it, especially the Davidic Psalter, by heart. Ps 84:10 ("For a day in your courts is better than a thousand elsewhere") may have been on his mind when he composed *Ode* 4:5 ("For one hour of your faith/ Is more excellent than all days and years"). Ps 1:2 ("And in his Law he will meditate day and night") probably helped him compose *Ode* 41:6:

> And let our faces shine in his light,
> And let our hearts meditate in his love,

The tone of the *Odes* is one of rejoicing in the appearance of, and triumphal life of, the long awaited Messiah, and in the experience of eternal life obtained through his resurrection:

> And his Word is with us in all our way,
> the Savior who gives life and does not reject ourselves.
> The Man who humbled himself,
> but was raised because of his own righteousness.
> The Son of the Most High appeared
> in the perfection of his Father.
> And light dawned from the Word
> that was before time in him.
> The Messiah in truth is one.
> And he was known before the foundations of the world,
> that he might give life to persons forever by the truth of his name.

(*Ode* 41:11–16)

JAMES H. CHARLESWORTH

SOLOMON, PSALMS OF. A collection of 18 noncanonical psalms from the 1st century B.C.E. which are preserved in Greek and Syriac. The title of the collection is a curious one, since there is nothing in any of the psalms to link them to Solomon.

Although a Greek original for the *Psalms* has been suggested (Hilgenfeld 1868), most scholars have argued that the Greek version is a translation of a Hebrew original. Many believe that the Syriac version is a secondary translation of the Greek (Harris and Mingana 1916–1920, vol. 2; Begrich 1939), but the evidence brought forward to support such a view—alleged errors which the Syriac and Greek share and supposed mistranslations of the Greek by the Syriac—is not compelling. On the other hand, apparent Syriac mistranslations of a Hebrew word or phrase that has been translated correctly in the Greek, the presence of atypical Syriac expressions which are in fact Hebraic idioms and which are absent from the Greek, and certain patterns of variation between the Syriac and the Greek in divine name terminology suggest that the Syriac, like the Greek, was translated from the Hebrew (Trafton 1985; 1986; cf. Kuhn 1937). The presumed Hebrew original is lost.

Although patterned after the canonical psalms and sharing many themes with them, the *Psalms of Solomon* are noteworthy for what seem to be striking historical allusions in several of the *Psalms.* For example, *Psalm* 2 speaks of a "sinner" who forced his way into Jerusalem with a battering ram (v1), after which "Gentile foreigners" defiled the Temple (v2; cf. vv 19–24). Later this "dragon" was killed dishonorably in Egypt, his body being left unburied (vv 25–27). Since these details match so closely what the ancient historians Josephus (*Ant* 14.4; *JW* 1.7) and Dio Cassius (*Roman History* 42.5) wrote about the Roman general Pompey, who captured Jerusalem in 63 B.C.E. and was slain in Egypt in 48 B.C.E., scholars generally agree that the psalmist must have had Pompey in mind. Similar passages which identify the conqueror as a Gentile who came from (and took captives back to) the West (17:11–13) and as one who was initially welcomed by some of the Jewish leaders (8:15–17) also correspond to what is known of Pompey.

Occasionally there have been attempts to identify the conqueror as someone else—e.g., Antiochus Epiphanes, Herod the Great, or Titus—but Pompey seems the most likely candidate. Similarly, some scholars have attempted to see allusions to historical figures and events in addition to Pompey, the most ambitious proposal (Aberbach 1951) being that the *Psalms* sketch the decline of the Hasmonean dynasty from the last stable ruler (Alexandra) to the last to occupy the throne (Antigonus). But such proposals

have not gained widespread acceptance. The inherent difficulty in relating poetic language to historical persons and events is always present in any such reconstruction.

The connection of the *Psalms of Solomon* with Pompey dates the collection to the 1st century B.C.E. There is no reason to believe that all of the *Psalms* were written at the same time or even by the same author. They do, however, share a common perspective, which suggests that, whether composed by one author or several, the *Psalms* reflect the thought-world of a particular group of Jews who brought them together sometime after Pompey's death in 48 B.C.E.

The communal perspective of the *Psalms* has been a source of intense scrutiny by scholars. The *Psalms* not only find fault with foreigners, but also with fellow Jews. Indeed, most of the *Psalms* exhibit a strong we/they mentality. The psalmist identifies himself with those whom he calls the righteous (3:3), the pious (9:3), those who fear the Lord (2:33), the poor (10:6), the innocent (12:4), and the saints (11:1). On the other side are the unrighteous (12:5), the sinners (4:8), the transgressors (14:6), those who please men (4:8), the lawless (17:20), the deceitful (4:23), the hypocrites (4:20), and the wicked (12:1). Such a perceived dichotomy within Israel itself suggests that the *Psalms* are the product of a Jewish party or sect.

Scholars have traditionally interpreted this partisan outlook against the background of Josephus' report of the intense rivalry between the Pharisees and the Sadducees (*Ant* 13.10–14.3). The presence within the *Psalms* of several concepts which Josephus characterized as Pharisaic (*JW* 2.8.14)—proper interpretation of the Law (4:8), divine providence and human free will (9:4–5), resurrection (3:12), and retribution (2:7)—might imply that they are a product of the Pharisees. Specific accusations concerning the profaning of the Temple and its sacrifices (1:8; 2:3; 8:12) would suggest, in turn, that the opponents are the Sadducees.

This understanding of the *Psalms,* although still common (Schüpphaus 1977; Lane 1982), has been called into question in recent years. Strong parallels between the *Psalms* and the Dead Sea Scrolls have caused some scholars to label them as Hasidic or Essenic (O'Dell 1961; Wright 1972; Hann 1988), a position, however, which has not proved persuasive. Other scholars, who prefer to leave the question open, point to a growing skepticism regarding the possibility of reconstructing 1st century B.C.E. Pharisaism from sources such as Josephus, and a growing awareness of the diversity within Judaism beyond the classic categories of Pharisee, Sadducee, and Essene (Charlesworth 1976). The identification of the opponents as the Sadducees faces similar problems. The accusations regarding the Temple certainly indicate the priestly nature of the group, but the charge that they set up a non-Davidic monarchy (17:6) points specifically to the Hasmonean dynasty, which was supported at various times by both Sadducees and Pharisees. Thus it is more accurate to see the *Psalms* as reflecting anti-Hasmonean, rather than anti-Sadduceic, sentiment (contrast the pro-Hasmonean 1 Maccabees), a sentiment which was not uncommon in the 1st century B.C.E.

The *Psalms of Solomon* reflect the struggle Jews underwent as they attempted to reconcile a debacle at the hands of a foreign conqueror with the belief that Israel was God's chosen people. The psalmist resolves the struggle by arguing that the evils which have befallen the nation have been caused by the sin of the people (1:7–8; 2:11–13; 8:9–14, 22; 17:5–8, 19–20). Thus, he confidently asserts that God has not abandoned Israel; he has simply chastised his people, upon whom he will have mercy forever (7:3–10; 9:9–11). Such confidence finds a special focus in the hope for the Messiah, which is set forth in *Psalms* 17 and 18. The psalmist looks forward to the day when the Messiah, the son of David, will come and rid the nation of its enemies and restore Jerusalem to its proper place (17:21–25, 45). Yet the psalmist does not really see the Messiah as a military figure—his trust will be in God, not in horse or rider or bow (17:33–34). Rather, the psalmist, building on such traditional texts such as Psalm 2 and Isaiah 11, sees him as king (17:21, 32, 42), judge (17:26–29), and shepherd (17:40–41). Such an explicit and detailed messianic expectation makes the *Psalms of Solomon* an especially important witness to pre-Christian Jewish messianism.

Parallel to such nationalistic concerns are those of an individualistic nature. The precise character of the personal piety in the *Psalms of Solomon* is debated, however. Some have argued that they affirm a piety of works (Braun 1962; Lane 1982). The righteous walk according to God's commandments (14:2) and are

characterized by righteousness (9:3). They confess their sins to God (9:6), repent (9:7), and endure his discipline willingly (3:4; 10:2; 14:1). God judges individuals according to their deeds (9:5). Thus, the righteous merit salvation; the piety is one of self-exaltation. Others contend that the focus of the *Psalms* is rather on the unmerited mercy of God (Büchler 1922; Sanders 1977). They are filled with thanksgiving to God for his mercy (4:6; 10:3; 13:12; 16:5–6). The righteous look to him for salvation (3:6; 16:6) and forgiveness of sins (3:8; 9:6–7; 10:1). Unlike the sinners, who receive God's punishment and whose end will be destruction (3:11; 13:11; 14:9; 15:10), the righteous receive God's discipline (13:6–11) and await resurrection to eternal life (3:11). The piety thus exalts God, not humans.

Interest in the historical allusions, the communal perspective, the messianic expectation, and the personal piety of the *Psalms of Solomon* has not been matched by an interest in their poetic structure. According to one analysis (Westermann 1981), however, the *Psalms* exhibit important developments in the basic categories of psalms. The lament psalm has evolved, for example, into the petitionary prayer without a lament (*Ps. Sol.* 12) and the prayer of repentance (*Ps. Sol.* 9). Similarly, the descriptive psalm of praise has become in some instances a one-sided praise of God's grace over his majesty (2, 3), which leads further to the praise of the righteous alongside of God (4, 6, 14, 15). On the other hand, the declarative praise of the people has seen little change (15, 16). Further work on the poetic techniques of the *Psalms* is needed.

The *Psalms of Solomon* are thus an important witness to the rich diversity within 1st century B.C.E. Judaism. The collection testifies both to the political perspective and to the personal piety of a particular group of Jews. In addition, it provides one of the outstanding examples of pre-Christian Jewish messianic hope. It is also a key document for ascertaining developments in postbiblical Jewish poetry. See also *OTP* 2:638–70; *APOT* 2:625–52.

SOLOMON, SONG OF. See SONG OF SONGS, BOOK OF.

SOLOMON, TESTAMENT OF. A 26-chapter pseudepigraphic folktale of the haggadic type which centers primarily on Solomon's building the Jerusalem temple with the aid of the demons under his control, and contains magic, primitive medicine, astrology, angelology, and especially demonology. (See Alexander *HJP²* 3/1:372–75; Charlesworth *OTP*, 933–87; Preisendanz PWSup 8:660–704.)

A. Contents

After a brief prologue, the story opens with a demon named Ornias who sucks the soul out of a boy through the boy's thumb. This lad has been inspiring the Temple artisans in their work and is therefore Solomon's favorite. When Solomon prays for help to gain power over the demon, God grants him a magical ring through the archangel Michael. The boy, given the ring, overcomes Ornias who is then made to fetch Beelzeboul, who in turn is compelled by Solomon to summon up the strange and powerful demons one by one. Solomon interrogates them and learns their names, their impious and monstrous deeds, and their "thwarting" angels. He then commits them to various punishments, usually temple-building tasks (chaps. 1–18). In the last eight chapters, Solomon hears a conflict between an old man and his son. Further he learns how the demons are able to know the future. In addition, he receives a contribution for the temple from the queen of Sheba (a "witch"). In response to a letter from the King of Arabia, Solomon sends the boy with the ring to Arabia to trap the wind demon Ephippas in a leather flask. Ephippas is brought back and, after putting the cornerstone to the temple in place, is made to fetch the Red Sea demon who informs Solomon that he had been called to aid the demons Jannes and Jambres in opposing Moses in Egypt. The demon is then commanded to hold up in the temple the pillar that Ephippas and he had retrieved from the Red Sea. The tale concludes with Solomon's tragic flaw, the love of a "Shummanite" (i.e., Shunammite) woman. He sacrifices to her gods and builds temples for them. This results in his loss of power over the demons.

B. Genre and Function

A "testament" (Gk *diathēkē*) is an ancient, venerated worthy's final discourse usually to his relatives (especially sons), but occasionally to other intimates or successors, prior to his impending death. Though the genre is fluid during the Hellenistic–Roman age, recent research (Nordheim 1980; Collins 1984) attempts to isolate three major parts: an opening narrative framework (e.g., those for whom the document is intended; the scene), a closing narrative framework (e.g., death, burial, mourners), and a central section (a historical treatment of the worthy's life, ethical exhortations, and predictions about the future). The "testament" may also include elements such as the fatal flaw of the worthy, the avoidance of temptations, or, more typically, instructions about righteousness and/or blessings and curses.

The *Testament of Solomon* does not completely conform to this description of the genre "testament":its opening and closing narrative frameworks are different and, as noted, it reads more like a haggadic folktale combined with medico-magical lore. However, like a testament it purports to be Solomon's last words, it gives instructions about the demons, it tells of Solomon's fatal flaw, and it is narrated in the first person. Moreover, two verses explicitly claim that it is a testament. In 15:14 (Recension B, Ms P) Solomon says "… at my death I wrote this testament to the sons of Israel and I gave (it) to them so that (they) might know the powers of the demons and their forms, as well as the names of the angels by which they are thwarted". Further in 26:8 (Recension B), when the fallen Solomon becomes a laughingstock to the idols and demons, he concludes (Recension B), "For this reason I have written out this, my testament, in order that those who hear might pray about, and pay attention to, the last things and not to the first things, in order that they might finally find grace forever. Amen." (cf. 26:8–9, Recension A: "And I wrote this, my testament, to the Jews and bequeathed it to them as a remembrance of my end. Let my testament be guarded for you as a great mystery against the unclean spirits so that you know the devices of the evil demons and the powers of the holy angels; because a great Lord Sabaoth, the God of Israel, prevails, and he made subject to me all the demons, (and) by him was given to me a seal of an eternal testament. [9]

And I died in my kingdom and was added to my fathers in peace, and the temple of the Lord God, to whom honor and worship are fitting for ever and ever was completed. Amen.").

In short, the Testament does not neatly conform to the genre, but it has some of its key elements. Because the Vienna papyrus fragment of the *Testament* is in the form of a "rotulus" (an official scroll rolled and read vertically, not in the usual horizontal fashion), R. Daniel (1983:295) has suggested that its author may have attempted to emulate an official will = testament *(diathēkē).* Clearly the author was transmitting information about the causes of disease, sickness, calamity, and death, and he attempted to employ a testament genre to do so. Another proposed hypothesis with regard to its function is that he sought to legitimize "white," or protective, magic among Hellenistic (Jewish?) Christians during the early centuries of Christianity when attraction to magic was increasing in Greco–Roman society, but when official Roman law could punish practitioners of "black" magic with death (Duling 1988:100–1).

C. Author, Language, Sources, Date, Provenance

Rather widespread Jewish legends about Solomon's magical wisdom in antiquity raise the possibility that the author had a Jewish background (Duling 1975; 1984; 1985); yet, clear Christian references (6:8; 12:3; 15:10; 22:20), if these are not later additions, indicate that the author was (also?) Christian (Duling 1988). The near absence of Semitisms points to final composition in Greek, specifically the *koinē.* Similar magical traditions in other ancient literature suggest that the *Testament of Solomon* was written by the early 3d century (McCown 1922b: 3, 59–66, 106–11), but that it probably contains earlier sources, some perhaps as early as the 1st century C.E. when the legend of Solomon's magical wisdom was already well established (esp. *Ant* 8.2. 5). The latest possible date is fixed by a reference to *T. Sol.* 26:5 in the *Dialogue of Timothy and Aquila,* a document F. C. Conybeare once dated about 400 C.E. (1898:14; McCown 1922a: 15); this date is somewhat reinforced by the discovery of the 5th–6th century Vienna papyrus fragment of *Testament of Solomon* 18 (Daniel 1983; cf. Duling 1988).

The provenance of the document cannot be stated with certainty; while Babylonia and Asia Minor are not impossible, Egypt is somewhat more likely, and Syria–Palestine is not out of the question since, apart from chap. 18, Egyptian influence is mostly lacking. Egypt is probably the provenance for chap. 18 because the 36 *decans* (36 "heavenly bodies" [Gk *stoicheia*], in this case demons, each of which rules 10 degrees of the 360 degree Zodiac), often seem to have names of Egyptian origin, and Ms N equates each of the *decans* with ten days of the Coptic month. However these influences could also be later realignments of the document in Egypt since, by the time the Testament is written, *decans* are widely known in antiquity. If the latter is the case, Syria–Palestine is a real option and this location is supported by the legend of Solomon's magical wisdom there.

D. Importance

The Testament's emphasis on Solomon's knowledge of magic and the demons is not explicit in the books that are included in the Jewish canon; rather, as later writers expand Solomon's literary output (e.g., *Pss Sol.;* Wis), so various traditions develop about Solomon's magical wisdom. The root for this development is 1 Kgs 5:9–14 (LXX 4:29–34), and especially 5:13 (4:33):"He [Solomon] could talk about plants from the cedar in Lebanon to the hyssop growing on the wall; and he could talk of animals, and birds and reptiles and fish." In the Hellenistic world such knowledge was typical of magicians. The LXX of the 1 Kings passage states that Solomon composed 5,000 "odes" (*ōdai,* LXX 4:32; MT 1 Kgs 5:12 has 1,004 "songs"), which may have suggested magical "incantations" (*epōdai,* Ant 8.2. 5). Correspondingly, when Josephus describes Solomon's unsurpassed magical wisdom and knowledge, he demonstrates it with the magician Eleazar's exorcism of a demon by means of Solomon's name and "incantations" *(epōdai),* and a root prescribed by Solomon which is placed under a magical ring (the magical ring is also in the Talmud and the *Testament*). Thus, the writings of Josephus in the 1st century C.E. make clear and unmistakable the meaning of the reference to Solomon's understanding of nature in this 1 Kings passage (*Ant* 8.2.5:"every kind of tree from the hyssop to the cedar"; "birds and all kinds of terrestrial creatures and those that swim and those that fly"). Probably the same 1 Kings passage, or at least the tradition built on it, is in mind in Wis 7:15–22 where Solomon is said to know astrology, "powers of roots," and "forces of spirits."

The evidence for the Solomonic magical tradition is rather extensive. Solomon's magical wisdom was probably known among the Essenes (11 QPsApa [Psalm 91]; cf. *War* 2.8.6 on Essene healing and *j. Šabb.* 6:8b, *j. ʿErub.* 10:26c, and *b. Šebu.* 15b on Psalm 91) and to the 1st century author of *Pseudo-Philo* (*L. A. B.* 60). It was certainly known among the Rabbis (esp. *b. Giṭ.* 68ab [the stone-cutting worm legend, cf. 1 Kgs 6:7]; also *Exod. Rab.* 52.4; *Midr.* Cant. 1.1, 5; *Num. Rab.* 11.3; *Pesiq. R.* 6.7; *b. Meg.* 11b; *Pesiq. Rab. Kah.*; Tg. Esth. II; cf. *j. Ber.* 10a; *Pesaḥ.* 56a), the gnostics (NHC II,5:*107*,3; V,5:*78*,30 and *79*,3; VII,2:*63*,11; IX,3:*70*,6,27), the Mandaeans (*Ginza* right, 190), and in the popular Jewish magical traditions of Palestine (*Ant* 8.2.5; *Sepher ha-Razim;* amulets), of Babylonia (the Aramaic Incantation Bowls), and of Egypt (PGM IV.850–929; 3007–86; XCII.1–16; Zosimus; perhaps Hygromancie of Solomon, if early).

The books of the NT canon do not refer directly to Solomon's magical wisdom. However, there is an oblique reference to "something greater than Solomon" in a context of wisdom and demon exorcism (Matt 12:42). Several modern scholars (Fisher 1968; Lövestam 1972; 1974; Berger 1973; Duling 1975) have in varying ways attempted to relate the distinctive use of the Synoptic Gospel title "Son of David" in healing contexts (Mark 10:46–52 = Matt 20:29–34 = Luke 18:35–43; Matt 9:27; 12:23; 21:9; contrast Mark 12:35–37 = Matt 22:41–45 = Luke 20:41–44) to this tradition since there is no surviving Jewish text which correlates the traditional Davidic messiah with healing. Yet curiously Solomon is called "Son of David" in the later Aramaic Incantation Bowl texts from 5th-century Babylon. The Gk of the Testament is very much like that of the NT, and certain aspects of the apocryphal, pseudepigraphical, and NT world of angelology and demonology can be illuminated by the *Testament of Solomon* (3, 6:Beelzeboul; on Luke 10:17–18, cf. *T. Sol.* 20:15–17).

While both Rabbinic and Christian writings know of a tradition that Hezekiah suppressed Solomon's magical books (McCown 1922a; cf. Hippolytus, *Commentary on Canticles*), it is clear the magical wisdom of Solomon was popular in some Jewish, Greek, and notably early Christian circles (McCown 1922a; cf. esp. Origen, *In Mattheum comm. ser.* [tract. 33] 110). The Solomon legend was also very popular in Arab folklore (Salzberger 1907), as the Testament itself helps to demonstrate, and traces of it can be found in Ethiopian literature. Nor did the interest in Solomon diminish; a great number of scientific and magical books were attributed to Solomon in Judaism and Christianity in the medieval period and beyond, as the preservation of mss shows.

E. Manuscripts

C. C. McCown's critical edition of the *Testament of Solomon* (1922b) was planned on the basis of 10 mss which he divided into three recensions, i.e., A (= Mss HIL), B (= Mss PQ), and C (= Mss STUVW). He decided on an eclectic text founded on Recensions A and B. McCown also printed separately three other mss: a shorter demonologically-oriented biography (Ms D) which he thought contained the original story (hypothetical *d*) behind the *Testament of Solomon,* and two mss discovered shortly before publication, namely, Ms E, closest to Ms D, and Ms N, mainly Recension B. A. Delatte later published another short version (1927). Since these surviving mss were written down from the 15th to the 18th centuries, K. Preisendanz's discovery (in the Austrian Nationalbibliothek) and publication (1956a) of a *papyrus* fragment of *T. Sol.* 18:34–40 (P. Vindob. G 330) dated to the 5th/6th century C.E. is extremely important. In 1983, R. Daniel published a slightly revised edition of the fragment, extended it to include 18:33, and added two previously unpublished fragments from the same column (29436 and 35939), that is, 18:27–28. The Vienna papyrus fragments indicate that at least chap. 18 was known at an early date and, if it was already part of the *Testament of Solomon,* as Duling has argued (Duling 1988:91–96), these fragments give added support to the theory of a relatively early dating for the document as a whole. Finally, G. Graf has listed an unedited 17th-century Arabic ms in the Vatican Library; this may be related to a ms found by J. H. Charlesworth in the Bibliothèque Nationale (Bib. Nat. Fonds Syriaque 194, ff. 153a–156b [but is Graf's "ethical exhortation" to Solomon's son Rehoboam really *Testament of Solomon* or the so-called Hygromancie of Solomon?]). Charlesworth notes one other text (Vat. ar. 448, ff. 39r–54r).

DENNIS C. DULING

SOLOMON, WISDOM OF. The Wisdom of SolomonSolomon is an exhortatory discourse, punctuated by an encomiastic invocation of Wisdom. It was written in Greek by a learned and profoundly Hellenized Jew of Alexandria, after that city's conquest by Rome in 30 B.C.E. By that time the earlier optimism of the Alexandrian Jewish community for a growing rapprochement with the Greeks and for social and cultural acceptance by them had been replaced by a mounting sense of disillusionment and disappointment. In contrast to Pseudo-Aristeas' mild criticisms of heathen cults, the author of Wisdom's wrathful exhibition of the innumerable crimes and corruptions connected with pagan idolatry and his unrestrained attacks on Egyptian theriolatry are an unmistakable sign of the complete rupture which had in his time sundered the Jewish community from the native Egyptians and Greeks.

A. Contents

The Wisdom of Solomon is readily divided into three parts: (I) Wisdom's Gift of Immortality (1:1–6:21); (II) The Nature and Power of Wisdom and Solomon's Quest for Her (6:22–10:21); and (III) Divine Wisdom or Justice in the Exodus (chaps. 11–19), with two excursuses, one on Divine Mercy (11:15–12:22), the other on Idolatry (chaps. 13–15).

Part I begins with an address to the pagan rulers of the earth to pursue justice or wisdom, while admonishing those whose deviant behavior will inevitably result in their destruction (1:1–16). In diatribe style the wicked are then allowed to speak for themselves. Convinced that life is chance, and death final, they inevitably conclude that one ought to derive maximum enjoyment from the pleasures at hand without regard for moral scruple. Blinded by their own malice, they are ignorant of God's mysteries, and thus pass up the prize of immortality. Harking back to his earlier statement concerning those who have covenanted with Death, the author points out that though God had indeed created man as an immortal image of his own proper being, through the devil's envy, Death has nevertheless entered into the cosmic order, to be experienced by his devotees (chap. 2).

Next an attempt is made to deal with various paradoxes which beset the question of divine reward and retribution. The suffering and death of the just, we are told, are in reality only brief episodes of trial in the immortal destiny of righteous souls which will bring them peace, future glorification, rulership over nations, and a special divine illumination (3:1–12). The barren woman whose life has been pure shall be fruitful at the great assize of souls, and the righteous eunuch will receive a portion in the temple of the Lord. Bastard offspring, on the other hand, will be cut off, so that even childlessness is to be preferred, if accompanied by virtue (3:13–4:6). Moreover, early death is not necessarily an evil, since it may actually signify early removal to safety through divine providence, and true length of life is in any case not to be measured chronologically but by the attainment of wisdom (4:7–20). A portrait is also provided of the ultimate vindication of the just which apparently involves their elevation to heaven to be among the angelic host, and of the final remorse of the wicked when they come to the full realization of their former folly.

There follows a vivid description of the divine judgment, in which the cosmic elements join battle to crush the all-encompassing power of wickedness (5:1–23). The author concludes this part of his work with a second exhortation, this time to Wisdom, which from this point on becomes the explicit theme of the book, usurping the place of the various synonyms earlier employed in conjunction with her. The lords of the far corners of the earth (the reference is probably to Roman rule under Augustus or one of his early successors) are to take note of the fact that their sovereignty is God-given, and that their criminal acts will be relentlessly scrutinized and punished. It therefore behooves them to seek Wisdom so that they may keep the divine ordinances (6:1–11). This task, we are assured, offers no insuperable obstacles, for Wisdom actually anticipates her lovers, and graciously seeks out those worthy of her. Employing the *sorites,* a standard chain syllogism frequently found in Hellenistic philosophical writings, the author eloquently argues that the desire for Wisdom leads to sovereignty (6:12–21).

In Part II, which forms the core of the book, we find the author at his best. With engaging imagery he describes his unwavering search for the great passion of his life, and with an unbridled exuberance he limns the exalted attributes of his beloved Wisdom. Without mentioning Solomon by name, in accordance with a stylistic feature of certain genres of Hellenistic literature, he nevertheless now clearly identifies himself with that illustrious king. In the opening section, the author promises to reveal the nature and origin of Wisdom (6:22–25). He informs us that he loved Wisdom and desired her above all else, though he quickly discovered that all other good things are also eventually acquired along with her (7:7–14). However, God is the sole source of Wisdom, and her scope includes the entire range of knowledge (7:15–

21). Wisdom's twenty-one attributes, borrowed largely from Greek philosophy, are enumerated, followed by an elaborate fivefold metaphor describing her essence and unique efficacy. She is pictured as entering generation by generation into holy souls, rendering them friends of God and prophets. She surpasses even the celestial lights, and nothing can prevail over her (7:22–30). She is God's companion, and Solomon sought to make her his bride, knowing that through her he would have immortality (8:1–16).

There follows a very moving prayer in which the king, acknowledging his feebleness and ephemeral nature, beseeches his Lord to send forth from the holy heavens his throne companion, Wisdom, who was present at the world's creation, to be his guide and guardian (9:1–12). Mortal reason is at best precarious, weighed down as it is by a perishable tent of clay. It is only God's holy spirit of Wisdom descending from on high which has taught men what is pleasing to Him, and has brought them salvation (9:13–18). Part II concludes with a detailed recitation of Wisdom's saving power in history from Adam through Moses and the Exodus (10:1–21).

Part III is constituted by an elaborate *synkrisis,* or comparison, in which the author proceeds with a series of antitheses in order to illustrate the theme that Egypt was punished measure for measure, whereas Israel was benefited by those very things whereby Egypt was punished. This section contains two excursuses. The shorter one (11:15–12:22) concerns the nature of God's mercy as illustrated by his treatment of the Canaanites, whose loathsome practices included sorcery, licentious mystery rites, infanticide, and cannibalism. Though their seed was evil and their viciousness innate, they, too, were nevertheless judged gradually to afford them a chance to repentance (12:3–18). God's mercy thus serves as a model lesson for Israel, to teach them humanity, and at the same time to instill in them confidence in their own relationship with the Deity (12:19–22).

In his second and rather long excursus on the nature of idolatry (chaps. 13–15), those who worship nature are chided for not pressing their search beyond visible reality, which, for all its beauty and dynamic character, only points to its supreme Author. Though not entirely culpable, since they are at least searching for the Deity, neither are they to be excused, for if they were resourceful enough to infer the "Universe," they should certainly have discovered its Master (13:1–9). More blameworthy, however, are the wretches who worship images, addressing their prayers to lifeless objects that are entirely impotent (13:10–19). The author now seeks to explain the origin of idolatry, which he claims did not exist from the beginning but came into the world through the empty illusions of men. A father consumed with untimely grief made an image of the child so suddenly taken from him, honoring him as a god, and handed down to his descendants mysteries and initiation rites. Again, absent rulers were honored by means of images which the artists had overly beautified in order to please their sovereigns, which resulted in the masses mistaking them for objects of worship. This turned out to be the one great trap of human life, for idolatry is the source of every moral corruption (14:12–31).

There follow six further antitheses between the Egyptians and the Israelites (16:1–19:8). The first antithesis (11:1–14) had contrasted the change of the Nile water into blood with the abundant water provided to the Israelites from the desert rock. The second antithesis (16:1–4) now describes the hungering of the Egyptians as a result of the hideousness of the creatures sent to plague them, whereas Israel, after only briefly suffering want, came to enjoy the exotic delicacy of quail food. In the third antithesis (16:5–14), the Egyptians are slain by locusts and flies, but Israel survives a serpent attack through the bronze serpent, symbol of salvation. In the fourth antithesis (16:15–29), the Egyptians are plagued by thunderstorms, while Israel is fed by a rain of manna. The fifth antithesis (17:1–18:4) provides a rhetorically elaborate description of the psychological terror occasioned by the plague of darkness. Deftly and almost imperceptibly the author moves from the physical contrast between darkness and light to the spiritual one which sees in the Egyptian moral villains obsessed with a bad conscience, and in Israel ethical heroes destined to illumine the world with the light of the Torah. In the sixth antithesis (18:5–25), the Egyptian firstborn are destroyed, but Israel is protected and glorified. In the seventh and final antithesis (19:1–9), the Egyptians are drowned in the sea, but Israel passes safely through. The book concludes with the conventional doxology: "For in every way, O Lord, you exalted and glorified your people, and did not neglect to assist them in every time and place" (19:22).

B. Structure

Although many earlier scholars had cavalierly carved the book of Wisdom up into a confusing disarray of units, recent scholarship has succeeded in demonstrating the structual unity of the book and the skill with which it was put together. Fichtner (1938), Maries (1908), and Pfeiffer (1949) had already noted some of its repetitions of vocabulary, but Reese (1965) was the first to recognize the author's skillful use of the rhetorical device of *inclusio* in order to mark off many sections of his work, and his attempt to structure the book on that basis. A recent detailed analysis of Wisdom's structure is provided by Offerhaus (1981).

C. Authorship

The history of the critical literature dealing with Wisdom parallels to some extent that dealing with the Homeric question. By the middle of the 18th century we begin hearing the voices of those who, like the ancient grammarians who ascribed the *Iliad* and *Odyssey* to different authors, sought to carve the book up and assign its various parts to diverse authors. In 1795, the year in which F. A. Wolff's *Prolegomena ad Homerum* was published, J. G. Eichhorn (*Einleitung in die apokryphischen schriften des A. T.,* pp. 88–90, 142–49), separated the first ten chapters from the rest, explaining the disharmony between the two parts, either by attributing the second part to another writer, or considering it a product of the earlier years of the author of the first part. A few years later, J. C. C. Nachtigal (*Die Versammlungen der Weisen,* II. Teil: *Das Buch der Weisheit,* pp. 8, 11, 82–192), presented his bizarre view that Wisdom was a mosaic, to which no fewer than 79 wise men had contributed.

All these attempts, however, were soon demolished by Carl Grimm's great commentary, which demonstrated that the unity of Wisdom was guaranteed by the uniformity of language and style characterizing the whole (1860:15). After a hundred-year gap, however, the search for multiple authorship revived. Focke (1913) divided the book into two parts (chaps. 1–5; 6–19), but suggested that the author of the second part may also have been the translator of the Hebrew original of the first part. More recently, Georgi (1980) considered it to be the product of a collective process. Others, like Gregg (1909), Goodrick (1913), Fichtner (1938), Pfeiffer (1949), and Reese (1983), continued to maintain unity of authorship, and this remains the consensus.

D. Language and Style

The strongest argument for the unity of Wisdom may be drawn from its language and style. In spite of some Hebrew coloring, such as *parallelismus membrorum,* Hebraisms, and the simple connection of clauses by conjunctions such as *kai, de, dia touto, dio, gar,* and *hoti,* Grimm has correctly pointed out that the author's Greek was on the whole rich and spontaneous, and that St. Jerome's judgment that his style was "redolent of Greek eloquence" was completely justified. Thus the author of Wisdom is quite capable of constructing sentences in true periodic style (cf. 12:27; 13:11–15), and his fondness for compound words is almost Aeschylean. His manner at times has the light touch of Greek lyric poetry (cf. 17:17–19; 2:6–9; 5:9–13), and occasionally his words fall into an iambic or hexameter rhythm. He employs *chiasmus* (1:1, 4, 8; 3:15), *hyperbaton* (240 examples), the *sorites* (6:17–20), antithesis, accumulation of epithets (*accumulatio;* 7:22–23), alliteration, assonance, *homoioteleuton, paranomasia, isokōlia,* (balance of clauses), *litotes, anaphora* (chap. 10), and Greek philosophical terminology.

These characteristics, in addition to the author's many favorite "theme" words and expressions which recur throughout the work, argue for unity of authorship, and make the hypothesis that Wisdom is a translation of a Hebrew original virtually untenable. (The Aramaic hypothesis has also had its advocates; Azariah dei Rossi in the 16th century and Zimmermann [1966] in the 20th.) Significant, too, is Wisdom's quotation in 2:12 of the LXX of Isa 3:10, which is radically different from the Hebrew, and of Isa 44:20 and Job 9:12, 19 (in 15:10 and 12:12), a fact which compelled Margoliouth (1900) to conclude that the Greek translators of Isaiah had utilized the Greek text of Wisdom. Although it is possible to maintain that the author may have used an earlier Hebrew document or documents deriving from Palestine in the composition of chaps. 1–10, we should nevertheless have to admit that they were not simply translated by him but rather served as the raw material for a new literary production.

E. Genre

The literary genre employed by the author of Wisdom, as Focke (1913:86) had already noted, is the *logos protreptikos* or exhortatory discourse. According to the *Rhetorica ad Alexandrum* (1421b21), "exhortation *(protropē)* is an attempt to urge people to some line of speech or action," and "one delivering an exhortation must prove that the courses to which he exhorts are just, lawful, expedient, honorable, pleasant, and easily practicable (cf. Wis 6:12–14; 8:7, 10, 16, 18). The protreptic was a union of philosophy and rhetoric which originated with the Sophists, whose sham productions were criticized in Plato's *Euthydemus,* which preserves the earliest example of the genre (278E–282D). Socrates' questioning of Cleinias in that section of the dialogue which serves as an illustration of what he desires a hortatory argument to be, leads to the following conclusion: "Since you think wisdom is both teachable and the only thing in the world that makes man happy and fortunate, can you help saying that it is necessary to pursue it and that you intend to do so?"

More recently, P. Bizetti (1984:55–80), following the lead of P. Beauchamp and M. Gilbert, has sought to demonstrate that Wisdom belongs to the genre of the encomium. The latter is an epideictic discourse which aims at persuading the hearer to admire someone or practice some virtue. Its main parts are: (1) an exordium which introduces and sums up the theme; (2) a eulogy which usually includes a description of the *genos* (ancestry immediate and remote) of the subject of the encomium; (3) the latter's *praxeis* or praiseworthy actions; (4) a *synkrisis* or extended comparison in order to contrast opposite lines of action; and (5) an epilogue with a concluding prayer (cf. Winston 1986).

The protreptic discourse readily lent itself to the incorporation of diatribe, the popular moral invective so characteristic of the Hellenistic period, and Wisdom contains a number of diatribal features: personified abstractions (1:4–6, 8, 16; chaps. 7–10; 18:15); speeches of an imaginary adversary (chaps. 2 and 5); imaginary objections of the adversary accompanied with answers (13:6–9); simple paratactic style (chaps. 1–6); parallelism, *isokōla,* and antitheses (chaps. 1–10); *accumulatio* (7:22–23; 14–25); evocation of mythological heroes or wise men (4:10; 10); elaborate similies (5:10–12); protreptic conclusion with monitory imperatives aimed at deflecting the evildoer from his path (6:1–11); and invective (chaps. 13–15).

F. Date

No consensus has thus far emerged regarding the date of Wisdom, and various scholars have placed it anywhere between 220 B.C.E. and 50 C.E. There is virtual agreement that the author made use of the LXX version of Isaiah which would carry us at least to the end of the 3d century B.C.E. Zeller (1963:295, n. 1), however, had already suggested that the address to the rulers of the four corners of the earth (6:1) referred to the period of Roman rule, and that the reference to the remoteness of the rulers' dwelling in 14:17 indicated more specifically the age of Augustus.

Although many commentators have interpreted Wisdom 14:16–20 as referring to the period of the Ptolemies, such a view seems to be very unlikely. First, the reference to the remoteness of the rulers' dwelling readily applies to Egypt under Augustus (and his immediate successors), who organized it not as a province under designated military authority, but as his own private domain, and ruled it in absentia through a prefect chosen from the knights. More important, however, is the fact that the Ptolemies had openly and explicitly proclaimed themselves gods, and had established a full dynastic cult, centrally organized with a hierarchy of provincial priests appointed by the crown, whereas our passage envisages a process which only gradually led to the idolatrous worship of rulers, a situation which can only apply to the Augustan period.

The linguistic evidence also points to a period not earlier than that of Augustus. Some 35 words or usages are first attested in Wisdom and do not appear in secular Greek literature before the 1st century C.E. Further considerations, however, seem to point to the reign of Gaius "Caligula" (37–41 C.E.) as the likeliest setting for Wisdom. The apocalyptic vision in which the author describes the annihilation of the wicked with such ferocious passion (5:16–23) could only be called forth by a desperate historical situation in which the security of the Jewish community of Alexandria was dangerously threatened by a power against which it was hopeless to put up any serious resistance. The riots which broke out in Alexandria in 38 C.E. involved the demolition of many synagogues, and above all a proclamation by the Roman prefect

A. Avillius Flaccus declaring the Jews "aliens and foreigners" (Philo, *Flacc* 54) in Alexandria. This measure, as Smallwood (1976:240) put it, "degraded them from their legal status of resident aliens, on which the existence of the *politeuma* depended, to that of aliens without the right of domicile. Legally they could now all be expelled." Although Flaccus was soon executed, "the situation remained unstable and the Jews lacked security for a further two years and a half, until their rights were officially and explicitly re-established by Claudius in 41" (Smallwood 1976:242).

Most commentators have assumed an Egyptian provenance for Wisdom (Zimmermann 1966:132–33 and Georgi 1980:396, however, opt for Syria), and in this they are undoubtedly correct. The intensity of the author's hatred of the Egyptians can only reflect the persecution of the Jewish community in Alexandria at the hands of the Greeks aided and abetted by the native Egyptians. It is difficult not to see an allusion to contemporary conditions in Egypt in the manner in which the author imputes greater blame to Egypt than even to Sodom (19:13–17).

G. Religious Ideas

1. Preexistence and Immortality of the Soul. In pointing out the superior endowments of young Solomon, the author of Wisdom began by designating the human body as the personal subject which receives the soul (8:19, "having had a noble soul fall to my lot"). However, since he was not satisfied with his initial formulation, and felt constrained to correct it, we must conclude that the words "or rather being noble, I entered an undefiled body," are meant to suggest the preexistence of souls of varying spiritual capacities, and that in the case of Solomon it was a noble soul that had taken the initiative of entering an undefiled body. In this the author was plainly associating himself to some extent with Platonic doctrine, though at the same time suppressing the major elements of Plato's myth about the procession of souls and the fall of some of them into bodies. That this is so may be further inferred from the fact that in 9:15, he reproduces the distinctive Platonic dualism regarding body and soul, replete with verbal echoes from the *Phaedo* (81C) and *Phaedrus* (247B).

It is essential at this point to emphasize those elements in Plato's theory of soul which are conspicuously absent in Wisdom. We have already alluded to the author's suppression of the conception of the soul's fall. This particular omission, however, is neither surprising nor really at variance with Middle Platonism. Although in the *Phaedrus*, the incarnation of souls seems to be the result of an intellectual "fall," in the *Timaeus*, the soul seems to be destined from the beginning to give life to a body. Mortal creatures came into being so that the universe would not be imperfect, which would be the case if it did not contain all the kinds of living being (41 B–C). Middle Platonists had already noted this inconsistency in Plato's writings and attempted to resolve it by emphasizing one or the other of these positions, the majority apparently opting for the pessimistic rather than the optimistic view. It is thus evident, that in suppressing the pessimistic view, the author of Wisdom, though clearly under the influence of Jewish tradition, was not necessarily being innovative even from the Greek point of view, but was simply aligning himself with that Middle Platonic position which was most congenial to his own way of thinking.

Although it is usually claimed that the author of Wisdom never speaks of the immortal nature of the soul as such, as Greek philosophers do, and makes immortality depend on the soul's practice of justice, this assertion thus baldly put is an overstatement. In the first place, Wisdom 2:23, according to which God created man for immortality and made him an image of his own proper being, clearly implies that man's immortality derives from the fact that his soul is an image of the divine Wisdom, the "proper being" of the Deity. Second, even according to some versions of the Platonic myths concerning the soul, we are told that some souls are "judged incurable because of the enormity of their crimes and are hurled into Tartarus, whence they never more emerge" (*Phd.* 113E; cf. *Grg.* 525C; *Resp.* 615E). Nevertheless, it is true that for Plato, the majority of souls are eventually purified through a process of purgation and thus have a natural claim to immortality, and that the Platonists usually offer proofs for immortality from the very nature of the soul, whereas the author of Wisdom places the emphasis not on this natural claim but on whether or not one has lived righteously. In so doing, however, he follows the same path pursued by Philo, who implies that only the souls of the wise enjoy immortality (*Quaes Gen* 1.16; *Op* 154; *Conf* 149). Both he

and Philo were undoubtedly influenced in this by biblical tradition, but at the same time could claim to be following the Stoic view adopted by Chrysippus, though without the latter's limitation on the preservation of wise souls only until the next world conflagration (*SVF* 2.809, 811).

The centrality of Wisdom's theory of immortality represents a new emphasis in the history of Jewish tradition, although it must be seen as part of a continuous development in Hellenistic Jewish thought. According to *1 En.* 102:5, the spirits of the righteous descend to sheol, but at the judgment will ascend to a life of joy as companions of the hosts of heaven (103:3–4; 104:6). *Jub.* 23:31 seems to presume an immediate assumption of the spirit, and in *T. Ash.* 6:5–6, the soul of the righteous is led by the angel of peace into eternal life. Finally, in *4 Maccabees*, roughly contemporary with Wisdom, the patriarchs are already in heaven ready to receive the souls of those who have died for the sake of God (7:19; 13:17; 16:25). Wisdom's doctrine of the preexistent soul, on the other hand, may be the earliest attestation of this teaching in Jewish literature (cf. *2 En.* 23:4–5; *2 Bar.* 23:5).

2. Eschatology. The author's eschatological descriptions form a sort of chiaroscuro, lacking any clear definition. He moves fitfully through alternating patches of darkness and light, almost deliberately blurring the points of transition. The picture which emerges is somewhat confused, but its broad outlines are nevertheless not difficult to draw. The just souls, after passing through the crucible of suffering during their earthly existence, are portrayed as being in the hand of God and perfectly at peace (either in some neutral zone in Hades, or more likely in Heaven). Conversely, the wicked who had oppressed their weaker brothers with apparent impunity, become ignominious carcasses, eternal objects of outrage among the dead. The picture is now abruptly transposed to the "moment of God's gracious dispensation," when the just will blaze forth and in contrast to their formerly passive though peaceful state, will be rendered eminently active. Taking his indignation as full armor, and employing the elemental forces of nature as his weapons, God will now devastate and smash the lawless kingdoms of the earth, thus inaugurating a new, transhistorical era of divine rule. Screened by the divine power, and in receipt of royal insignia of the highest majesty, the just souls (now clearly among the angelic hosts) will, as God's agents, judge the nations of the world, while enjoying an unsurpassed vision of the truth. But what was a gracious dispensation for the just will constitute the day of reckoning for the souls of the wicked, who are pictured as coming forward cringing to be convicted to their face by their own criminal acts. It is not clear, however, whether the wicked face a double judgment, one immediately after death, and a second one at the time of the gracious visitation of the just, or whether they are at first automatically hurled speechless into the depths of Hades, only later to face formal charges in the presence of their former victims.

3. Torah and Sophia. The central figure which strides across the book is Sophia or Dame Wisdom, appearing at first under a variety of names (chap. 1), then gradually coming into sharper focus, until she begins to dominate the stage completely (6:12ff.). But then she recedes into the background and merges almost imperceptibly with the Deity, only suddenly to emerge one last time in full power under one of her alternate titles (18:15). She is no innovation of the author of Wisdom, but had already made her appearance as a cosmic force in Proverbs (8:22–31; 1:20–33) and Job (28:12–28) under the guise of a charming female figure playing always before Yahweh, after having been created by Him at the beginning of His work (Prov 8:30).

The figure of Wisdom also has obvious roots in ANE myth. Hu and Sia, for example, are in Egyptian tradition the creative word and the understanding of the high god Re-Atum, personified and separated from their originator. Similarly, Egyptian Maat is a personification of the concept *maat* or right order in nature and society (originally a function of the high god) who became the daughter of Re, and was vouchsafed a cult of her own. According to one text, "Re has created Maat, he rejoices over her, he delights in her, his heart is joyful when he sees her" (Ringgren 1947:49–52; Kayatz 1966:93–119). Examples from the Akkadian sphere are Mešaru and Kettu, Righteousness and Right, who were sometimes conceived only as qualities of the sun-god or as gifts granted by him, and sometimes in a more concrete way as personal beings, independent deities (Ringgren 1947:53–58). We also have an early Semitic reference (6th century B.C.E.) to Wisdom who is dear to the gods in *The Words of Ahiqar* 94–95

(found at Elephantine):"For all time the kingdom is hers. In heaven is she established, for the lord of holy ones has exalted her" (*ANET,* 428).

Wisdom appears again in The Wisdom of Ben Sira (ca. 180 B.C.E.), a Jewish Palestinian work which, having been translated into Greek, left a distinct mark on Wisdom. Both books, for example, use virtually identical images to describe their authors' ardent pursuit of Wisdom, and both place a similar emphasis on God's mercy. Like Proverbs 8, Ben Sira describes Wisdom as having been created from the very beginning (1:4; 24:9), and as having been infused into all of God's works (1:9). She is further described as traversing the entire cosmos, but finally, at the divine behest, making her home in Israel, in God's beloved city of Jerusalem (24:3–12). More important, going beyond the book of Deuteronomy which had identified the laws of the Torah with wisdom (4:6), Ben Sira identified Wisdom with Torah (24:23), "as a result of which both were conceived together as a heavenly element which descended from heaven to take up its abode among the children of Israel" (Weinfeld 1972:256; cf. Collins 1977). The author thereby reached the uneasy compromise of a Divine Wisdom which pervades the cosmos, yet maintains its focus in Zion and in the teachings of the Torah, which thus achieves a new universal significance.

In Proverbs, Job, and Ben Sira, however, Wisdom is not yet strictly speaking an hypostasis as that term was broadly defined by Oesterley and Box (1911:169), i.e., "a quasi personification of certain attributes proper to God, occupying an intermediate position between personalities and abstract beings," since according to these texts she is only the first creation of God. In Philo and Wisdom, on the other hand, where Sophia is considered to be an eternal emanation of the Deity, we undoubtedly have a conception of her as a divine hypostasis, coeternal with Him.

In the light of this tradition of Wisdom speculation, it is no longer difficult to understand why the author of our text chose the Wisdom figure as the mediator of his own message to his contemporaries. She was the perfect bridge between the exclusive nationalist tradition of Israel and the universalist philosophical tradition which appealed so strongly to the Jewish youth of Roman Alexandria. Moreover, as Reese and Mack have recently shown, the author of Wisdom skillfully adapted the Isis aretalogies for his own use in describing Sophia (Reese 1970:36–50; Mack 1973:63–107). The cult of Isis and Sarapis was one of the most popular of the oriental religions from the 4th century B.C.E. to the 4th century C.E., though its peak of popularity was reached in the 2d century C.E. The goddess Isis was a savior and revealer, linked to the pursuit of wisdom and associated with the throne. In a relief of the Ptolemaic temple at Esna, she is said to give the king kingship "for the duration of eternity and perpetuity" (Sauneron 1962–1975:307, 24; cf. Wisdom 6:21). Like Sophia (Wisdom 8:4), she is called *mystis,* initiate, (*P. Oxy.* 1380.111); and, like Hu and Sia, she is an associate of Re, accompanying him in the sun bark and having complete knowledge of his workings. It may be noted that Gaius, who had decorated a room (the *Aula Isiaca*) in his palace on the Palatine with paintings depicting numerous Egyptian religious symbols, had built a temple to Isis, and had instituted Isiac mysteries in which he is said to have participated himself while dressed in female garb (*Ant* 19.1.1.5, 30). Cleopatra VII was said to have dressed as Isis and to have given audiences under the name of *Nea Isis* (Plut. *Vit. Ant.* 54; see Kloppenborg 1982). It was not only fitting, but also politic, for the author of Wisdom to reclaim the falsely appropriated *aretai* for Her to whom they truly belonged, the remythologized Sophia.

4. Logos and Sophia. The most remarkable feature about the author's description of Sophia is that he depicts her as an effluence or emanation of God's glory. Most Middle Platonists seem to have avoided such a conception, but it was apparently adopted by some of the neo-Pythag- oreans, and was clearly implied by Philo, who often "Pythagorizes," though in this case he may have gotten the notion from the Middle Stoa. Since, according to the writer, Wisdom pervades the entire cosmos and yet at the same time enjoys intimacy with God (7:24; 8:1, 3), it may be said that there is an aspect of God's essence in everything, including the human mind, which yet remains inseparable from God. The only thing comparable to this view in ancient Jewish thought is Philo's similar notion of an all-penetrating Divine Logos which reaches into each man's mind, thus converting it into an extension of the Divine Mind, albeit a very fragmentary one (*Quod Det* 90:*Gig* 27; *Leg All* I 37–38). Like Philo, too, the author of Wisdom evidently teaches that God created the world by means of Wisdom. Although this statement that "God

made all things by his word *(logo),* and through his wisdom *(sophia)* framed man" (9:1–2) is in itself ambiguous, since it is by no means clear that "word" and "wisdom" here refer to Logos/Sophia, the matter appears to be settled by the description of Wisdom as "chooser of God's works" (8:4). This phrase clearly implies that Wisdom is identical with the Divine Mind through which the Deity acts. In the light of this, the assertion that "with you is Wisdom who knows your works and was present when you created the world" (9:9) must signify that Wisdom contains the paradigmatic patterns of all things (cf. 9:8) and serves as the instrument of their creation.

5. Pursuing Wisdom. In depicting Sophia, the author is all aglow with a burning enthusiasm that fills the verses dealing directly with her with a luminous and passionate intensity. His confident words convey a conviction, evidently confirmed by his personal experience, that Wisdom is easily found by those who seek her, to the point of even anticipating them in their search (6:12–16). He speaks of his love for her and his seeking to make her his bride so that he might live with her (8:9; 7:28; 8:16). It is noteworthy that the terms of the description of Wisdom's union with God correspond very closely to those of the description of the student's union with Wisdom. This undoubtedly implies that man's ultimate goal is union with God, which may, however, be achieved only through union with his Wisdom, which is but one of his aspects (*TDNT* 7:499). This union with Sophia is possible because of man's kinship with her (8:17), through his possession of a mind permeated by the intelligent spirit of Wisdom (7:23–24). But if Wisdom is already present in man's mind, as she is indeed in every part of the universe, what is the significance of man's hot pursuit of her and the need for special supplication to the Lord to send her down from his heavenly throne (9:10)? We have already seen that Wisdom is both immanent and transcendent (she pervades the universe, yet remains in unbroken union with God), so that both forms of description may easily be interchanged depending on the particular focus of the writer. The Neoplatonist Proclus later provides a concise expression of this bifocal perspective: "The gods are present alike to all things; not all things, however are present alike to the gods, but each order has a share in their presence proportioned to its station and capacity, some things receiving them as unities and others as manifolds, some perpetually and others for a time, some incorporeally and others through the body" (*Elements* 142). From the human viewpoint, the Divine Wisdom enters man and departs; from the eternal perspective of God, however, it is ever present to man, though its consummation in any particular case is conditioned by the fitness of the recipient. Hence our author speaks in no uncertain terms of "desire for instruction" (6:17), "training in Wisdom's society" (8:18), and the need for predawn vigilance on her behalf (6:14–15).

The author's highly charged language with reference to Sophia seems to allude to a mystical encounter, and although the more precise delineation of the nature of this type of encounter which is afforded by Philo is missing in Wisdom, the latter's description seems more intensely personal and therefore less likely to be a purely intellectual exercise.

6. The Nature and Efficacy of Wisdom. As the Divine Mind immanent within the universe and guiding and controlling all its dynamic operations, Wisdom represents the entire range of natural science, in addition to the arts, rhetoric, and philosophy. She is man's counselor and comforter and bestows riches and glory on her own, though her greatest boon is the gift of immortality (7:16–21; 14:2; 8:7–13). Above all, she is synonymous with Divine Providence, controlling historical events, and in each generation guiding the friends of God and inspiring his prophets (7:27; 14:3). Unlike Ben Sira, the author of Wisdom nowhere explicitly identifies Wisdom with Torah, and aside from a marginal reference in 18:9 to the Passover sacrifice, makes no mention of the sacrificial cult. Wisdom is conceived by him as a direct bearer of revelation, functioning through the workings of the human mind, and supreme arbiter of all values. She is clearly the Archetypal Torah, of which the Mosaic Torah is but an image. When he insists that unless God send his Wisdom down from on high men would not comprehend God's will (9:17), he is certainly implying that the Torah is in need of further interpretation which Wisdom alone is able to provide. Here, the author closely approaches the position of Philo of Alexandria, in whose view, even before the Sinaitic Revelation, the Patriarchs were already constituted *nomoi empsychoi*, living embodiments of Wisdom. In Wisdom 10, Sophia had similarly already served as a personal Guide to six righteous heroes who lived before the Sinaitic Revelation. An echo of this notion may later be found in

the statement of Rabbi Avin (4th century) that the Torah is an incomplete form of the Supernal Wisdom (*Gen. Rab.* 17.5; 44.12, Theodor-Albeck: 157, 239).

7. Universalism and Particularism. Twice Wisdom is described as *philanthrōpos,* humane or benevolent (1:6; 7:23), and in 12:19 we are told that God's mercy is a model-lesson for Israel, teaching them that the righteous man must be humane. God loves all that exists, loathing nothing that he has created (11:24), and as the lover of all that lives, he spares all. We have here a faint intimation of the Middle Stoic doctrine of *philanthrōpia,* which is fully elaborated in the writings of Philo. The special kinship between God and man, based on the notion of a Divine Logos at once immanent and transcendent, led inevitably to the concept of the unity of man. In this case, as it often happened, a native Jewish idea had converged with a Greek philosophical conception. Going beyond the negative formulation of justice which forbids one individual to injure another, the Stoic Panaetius advanced the positive definition of it as an active beneficence which forms the bond of society (Cicero *Off.* 1.20–22). Following Panaetius, Philo, too, emphasized the positive aspect of justice as an active beneficence (*Virt* 166–70). This quality was epitomized by him in the word *philanthrōpia.* In a section of his treatise *De Virtutibus* devoted to *philanthrōpia* (51–174), Philo pointed out that it had *eusebeia,* piety, as its sister and twin, for the love of God involves the love of man, inasmuch as man "through that higher part of his being, namely, the soul, is most nearly akin to heaven and also the Father of the World" (*Dec* 134).

Many commentators find the "undisguised particularism" of Part III of Wisdom, where God appears "as partial to the Jews and inimical to their enemies" (Reider 1957:41), and the verses regarding the innate viciousness of the Canaanites and their primal accursedness (12:10–11) irreconcilable with the universalism encapsulated in the adjective *philanthrōpon.* It is evident, however, that the ancient Egyptians and Canaanites merely served the author as symbols for the hated Alexandrians and Romans of his own day, upon whom he visited an apocalyptic vengeance in chap. 5. The intense hatred breathed in Part III can only be understood in the light of contemporary conditions. Finding himself in similar conditions, Philo, who has a much more elaborate doctrine of *philanthrōpia* and is always at great pains to tone down Jewish particularism, is nevertheless quite capable not only of depicting the future divine punishment of Israel's enemies, but also of setting God's people apart as the special concern of the Deity who employs the Romans as pawns in his larger historical plan (*Praem* 169–72). This is not to deny that there is a certain degree of tension between the universalist and particularist tendencies both in Philo and in Wisdom, but it is not distinctly more pronounced in the latter than it is in the former.

H. Purpose

The author is primarily addressing his fellow Jews in an effort to encourage them to take pride in their traditional faith. He seeks to convince them that their way of life, rooted in the worship of the one true God, is of an incomparably higher order than that of their pagan neighbors, whose idolatrous polytheism had sunk them into the mire of immorality. Moreover, he attempts to justify their present suffering through the promise of immortality as a reward for their steadfast perseverance in the pursuit of righteousness. His accusing finger is especially pointed, however, at the pagan kings, i.e., the Roman rulers, who have abandoned the principles of divine justice and who will therefore suffer the consequences of their lawlessness. Following the philosophy of Greco–Roman kingship tracts, he insists that the king, above all, must pursue wisdom (6:21, 24). At the same time, the author naturally tones down the divine nature to which the pagan writers sought to assimilate the king. He emphasizes instead the king's lowly and mortal origins (7:1–5; 9:5).

Moreover, the Greco–Roman doctrines of kingship, as indeed all the high philosophic ideals of Greek thought, are identified by the author with the teachings of Judaism. Indeed, the philosophical tendency of the book is marked by the Stoicizing Platonism, characteristic of the middle Platonic tradition. By representing Judaism in intellectually respectable terms, he sought to shore up the faith against hostile and anti-Semitic attacks from without and gnawing doubts from within, and through a determined counterattack against the immoral pagan world which he threatened with divine retribution he attempted to revive the flagging spirits of his hard-pressed people. Finally, it must be said that in addition to the social and political factors which stimulated the author to write the book, we must reckon above all with

his unbounded love and enthusiasm for wisdom, which verged on the mystical, and lent to his writing (at least to its central part) an extraordinary degree of intellectual excitement as appealing today as when the book first left its author's study.

I. Manuscripts and Versions

The best critical edition is the text published by Joseph Ziegler as part of the Göttingen LXX in 1962. The text of Wisdom is well preserved, in whole or in part, in five uncial manuscripts: A or codex Alexandrinus (London, British Museum), 5th century; B or codex Vaticanus (Rome, Vatican Library), 4th century; C or codex Ephraemi Syri rescriptus (Paris, Bibliothèque Nationale), 5th century (a palimpsest written over by St. Ephraem in the 12th century, and containing only a part of Wisdom); S or codex Sinaiticus (the "Leningrad" text, now in the British Museum), 4th century; V or codex Venetus (Venice, Library of St. Mark), 8th century (important for its witness to many Origenic readings). According to Ziegler, the original form of the text of Wisdom is best transmitted through the uncials B and S (which are so closely related that Ziegler treats them as a single witness, B–S) and A. When these manuscripts agree and are followed by most of the minuscules, we may be certain of the correct reading of the text.

The book is known as The Wisdom of Solomon in manuscripts A, B, S, and V (B: *Sophia Salōmōnos;* A and V: *S. Solomōntos;* S: *S. Salomōntos*). In the Syriac Peshitta version, it is known as the "Book of the Great Wisdom *(Hakmeta Rabba)* of Solomon, son of David." In the Vetus Latina, it is simply *Liber Sapientiae,* "Book of Wisdom."

For textual criticism, the most useful of the versions is the Vetus Latina, originating in Africa in the second half of the 2d century. Its importance lies in the fact that it represents the reading of Gk mss earlier than any that have come down to us. Of the Coptic translations, we have the complete text of Wisdom only in the Sahidic dialect, transmitted through two good manuscripts from the 6th–7th centuries, and published respectively by Paul de Lagarde (1883) and Sir Herbert Thompson (1908). There are also three Syriac versions, an Old Ethiopic (Geʿez) translation, an Arabic translation, and an Armenian version.

J. Status and Influence

In the Sinaitic and Alexandrian codices, Wisdom stands between the Song of Songs and Ben Sira, with the prophetic books following. The sapiential books thus hold an intermediate position between the historical and prophetic. St. Jerome recognized that Wisdom was a pseudepigraphon and placed it among those books formally excluded from the Canon (*PL* 28:124). St. Augustine, who quotes Wisdom close to 800 times, at first attributed it to Ben Sira but later declared the author to be unknown. In his *De Praedestinatione Sanctorum* 14.26–29, he nevertheless came out in favor of the canonicity of Wisdom. The Council of Trent (1545–63), decided the issue of canonicity raised by the reformers by decreeing the book's canonical status. For the Greek Church, the Synod of Jerusalem in 1672 introduced Wisdom and other deuterocanonical books to a place in Holy Scripture. From the time of the Reformation, Protestant Churches, following the example of Luther, separated the so-called Apocryphal books from the rest of the Scripture.

The oldest reference to Wisdom appears to be in Clement of Rome's *Epistle to the Corinthians* 27 (end of the 1st century). Irenaeus (*Adv. Haer.* 4.38.3) alludes to Wisdom 6:19, and according to Eusebius (*Hist. Eccl.* 5.26) he mentioned, in a book now lost, Hebrews and Wisdom, quoting passages from both. Wisdom is explicitly mentioned in the *Muratori Canon* (ca. 200):"Further an epistle of Jude and two with the title John are accepted in the Catholic Church, and the Wisdom written by friends of Solomon in his honor" (68–70). In the African Church, the first explicit use of Wisdom is in Tertullian *Adv. Valent.* 2.2, where the Sophia of the Valentinians is contrasted with the true Sophia of Solomon.

Origen admits that Wisdom "is not held by all to have authority" (*Princ.* 4.4.6), but he himself uses it freely. In *Princ.* 1.2.9, he provides an elaborate explanation of the christological meaning of Wisdom 7:25–26. Similarly, Dionysius of Alexandria (3d century), a pupil of Origen, appeals to Wisdom 7:26 to prove a point. (For detailed discussion, see Grant 1967:70–82; Larcher 1969:36–63.)

Finally, we must note the close affinities that exist between the *Teachings of Silvanus* (late 2d or early 3d century), the only non-Gnostic document in Codex VII of Nag Hammadi, and Jewish wisdom

literature, particularly Wisdom. In one of Silvanus' hymns we have an explicit allusion to Wisdom 7:25–26 (113) (see Schoedel 1975:169–99). For further discussion, see Winston *The Wisdom of Solomon* AB.

DAVID WINSTON

SON. See FAMILY.

SON OF GOD. An honorific whose history began ca. 3000 B.C.E. In the biblical period, the title suggested a variety of ideas according to its different adaptations.

A. "Son of God" in the OT

1. The King

2. The People of God

3. The Heavenly Hosts
B. "Son of God" in Non-Christian Jewish Literature
1. The Case of the Messiah
2. The Righteous of the People
3. Charismatic Individuals
4. An Exalted Angel
C. "Son of God" in the Greco–Roman World
1. The Hero
2. The "Divine Man"
3. The Ruler
D. "Son of God" in the NT
1. The Case of the Historical Jesus
2. The "Son of God" as the Heavenly Messiah
3. Installation as "Son of God" on Earth
4. The Sending of the Preexistent "Son of God" from Heaven
5. The Use of the Title by Individual NT Authors

A. "Son of God" in the OT

1. The King. In the entire Near East, the king could be called "Son of God" or even "God." Pharaoh was the "Good God" (Moret 1902:296). The first of the five "great names" which he received upon his enthronement was "Horus," an old title designating him as the earthly manifestation of the falcon god Horus, the ancient dynastic god of Egypt (Gardiner 1957:72). His incarnation was assumed: "He descended from heaven and was born in Heliopolis" (Erman 1923:340).

The Semitic rulers of Akkad (ca. 2350–2150 B.C.E.) claimed divinity for themselves. Thus, Naram-Sin styled himself *ilu-A-ga-de,* "God of Akkad" (Radau 1899:7). Following the example of the Akkadian rulers, the kings in the ensuing period of Sumerian renaissance had their names prefixed by the determinative for divinity (Dhorme 1910:170). They even enjoyed worship (Römer 1969:146). Bursin called himself "the rightful God, the Sun of his country" (Radau 1900:199, 201). The old titulary continued to apply to the later Semitic rulers. Thus, Hammurabi was the "God" *(ilu)* and "Sun" of his people (Dhorme 1910:170), and his name was occasionally prefixed by the determinative for divinity (Edzard 1965:257–58).

The Syrian kings possibly claimed divinity for themselves. Ezek 28:2, 9 mocks the king of Tyre for claiming to be divine and occupying the throne of *ʾĕlōhîm,* "God." According to Virgil (*Aen.* 1:729 with Servius' note) and Silius Italicus (*Pun.* 1:86), the kings of Tyre traced their descent to Baal. Frazer (1961:15–16) argued that the old rulers of Tyre and Damascus, as well as the kings of Edom, were regarded as divine, since their proper names were composed of names of gods, or were simply names of deities. We know that at least the later Seleucide rulers of Syria claimed to be *theos,* "God" (see below, sec. C.3). Morgenstern (1960:138–76) argues that they continued old rituals in which the king enacted the role of the sun god. Josephus (*Ant* 9.4.6) reports a worship of the deceased rulers of Damascus in his day.

The Israelite king could also be called *ʾĕlōhîm,* "God" (Ps 45:6 [for attempts to explain this away, see Fohrer *TDNT* 8:349, n. 91]). Among the five names of the royal child who is to sit on David's throne, we find *ʾēl gibbôr,* "Mighty God" (Isa 9:6). In Ps 89:28—Eng v 27, the king is said to be the "Highest" *(ʿelyôn)* of the kings, which is a divine name (cf. Hammurabi's title, *i-lu sar-ri,* "God of kings" [Code, recto III: 16]). The parallel in the verse is "firstborn" of God.

It was more common to refer to the king in Israel-Judah as the "Son of God." This was a royal title throughout the ANE. From the 1st Dyn. (ca. 3000 B.C.E.), the pharaohs were regarded as the "sons of Isis," and were represented as being suckled by her and sitting on her lap. The last of pharaoh's royal names was "Son of Re," which he bore from the 4th Dyn. (ca. 2500 B.C.E.) onwards (Gardiner 1957:74). The title indicated that he was the physical offspring of the sun god, as is shown in particular by the

evidence from Deir el-Bahri, where Amon-Re is represented as having united sexually with pharaoh's mother (Sethe 1914:102–3).

In an inscription for Ramesses II, God says: "I am your Father, who has engendered you as god in order that you be king of Upper and Lower Egypt on My throne" (Roeder 1915:158–59). Pharaoh ruled in the place of his divine father. He obviously had to answer for his father's possessions with which he had been entrusted.

Beginning with the Sumerian king Mesilim of Kish, the Mesopotamian ruler was seen as the "son" or "child" of his god or goddess (Sjöberg 1972:87–112). The king is said expressly to have been "born" of the deity, and we should obviously understand this sonship in physical terms. Abisare of Larsa is said to be the "Pride of his physical Father" *(giri$_x$-zal-a-a-ugu-na),* the god Enlil (Sjöberg 1972:96–97). The male god could also be said to have implanted his seed into the womb of the king's mother, a goddess or a priestess representing her (Sjöberg 1972:88, 93).

In the Canaanite epic about Keret, the king is called the "Son of El," and it is implied that as one of the "gods" he is not supposed to die. This is "a projection of cultic terminology" used to enhance the royal office and person (Gray 1964:66–67).

In the Nathan prophecy in 2 Samuel 7, the relationship between God and the Israelite–Judean king (David's "seed") is described as a father–son relationship (v 14; cf. 1 Chr 17:13; 22:10; 28:6). In Ps 89:27–28—Eng vv 26–27, God is the "Father" of the king, his "firstborn." The king was "born" from God when he was installed, as is made clear by the declarations of Yahweh in two Psalms which were used as liturgical texts at the enthronement ceremony: "You are My Son; this day I have begotten thee" (2:7); "In holy ornament out of the womb of Dawn, I have fathered thee as Dew" (110:3; Mowinckel 1955:235–36; Widengren 1976:186).

It has been argued that Ps 2:7 ("today") implies that the "Egyptian idea of physical sonship is changed into a legal one" (*TDNT* 8:351). However, since pharaoh is seen as divine primarily in his role as ruler, the thought in Ps 2:7 is not really dissimilar (*RGG* 6:118). The enthronement was the definitive act of begetting or deification in Egypt too (Preisigke 1920:13–14). The technical term is *smen,* which corresponds to the verb in Ps 2:6, "I have set *(nosaktî)* My king on Zion, My holy hill." This is a parallel to the "birth" in the next verse. "The new Pharaoh does not exist, theologically speaking, until he has received … all the magico-religious consecrations which transform him into a living incarnation of Ra …" (*ERE* 7:712). Thus, Thutmosis III can say that he is God's "Son, whom He commanded that should be upon His throne … and begat in uprightness of heart" (Breasted *ARE* 1:59). The birth occurs after the call to the throne.

In Mesopotamia, too, the king was "born" on the day of his enthronement. In a description of the enthronement of Shulgi, it is said: "The En-priestess bore a good man, who had been placed in (her) womb. Enlil, the Mighty Shepherd, made the youth stand forth, a son, who is well suited for kingship and the throne" (Sjöberg 1972:104–5, with a slight change). A description of Shulgi being given the royal insignia follows. At the coronation, the birth of the king was cultically enacted. Sjöberg (1972:107) also refers to a word of Gudea to the goddess Gatumdu: "My seed [i.e., the seed of my Father] You have received; in the sanctuary, You have begotten me."

"Dawn" (Shahar) in Ps 110:3 corresponds to Gatumdu in the prayer of Gudea (cf. Isa 14:12, where Shahar is the mother of the Babylonian king). In the text about the enthronement of Shulgi, the goddess is represented by the En-priestess. In Ps 110:3, Yahweh has taken the place of Shalem, who is the consort of Shahar in Ugarit. Shalem is really identical with El Elyon, the old city god of Jerusalem with whom Yahweh was merged (Gen 14:18–20, 22; Isa 14:14). Ps 110:3 thus sets forth the king's birth as "Dew," an Ugaritic divine name *(ṭly),* from Shahar and Shalem-El Elyon-Yahweh (cf. the description of the king in Ps 72:6).

The Nathan prophecy guarantees the perpetuity of the Davidic Dynasty (2 Sam 7:16). This promise gave rise to "messianic" expectations (Isa 7:14–17 [a prophecy based on Egyptian and Canaanite oracles about the birth of the royal child from the queen, a representative of the goddess]; 9:6–7 [an oracle

showing influence from the Egyptian royal titulary in the five names of the child who is to occupy the Davidic throne]).

2. The People of God. Israel is also called God's "Son" (Exod 4:22–23; Jer 31:9, 20; Hos 11:1). God is the "Father" of the people (Deut 32:6 [cf. v 18, where God is said to have "engendered" Israel]; Jer 3:4, 19; 31:9; cf. Isa 63:16; 64:7; Mal 2:10). All the individuals of the people are therefore God's "sons" and "daughters," or "children" (Deut 14:1; 32:5, 19; Isa 30:1; 43:6; 45:11; Ezek 16:20–21; Hos 2:1). This usage of the name "Son(s)" of God designates Israel as God's chosen and protected people. The Israelites are obliged to respond to the divine mercy by serving God in subordinate and dutiful obedience (*TDNT* 8:352).

3. The Heavenly Hosts. The Israelites took over the Canaanite concept of an assembly of gods under the supremacy of El, even designating Yahweh as the "master in the great council of the holy ones" by the name of the Canaanite high god (Ps 89:8—Eng v 7). These "holy ones," an Ugaritic term for "gods" (*TDNT* 8:347, n. 79), could also be called "sons of gods," as is shown by the parallelism in Ps 89:6–7 (cf. 29:1).

Since the latter term according to usual Hebrew idiom means "gods" (cf. Exod 15:11, where "gods" and "holy ones" are in parallelism, and Ps 82:1, 6, where the "assembly of El" is said to be constituted by "gods"), there were made attempts at suppressing it. In Gen 6:2, the Rescriptor of LXX A has substituted "angels" for "sons." Instead of "sons," the LXX reads "angels" in Job 1:6; 2:1; 38:7. In Dan 3:25, the LXX (3:93) reads "angel of God," whereas the MT has "son of God." In Ps 89:7, the Targum reads "angels" instead of "sons of God."

In Deut 32:8, the MT reads "sons of Israel," while the LXX has "angels of God." A fragment from 4Q, however, reads *bny ʾl* …, which obviously represents the original text.

In Deut 32:43, the MT reads: "Praise His people, O ye nations." The LXX is very different: "Rejoice ye heavens, and let all the angels of God worship Him." The Gk text goes on: "… and let all the sons of God strengthen themselves in Him." The MT omits these words. The Qumran text, however, has preserved the original: "Rejoice, O ye heavens with Him, and all ye gods worship Him."

There can be no doubt that the "sons" of God were no mere servants of God, as the substitution "angels" endeavors to purport. In Gen 6:1–4, we find a repugnant myth to the effect that the "sons of God" once descended from heaven and had intercourse with women. Psalm 82 appears to reflect a myth about the high god judging certain arrogant "gods, sons of the Most High" (v 6), in the divine assembly (Cooke 1964:29–34).

B. "Son of God" in Non-Christian Jewish Literature

1. The Case of the Messiah. In the Latin and Syriac versions of *4 Ezra,* God refers to the Messiah as "My Son" (7:28–29; 13:32, 37, 52; 14:9 [in some of these passages, the Copt, Eth, and Arab versions have the same reading or a similar one, "child" or "young man"]). The Gk text, upon which the other translations are based, reads *pais,* which means "servant" as well as "son," and the former appears to be the most appropriate in the lost Semitic original. However, it must be noted that idea of the king as God's "servant" was associated with that of his divine sonship. In a text about Ashurbanipal, "servant" and "son" are found in parallelism (Dhorme 1910:166–67). The two terms as royal titles are closely associated in the OT (2 Sam 7:4, 8; Ps 89:21, 27–28—Eng vv 20, 26–27). In the description of the righteous in Wis 2:12–20, divine sonship and service are associated. The ambiguity of the Gk version of *4 Ezra* may thus be regarded as having been made by deliberate choice.

In God's promise to Levi in *T. Levi* 4:2, it is said that the patriarch will become God's "Son" *(hyios)* and the "Minister *(therapōn)* and Priest *(leitourgos)* of His Presence." In chap. 8, there is a description of Levi's installation as the priestly Messiah, but the patriarch receives also royal insignia, a crown and a scepter ("staff of equity," the name of the king's scepter in Ps 45:7—Eng v 6). In 18:6, it is said: "The heavens will be opened, and from the temple of glory, sanctification will come upon him, with a fatherly voice, as from Abraham to Isaac. And the glory of the Most High shall burst forth upon him. And the spirit of understanding and sanctification shall rest upon him" (in the water [probably a Christian

interpolation based on Mark 1:9–11]). Here we find a clear reference to Isa 11:2, which describes the Spirit of God which is to "rest upon" the future king as the "spirit of wisdom and understanding."

Thus, although "Son of God" appears as a priestly title in Syriac inscriptions (Harris 1914:108–13), the evidence of the *Testament of Levi* should be interpreted in the light of the old idea that the high priestly office really belonged to the king (Gen 14:18; Ps 110:4). When the kingship ceased to exist, many of the ruler's functions and paraphenalia were transferred to the high priest (cf. Zech 6:9–14, where the "messianic" prophecy about Zerubbabel, the Davidide who was the Persian governor of Palestine, has been transferred to the high priest Joshua). In later periods of messianic expectations, we therefore often find a priestly Messiah as well as a royal one, even within the same body of literature. Thus, the *Testaments of the Twelve Patriarchs* also know the figure of the royal Messiah. In *T. Jud.* 24:2–3, there is a prophecy about the kingly Messiah from the house of Judah which is similar to the prophecy about the priestly Messiah from the house of Levi: "And the heavens will be opened upon him to pour out the spirit as a blessing of the Holy Father."

The immediate continuation adds a similar prophecy about the people, who are called God's "sons":"And He will pour the spirit of grace upon you. And you shall be His sons in truth […]."

In the Ethiopic version of *1 Enoch* 105:2, God calls the Messiah "My Son." Chap. 105 is not found among the Greek fragments, but the Aramaic original does seem to contain it (Milik and Black 1971:208).

In 1QSa 2:11–12, there may be found a reference to the birth of the Messiah as the fulfillment of the words of God in Ps 2:7. But the text may be read in different ways. In any case, the term "Son" is not used.

The Qumran sectarians also took the "Son" of God in 2 Sam 7:14 to be the "shoot of David," i.e., the Messiah, who is to reveal himself "on Zion at the end of the days, as it is written, 'And I will raise up the fallen booth of David' " (4QFlor 1:11–13, quoting Amos 9:11a). A little below, the text quotes Psalm 2, but unfortunately breaks off before v 7.

In a fragment from a presumable Daniel apocryphon (4QPs Dan A^a = 4Q 243), the title "Son of God" is several times applied to a certain king who is to rule over all the world. Fitzmyer (1973–74:391–94) takes this to refer to a Jewish ruler, but further work on the text is still necessary.

In rabbinic Judaism, the Messiah could be called "Son of God," the oldest tradition being a citation of Ps 2:7 found in a baraitha in *Sukk.* 52a. R. Nathan (ca. 160) is cited as having referred Ps 89:27, where the king is God's "firstborn," to the Messiah (*Exod. Rab.* 19:7). Mekhilta *Exod.* 7 (48b [ad 15:9]) calls the Messiah the "Son of the King."

Other rabbinic instances are from the age of the Amoraim. There can also be found rabbinic polemics against the idea of Jesus as the "Son of God." The Christological use of Ps 2:7 may explain the rabbinic reluctance of referring the text to the Messiah.

2. The Righteous of the People. The designation of the people of Israel as the "son" or even "sons" or "children" of God (cf. God as the begetter of the people in *Sib. Or.* 3:726) can be found down to the period of the rabbis (Delling 1977:18–28). But the collective usage of the term was also narrowed down: God's "sons" were the righteous among the people. Sir 4:10 (Heb) says that the one treating orphans and widows compassionately will be "like a son of the Most High." The righteous thus calls upon God as his "Father" (23:1, 4; 51:10 [Heb]). According to Wis 5:5, the righteous man who is persecuted and killed by the godless is counted among God's "sons," i.e., angels, after death. But already on earth, he calls God his "Father" (2:16; 14:3) and is his "son" (2:18).

Although Philo refers to Deut 13:19 [—Eng 13:18] –14:1 when discussing the possibility of becoming "sons" of God, it is clear that this is only a formal reference and that Philo does not regard membership of the people of Israel as a requisite for being God's "son." Only the good and wise is the "son" of God (*Spec Leg* I 318; *Quaes Gen* I 92) or his adopted "son" (*Sobr* 56–57). He is born spiritually by God (*Vita Mos* II. 209–10; *Quaes Exod* II. 46). If people cannot become "sons" of God, they should at least try to become children of "His invisible Image, the most holy Word […]" (*Conf* 62, 146).

For the rabbis, sonship was dependent upon the observance of the Law (*TDNT* 8:359–60; Delling 1977:26). The thought is implied already in *Jub.* 1:24 (Delling 1977:19–20).

3. Charismatic Individuals. In Samaritanism, Moses is the "Son of the house of God," a title which characterizes him as belonging to the angelic dynasty. Being the "Elohim from humankind" (cf. Exod 7:1, where God says to Moses: "I make you as God [*ʾĕlōhîm*] to Pharaoh"), Moses is actually the highest among the angelic sons of God (Fossum 1985:122, 123–29, 150–51). R. Jose ben Halafta (2d century) says that since God calls Moses "faithful in all His house" (cf. Num 12:7), "he ranks higher than the ministering angels" (*Sifre Num.* 110).

In the *Death of Moses,* God addresses Moses as "My Son" and even says: "I am God, and you are God" (Jellinek 1967:121 and 119). Already in the drama *Exagogē* by Ezekiel the Tragedian, God addresses Moses as "My Son" (line 100).

Honi the miracle-worker is reported to have spoken to God as follows: "Your sons have turned to me, because I am a Son of Your house" (*m. Taʿan.* 3:8). To be a "Son of the house of God," i.e., belong to the angelic family, implies a higher status than being a "son" of God, i.e., a (righteous) Jew.

Rab (3d century) is reported as having said: "Day by day, a *bath gol* was heard saying: 'The entire universe exists on account of My Son Hanina […]' " (*Taʿan.* 24b; *Ber.* 17b; *Ḥul.* 86a). Since the entire universe is sustained because of the Galilean ḥasid, Hanina ben Dosa, it is clear that his divine sonship implies far more than the sonship of the righteous who fulfill the will of God.

When R. Ishmael in his unhistorical role as high priest entered the Holy of Holies on the Day of Atonement, he saw Akatriel Yah (a name of God or, as is the case in later mystical literature, his human-like manifestation) being seated on a throne and addressing him as follows: "Ishmael, My Son, give me your praise" (*Ber.* 7a). In *3 Enoch,* where Ishmael is a type of the mystic who ascends to heaven, God says that Ishmael is "My Son, My Friend, My Beloved, and My Glory" (1:8). The mystic who draws near to God is called his "Son."

In the Hellenistic Jewish romance *Joseph and Asenath,* Joseph is called "Son of God" (6:3, 5; 13:13) and God's "firstborn Son" (18:11; 24:4 [cf. 23:10, "like the firstborn Son of God"]). The people of Israel or the righteous in general are called "sons" of God (16:14; 19:8), but Joseph is far more than a righteous Jew. He is attired like a king (5:4–6); people prostrate themselves before him (5:7); he is called the "sun from heaven" (6:2); and he is said to be of great beauty and possess omniscience "because of the great light that is inside him" (6:6).

Hengel (1976:44, n. 87) compares this picture of Joseph to that of Abel in *T. Ab.* chap. 13, where the latter is the heavenly judge of the souls, sitting on a crystal throne which blazes like fire. He is described as a "wondrous man shining like the sun, like unto a son of God *(homoios hyiō theou)*" (Recension A).

The comparison of Abel to "a son of God" may in fact imply more than a comparison to an angel, for the vision is quite similar to that of the "Great Glory" in *1 Enoch* 14, which, in turn, clearly recalls Ezekiel 1. That the image of the enthroned "man" in heaven draws on the portrait of the Glory is seen in the preceding sec. of the *Testament of Abraham*. In chap. 11, Adam is described as an "all-marvellous man" sitting on a golden throne at the gate of paradise. This is the place occupied by Akatriel Yahweh in the *Mystery of Sandalphon.* The *Testament of Abraham* says that the "appearance of the man *(hē idea tou anthrōpou)* was fearsome, like that of the Lord." This obviously alludes to Ezek 1:26 LXX, where the Glory upon the heavenly throne is said to possess a "likeness as the appearance of a man" *(homoiōma hōs eidos anthrōpou*) (Fossum 1985:276).

4. An Exalted Angel. In *3 Enoch,* Enoch ascends to heaven and is transformed into the angel Metatron, God's vicegerent, who is enthroned before God's hall (10:2z; 48[C]:8). God says: "Every secret I revealed to him as a father […]" (48[C]:7). Enoch-Metatron is called by several epithets of honor, even being given the name "the Little Yahweh" (12:5; 48[C]:7; 48[D]:1), but "Son (of God)" is not found.

In a fragment of the *Prayer of Joseph,* we come across a representation of an angel by the name of Israel, who is said to be a "ruling Spirit," the "Firstborn of every living thing," the "Archangel of the power of the Lord," the "Chief Captain among the sons of God," and the "First of those who serve before the Face of the Lord" (Or. *Jo.* 2:31). That the angel is said to be the "Firstborn of every living thing" derives from an exegesis of Exod 4:22, where God says: "Israel is My firstborn son." This verse could be referred to the patriarch Jacob, who was given the name Israel by God (*Jub.* 19:29; *Exod. Rab.* 19:7; *3 En.*

44:10). In the *Pr. Jos.*, the preexistent angel Israel, who is the chief "among the sons of God," explicitly identifies himself as having become manifested in the patriarch: "[…] I, Jacob, whom men call 'Jacob,' but whose name is 'Israel' […]."

Further evidence for the idea of a preexistent angelic Son of God may be found in the synagogal prayers which are imbedded in Books Seven and Eight of the *Apostolic Constitutions.* In the first prayer, God is thanked because of all the gifts he "gave to us through Jesus, Your Son" (7:26:3). The name "Jesus" is of course an interpolation, but perhaps not "through Your Son." The "Son" is possibly identical with the divine "Name" which God caused to dwell among the people (v 2; cf. Deut 12:5, 11). The intermediary may also have been present in the original version as the mediator of the work of creation (v 4).

In another prayer, it is said that God brought everything into being through his "only Son" (8:12:9). The continuation describes him as having been born before all ages, and characterizes him as "Divine Word, Living Wisdom, Firstborn of all creation, Angel of Your great counsel [cf. Isa 9:6 LXX], Your High Priest, both King and Lord of intelligible and perceptible nature, the one before all things, through whom are all things" (vv 9–11).

Although the possibility of a Christian redaction cannot be ruled out, it must be noted that Philo furnishes evidence for the usage of titles such as these in representations of the intermediary in Hellenistic Judaism. In one passage, the Alexandrian Jewish philosopher heaps various epithets upon the intermediary: "[…] God's Firstborn, the Word, who holds the eldership among the angels, their ruler as it were. And many names are his, for he is called 'Beginning,' 'Name of God,' His 'Word,' 'Man after His image,' and 'He that sees,' i.e., 'Israel' " (*Conf* 146). In another text, Wisdom (Sophia) is called "Beginning," "Image," and "Vision of God" (*Leg All* I: 43). The intermediary is also "High Priest" (*Migr* 102; *Fuga* 108–18; *Somn* 1:215; 2:183).

The many-named intermediary is also said to be God's "Son":he is God's "true Word and firstborn Son," who oversees the heavenly bodies whose courses regulate the life of the universe, "like a viceroy of a great king" (*Agr* 51); "the incorporeal Man, who is no other than the divine Image, [is] His eldest Son, whom He elsewhere calls 'Firstborn' and the 'Begotten One' […]" (*Conf* 62–63).

Philo also calls the material world God's "younger son," who can teach people about God (*Quod Deus* 31–32; *Ebr* 30; *Cher* 43–45). The "eldest and firstborn Son" is the "Word," which now is seen as the spiritual world of ideas. In this particular construal of the intermediary, a Platonic influence is seen at work, but there can be no doubt that one of the facets of the Philonic intermediary is an adaptation of a Jewish angelic figure with many names, one of which is "Son of God."

Pre-Christian evidence for this intermediary is also found in Sophianism. Wisdom is merged with the figure of the principal angel (Sir 24:4; Wisdom 10 [Fossum 1987:231, 236–37]), the hypostatized word of God (Wis 9:1–2), and the divine Spirit (Sir 24:3, 5–6; Wis 9:10, 17 [cf. the merger of word and angel in 18:15–6]).

Sophia is the daughter of God, having been brought forth by him (Prov 8:22–25; Sir 24:3; Wis 7:25; Philo, *Fuga* 50; *Virt* 62; *Quaes Gen* 4:97; cf. *Cher* 49–50). She can also be portrayed as God's wife (Wis 8:3; Philo, *Cher* 49–50), who shares his throne in the manner of the Near Eastern ruler (Wis 9:4, 10 [for Pharaoh as God's *synthronos*, see Widengren 1976:187, n. 8; for the Israelite king, see 1 Chr 28:5; 2 Chr 9:8; cf. Ps 80:1]).

A survey of some later evidence does not seem irrelevant. Justin Martyr is seen to be indebted to a Judaism like that of Philo, only less philosophical, when he refers all the OT theophanies and names of the divine attributes to the Son. In one passage, Justin says: "God has begotten as 'Beginning' before all His creatures a kind of rational Power from Himself that is also called by the Holy Spirit 'the Glory of the Lord,' and sometimes 'Son,' and sometimes 'Wisdom,' or 'Angel,' or 'God,' and 'Lord' and 'Word.' And on another occasion, he calls himself 'Captain,' when he appeared in human form to Joshua the son of Nun" (*Dial*. 61:1). In an even longer list of names, the apologist includes such names as "Man," "Angel of great counsel," and "Israel" (*Dial.* 126:1). Justin says that the angel bearing the name of Israel is the "Firstborn of all creation" and therefore "God" (*Dial.* 125:3–5). In another enumeration of names of

Christ, we also find "Priest" (*Dial.* 34:1). In all but one of Justin's lists of names of Christ (see also *Dial.* 62:2; 128:1–2; 1 *Apol.* 33:6), "Son" and "Angel" remain constant.

In the Similitudes of the *Shepherd of Hermas,* which is an adaptation of a Jewish writing, we find an intermediary identified variously as "Son of God" (5; 8–9), "Lord" (5; 9), "Holy Spirit" (5), the angel Michael (8), and the "glorious Man" (9). He appears as the leader of six other archangels (5; 9). If it be argued that Similitude 8 does not allow the inference that Michael is the same as the Son of God, a comparison of the Son in Similitudes 5 and 9 with the archangel shows at least that they are interchangeable. In *Sim.* 5:6:2–3, the Son is said to have been set over the people and to have given the Law. This is predicated of Michael in 8:2–3.

In Similitude 9, the Son is represented as very glorious and tall, and is ascribed with the function of judging the people. Michael is represented in the same way.

In Similitude 9, the "glorious Man," who is identified with the Son (12:8; cf. 6:1–3), is said to be the "Lord of the tower" (5:7; 7:1). This corresponds to the representation of Michael as the "Lord" of the people (8:3:3).

The pagan philosopher Celsus reports on certain prophets in Palestine and Syria who claimed to be "God, Son of God *(theou pais),* or a divine Spirit" (Or. *Cels.* 7:9). There does not seem to be a difference between these claims. In view of all the Jewish evidence surveyed above, it does not seem necessary to explain the assertions of these prophets in the light of Christian trinitarianism.

In the *Doctrine of Addai,* a work from Syrian Christianity, which is replete with Jewish Christian terms and concepts, it is said to Jesus: "Either you are God who has come down from heaven and does these things, or you are the Son of God, who does these things" (fol. 3a). In the *Acts of Thomas,* another work from the same provenance, the alternative runs: "This man is either God or the Apostle of God" (chap. 9). The equivalent of being God having come down to earth is to be his "Son" or "Apostle." The latter title is another designation for "Angel." Justin Martyr says: "Now the Word of God is the Son, as we have said before. And he is called 'Angel' and 'Apostle,' because he declares what we ought to know and is sent forth in order to make known whatever is revealed" (1 *Apol.* 63:5). The equivalence of "Angel" and "Apostle" derives from Judaism, where "Apostle" *(šaliaḥ)* could be used as a gloss for "Angel" (Bühner 1977:281–82, 323–34, 326–29). The "Son of God" is an angel sent by God.

C. "Son of God" in the Greco–Roman World

1. The Hero. Gods proper could of course be regarded as sons of another god (e.g., Apollon and Hermes were sons of Zeus). But heroes could also be called "Son of God." While Achilles, the son of the goddess Thetis and the hero Peleus, had to go to the realm of the dead, Dionysus and Heracles, both sons of Zeus by a human mother, attained the rank of the immortal gods. Dionysus, whose name probably means "Son of Zeus," and who was also called *Dioskuros,* "Child of Zeus" (*Hymn. Hom.* 33:1), was recognized as divine right from the birth, whereas Heracles had to struggle for recognition and attained apotheosis only at death.

Heracles was the prototype of the person who had to serve God and combat evil throughout life (Soph., *Trach.* 248–53; 274–78). Already Theocritus connects him with the expectation of an eternal peace (*Idu.* 24). In Pseudo-Seneca's dramas about Heracles, the hero is called "savior" *(sōtēr)* and "conqueror of the universe" *(pacator orbis)* (*Her. oet.* 1990), and represented as the victor over death and chaos (*Her. fur.* 889–902; *Her. oet.* 147–50). Heracles is here the model of the ruler who has "earned heaven by his deeds of valor," so that he can ask his Father for the "world" (*Her. oet.* 97–98 [Hengel 1976:25]). It is not surprising that Heracles in some Christian quarters was seen as a kind of forerunner of Christ.

In the philosophy of the Stoics and the Cynics, Heracles was a model of the moral person or even of the ascetic (Epict., *Diss.* 3:26:31). Since it was a Homeric phrase that Zeus was the "Father of men and gods" (*Il.* 1:544; *Od.* 1:28; *et al.*), Epictetus also asserts that Heracles knew his own Father, Zeus, to be the Father of all humans (*Diss.* 3:24.16). Heracles mythology has here been used to convey the Stoic idea that all people are children of God. This is found already in Chrysippus and Cleanthes, and is worked out by Cicero and, especially, by Epictetus (*TDNT* 8:337). However, people had to realize this fact (Epict., *Diss.* 1:3).

2. The "Divine Man." Lucian calls Heracles "Divine Man and God" *(theios anēr kai theos)* (*Cyn.* 13). Men whose gifts and acts were above normal were called "divine" *(theios)* and even regarded as gods. Already Empedocles says of himself that he is seen as a god (von Martitz *TDNT* 8:338–39). Pompey is called "Divine Man" *(homo divinus)* and said to have descended from heaven (Cicero, *De imp. Cn. Pomp.* 14:41; *Ad Quint. fr.* 1:1:2:7). The title "Son of God," however, is not used of these people.

Certain physicians were known as "sons" *(paides, hyioi)* of God, but the phrase is here entirely functional and designates these men as disciples of Asclepius, the god of their guild (*TDNT* 8:336 and 337, n. 18). On the other hand, it must be kept in mind that divine origin was predicated of certain famous individuals, e.g., Pythagoras and Plato (*TDNT* 8:339). These men were called "divine."

From a later period, we have the evidence about Apollonius of Tyana, the miracle-working Neo-Pythagorean peripatetic philosopher, who was said to be the son of Zeus (Philostr., *VA* 1:6). Lucian of Samosata ridicules Apollonius' pupil, Alexander of Abonuteichos, for claiming to be the offspring of Podaleirus, the son of Asclepius (*Alex.* 11; 14; 18; 35; 39–40 [Hengel 1976:31, n. 61]).

It was also held that any man might become divine, or realize his inherent divinity, through initiation into certain mysteries. The Hermetic tractate on rebirth teaches that every man through regeneration can become "a god, a child of God" *(theos theou pais)* (*Corp. Herm.* 13.2).

3. The Ruler. The Hellenistic–Roman kingship ideology was taken over from the East. But there were certain antecedents in Greece. The Spartan general Lysander was venerated as divine after his victory over the Athenians in 404 and was accorded a cult in Samos (Plut., *Lys.* 18). In the 4th century, the tyrant Clearchos of Heraclea styled himself "Son of Zeus" (Memnon *apud* Photius, *Bibl.* 224). But the big watershed was in the year 331, when Alexander the Great was called the "Son of Ammon" by an oracle in the Libyan desert. In Greek terminology, this meant that he was the son of Zeus (Plut., *Alex.* 27–28). Alexander addressed Zeus as his "Father" (Arrian., *Anab.* 7.8.3) and was said to have been engendered by him (Plut., *Alex.* 2–3; *et al.* [Pokorný 1971:15]). Plutarch asserts that Alexander regarded his apotheosis as politically pragmatical (*Dial. mort.* 14), deriving the idea from that of the divine sonship of all men (*Alex.* 27).

The Ptolemaic rulers were styled "Savior God" *(theos sōtēr)* and "Son of Helios" (*TDNT* 8:336). They could also trace their ancestry to Dionysus. The Seleucide rulers and the smaller Greek kings in the East claimed the title "God" *(theos).* Seleucus' father was said to be Apollon (Just. 15.4).

In Ephesus, Caesar was declared "God Manifest" and "Savior" of all humankind. Two years after his death, he was declared *divus Iulius,* the "deified Julius" or even the "divine Julius," in Rome. He may even have been held to be the high god himself, as is suggested by the name *Iuppiter Iulius* (Dio Cass., *Hist.* 44.6.4). Like the temples of the gods, Caesar's temple was an asylum (Dio Cass., *Hist.* 47.19). His statue was placed among the statues of the gods in Pantheon (Dio Cass., *Hist.* 53.27.3).

Octavianus, Caesar's adopted son, was *divi filius,* "son of the deified" or "son of the divine," but his names "Caesar" and "Augustus" (the latter often being used as a divine epithet, e.g., of Hercules) associated him closely with divinity (*PW* 4:828). Virgil even called him *deus,* "God" (*Ecl.* 1.7.1–2). He was said to be the son of Apollo by direct engendering (Suet., *Aug.* 94.4; Dio Cass., *Hist.* 45.1.2).

In the East, this kind of phraseology was common. A stele in Pergamum reads "emperor Caesar, Son of God *(theou hyios),* God Augustus" (Deissmann 1923:295). In a resolution in Augustus' honor passed by the provincial assembly in Asia Minor, the emperor is hailed as a "savior" *(sōtēr)* sent to humankind. It is also said that "since the birthday of God [i.e., Augustus] has been for the whole world the beginning of the gospel *(euangelion)* concerning him, let all reckon a new era beginning from the date of his birth" (Deissmann 1923:313).

The Oriental expectation of a world savior as seen fulfilled by Augustus was also adopted by the Romans. The "great Progeny of Jupiter" ushering in the golden age in Virgil's 4th Ecloge is probably Augustus, or his son (*PW* 4:829–30). The Roman poet ascribes the same function to the emperor in *Aen.* 6.791–807.

Horace hailed Augustus as the god Mercury, who had been appointed by Jupiter as an "instrument" of "atonement" on behalf of the Romans for their murder of Caesar. He addressed the pre-incarnated

emperor thus: "Put on the mortal shape of a young Roman; Descend and well contented to be known; As Caesar's avenger; Stay gladly and long with the people of Romulus; Delay your homeward, skybound journey" (*Ode* 1.2.41–45).

Ruler ideology is probably also to be found behind the legend of Romulus, Mars' son, who, after having been killed, came back to life and was witnessed to have ascended to heaven (Hengel 1976:38–39).

Some of Augustus' successors were hesitant vis-à-vis the cult of their person, but the idea of the divinity of the Roman emperor had come to stay (*PW* 4:833–53). Already under Gaius (Caligula), who claimed to be the incarnation of different gods, cult of the living emperor became a duty.

D. "Son of God" in the NT

1. The Case of the Historical Jesus. Jesus spoke of God as people's "Dad (dy)," using the diminutive form *ʾabbâ* (Mark 14:36 [Gal 4:6 and Rom 8:15 show that this memory was preserved]), which appears to have been quite unusual (Jeremias 1966:59–67). As Hahn (1964:321–29) and others have shown, it is improbable that Jesus also spoke of God as "my Father," thereby claiming a unique relationship with God. Matt 11:27 = Luke 10:22, where Jesus says that "all things" (= "all authority" [Matt 28:18]) have been delivered to him by his Father, the only one who knows him and who is known only by him and the ones to whom he chooses to reveal him, is a strongly literary passage and markedly different from other passages telling us anything about the self-consciousness of the historical Jesus. On the basis of this universal authority, Jesus can reveal the Father. Scholars have suggested a background in wisdom tradition or apocalypticism including Qumran (Pokorný 1971:30–31).

While Matt 11:27 = Luke 10:22 portrays Jesus as God's representative as well as his subordinate, Mark 13:32 ("[…] not even the angels, nor the Son, but only the Father" knows the last day) teaches the full subordination of the Son. But the intimate relationship between "the Father" and "the Son" is still present (the Son is closer to God than the angels). There is a tension between this absolute usage of "the Father," which corresponds to that of "the Son," and the words of Jesus about "your Father." Mark 13:32 as well as Matt 11:27 = Luke 10:22 is a clear Christological limitation of the Father name of God.

In Matt 28:18–20, the commission of the resurrected Jesus to the disciples to go and baptize people "in the name of the Father and the Son and the Holy Spirit" follows upon the word about all authority having been given to the Son. The title "the Son" has here found a new place in the baptismal liturgy, and the association of "the Father" and "the Son" has been expanded into a formula containing the names of all the three persons in the divine economy.

In the parable of the vineyard, Jesus speaks about the sending and killing of the owner's "beloved son" (Mark 12:6), in whom the readers are supposed to see Jesus himself (Mark 1:11; 9:7). The allegorical traits of this parable point clearly to the Christology of the community (Kümmel 1965:214–30).

2. The "Son of God" as the Heavenly Messiah. Since the other honorifics of Jesus were first used with reference to his eschatological function, it stands to reason that also "Son of God," which was closely associated with royal messianism, had the same primary usage (Hahn 1964:284–92). In his earliest letter, Paul speaks of the expectation of God's "Son from heaven, whom He [i.e., God] raised from the dead" (1 Thess 1:10). It has been suggested that this originally was a saying about the Son of Man which Paul reinterpreted for his Hellenistic community (Friedrich 1965:502–16). A merger of the messianic figure of the Son of God and the eschatological Son of Man is found in the account of the process against Jesus, where the high priest asks: "Are you the Christ [= Messiah], the Son of the Blessed?" (Mark 14:61). Whether or not the original text read that Jesus gave an unequivocally affirmative answer (the versions differ), the continuation of his reply implies that he is the Son of Man who will be seen "seated at the right of the Power and coming with the clouds of heaven." The text takes "the Son of the Blessed," a phrase which contains a circumlocution for the name of God, as a messianic designation and explains the function of the Messiah by reference to his enthronement by the side of God and return as the eschatological Son of Man.

Rev 2:18 describes the "Son of God" with colors from the portrait of the "one like a son of man" in Rev 1:13–15. Rev 19:11–6, which uses the same colors to depict the figure of the eschatological "King," cites Ps 2:9.

1 Thess 1:10 links the advent of the Son of God from heaven to his resurrection. Mark 14:62, although speaking of Messias futurus, does not mention explicitly the ascension but describes Jesus as a heavenly being with reference to Ps 110:1 and Dan 7:13 (and Ps 80:17 [Seitz 1973:481–85]?). In Peter's Pentecost sermon, Ps 110:1 is cited with reference to the ascension of Jesus (Acts 2:34–35). Being seated at the right of God, he was made "both Lord and Christ [= Messiah]" (v 36). During his lifetime, Jesus was only Messias designatus, "a man attested to you by God with mighty works and wonders and signs […]" (v 22).

In Paul's speech in Pisidian Antioch, it is Ps 2:7, the other enthronement text in the OT, which is cited with reference to the resurrection of Jesus (Acts 13:33). In the beginning of Romans 1, Paul quotes an old confession formula saying that Jesus "was descended from David according to the flesh and designated Son of God in power according to the Spirit of holiness by his resurrection from the dead […]" (vv 3–4). During his life as a Davidide, Jesus was Messias designatus; it was first upon his ascension that he was made the messianic "Son of God in power."

The idea that Jesus was installed as the messianic Son of God upon his ascension appears to have been arrived at by the adaptation of the tradition that an individual could ascend to heaven and become the "Son of God," an angelic being or even the divine Glory (see above, sec. B.3 and 4, the beginning). The Son of Man, with whom Jesus as the heavenly Messiah appears to have been merged at the oldest stage of this layer of tradition, would in fact seem to have been the principal angel or even the Glory of God (Fossum 1985:279).

3. Installation as "Son of God" on Earth. The account of the transfiguration, according to which Jesus was identified by a heavenly voice as "My beloved Son" (Mark 9:7), may have been an original resurrection story (Bultmann 1957:278). However, it may also be a text describing Jesus' installation as the eschatological king (Riesenfeld 1947:182–220, 223–25, 303–6) already during his human life.

Jesus' installation as the Son of God was also pushed back to the beginning of his earthly ministry in order to include this in the rule promised to David. Coming up out of the waters of the Jordan, the heavens were opened, the Spirit descended upon him in the form of a dove, and a heavenly voice said: "You are My beloved Son, with thee I am well pleased" (Mark 1:11). Baptism or ritual washing was part of the royal installation. Upon his accession to the throne, pharaoh was washed with water from a sacred pool representing the primordial waters out of which the sun god was born. When pharaoh came forth begotten out of the water, the sun god had to recognize him as his son (Blackmann 1918:153–57). 1 Kgs 1:33–34 relates that Solomon was anointed king at the well of Gihon; perhaps he was washed as well as anointed. Ps 110:7 says that the king at his enthronement "drinks from the brook." Drinking was part of ablution rituals. In the Mesopotamian *bit rimki* ritual, the king not only washed his mouth with water (and beer), but was also cleansed with "clean water" (Widengren 1976:215–16). During his installation as the eschatological high priest (-king), Levi was washed with "clean water" (*T. Levi* 8:5).

That the Spirit appears in the form of a dove is explicable against the background of the Near Eastern idea that the power which filled the king was represented in the figure of a bird. In Persia, the bird actually was a dove (Bultmann 1957:266).

The unction, which belonged to the Semitic enthronement ritual, conveyed the Spirit of God (1 Sam 16:13). In Luke 4:18, Jesus cites the beginning of the royal hymn in Isaiah 61: "The Spirit of the Lord is upon me, for He has anointed me […]" (v 1). That this refers to the baptism of Jesus is seen from Peter's speech in Acts 10, where it is said that the word of God went forth "after the baptism which John preached: how God anointed Jesus of Nazareth with the Holy Spirit and power […]" (vv 37–38).

The words of the heavenly voice recite Isa 42:1 as well as Ps 2:7 (the latter text being quoted verbatim in the parallel in Luke 3:22 Codex D [Bezae], some Itala mss, and many Fathers). In the former text, the beginning of the first of the songs about the Suffering Servant of Yahweh, God says: "Behold My Servant, whom I uphold, My Chosen, in whom My soul delights; I have put My Spirit upon him […]." The Heb text reads *ʿebêd*, which means "servant," while the LXX has *pais*, which means "son" as well as "servant." Even if Isa 42:1 LXX was the sole scriptural support for Mark, it does not have to follow that the heavenly voice originally identified Jesus as the Suffering Servant. Whoever the Servant is intended to

be, the song is held in the style of ANE royal hymnology (Widengren 1969:368). As has been seen above (sec. B.1), "Servant" as well as "Son" was a royal title (for "Servant" as a kingly title, see also 2 Sam 3:18; Ps 89:3; Ezek 34:23). The Targum reads: "My Servant, the Messiah […], My Chosen One, in whom My word has delight" (cf. Targum Isa 43:10, "My Servant, the Messiah, in whom I have My delight"). The close parallelism between Mark 1:10–11 and the eschatological prophecies about the priestly and the kingly Messiah in the *Testaments of the Twelve Patriarchs* (see above, sec. B.1) shows that Mark's unambiguous *hyios*, "Son," is the appropriate term.

In the LXX, "beloved" can translate "only" (Gen 22:2, 12, 16 ["your beloved son," i.e., Isaac]; Ps 127:2; Jer 6:26). *T. Levi* 18:6 compares the priestly Messiah to Isaac (and God's "fatherly voice" to that of Abraham), but there is really no other non-Christian evidence for Isaac as a type of the Messiah (but see Rom 8:32).

In quoting Isa 42:1, Matt 12:18 substitutes "Beloved" for "Chosen." The former as well as the latter was a Semitic royal title (for the latter, see Dhorme 1910:150–52; 2 Sam 21:6; Ps 89:4). Although the term "Beloved" in Mark 1:11 is an adjective and no second title, it has to be understood in the light of the royal titulary. As a matter of fact, "Beloved" was also used as an adjective. Thus, Mesilim of Kish was said to be the "Beloved Son of Ninhursaga" *(dumu-ki-ǧ-^{d}nin-ḫur-saga)* (Sjöberg 1972:87 [for further Mesopotamian evidence, see Dhorme 1910:164–66]). Pharaoh Thutmosis is the "Beloved of Hathor" (Gardiner 1957:72). Solomon the king is "loved" by God (2 Sam 12:24; Neh 13:26). Targum Ps 2:7 reads: "Beloved as a son is to his father you are to Me."

The words that God is "well pleased" with the Son also have parallels in royal ideology. At the installation of Hatshepsut, Re introduces her to the divine assembly and says: "Behold My daughter Hatshepsut; she lives! I love her; I am well pleased with her! (Sethe 1914:113). As has been seen above, the Targumic versions of Isa 42:1 and 43:10 read that God has found delight in the Messiah.

4. The Sending of the Preexistent "Son of God" from Heaven. At an early stage, Jesus was even conceived of as the preexistent Son who had been "sent" by God into the world in order to bring salvation to humankind (Gal 4:4–5; Rom 8:3–4; cf. John 3:17; 1 John 4:9, 14). Schweizer (*TDNT* 8:375) has explained this notion against the background of Hellenistic Jewish ideas about God's personified word and wisdom. Now the divine Word is called God's "Son" by Philo, but is not said to have been "sent" into the world, while Sophia in Wisdom 9 is said to have been "sent" (the sending of Sophia and the Spirit in vv 10 and 17 corresponds to that of the Son and the Spirit in Gal 4:4–6), but is not the "Son" of God. We should therefore also take into account that the many-named intermediary in Hellenistic Judaism could be represented as an angel and called the "Son" of God (see above, sec. B.4). Angels were "sent" by God (Gen 19:13; Exod 23:20; Mal 3:1 [cf. 4:5, where the eschatological angel is identified as Elijah, whom God will "send" back to earth]; Tob 12:20 [which is similar to John 7:33 and 16:5, where Jesus says that he will return to the one who has "sent" him]). They could therefore be called "Sent Ones," "Apostles" (see above, sec. B.4, the end).

Furthermore, the idea of the preexistence of the Messiah should be taken into account. The "Man" - Messiah in 4 Ezra 13:26 is said to have been kept by God "for many ages" (cf. 12:32). The "son of man" figure in *1 Enoch*, who is identified as the Messiah (48:10; 52:4), is said to have been brought into being before the world (48:2–3, 6; 62:7). Pesikta R. 36:1 takes the primal light of creation in Gen 1:3 to be the light of the Messiah which God conceals under his throne. This tradition may be quite old, for already Aristobulus takes the light to be Sophia (apud Eus. *Praep. Ev.* 13.12.9–11), and Philo identifies it as the divine Word (*Somn* 1.75). Pesikta R. 33:6 says that the Messiah is preexistent. The proof being advanced is Gen 1:2, since Isa 11:2 says that the Spirit of God will rest upon the "messianic" king. In the 3d century C.E., Simeon ben Lakish took Gen 1:2 to speak of the "Spirit of the Messiah" (*Gen. Rab.* 2:4 [Hengel 1976:70–71]).

The Jewish Sibyl calls the Messiah "a certain king sent from God" (5.108 [cf. the sending of kings in 3.286 and 652, where the Messiah is probably not indicated]). The Messiah comes from heaven (5.414 [cf. 256, which may be part of the Jewish groundwork, although the next line possibly reveals Christian influence]).

The idea of the preexistence of the Messiah could find some support in the OT. Mic 5:2 states that the Messiah's "origin is from old, from ancient days" (LXX: "from the beginning, from the days of the aion"). Ps 89:28—Eng v 27, which was applied to the Messiah by R. Nathan (see above, sec. B.1), says that God calls the king his "firstborn." The LXX reads *prōtotokos,* which is similar to *prōtogonos,* an epithet which both Philo and the *Prayer of Joseph* bestow upon the preexistent intermediary (see above, sec. B.4 [cf. Col 1:15, where the "Son" of God is *prōtotokos*]).

5. The Use of the Title by Individual NT Authors. According to Paul, God sent his Son in order to set people free from slavery under the elemental spirits of the universe and the Law (Gal 4:3–5; Rom 8:2–4). People were thereby made sons of God by adoption and received the Spirit, through which they could cry: "Abba! Father!" (Gal 4:5–6; Rom 8:15). In the end, they would be "conformed to the image of His Son" (Rom 8:29). The specific act through which the Son effected the salvation was his death on the cross (Gal 2:20; Rom 8:3, 32 [cf. Hengel 1976:7–15]).

The title "Son of God" is a clue to the identity of Jesus in the gospel of Mark. It is found already in the first verse of the work (accepting the reading of Codex Sinaiticus[a], B, D, etc.), which is matched by the exclamation of the Roman soldier centurion at the cross (15:39). Jesus is solemnly declared to be the Son of God by a heavenly voice at two crucial points in his career, i.e., when he is installed as the Messiah (1:11) and right after the confession of Peter before the disciples that Jesus is the Messiah (9:7 [cf. above, sec. D.3]).

The exclamation of the demons that Jesus is the "Son of God" (3:11; 5:17) has another derivation, for the Messiah was not expected to expel demons. The appeal to the miracle-working "divine men" in the Greco–Roman world would not seem to be of any avail, because the pregnant title "Son of God" does not seem to have been applied to those people (see above, sec. C.2). Now in the mouth of the demons, the "Holy One of God" appears to be a parallel title to that of the Son of God (1:24). In Ps 89:5–7, "Holy Ones" and "Sons of God" are parallel titles, designating the members of God's council (see above, sec. A.3). In Zech 14:5, it is foretold that on the Day of the Lord, "God will come, and all the Holy Ones with Him" (the prophecy is repeated in *1 Enoch* 1:9 and Jude 14). Obviously, at the turn of our era, both "Son(s) of God" and "Holy One(s) of God" were regarded as angelic names. The demons' identification of Jesus as the "Holy One of God" and the "Son of God" fits into the Jewish Christian tradition which regarded the miracle-worker as an angelic "Apostle" or "Son of God," the figure of whom has been met with in the *Acts of Thomas* and the *Doctrine of Addai* (see sec. B.4, the end).

Although the title of the Son of God reached Mark from different sources, it is clear that he attaches a unique significance to it. The demons are adjured to be silent; so are the disciples after the confession of Peter. It is only through his death that the deeper meaning of the divine sonship of Jesus can be grasped (cf. 15:39).

In Matthew, it is not the demons but only the disciples who proclaim that Jesus is the Son of God (14:33; 16:16). As is shown by Peter's confession, it is a title of the Messiah (cf. 26:63). The title implies service of God (3:17–4:10). Suffering is involved. The leaders of the Jews mockingly ask why God does not deliver Jesus from the cross, since he claims to be the Son of God (27:43). This reflects Wis 2:12–20, where the righteous, claiming to be the "Son" and "Servant" of God his "Father," is oppressed, tortured, and killed by the ungodly, who mock him for believing that he will be vindicated in the end by God (*TDNT* 8:378). In the Sermon on the Mount, the believers demonstrating God's will and love are promised the status as God's "sons" (5:10, 45 = Luke 6:35).

The title "Son of God" in the temptation narrative is a name of a miracle-worker (Matt 4:3 = Luke 4:3; Matt 4:6 = Luke 4:9). A Moses-Israel typology has been pointed out by Dupont (1956/57:287–304). Now Moses, who was known to be a great miracle-worker, bore the title "Son of the house of God." As was pointed out above, this title, which also belonged to Honi, another miracle-worker, indicated angelic status (see sec. B.3). Exod 4:22, where Israel is called the "firstborn son" of God, could be referred to the principal angel (see above, sec. B.4). Thus, we again come across the Jewish Christian notion of Jesus as a miracle-working angelic "Son of God."

Luke does not assign any significant role to the title "Son of God" (*RAC* 12:49). It is an equivalent to "the Christ," the latter being preferred above the former, as can be seen when comparing Luke's text to the parallels in Mark and Matthew (Luke 9:20; 22:67–70; 23:47).

In the Annunciation, Jesus is identified as the Son of God and the heir to the throne of David (1:32–33, 35). Here Hellenistic "divine man" and ruler ideology have been merged with messianism, for virgin birth was not predicated of the Messiah (in spite of the fact that Isa 7:14 LXX reads "virgin" where the MT has "young woman" [for the verse, see above, sec. A.1, the end]). Now the "divine men" and the imperial "sons" of God were seen as the progeny of a god, either by direct engendering or by a woman, so there is no exact parallel to what is related by Luke. However, we should consider Plutarch's report that the Egyptians believed that the spirit of a god could work the beginnings of a new life in a woman (*Numa* 4).

John agrees with Paul that the purpose of the sending of the prexistent Son of God was his death for the salvation of humankind (3:16–17; 10:11; 11:51–52; 13; 15; 1 John 4:10). Like Paul (Gal 3:26), John emphasizes faith as the condition for becoming God's son or child (1:12). Again like Paul, John holds that the Spirit is instrumental in this birth (3:5, 6, 8).

In John, God is called "Father" about 120 times. Jesus is " (the) Son" /"Son of God" 27 times. The correlation Father/Son suggests itself. The full title "Son of God" is found primarily in confession-like formulas (1:34, 49; 20:31; also in 1 John 4:15; chap. 5; 2 John 3). While "Son of God" is associated with "the Father" only twice (5:25; 10:36), "the Son," which is found 18 times, is virtually always correlated with the idea of God as Father. The intimacy between the Father and the Son is thereby emphasized (1:18; 3:35–36; 5:19–26; 6:40; 8:35–36; 14:13; 17:10). The Son does only what the Father wants him to do; he is thus a true revelation of God.

The basic theme of Hebrews is the "representative atoning suffering of the Son" (Hengel 1976:87), who is a preexistent divine being standing above the angels. Old notions about the Near Eastern priest-king are revived in order to explain his work. In contrast to the priest-king, however, Jesus sacrificed himself (9:12, 25; 10:10). He then took his seat at the right hand of God (1:2–3; 10:12–13). Denial of the Son of God by those who have been purged by his death is unforgivable (6:6; 10:29).

JARL FOSSUM

SON OF MAN

[Heb *ben ʾādām* (בֶּן אָדָם)*;* Aram *bar ʾĕnāš* (בַּר אֱנָשׁ);Gk *(ho) huios (tou) anthrōpou* (ὁ υἱος του ἀνθρωπου)]. A Semitic expression that typically individualizes a noun for humanity in general by prefacing it with "son of," thus designating a specific human being, a single member of the human species. Its meaning can be as indefinite as "someone" or "a certain person." Used in Dan 7:13–14 to describe a cloud-borne humanlike figure, the expression—or at least the figure so designated in Daniel—became traditional in some forms of Jewish and early Christian speculation which anticipated a transcendent eschatological agent of divine judgment and deliverance. In the NT that agent is almost universally identified with the risen Jesus. This survey will treat Jewish and Christian texts that use the term "son of man," as well as texts that develop and elaborate the tradition in Daniel 7 without retaining that expression.

———

A. The OT Apart from Daniel 7

With the exception of Daniel 7 (see below), the singular *ben ʾādām* occurs in the Hebrew Bible only in poetic parallelism and in the book of Ezekiel.

1. In Poetic Parallelism. It appears fourteen times, in synonymous poetic parallelism, always in the second half, as an emphatic counterpart to words designating "man" or "human being" (usually *ʾîš, ʾĕnāš, geber* (Num 23:19; Isa 51:12; 56:2; Jer 49:18, 33; 50:40; 51:43; Ps 8:5—Eng 8:4; 80:18—Eng 80:17; 146:3; Job 16:21; 25:6; 35:8). The emphasis in some of these texts is on human beings' difference from God, as well as their mortality and undependability (cf. 1QS 11:20; 1QH 4:30). This appears to undercut the common assertion that *ben ʾādām* is in itself a "lofty" designation for human beings. An evident exception is Ps 8:5 (cf. Ps 80:18), but the point is precisely the paradox that God "is mindful of" man and crowns "the son of man" like a king. This text is noteworthy, nonetheless, because its combination of Gen 1:26–28 with the version of the Eden story behind Ezek 28:12–18—where the first man appears to have been a king—makes it particularly apt to be conflated, in Christian tradition, with Dan 7:13–14 (see below C.6.b, e).

2. Ezekiel. Ninety-three times in Ezekiel, God addresses the prophet as "son of man" (Heb *ben ʾādām*). Interpreters disagree as to whether the expression emphasizes the prophet's mere human status before God or his lofty privilege as *the* man singled out from the rest of the people to be addressed by God and sent as the divine messenger.

B. Early Jewish Texts

Paradoxically, a generic term meaning "human being" develops a theological aura and, eventually, a set of highly technical meanings. At the root of this development is the single occurrence of *bar ʾĕnāš* in Daniel 7, a text almost unequaled for its influence on both Jewish and Christian messianic speculations in the crucial period up to 100 C.E.

1. Daniel 7. Broad consensus sees this chapter as the product of a complex history of tradition with deep roots in non-Israelite mythology. Opinions differ widely, however, on the details of the tradition's history. Where in the ANE are its mythic roots to be found? Was the Israelite form of the text created in one piece? If not, where are the literary seams, and when should one date the creation of the earlier stage or stages? The present discussion will focus on the whole of Daniel 7 as an intelligible unit that dates in its present form and context from the time of the Jews' persecution by Antiochus IV Epiphanes (167–164 B.C.E.) and will emphasize elements that illuminate later Jewish and Christian developments of the tradition.

Daniel 7 divides into two major parts: Daniel's vision (vv 1–14) and its angelic interpretation (vv 15–27). As elsewhere in Daniel 7–12, action occurs on two levels, earth and heaven, both of which are described with strong mythic imagery. Essential to the action is a conflict between the chaotic forces, depicted as fearsome beasts that arise from the primordial deep, and the divine King and his heavenly entourage. The beasts are interpreted as kingdoms (v 17 LXX—MT v 23), and the conflict is for sovereignty over the earth.

The vision focuses on the fourth beast and the blasphemies spoken by its eleventh horn (vv 7–8). The situation is resolved when the white-haired Deity ("the Ancient of Days") convenes the heavenly court for judgment (vv 9–12). The beast is condemned and slain, and its body is destroyed and given over to be burned; dominion is taken away from the other three beasts. The heavenly action concludes when "one like a son of man" is conveyed to the courtroom, where he is presented to the Ancient of Days and is given eternal and indestructible "dominion, glory, and kingship" over "all peoples, nations, and languages" (vv 13–14).

According to the angel's interpretation, which picks up key words and phrases in the vision, the enthronement of the "one like a son of man" means that "the holy ones of the Most High" or "the people

(ʿam) of the holy ones of the Most High" will be given "kingship and dominion and the greatness of the kingdoms under the whole heaven" forever (vv 18, 22, 27).

Although scholars debate the meaning of almost every element in the vision and interpretation, the following seems the best explanation. "Son of man" is not a formal title, but a designation used in a simile ("*one like* a son of man"), quite possibly to contrast the cloud-borne figure with the beasts. But although this figure has the appearance of a human being, it is, in fact, a heavenly figure (cf. Dan 9:21; 10:5 and in Ezek 1:26 of God), one of the holy ones, who is the patron of the suffering people of the holy ones of the Most High. The relationship of this heavenly figure to suffering righteous Israel is analogous to the relationship between the angelic prince Michael and "your people" in Dan 10:13, 21; 12:1, although in the latter passages Michael has a judicial function not possessed by the one like a son of man. The heavenly enthronement of the one like a son of man will involve Israel's earthly supremacy over all the nations (cf. 1QM 17:5–8).

Although the one like a son of man is never called "king" or "anointed one" (messiah), this heavenly figure is given royal powers and prerogatives ("dominion, glory, and kingship"), and all nations will "serve" him and the people of the holy ones. This terminology repeats the ideas expressed in Dan 2:44; 3:29; 4:1–3, 34–35; 5:19–21; 6:26. Like chaps. 2–6, this vision and its interpretation depict a conflict between earthly kings and the divine Monarch and the latter's ultimate triumph and sovereignty. Different from those chapters, here the bearer of that sovereignty is the enthroned heavenly patron of the people of God who have suffered at the hands of the kings, who have rebelled against heaven—notably Antiochus IV (cf. chap. 3 and 4:27).

Especially significant for subsequent Jewish and Christian interpretations of the tradition is the sequence of events in the vision. The judgment of the fourth beast and his destruction are functions of the heavenly court (v 11); only after this has happened and after a clear break and transition in the text (v 13a), do we hear of the appearance, presentation, and enthronement of the one like a son of man.

The closest known analogies to this chapter's mythic imagery are in Canaanite and Mesopotamian sources. The description of the heavenly court in vv 9–10 and the presentation of one like a son of man also have an earlier, 3d century B.C.E. Israelite counterpart in *1 Enoch* 14:8–24, where Enoch is transported to the heavenly throne room to be commissioned as a prophet.

2. The Parables of Enoch (*1 Enoch* 37–71). This major section of the corpus known as *1 Enoch* attests a crucial step in the development of the tradition in Daniel 7. Although these chapters also transmit and rework traditional material from *1 Enoch* 1–36, their uniqueness within the Enochic corpus lies in a series of heavenly tableaux that depict an unfolding drama whose protagonist is a transcendent figure known as "the righteous one," "the chosen one," "the anointed one," and "this/that son of man," who functions as champion of "the righteous and the chosen" and as judge of their antagonists, "the kings and the mighty."

The date of these chapters is disputed. Some scholars argue that the Parables are post-Christian, and even of Christian origin, while others point to a few details that suggest composition in the late 1st century B.C.E. However one dates the Parables in their present form, their traditions about the heavenly deliverer differ from Daniel 7 in distinctive ways that are paralleled in other Jewish texts and in NT gospel traditions about the son of man.

The Parables' portrait of this agent of deliverance draws much of its language and imagery from three biblical sources or traditional interpretations of these sources. The basic texts are: Daniel 7; Isaiah 11 and Psalm 2; Isaiah 42, 49, and 52–53. Through the use and elaboration of this material, the author has created a composite figure whom he considers to be the referent in texts about the heavenly one like a son of man, the Davidic king, and Second Isaiah's servant of the Lord.

The identification of these figures with one another is understandable; for all their differences, their characteristics and functions can be seen to be compatible and complementary. According to Psalm 2, the Davidic king, the Lord's anointed and son, will exact divine judgment on the rebellious kings and rulers of the earth, whose kingdoms will be given to him as his "inheritance" and "possession." Isaiah 11 emphasizes the royal function of judgment. In Second Isaiah, the servant of the Lord has traits elsewhere ascribed to the Davidic king. The Spirit of the Lord rests on him so that he is an agent of justice for the

lowly (Isa 42:1–4; cf. Isa 11:2–5). His word is likened to a weapon (49:2; cf. 11:4). He is God's chosen one and servant (42:1; cf. Ps 89:3, 19–20; [4, 20–21 Heb]). He is exalted (52:13–15) in the presence of kings and rulers (ibid.; cf. 49:7), although they are not his opponents as in Psalm 2. In Daniel 7, after the judgment that destroys or neutralizes opposing monarchs and kingdoms, the heavenly one like a son of man is enthroned as the bearer of God's royal power and dominion. That Second Isaiah and the author of Daniel 7 ascribed, respectively, to the servant of the Lord and the one like a son of man the status and some of the functions traditionally attributed to the Davidic king is not surprising; this king is of marginal significance in Second Isaiah (Isa 55:4–5, "witness, leader, commander," and contrast 45:1, Cyrus, the Lord's anointed) and is not even mentioned in Daniel.

The first Parable (*1 Enoch* 37–44) begins by anticipating the appearance of "the Righteous One" (38:2). Here and in chaps. 52–53, this epiphany recalls the theophany in *1 Enoch* 1–5, and this indicates that the Righteous and Chosen One will function as the agent of God's judgment (38:3). "Righteous One" is a title of the servant in Isa 53:11. In *1 Enoch* 38, as throughout, the opponents are the kings and mighty, the exalted and powerful, who possess the earth and oppress the righteous and chosen. In chap. 39, Enoch sees the dwelling of the Chosen One of righteousness and faith (cf. Isa 11:5) in the heavenly court, among the angels and holy ones (cf. Daniel 7).

In the second Parable, chap. 46 takes up the tradition in Daniel 7. Enoch sees one who has "a head of days" (hereafter he is called "the Head of Days") and with him, one who has the appearance of a man and a gracious face like the angels. The term "son of man" is introduced. Here and throughout the Parables (with the exception of 69:27), the term is qualified: "this/that son of man" or "the son of man who …," but, as is often the case in Ethiopic, which has no definite article, the demonstratives, "this" and "that," very likely reproduce the article in the earlier Greek form of the Parables. Thus, the text refers back to a known "son of man," the one already introduced. But even if this definite usage does not indicate a traditional *title* received by this author, chaps. 46–47 leave no doubt that the *figure* is derived from Daniel 7, or, less likely, a common tradition. Because the whole of the Parables is set in heaven and because the narrative begins with the son of man already in the presence of the Deity, no mention is made, as in Daniel, of the son of man coming with the clouds of heaven.

In chap. 47 the heavenly court is seated (cf. Dan 7:10) not for judgment, but for intercession. Then a new scene unfolds. Among the many, inexhaustible fountains of wisdom (48:1; 49:1), the seer witnesses the naming of the son of man, which is described in the language of the servant's call in Isaiah 49 (*1 Enoch* 48). However, in a major difference from Isa 49:1, this naming is traced back not to the womb, but before the creation of the heavenly luminaries (48:3, 6; cf. 62:7, "from the beginning"). From that time, the son of man was hidden with God, but now God's wisdom has revealed him to the righteous, holy, and chosen ones. This language of heavenly, hidden preexistence and subsequent limited revelation indicates that the author's description of this unique heavenly figure has been influenced by Jewish speculations about Wisdom's preexistence, role in creation, and earthly embodiment in the Torah and its exposition (cf. Prov 8; Sir 24; Bar 3:9–4:4; and in the Parables, *1 Enoch* 42). Although the son of man is not identified *as* Wisdom, aspects of the Wisdom myth have colored the Parables' eclectic portrait of this heavenly figure. The description is further complicated in 48:8–49:4. Reference to "the kings of the earth" (the term occurs only here in the Parables) who "have denied the Lord of Spirits and his anointed one" (48:8, 10) recalls Ps 2:2. Then speaking of the Chosen One who stands before the Lord (cf. Dan 7:13), the author takes up the theme of two parallel passages in Isa 11:2–3 and Isa 42:1 and conflates their imagery in order to describe the spirit that will enable the Chosen One to judge rightly (*1 En.* 49: 1–4).

This judgment, anticipated again in 51:3; 55:4, is described in chaps. 62–63. This lengthy passage is a traditional reworking of Isa 52:13–53:12 (see below, B.3), and it also incorporates royal language and the term "son of man." The Lord places the Chosen One on the divine throne of glory (a Davidic royal term). As in Isaiah 52–53, the exaltation takes place in the presence and to the astonishment of the kings, who recognize the Chosen One and confess their sins. Different from Isaiah, here the kings and mighty are to be judged and condemned by the exalted one, who will slay them with the word of his mouth (62:2; cf. Isa 11:4 and its application to the Davidic heir in *Ps. Sol.* 17:27, 39). With this scene the heavenly drama

of judgment reaches its climax. Vindication comes for the persecuted righteous and chosen, when their heavenly champion condemns their oppressors. Thereafter they will enjoy eternal life in the presence of the son of man and the Lord of Spirits (62:13–16).

The Parables reflect the creative development and mutual modification of complementary traditions. Daniel's heavenly figure is here described in language taken from Davidic royal oracles and Deutero-Isaianic texts about the servant of the Lord. He is not, however, the bearer of God's eternal reign, as in Daniel 7. He is seated on the divine throne of glory in order to execute judgment (cf. 69:27–29). It is in order to describe this function, which Daniel does not attribute to the "one like a son of man," that this author employs language from the servant passages and royal oracles. Conversely, the humanity of the Davidic king is replaced by the transcendence of the heavenly son of man, and the human suffering experienced by the servant (Isa 50:6–9; 52:13–53:12)—and in some royal Psalms by the king—is here a characteristic of the righteous and chosen ones, the earthly clients of the heavenly Righteous One and Chosen One.

These developments reflect an ongoing tradition. With the Exile and the demise of the Davidic dynasty, Second Isaiah reshaped older traditions about king and prophet and applied them to the servant, a mysterious figure who personified Israel and also stood against the nation. The largely nonhistorical and mythical language of the servant passages lent itself to an interpretation about heavenly and cosmic exaltation and judgment, which could easily be co-opted into a dualistic, apocalyptic world view. Thus, the pseudonymous author of the Parables, standing in the apocalyptic traditions of *1 Enoch* 1–36, could conflate another part of his apocalyptic heritage, the heavenly enthronement scene in Daniel 7, with the royal traditions in Second Isaiah and their Davidic antecedents in Isaiah 11 and Psalm 2.

A dualism between earth and heaven and a revelation of the heavenly world are essential to the Parables, as they are to the rest of *1 Enoch.* These chapters profess to be a revelation of the hidden parts of heaven and earth, based on a journey to these remote regions. Central to the revelation are the events, places, and personages involved in the great judgment that will adjudicate the evils and injustices experienced by the author's community—the righteous and the chosen. In particular, the seer brings to his people the knowledge that they have a heavenly champion and vindicator. He is hidden from their eyes, but not from their knowledge, and essential to their righteousness is their belief that he exists in a heavenly realm that prepares for judgment and that he will appear in order to bring vindication and execute judgment. At that time, the kings and mighty who oppress them will see what hitherto they have neither seen nor believed: in the face of the Chosen One they will see the chosen ones whom they have persecuted; they will acknowledge the reality of the realm from which he came; they will recognize the inevitability of their own judgment.

In their present form, the Parables provide one final twist to the drama of the son of man. Chap. 71 recapitulates earlier traditions about Enoch's ascent (especially the commissioning scene in *1 Enoch* 14–16 and the journeys in 17–36) and conflates them with Daniel 7. Enoch is greeted by the Lord of Spirits, who identifies him as the protagonist in his own visions. He is the son of man born for righteousness. This turn of events is totally unexpected. Previously, there has been no hint that the heavenly deliverer had an earthly existence, much less that Enoch had been seeing visions about himself. The text is probably an addition to an earlier form of the Book of Parables, but an addition with important parallels.

3. Wisdom of Solomon 1–6. In this text from around the turn of the era, an author posing as Solomon admonishes the kings and rulers of the earth to practice justice because God rewards righteousness and punishes wickedness. Central to his exposition is the case of an unnamed righteous one, a typical figure who is persecuted and put to death by rich and powerful opponents, but vindicated in the heavenly court, where he stands among the angels and condemns his persecutors. The two scenes that depict his persecution and exaltation (chaps. 2 and 5) are cast in the language of Isaiah 52–53, and significant parallels to the judgment scene in *1 Enoch* 62–63 and to *1 Enoch* 46 indicate that Wisdom and the Parables present variants of a common exegetical tradition, which conflates the Isaianic servant passage with material from Isaiah 14 and identifies the kings of Isaiah 52–53 with the royal figure who storms heaven and is cast down to earth.

Also significant for a comparison with the Parables are elements in Wisdom that reflect royal traditions. The framework in Wisdom 1–6 addresses the kings and rulers in language closely paralleled in Psalm 2 (cf. 1:1; 5:23; 6:1, 11 with Ps 2:2, 10 and cf. 4:18 with Ps 2:4), and the expression "son of God" is used of the righteous one (Wis 2:16, 18; 5:5) as it is of the king in Ps 2:7. In 9:9–17, speaking autobiographically, "Solomon" associates right judgment and kingship with the knowledge and understanding of God's counsel which is mediated by the descent of heavenly Wisdom, the holy spirit, which is present at God's throne of glory (cf. Isa 11:2–5), and in 1:6–11 wisdom is God's agent for the right judgment of all people (cf. *1 Enoch* 49:3–4; 51:3).

These parallels to *1 Enoch* 37–71 notwithstanding, Wisdom never uses the term "son of man" of the righteous one. Possible evidence of the influence of Daniel 7 may be found in Wis 3:8, which alludes to the exaltation of the righteous typified in chap. 5, construing it as governing or judging *(krinein)* nations and ruling over peoples (cf. Dan 7:14, 27).

In light of the aforementioned parallels, the differences between Wisdom and the Parables are especially significant. In Wisdom the protagonist is the persecuted one, who has been exalted as judge or accuser of his own persecutors; he is not a transcendent champion of the persecuted righteous. He is, moreover, a type of the many persecuted righteous and not a unique figure who is identified with Daniel's one like a son of man (note the plurals in Wis 3:8). In this respect, the tradition is logically prior to the form in the Parables, for it is identifiably closer to the Deutero-Isaianic source about the persecuted and vindicated servant. Nonetheless, the Solomonic author appears to have known an Enochic context for these traditions. Thus, 4:10–15 cites Enoch as the righteous one par excellence (does this presuppose *1 Enoch* 71 and its identification of Enoch with the son of man?), and the structure of the text—including its argument against those who deny the possibility of immortality and postmortem judgment—parallels *1 Enoch* 102–4.

The Parables and Wisdom parallel one another both in their use of Davidic material and in their failure to apply it to a future Davidic king. Although the author of Wisdom claims to be the son of David, addressing the (potentially) unjust rulers of the earth, his expected agent of ultimate justice will not be a Davidite. He is described as Second Isaiah's servant of the Lord, the righteous one who will condemn his own persecutors. Nonetheless the Greek author plays on the parallels between the LXX word *pais* ("servant, child") and the royal title "son" (Ps 2:7; cf. Ps 110:4 LXX, "out of the womb before the morning star I begat you" and *1 En.* 48:3 of the servant figure), and he applies language from Ps 2:4, 9 to the fate of the righteous one's antagonists (4:18–19). The author of the Parables also does not expect justice from a Davidic ruler and he applies the Davidic oracles to the servant figure. In this case, however, the Chosen One is not one of many who vindicate themselves; he is identified with the unique heavenly son of man in Daniel 7, who will appear, however, not after the judgment, but as its agent. That Wisdom and the Parables offer variants on a common tradition is crucial for our understanding of NT son of man traditions.

4. *4 Ezra* 11–13. This text from the end of the 1st century C.E. makes no reference to a figure called "son of man," but the two visions in chaps. 11–12 and 13 parallel Daniel 7 and describe in two different ways the coming of the anointed one.

In the first of these visions, the Roman Empire and its kings are opposed and judged by the Davidic king. In the vision (11:1–12:3), an eagle comes up out of the sea (11:1; cf. Dan 7:1) and is opposed by a lion who indicts it for deceit, injustice, and oppression of the meek, which constitute insolence against the Most High (11:36–43; cf. Dan 7:8, 25). For this it is condemned and its body burned (11:44–12:3; Dan 7:11). In the interpretation (12:4–39), the eagle is identified as "the fourth kingdom which appeared to your brother Daniel" (12:11; cf. 11:39), which will arise on earth (12:13; cf. Dan 7:23); the lion is said to be the anointed one who will arise from the posterity of David and denounce the kings represented by the eagle's wings, destroy them, and deliver the remnant of Israel.

Chap. 13 recounts a second vision and interpretation, which corresponds to Dan 7:13–14. The winds stir up the sea (13:1; cf. Dan 7:2) and "something like the figure of a man" comes up out of the heart of the sea and flies with the clouds of heaven (13:3; Dan 7:13). The voice that issues from his mouth melts all

who hear it (13:3b–4). When he is attacked by a multitude, he carves out a mountain, and standing upon it, he sends from his mouth a stream of fire that burns up all who have gathered against him (13:5–11). Then he gathers the remnant (13:12–13). According to the interpretation (13:21–58), the man is the one "whom the Most High has been keeping for many ages" to "deliver his creation and direct those who are left" (13:26). He is "my son" (13:32, 37, 52), who is hidden (v 52) but will be revealed (v 32) and will stand on top of Mount Zion to reprove the nations for their ungodliness, destroying them by the flame of the Torah (13:33–38).

Although the form of *4 Ezra* 13 and the image of the cloud–borne man parallel Daniel 7, crucial elements in chap. 13 differ from Daniel 7 and agree with the Parables of Enoch and their use and modification of Davidic oracles and, probably, Deutero-Isaianic servant motifs. Like the anointed one in *4 Ezra* 11–12, the man appears not to rule, but rather to execute judgment and deliver the righteous. The manner of this judgment by a fiery blast is reminiscent of Isa 11:4 and the use of this passage in *1 En.* 62:2 (cf. 49:3–4; cf. also *Ps. Sol.* 17:39, 41). Other motifs recall Psalm 2. The man's title is "my son" (Ps 2:7), and he judges the nations who have gathered against him at Mount Zion (Ps 2:1–2, 6; cf. *1 En.* 48:8, 10). A parallel to the Parables' use of servant material also seems likely. Like the Chosen One of *1 Enoch,* "my son" has been kept for many ages and hidden and will be revealed (13:26, 52, 32; cf. *1 En.* 48:3, 6–7; 62:7 and vv 1–3). Like the Chosen One, he will gather the righteous (13:26, 39; *1 En.* 48:7; cf. Isa 49:6, 8–9). Different from the Parables, *4 Ezra* 13 does not use the titles "the Chosen One" and "the Righteous One" and depicts no recognition scene to correspond to *1 Enoch* 62–63 and Isaiah 52–53. Although there is no enthronement as such, the man on the clouds has the office of executing divine judgment.

The stages of tradition in *4 Ezra* 11–13 are complex and difficult to trace. In their present form, the two visions refer to the Davidic messiah (cf. *4 Ezra* 7:28–29, "my son, the anointed one"). To this end, chap. 13 has domesticated cosmic elements of a vision that described a transcendent deliverer and judge. Precisely how this vision was related to Daniel 7 is debated. *4 Ezra* 12:11 mentions the vision in Daniel 7, but chap. 13 could know a source behind Daniel. In any case, similarities between chap. 13 and the combined son of man, messianic, and servant elements in the Parables suggest that at least one source was closely related to the Parables, if not identical with them.

5. *2 Baruch.* This apocalypse, which is roughly contemporary with *4 Ezra,* presumes the messianic identification of the central figure in Daniel 7 and his judicial functions. In chaps. 36–39, the last leader of the fourth kingdom will be taken to Mount Zion, where "my anointed one" will convict him and put him to death. A scenario like *4 Ezra* 13 is presumed. Both this text and chaps. 29–30 speak of the revelation, or glorious appearance of "my anointed one," thus suggesting a transcendental figure. Chaps. 53–74 make "my anointed one" the agent of a universal judgment, and the image of the lightning (53:9, 12) recalls the gospel logion in C.1.a below. Of importance in all of these texts from *2 Baruch* is the ubiquity of the title "my anointed one," which is missing in Daniel 7 and rare in *1 Enoch,* and the transcendental character of this figure, which is foreign to the biblical texts about the king.

6. Reconstruction of the Tradition. The evidence presented here indicates that the idea of a transcendent judge and deliverer was a known element in Jewish eschatology by the latter part of the 1st century C.E. The texts in question attest a common model that was composed of elements from Israelite traditions about the Davidic king, the Deutero-Isaianic servant/chosen one, and the Danielic "son of man." The model surely existed apart from these texts, and, in order to posit belief in such a transcendent savior figure in any given case, we need not presume that any one of the texts was known and used as a literary source. For the modern critic, however, the texts serve as extant testimonies and expressions of the belief. The texts and their sources in the Hebrew Scriptures do not represent successive developments in a single continuous process. The tradition was fluid and its components interacted with one another in different ways. The transcendent deliverer was often identified with Daniel's one like a son of man, although he was not always called "son of man." In *4 Ezra* and *2 Baruch,* e.g., royal and messianic terminology predominated. In other cases not discussed here (Dan 12:1 and the Qumran texts about Melchizedek), a different kind of transcendent savior was envisioned without employing the imagery and terminology of Daniel 7. (See ESCHATOLOGY.) Common to all of these texts is an emphasis on the judicial functions

of the exalted one—an element foreign to Daniel 7 but central to the Davidic texts and taken over into Second Isaiah.

The creative milieux for these traditions were situations of persecution or suffering, as is clear in Daniel 7 and *1 Enoch.* Although *4 Ezra* and *2 Baruch* do not mention persecution, the nation's suffering after the events of 70 C.E. is the omnipresent context in these works, and Roman injustice is singled out in *4 Ezra* 12:40–43 and is generalized in *2 Bar.* 72:4. In Wisdom 2 and 5, the persecution and vindication of the righteous one are in focus. In all of these texts, kings, princes, or the rich and powerful are the source of suffering, and thus the royal prerogative and function of judgment is understandably ascribed to the respective protagonists. A similar situation provides the context for parallel speculation about a Davidic messiah in *Ps. Sol.* 17.

The dating of the son of man-servant-messiah tradition is difficult because its clearest attestation is in the Parables, which are notoriously difficult to date. Nonetheless, the evidence in *4 Ezra* 13 indicates that something very close to the tradition in the Parables was known and substantially domesticated by the end of the 1st century. An earlier date is indicated by the Wisdom of Solomon (ca. 40 C.E. at the latest) and its modified form of the conflation of servant and messianic traditions. Thus the conflated tradition attested in the Parables appears to have been extant early in the 1st century C.E. This hypothesis provides a context for the study of NT son of man traditions.

C. The New Testament

The term "son of man" occurs in the NT, with four exceptions (Acts 7, Hebrew 2, and Revelation 1, 14), only in the gospels, and there always on the lips of Jesus. With one exception (John 5:27), the gospels always use the definite article ("*the* son of man"), thus introducing the term as a known quantity, even in contexts where it has not been previously defined. Modern scholarship has raised a plethora of questions about the usage in the gospels. How does one classify the sayings? What are the various connotations of the term? To what extent does the usage reflect the Jewish traditions in Daniel, *1 Enoch, 4 Ezra?* Was there, in fact, a concept of a son of man figure prior to the gospel traditions? Did the historical Jesus use the term, and if so, which sayings are genuine and was Jesus referring to himself or another figure?

Since the term's use or nonuse by the historical Jesus has been very much at the center of the discussion, extensive debates have revolved about the philological issue. How was the Aramaic term *bar (ʾĕ)nāš (āʾ)* used in 1st century Palestine? If Jesus used it, could he have meant, simply "I," "me," or "this man"? If so, then one need not assume that his use of it implied a messianic allusion to the figure of Daniel 7.

The present discussion will build on the treatment of the Jewish texts provided above, with two questions particularly in focus. To what extent do the NT son of man texts reflect the conflated traditional developments described above, in their imagery and in the status and functions they ascribe to "the son of man"? Are there NT texts that do not use the expression, but appear to reflect these traditional developments? Such a study and classification of the texts may also help historical queries about earlier forms of the sayings that may be attributed to the historical Jesus.

Since the investigation is textually oriented, primary consideration must be given to the contexts and functions of the passages in the documents that presently contain them. Only in the case of "Q," the hypothetical source of the material common to Matthew and Luke, are the texts discussed with reference to an antecedent context, although the present contexts in Matthew and Luke are also discussed.

1. The Document "Q." a. Matt 24:26–27; 37–39 = Luke 17:22–37. The son of man's epiphany is compared to the flashing of lightning and to the coming of the flood in the days of Noah. This double comparison emphasizes the universal dimensions of the son of man's appearance and the sudden and unexpected character of the judgment it will bring. Both the Matthean–Lukan comparison with Noah and the additional Lukan comparison with Lot (which could be original; cf. Sir 16:7–8; Wis 10:4–7; 2 Pet 2:4–10) indicate that a few righteous will be saved, but the saying emphasizes the damning judgment that will fall on the majority of humanity. Although the comparison with lightning recalls the heavenly setting of the scene in Dan 7:13–14, the association of judgment with the son of man and the analogy of the days of Noah parallel the Enochic form of the tradition, for which the flood/final judgment typology is

commonplace. The verb "revealed" in Luke 17:30 is not typically Lukan and may be original to the saying. The verb is used in *1 En.* 48:7; 62:7 of the present time and in *2 Bar.* 29:3; 39:7 and *4 Ezra* 7:28; 13:32 of the future. The idea is consonant with the public manifestation indicated by the comparison with the flood and the judgment of Sodom and recalls the judgment scenes in *1 Enoch* 62–63, *4 Ezra* 7 and 13, and *2 Baruch* 40 and 72.

b. Matt 24:43–44 = Luke 12:39–40. Like the previous saying, this logion emphasizes the sudden, unexpected nature of the son of man's coming, here compared to a thief's break-in. Thus, although judgment is not mentioned as such, the admonitory function of the saying indicates that judgment rather than Israel's salvation and exaltation (Daniel 7) is associated with the coming of the son of man. Knowledge of the saying is widely attested in the NT. It may well be reflected in Mark 13:32–36, which occurs shortly after the reference to the coming of the son of man in 13:26–27 (cf. Matt 24:42). On the tradition in Paul, Revelation, and 2 Peter, see below, C.6.a, C.7, C.8.

c. Matt 10:32–33 = Luke 12:8–9; cf. Mark 8:38 (below). These passages and their contexts emphasize the ultimate consequences of human confession or denial of Jesus, probably in courts of law. The preceding context in both Matthew and Luke (and hence Q) anticipates the final judgment when secret words will be publicly manifest. Physical death is contrasted with eternal destruction, and divine protection is promised to those who do not fear to give up their lives (cf. Mark 8:34–37). The one who "has authority to cast into Gehenna" (Luke 12:5; Matt 10:28) would seem to be God, but the idiom appears in Daniel 7, and in *1 Enoch* the son of man is the agent of the judgment that condemns to Sheol. Luke 12:8–9 and its Markan parallel agree against Matt 10:32–33 in their reference to the son of man. He is a future judicial figure in the heavenly court, whose function is specifically related to Jesus; he will respond in kind to human responses to Jesus. Presumed is the Enochic formulation: the son of man is the heavenly vindicator of the wronged righteous. Matthew's use of "I" rather than "the son of man" could be due to the evangelist's redaction based on his identification of the son of man with Jesus. Alternatively, it could reflect the earliest form of the saying, or at least a pre-Matthean variant that identifies the heavenly vindicator with the righteous one, as in Wisdom 2 and 5. The original verb in the second part of the saying is uncertain. "Ashamed" (Mark 8:38) is a verb that is used in judicial contexts to mean "lose one's case," and the noun "shame" occurs in *1 En.* 62:10; 63:11 in connection with the son of man's condemnation of the kings and the mighty. However, the use of "deny" in Mark 8:34 may reflect knowledge of the version of the saying in Q, where that verb occurs, and its omission in Mark 8:38 could be an attempt to avoid application to Peter (cf. 14:68, 70). Mark's reference to the "Father" and the "angels" has parallels in the Matthean and Lukan versions of the Q saying respectively.

d. Matt 19:28 = Luke 22:28–30. In the future, Jesus' disciples will be enthroned with the son of man to judge the twelve tribes of Israel. Although only Matthew mentions "the son of man," Luke's statement that "my Father has assigned me the kingdom" and the reference to enthronement parallels the wording of Daniel 7. It is uncertain whether judging *(krinein)* here connotes judicial functions *(1 Enoch)* or ruling (as in Daniel), or both. Important, however, is the relationship between one's association with Jesus and one's future exaltation with the son of man, which parallels C.1.c, above.

e. Matt 12:38–42 = Luke 11:29–32. Luke's reference to the son of man being a sign like Jonah is usually regarded as more original than Matthew's explicit reference to the son of man's death and resurrection (which reflects the passion predictions). Different from C.1.c and d, the son of man is identified as Jesus the prophet, who is compared to Jonah and wise Solomon. Unlike their preaching and teaching, Jesus' preaching is rejected in his own time. As in C.1.c, this rejection will have consequences at the final judgment, when the obedient Queen of the South and the penitent inhabitants of Nineveh will condemn the wicked of Jesus' generation. The term "son of man" may be used here of the earthly Jesus because he is expected to be the one who will preside over the final judgment. In such a case, another element in C.1.c is present, although the rejection that will be punished is here located in Jesus' earthly ministry rather than in the postresurrection community. The reference to "the wisdom of Solomon" is noteworthy; the book of that name recounts the career of the rejected and vindicated sage, using as a pattern the Isaianic tradition that *1 Enoch* applies to the exaltation of the son of man (above, B.3).

f. Matt 11:16–19 = Luke 7:31–35. As in the previous saying, "this generation" is criticized for rejecting the prophetic ministry of Jesus, the son of man. Indeed, they have rejected both the stern preaching of John and the joyous proclamation of forgiveness announced by the son of man. The wrongness of this rejection will become evident when "wisdom is vindicated." The motif recalls both Wisdom 2 and 5, whose rejected and vindicated protagonist is the spokesman of Wisdom, and the Parables of Enoch, whose exalted protagonist has some of the characteristics of preexistent Wisdom. Paradoxically, the son of man's ministry is characterized by the reconciliation of sinners in contrast to John's announcement of the kind of judgment that the Parables of Enoch associate with the son of man.

g. Matt 12:32 = Luke 12:10. This free-floating logion also refers to opposition to the human Jesus, the son of man, but it contrasts such words against Jesus in his ministry with blasphemy against the Holy Spirit in the postresurrection situation. In Matthew the logion precedes the saying about the sign of Jonah and is compatible with it because the sign of the son of man is his resurrection. In Luke, it is also compatible with its context because the son of man's future judicial functions relate to confession and denial in the postresurrection situation (cf. Mark 13:9–11).

h. Matt 8:20 = Luke 9:58. "Son of man" here is sometimes taken as a surrogate for "I," but at the very least, a contrast is indicated between Jesus the human being and the animals. This could imply the contrast evident in Dan 7:3, 13 and, thus, also Jesus' future status as son of man. Perhaps more to the point is Ps 8:4–8. Ironically, the son of man, who has been given glory and honor as well as dominion over the beasts of the field and the birds of the air, does not have the shelter they possess. If other NT applications of Ps 8:4–8 to Jesus' future power indicate traditional usage (below, C.6.b), the present text may imply an ironic contrast between present lowliness and future glory. In its Lukan context, the saying follows Jesus' rejection by unhospitable Samaritans, but it is uncertain whether Q understood Jesus' homelessness as a result of his rejection.

i. Matt 4:1–11 = Luke 4:1–13. Although the title here associated with Jesus is "son of God," Satan's offer to give Jesus all the kingdoms of the world and their glory or power is phrased in the language of Dan 7:14. The verb *paralambanein* ("take along") is typically applied to the accompanying, interpreting angel in journey visions, and the idea here may be that Satan disguises himself as a member of the heavenly court and offers Jesus the prerogatives of the eschatological son of man. The close connection between "son of man" and "son of God" occurs in other texts (see below).

j. Summary. Texts in this early stratum associate the son of man with the coming judgment. In 1.a, b, in their Q form, this future figure was not specifically connected with Jesus. In the remainder of the texts, human reactions to Jesus are a touchstone for the future judgment, although in 1.c, d it is not certain that the original form of the saying identified future son of man as the exalted Jesus. In 1.e–h the term "son of man" is used of Jesus in his earthly ministry. The double usage, with reference to Jesus' earthly and future activities, will be fixed in Mark.

2. The Gospel according to Mark. a. The Son of Man in the Future. (1) Mark 8:38. Like its parallel in Q (C.1.c; cf. C.1.d, e, f), this text envisions the son of man as the future judicial functionary who will act in accordance with human reactions to Jesus. In context it follows Peter's confession of Jesus and his rejection of Jesus' announcement that "the son of man" must suffer and die. This is a reminder that Mark's various usages of "son of man" cannot be dissociated from one another. The major elements in v 38 ("comes, glory, Father, angels")—all missing in the Q parallel—have counterparts in Mark 13:26–27, 32 (see C.2.a.3), which may indicate Markan redaction (but see below, C.6.a).

(2) Mark 14:62. In context, this reference to the future son of man parallels Mark 8:27–29. Different from Simon, who confessed Jesus as messiah, Caiaphas has cynically asked about Jesus' status as the messiah (v 61). His implied rejection, which will be explicit in v 63, leads to the threat that Caiaphas and his court "will see" the enthroned son of man as their judge. Although Daniel 7 is the source of the idea that the clouds of heaven will convey the son of man (here from the heavenly throne room rather than to it), other elements in the description parallel the tradition in the Parables of Enoch and Wisdom 2, 5. The son of man is also the messiah (v 61), seated at God's right hand (Ps 110:1). He will be seen (*1 Enoch* 62) by those who have rejected him (Wis 5:1–2) not only as messiah but as God's son (Wis 2:16–20; 5:5).

(3) Mark 13:26–27. The context is a description of the end time. When *false* messiahs have been proclaimed, the son of man will appear on clouds, as predicted in Dan 7:13–14, but coming from heaven, with the power and glory he has received there (Dan 7:14). Although the judicial function described in *1 Enoch* is not explicit, the influence of that tradition is suggested by two elements not found in Daniel 7. Certain unnamed persons "will see" the son of man, who will send angels to gather "the chosen ones" (cf. *1 Enoch* 51; 61:2–5; 62:14–15).

b. The Son of Man on Earth. Mark's gospel reflects the semantic ambiguities in the term "son of man" and plays on these ambiguities, referring to Jesus the man.

(1) Mark 2:1–12. With an evident allusion to Dan 7:14, Jesus makes the paradoxical claim that in the present, on earth, this human being possesses divine "authority," which tradition said would be given in the future to the glorified heavenly "son of man." Different from Daniel, this authority involves not political dominion over the nations, but the forgiveness of sins. Thus Jesus exercises divine judgment, but the formulation differs from *1 Enoch,* where the son of man *punishes* sinners and saves the righteous. Both the emphasis on forgiveness and the scribes' opposition to this aspect of Jesus' ministry recall the Q saying about John and the son of man (C.1.f), and the opponents' rejection of the son of man's authority parallels other son of man texts in Q and Mark.

(2) Mark 2:23–28. This story repeats the paradox in Mark 2:1–12. As son of man, Jesus states what is permissible (*exestin,* the verb from which *exousia* "authority" is derived) on the divinely created sabbath.

c. The Son of Man who Dies and Rises (8:31; 9:9–12, 31; 10:33–34, 45). These passages predict the events that constitute the climax of Mark's gospel (cf. 14:21, 41), in each case using verbs that occur in Second Isaiah's last servant passage (52:13–53:12). The pattern of suffering and vindication will be embodied in chaps. 14–16 in a literary genre whose prototype is found in the recasting of Isaiah 52–53 in Wisdom 2 and 5. The use of the term "son of man" in these predictions again plays on the ambiguity of the expression. Jesus the man will be vindicated in his resurrection and will then appear as the glorified son of man. The term is further legitimated in the present usage because of the traditional conflation of servant and son of man materials in the Parables of Enoch. Mark identifies the vindicator with the persecuted one, as in Wisdom, but he parallels the Enochic form of the tradition by using the term "son of man" as a designation for the unique future champion of the chosen.

d. Summary. Mark uses "son of man" both as a designation for the human Jesus and in its traditional specific sense to denote his future status as the exalted messianic judge. Bridging the two usages are the formulas that describe the death and resurrection of Jesus; the suffering man will become the exalted son of man when the rejection that led to his death is overcome in the vindication constitutive in his resurrection. In the future as son of man, he will participate in the judgment of those who rejected him in his lifetime or during the time of the church. The purposeful ambiguity of the expression, which is an integral part of Mark's plot, is evident in the author's decision never to use "son of man" as the predicate of the verb "to be," as he does with the titles "son of God" and "messiah." Jesus is never said to be the one who "is the son of man." The lack of such explicit identification allows the ambiguity of the term to stand, and thus perpetuates the mystery of Jesus' identity among the human characters in the story in spite of his use of the term.

e. Son of Man and Son of God. Mark's theology has a peculiar terminological twist. Jesus the son of man is also son of God. The relationship of the two terms is evident in Mark 8:38, which refers to God as the Father of the son of man. Although the title "son of God" may well be a messianic designation derived from Psalm 2 (see Mark 1:11, where it is conflated with servant language also used in *1 Enoch* 49:4), its use by demons designates him as a unique divine being. Because he is such, he can forgive sins, rule the sabbath, and exercise God's power to still the sea (4:35–41). But son of God is not simply contrasted to son of man, as Jesus' divine status is contrasted to his human status. In the tradition of the Parables, the son of man who will judge is a preexistent heavenly being with some of the characteristics of divine Wisdom. Between such a preexistence, which Mark presumes for the son of God, and the future glory which he attributes to the exalted son of man, Mark posits an earthly incarnation as the son of man, Jesus of Nazareth. But like the righteous one in Wisdom 2 and 5, this man is shown to be son of God by

obediently submitting to God's will in the human fate of death (Mark 15:39; cf. Wis 2:12–20; 5:1–5). Mark's three stage pattern of preexistence, incarnation, and exaltation results from his overlaying of two related patterns: *Enoch*'s preexistent and exalted son of man, and Wisdom of Solomon's persecuted and exalted righteous man/son of God. This overlaying of patterns appears to have been present also in Q, which presented Jesus as Wisdom's persecuted spokesman who would also be the exalted son of man.

3. The Gospel according to Matthew. a. Matt 13:24–30, 36–43. In this parable and its interpretation, judgment is the purpose of the son of man's parousia (explicating Mark 13:26–27 = Matt 24:30–31), and the son of man is identified with the earthly Jesus. The notion that the righteous will "be sown" as seed (contrast Mark 4:1–20 = Matt 13:1–23, where the unnamed sower sows the word of God) recalls similar terminology in *1 Enoch* 62:8 (see below). In the eschatological part of the parable's interpretation (13:41–43), the son of man dispatches his angels not to gather his chosen ones (Mark 13:27; cf. in the parable, v 30), but to gather the wicked and cast them into hell (cf. *1 Enoch* 62–63 and the discussion of C.1.c above). The positive side of judgment is present in the interpretation in v 43—a democratizing of the exaltation of the wise in Dan 12:3. The language describing the harvest parallels John's preaching in Matt 3:11–12 and thus ascribes to the baptist a proclamation about the future activity of the son of man as the judge.

b. Matt 25:31–46. This extensive description of the great judgment is rooted in Daniel 7: The central figure is the son of man who comes in his glory. The scene, however, is closely related to the tradition attested in *1 Enoch* 62–63 and Wisdom 2 and 5. As in the Parables, the son of man is a royal figure ("the king," vv 34, 40) who is seated on "the throne of his glory" (v 31; cf. the Parables of Enoch) for the purpose of judgment. In this judgment the nations recognize in the enthroned one the little ones whom they had helped or maltreated on earth, and on the basis of these actions they are granted eternal life or consigned to eternal punishment (cf. *2 Baruch* 72). The passage is a hybrid of the forms of the tradition in the Parables and Wisdom. As in the former, the son of man is the champion and avenger of the persecuted little ones. As in Wisdom, there is a kind of identification between the persecuted ones and the exalted one: "what you have done to the least of these, you have done to me" (vv 40, 45). In its focus on the judgment of those who have responded to Jesus' persecuted alter egos in the world, this text complements the Q and Markan tradition about the son of man's eschatological judicial functions vis-à-vis those who have confessed or denied Jesus under duress (see above).

c. Other Passages about the Son of Man in the Future. Matthew's editorial work also reflects his interest in the future activity of the son of man. Although it is possible that he changed "son of man" to "I" in the Q logion in 10:32–33, he has changed Mark's "I" to "son of man" in 16:13, and in 16:28 he has altered Mark 9:1 to refer to the son of man's coming in his kingdom. Other additions define the son of man as judge. According to 16:27 (= Mark 8:38), the son of man will "render to each according to his deeds." In 10:23, he concludes Markan material about the disciples' persecution by promising that the son of man's parousia will cut it short. The juxtaposition parallels the Q saying about confession, denial, and the judgment, which follows in vv 32–33.

d. The Son of Man Exalted before the Parousia (26:64; 28:16–20). In Mark 13:26 and 14:62, Jesus predicts the future coming to earth of the enthroned son of man without indicating when the enthronement will take place. Matthew defines this more closely in 26:64, where Jesus informs Caiaphas that "hereafter *(ap᾽ arti)* you will see the son of man …" (cf. Luke 22:69). The time of the enthronement is made explicit in 28:16–20. By the time he commissions the eleven in Galilee, the resurrected Jesus has already been "given all authority in heaven and on earth" (Dan 7:14), something he earlier refused, when Satan offered it to him.

e. Summary. Much more than Mark, Matthew emphasizes Jesus' identity and functions as son of man. The combination of Markan and Q traditions creates a relatively large number of references to Jesus' earthly activity as son of man, and Matthew's redactional touches and unique passages employ the language and imagery of Daniel 7 and the Parables of Enoch in order to allude to or describe Jesus' postresurrection exaltation and, notably, his future function as judge.

4. Luke–Acts. Luke, like Mark and Matthew, uses the term "son of man" in connection with Jesus' ministry, his death and resurrection, and his future eschatological activity, and with reference to each of these, Luke shows some predilection for the term.

a. The Ministry of the Son of Man. In his use of Mark 2:10, 28 (at 5:24; 6:5) and in his placement and redaction of some of the Q traditions (about the Baptist and the son of man, the son of man's homelessness, the sign of Jonah, and words against the son of man), Luke depicts Jesus' ministry as the activity of the son of man which leads to opposition and rejection. In a similar vein, Luke moves the material from Mark 10:35–44 to Luke 22:24–27, and revises Mark 10:45 to describe not the death of the son of man, but Jesus' mission, in his ministry, to seek and save the lost (19:10).

b. The Death and Resurrection of the Son of Man. Of Mark's sayings about the son of man's death and resurrection, only 9:9, 13 have been dropped. The second of these references reappears, however, in 17:25, where it is incorporated into the eschatological timetable that will culminate with the days of the final revelation of the son of man. The death-resurrection formula is also inserted into each of the three stories in chap. 24 to vindicate Jesus' predictions; the term "son of man" is used in the first instance (v 7), while messiah (Christ) occurs in v 26.

c. The Son of Man in the Future. The future judicial functions of the son of man are essential to Luke's eschatology, as is evident in his use of tradition and the details of his redaction and composition. Throughout, he admonishes the church to act with an awareness of the connection between its present existence and its future accountability to the son of man. The beatitude in 6:22 promises heavenly reward to those who are rejected not "for my sake" (cf. Matt 5:11, the Q parallel) or "for my sake and the gospel's" (Mark 8:35; 13:9–10), but for the sake of the one who will be identified as the eschatological judge—the son of man (cf. the parallel Markan and Q traditions at Luke 9:26; 12:8). Warnings about indifference concerning the time of coming of the son of man are expressed in the Q sayings in 12:35–38; 39–40; 41–48. The second of these speaks explicitly of the son of man's coming. The first and third are partly paralleled in Mark 13:32–37, which comments on the time of the coming of the son of man. Luke 17:20–18:8 is held together by the common theme of the coming of the kingdom and the end (cf. also 17:1, 7, 12). First, Jesus disclaims the possibility of apocalyptic calculation (17:20–21). Then after the Q tradition about the suddenness of the son of man's revelation (vv 22–37), Luke inserts a parable that promises speedy vindication to God's chosen ones (18:1–8). The placement of 18:8b indicates that the son of man will be the agent of that vindication and the judge who will look for faith on earth. In chap. 21 (= Mark 13), Luke announces the glorious coming of the son of man (vv 27–28 = Mark 13:26–27) and defines the gathering of his chosen ones as "your redemption." In vv 34–36, which replace Mark's ending to the section (cf. 13:32–37), traditional material (see below, C.6.a) has a Lukan nuance that recalls 18:1–8. The promise of redemption for the chosen ones is qualified with an admonition to be ready to "stand before the son of man," the judge.

d. The Present Exaltation of the Son of Man. Like its Matthean counterpart, Luke's version of Jesus' statement to Caiaphas specifies that "henceforth" *(apo tou nun)* the son of man will be enthroned (22:69; cf. Matt 26:64). Different from Matt 28:16–20, Luke documents the enthronement not in the account of Jesus' commissioning of the eleven (24:44–49), but in Acts, in two stages. First, drawing on Dan 7:13–14 and its typical NT revision, Luke compares Jesus' ascent on a cloud with his return on a cloud (Acts 1:9–11). Secondly, Stephen's vision reveals that Jesus' enthronement as son of man is an accomplished fact (Acts 7:55). The threat implicit in the Caiaphas scene recurs. Stephen's revelation vindicates the preaching that led to his trial and triggers his condemnation to death for the sake of the one he has revealed to be son of man.

e. Jesus as the Chosen One and Righteous One. Although we must be cautious in our conclusions about early Christian applications of multiple titles to Jesus, Luke–Acts is especially noteworthy for its combination or interchanging of son of man, messianic, and servant terminology and imagery. Simeon, who awaits "the Lord's anointed one," blesses Jesus as "the light of the nations" (Luke 2:25–32; cf. Isa 49:6; *1 En.* 48:4, 10). In the crucifixion scene, Luke replaces Mark's "the anointed one, the King of Israel" with "God's anointed one, his Chosen One" (Mark 15:32; Luke 23:35). The voice at the

transfiguration designates Jesus as "my Son, my Chosen One" (9:35), a messianic-servant conflation that differs from Mark's "my beloved Son" (9:7). In Acts the crucified and resurrected Jesus is three times designated as "the Righteous One" (3:14; 7:52; 22:14), a term applied to the son of man in Enoch and the persecuted protagonist of Wisdom 2 and 5. A nontitular use occurs in the centurion's confession (23:47; cf. Matt 27:4, 19, 24). This usage should not obscure Luke's interest also in Jesus' status as the anointed one who has entered his glory (see 23:42; 24:26; Acts 2:36).

5. The Fourth Gospel. John's use of "son of man" is an integral part of his whole, many-faceted view of Jesus. Although the term occasionally appears where one might expect "son of God," it is usually accompanied by elements familiar from the Jewish traditions or the Synoptic son of man passages. It is associated with judgment and with Jesus' humanity and his death. Most striking are the uses of the verbs *hypsoun* ("lift up, exalt"), which John uses only in conjunction with "son of man," and *doxazein* ("glorify"), which he applies to Jesus mainly in connection with his proper name or the term "son of man." Both verbs denote a status traditionally ascribed to the son of man in the future, but both are also used of the servant of the Lord in the LXX of Second Isaiah. This tendency to make "son of man" the subject of verbs that Second Isaiah applies to the servant parallels the Synoptic tradition and especially its passion predictions (above, C.2.c). Thus, in his use of the conflate Jewish tradition, John, like the other evangelists, employs the Enochic term "son of man" but also uses the notion in Wisdom 2 and 5 that the exalted one is identical with the persecuted one. John's special nuance is the use of verbs that interpret Jesus' death as his exaltation. The idea parallels Wisdom, and it also replaces the Synoptic notion of a future glorious parousia of the son of man. For John, as for Mark, a tension exists between Jesus' identity as son of God and son of man, but in John, Jesus' heavenly preexistence is explicit both to the reader and in Jesus' public discourse.

a. John 1:43–51. The strangeness of the comparison of Jesus with Jacob's ladder (Gen 28:10–17) should not obscure the close connection between this passage and Synoptic references to the son of man, in particular the accounts of Peter's confession and Caiaphas' rejection of Jesus. Nathaniel identifies Jesus as "son of God" and "King of Israel" (messiah) and Jesus responds with a reference to "the son of man." As in Mark 14:62 = Matt 26:64, he refers to heaven and what "you will see" *(opsesthe);* "the angels" add another traditional son of man detail. John's unique touches are these: the exalted son of man will not come on a cloud at the eschaton; in the time after the acension/exaltation, when greater things happen (cf. 14:12), the angels will minister to the church because of the activity of Jesus, the son of man. The title may imply the death/exaltation of Jesus and its corollary, his humanity.

b. John 3:13–16. The parallelism in v 14 indicates the centrality of Jesus' crucifixion, but the ambiguous verb *hypsoun* expresses the paradox that the lifting of Jesus on the cross is his exaltation to the place from which he came (v 13). This paradox, that the son of man is also the heavenly son of God (cf. 1:49, 51) is expressed in v 16. The verb *dei* ("it is necessary") prefacing a statement about the death/exaltation of the son of man parallels the formulation of the Synoptic predictions about the necessity of the son of man's death and resurrection (Mark 8:31 par.; Luke 24:7, 26).

c. John 5:25–29. This double tradition again identifies Jesus as both son of God and son of man and ascribes to both the uttering of the voice that will raise the dead. If v 26 states that the Father has "granted" *(edōken)* his son to have life, v 27 employs the language of Dan 7:14; he has also "given him authority … because he is the son of man." Like the traditional extension of Daniel 7 in *1 Enoch* and the Synoptics, it is the authority to execute judgment (vv 27–30).

d. John 6:27, 53, 62. In the present form of this complex chapter, which is marked by repetitions, developments in the tradition, and redaction, the following data are relevant. The "son of man" is the functionary of "the Father," and the terms are almost juxtaposed in v 27. He is the one who gives "food" for life (v 27), and is also the "bread" of life itself that has descended from heaven (vv 35–38). The "bread" that he gives is unexpectedly identified in vv 51–56 as the "flesh" (and "blood") of the "son of man." This may be a legitimate exposition of v 27 (Jesus *qua* man gives his life; cf. 3:14–16). The wording of v 62 recalls Synoptic passages about seeing the exalted son of man. Here the ascent that will be seen is the return of the son of man/son of God to his former glory.

e. John 8:28. As in 3:14, Jesus describes his crucifixion with the verb *hypsoun,* whose ambiguity is evident in the fact that those who lift up the son of man will learn from that who he is. Close at hand is Wisdom 5, where persecutors see the one whom they denied and put to death exalted among the sons of God and ready to condemn them. Jesus' identity as the heavenly one is clear in the context here, and his function as judge is mentioned (v 26).

f. John 9:35. Here alone in John, the son of man is the object of belief, and some mss read "son of God." The reference to judgment in v 39 is consonant with the term "son of man," and the point may be, "Do you believe that this man is the expected son of man?" As in 5:27, with its reference to judgment, the importance of Jesus' identity as the "son of man" is indicated by the term's syntactical function as predicate of the verb "to be."

g. John 12:23–41. This passage is a remarkable Johannine reformulation of Synoptic passion material. Verses 23, 25–26 recall Mark 8:31, 34, 35, 38. Verses 27–29 are a Johannine reformulation of the Synoptic Gethsemane tradition, and possibly the long reading attested in some mss of Luke 23:43–44. Although the allusion to the cross in 12:32–33 need not reflect the saying in Mark 8:34, the verb *dei* ("must") in John 12:34 parallels Mark 8:31, as it did in John 3:14. A typical Johannine feature running through the passage is the interpretation of Jesus' crucifixion as the exaltation/glorification of the son of man, which the Synoptics see as separate events. The conflated citation of Isa 53:1 and 6:9–10 (vv 38–40) adds another Johannine nuance. The former passage, which begins Isaiah's description of the suffering of the servant, follows the description of the servant's exaltation *(hypsoun)* and glorification *(doxazein).* The quotation of Isaiah 6 allows John to equate the servant's glory with the glory of the son, which the prophet saw in his inaugural vision. Now, as then, the people do not believe.

h. John 13:31. This last Johannine reference to the son of man employs the verb "glorify" four times in a way that parallels the servant passages in Isa 53:12 and 49:3. As earlier, the glorification is Jesus' crucifixion.

6. Paul and the Pauline Tradition. The term "son of man" never occurs in the writings of Paul; the Semitic expression would not have been understood by Paul's gentile audience. Nonetheless, at least two Pauline passages appear to reflect knowledge of Synoptic son of man traditions.

a. 1 Thessalonians. This earliest of Paul's extant writings is dominated by the expectation of the parousia of Jesus, who is called variously "Lord" and "Son." Several passages indicate the judicial nature of the parousia or of Jesus' functions in connection with it, and in some cases, the language or imagery parallels Synoptic son of man traditions.

According to 1:10, Jesus will come from heaven as the divine vindicator to rescue Christians from the coming wrath. In 2:19–20, Paul focuses on his own judgment (cf. 1 Cor 3:13–15; 4:1–5). When he stands "in the presence of *(emprosthen)* our Lord Jesus Christ at his parousia" (cf. Luke 21:36), the Thessalonians will be the cause for his hope and joy, his crown of boasting and his glory (cf. Wis 5:16). The references to blamelessness (cf. Jude 24–25) and holiness in 3:13 (cf. 5:23) indicate that judgment will be effected "in the presence of *(emprosthen)* God and our Father at the parousia of our Lord Jesus Christ with all his holy ones" (cf. the wording of Mark 8:38, and see also Did. 6:6–8).

With the death of some of the Thessalonians, Paul found it necessary to augment his preaching about the parousia by integrating reference to the resurrection into his eschatological scenario (4:13–18). A creedal formula about Jesus' resurrection from the dead is Paul's basis for his proclamation of the Christian's resurrection, and an appeal to "a word of the Lord" (4:15) introduces a brief description of the parousia, which places the resurrection in the context of events that are mentioned in Mark's description of the coming of the son of man (13:26–27) and Matthew's elaboration of the passage (24:31):the voice of an archangel; the trumpet of God (Matthew); Jesus' descent from heaven; and the Christians being caught up in the clouds to meet the Lord in the air.

This Pauline description is followed immediately by an admonition to vigilance, which also has echoes of Synoptic tradition (5:1–11). The comparison of the day of the Lord with a thief recalls Matt 24:43–44 = Luke 12:39–40. The vocabulary in 1 Thess 5:3, 7 and the admonition to pray constantly (v 17) occur in Luke's ending to the "Synoptic apocalypse" (21:34–36), with its warning to be watchful in order to be

able to stand before the son of man. The imagery about sleeping and watchfulness is typical of several Synoptic passages about the parousia. Paul's comparison to a woman's birth pangs parallels the metaphor in Mark 13:8 and, more closely, the simile in *1 En.* 62:4.
